Males with best stripe in hackle and saddle; females with the fine penciling and even color that wins everywhere. They have won fifty first prizes. It pays to get eggs from birds that have been bred right. Eggs now one-half price. Circular free. W. H. Wiebke, Box 348, Ft. Wayne, Ind.

This department is open to all readers and advertisers in the central territory, and they are invited to send in all poultry news items that come to their attention. Address C. W. Zimmer, 358 Dearborn Street, Chicago, Ill.

A good hen does business every day. And then she lets us know by cackling.

If there is nothing doing she keeps "mum."

All live fanciers "cackle" (advertise) in American Poultry Journal—and there is always something doing in the way of returns.

Are you cackling in American Poultry Journal? If not, why not?

The best you can get seems to be about the worst of it—unless you advertise in the American Poultry Journal.

When a fellow can't smile—his face needs fixing.

You will always smile if you advertise in American Poultry Journal.

Why should cocks be the smoothest of birds known?

Answer—Because they always have a comb about them.

What is the difference between a hen and an idle musician?

Answer—One lays at pleasure, and the other plays at leisure.

Why is the first chick of a brood like the main mast of a ship?

Answer—Because it is a little ahead of the main hatch.

Why would a compliment from a chicken be an insult?

Because it would be foul language.

What bird is in season all the year?

Answer—The weather cock.

When is a lady's arm not a lady's arm?

Answer—When it is a little bare (bear).

Elsewhere in this issue will be found a letter addressed to the Wayne Poultry Tonic Company, Fort Wayne, Ind., giving a strong testimonial on the merits of their Little Red Hen Poultry Tonic.

Eleanor, aged six, had been going to school only a few weeks. She had learned to raise her hand if she wanted anything. One day she put this into effect when she was sent to the chicken house to get the eggs.

Just as she reached the chicken-house door her mother heard her say: "All you chickens that have laid an egg, raise your hands."—The Delineator for July.

The Chicago market reports gives an advance of 1 to 3 cents per pound in the price of poultry.

S. A. Noftzger has applied for admission of the Partridge Plymouth Rock. You should support his petition when it comes up. They are well worthy of admission.

Judge W. E. Stanfield, Hillsdale, Mich., goes to the Pacific coast to fill several judging engagements during the last of November and through December. Mr. Stanfield is also a prominent breeder of White Orpingtons.

The White Feather Poultry Farm, H. T. Whitney, proprietor, Rocky River, O., is offering his ten pens of S. C. White Leghorns for sale at bargain prices. These birds contain the blood lines of Mr. Whitney's "Snow Fluff Strain," which were the winners in keen com-

petition at the late Cleveland show and, further, have a reputation as egg producers. You would do well to correspond with Mr. Whitney if in need of S. C. W. Leghorns. He is also offering some early pullets suitable for show purposes. His ad is to be found elsewhere.

The good word comes from L. C. Buschman, 4939 North Meridian street, Indianapolis, Ind., that he has 2,000 fine Rose Comb R. I. Reds, some of which are now ready for exhibition purposes. Our readers remember the many first and special prizes won by Mr. Buschman at our leading shows last season, and these young birds are bred from these prize winners. Being mated by Mack Pierce, the quality is assured. Mr. Buschmann is also offering some of his breeding birds at reduced prices. You should have his book, "How to Mate, Breed and Judge Reds." This book is sent to all who enclose 20 cents. Mr. Buschmann's ad appears elsewhere.

Lloyd C. Mishler, R. F. D. 1, North Manchester, Ind., who made a clean sweep of all first prizes at the late Chicago Show in R. C. Black Minorcas, is offering some of his fine breeding specimens at right prices. His young stock will be ready for the fall fairs. If you want to win, write Mishler.

E. E. Wilson, Indianapolis, Ind., has just had the honor to be elected state vice-president for Indiana of the Black Minorca Club. It will be remembered by our readers that Mr. Wilson has been capturing the first prizes in hot classes on his Minorcas for some time. He won the state championship last year and again this year.

This should convince you of the quality of Mr. Wilson's birds. Personally Mr. Wilson has the necessary qualifications and will make a very efficient officer.

A. P. A. CACKLES.

The latest cackles from the A. P. A. nest say the first session of the convention at St. Louis will be called to order at 9 a. m., Tuesday, August 16, 1910.

EVERYTHING FOR POULTRY KEEPERS

WE MANUFACTURE SEVENTY-TWO DIFFERENT ARTICLES for up-to-date, progressive poultrymen and women, ranging from Cyphers Mammoth Compartment Incubators holding 50,000 eggs at one filling down to 10-cent trial packages of Lice Powder, and every article is warranted to be as represented and is guaranteed to give satisfaction or money refunded. Standard goods we manufacture and sell include the following:

Incubators
Brooders
Brood Coops
Chick Shelters
Brooder Stoves
Leg Bands
Egg Packages
Egg Testers
Caponizing Sets
Scratching Food

Developing Food
Chick Food
Forcing Food
Laying Food
Short-Cut Alfalfa
Shredded Alfalfa
Meal Alfalfa
Full-Nest Egg Food
Nodi Charcoal
Poultry Remedies

Lice Powder
Lice Paint
Napcreol (Disinfectant)
Anti-Fly Pest
Egg Preservative
Fumigating Candles
Drinking Fountains
Grit and Shell Boxes
Food and Water Holders
Roost Supports

Roofing Paper
Spray Pumps
Powder Guns
Wire Fencing
Bone Cutters
Chick Markers
Bone Mills
Root Cutters
Nest Eggs
Poultry Books

OUR COMPLETE CATALOGUE FOR 1910 Consists of 160 pages, 7½ x 10 inches, and contains an illustrated description of all goods we manufacture. Tells about freight rates, gives prices, etc. Contains five instructive chapters on successful incubating, brooding, feeding, heavy egg yields, etc. Illustrates and describes our \$40,000 poultry farm—the largest in the world owned and conducted by an Incubator, Brooder and Poultry Supply Company.

THIS BIG CATALOGUE and Poultryman's Guide is **FREE** postpaid to any address if you will kindly mention that you saw our advertisement in this paper. Note below our six places of business in the United States which insure low freight rates and prompt delivery of goods. Address Home Offices or Branch Store nearest you.

Are you coming to St. Louis?

The one breed above all others that should be admitted at St. Louis is the Partridge Plymouth Rock.

We have seen flocks of these fowls that had fewer culls than many of the old varieties and specimens in the show room that were close to perfection. Certainly they are a beautiful fowl and entitled to recognition.

Here's for Denver next!

U. R. Fishel and T. E. Quisenberry will take their seats as members of the executive board of the A. P. A. Both Fishel and Quisenberry are known to be hustlers, so there will be something doing.

We wonder if the same stenographer will report this meeting—oh, prunes!

German breeders, attention! Anheuser Busch—that's all.

Breeders of Hamburgers and Laken-velder are included.

BUFF WYANDOTTE HEN.

Second prize St. Louis, 1907; first Evansville, 1909; second Cleveland, O., 1909; first Youngstown, O., 1910. Score 94½. Owned by F. A. Poertner, Berea, Ohio.

Many recruits will be added to the above varieties during the meeting.

We advise those from dry districts to stay home, for their name will be "Mud" after drinking Missouri river water for a week.

If the good feeling among certain members of the A. P. A. continues to improve at the rate it has lately, we should not be a bit surprised to see a quartet composed of Frank Heck, John H. Robinson, Reese Hicks and Grant Curtis, with Theodore Hewes playing the calliope, render the following ditty, to the tune of "Has Anybody Here Seen Kelly:"

"Has anyone here seen Bryant—
B-r-y-a-n-t?"

Has anyone here seen Bryant?
A good old scout is he!

His tie is red and his hair is gray;
He is president of the A. P. A.,
And we will listen to his say

When the Reds come up to have their day.

Has anyone here seen Bryant?"

All members will please attend the convention adorned with all the prevailing chanticleer paraphernalia.

POULTRY DISEASES And How to Prevent Them

BY J. C. NUCKOLS

Free Book—Saves Chicks

THOUSANDS of young chicks die because poultry-raisers lack the valuable information given in this book. As manufacturers of the celebrated

ESSO CHICKEN CHARCOAL

(Re-Carbonized—Twice-Burnt)

we have a personal interest in saving these young birds and will be glad to send a copy of Mr. Nuckols' book postpaid on request to every poultry-fancier. There is no "string" attached to this offer—the book is as free as air to you.

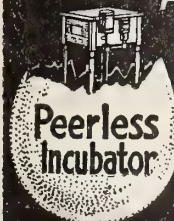

You can also have a small sample package of ESSO Re-Carbonized CHARCOAL free for the asking. Or if you prefer a larger package, inclose seven cents in stamps to pay cost of mailing.

The S. Obermayer Co., 641 Evans St., Cincinnati, O.

A Word to Poultry Supply Dealers:

You can greatly increase your sales of charcoal. We arrange, wherever possible, to deliver the free book and samples to poultry-raisers through a local dealer, to whom all inquiries are referred. Write for our liberal proposition to dealers.

ARE YOUR INCUBATING EXPENSES TOO HIGH?

Cut them down by using my **Tandem Thermostat** and **Acme Trip Burner**. Fits any incubator or brooder.

PEERLESS INCUBATORS AND BROODERS have many improvements over others, covered by my patents—you can get them only in a **Peerless**. My **New Lampless Brooder** is the best on earth—no lamp, no expense to operate. I manufacture every attachment to enable you to remodel any incubator and make it better than it was when new. Get my **Free Book of Plans** and complete catalog—it shows you how to build your own incubator. Write me today about the poultry supplies you need.

F. GRUNDY, Poultry Expert, -- Morrisonville, Illinois.

RIPPLEY'S FLY REMOVER & LICE KILLER

Saved One Customer \$75 that used it on 5 Cows 90 Days in increased flow of milk. It protects all cattle and horses from flies, lice and insects all day in pasture or barn. Has stood a 10-Year Test. Non-poisonous, fine disinfectant. Cows sprayed with it give 1-3 more milk, at a cost of ½ cent per day.

if it falls to protect animals. Prices—send \$1.00 for enough, and sprayer to apply it, to protect 3 cows 30 days; 5 gallons, \$4.25, to protect 5 cows 90 days, 10 gallon, \$8.00, protects 10 cows 30 days; ½ bbl., 30 gallons, \$30.00; 50-gallon bbl., \$30.00. 4-gallon Automatic Sprayer, will spray 25 cows in 10 minutes, or whitewash buildings, \$5.00. Booklet free of Fly Remover, Whitewashers, Sprayers, Cookers, etc.

RIPPLEY MFG. CO.,

Dept. 27, CRAFTON, ILL.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question—(1) Will you kindly tell me through the columns of your paper what is the trouble, cause and cure of my chicks? They were apparently healthy otherwise and would suddenly go blind; their eyelids would stick together and after washing would for a short time be all right; then stick again and finally die. (2) Is there danger of feeding too much dry ground bone, and if so how much should be fed to chicks under six weeks old? How much to old hens? Is it better burned? (3) My hens have been laying good all season and have very suddenly taken to egg eating. No change in feed rations. Can you tell the cause? (4) I wish to install an incubator capacity for next season for about 1,500 eggs. Would you advise small incubators, say of 200 egg capacity, or one large machine? (5) We have plenty of milk to feed young chicks and also for old fowls. Is it better to feed sweet or sour? Or should it be fed in both conditions? (6) I can build house for incubator from stone as cheap as lumber. Which is best? W. H. B.

Brownlee, Sask.

Answer—(1) This is usually caused by breeding from diseased stock or stock that has had the roup. There is no cure. (2) One ounce three times a week to chicks, two ounces three times a week to old birds is sufficient. It is no better burned. (3) This is caused

by a lack of lime. Feed plenty of oyster shells. (4) We would advise the use of the smaller machines for this number of eggs. (5) Either way is all right, but we prefer the sweet. (6) We prefer lumber.

Question—Why is it that nearly all the cockerels we have caponized have puffed out on the sides and had to be pricked to let out what seemed to be wind several times? They eat and seem to be well, but puff out hard and tight, and as this has been our first experience in caponizing would like to know what is wrong.

Iberville, La.

Mrs. F. M. V.

Answer—We are unable to say. Will some of our readers please answer?

Question—(1) Out of a setting of pullet line of B. Rock eggs do the chicks come in different shades of color? (2) Would a cockerel out of the pullet line that is dark and snappy in barring make a good breeder? (3) Does the Standard allow for any variation in color in show birds? If so, how many shades? (4) Does the Standard answer such questions? (5) Is there any work on how to breed and fit B. Rocks for the show room?

Baronet.

S. F. Y.

Answer—(1) If properly mated the pullets should be nearly all one shade. (2) He might. (3) No. (4) The Stand-

ard gives full description of what a Barred Rock should be. (5) See our list of books in this issue.

Question—(1) I would like to get some information in regard to Indian Runner ducks. Would like to know something of their origin. (2) What should the color of the pure bred ducks be? (3) Will they breed true to color? (4) What should be their standard weight? (5) Do you think a good laying strain of these ducks will lay as many eggs as good laying hens will? (6) What is the best feed to feed laying ducks? (7) At what age will they begin to lay if properly fed?

Jonesville, N. C.

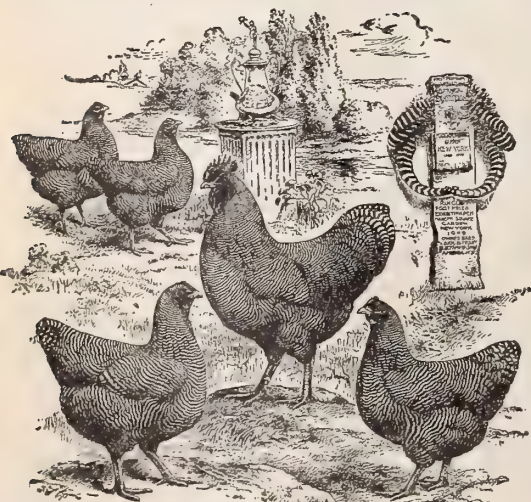

P. W. E.

Answer—(1) They are natives of India. (2) Light fawn and gray. (3) Yes. (4) Drake 4½ pounds, duck 4 pounds. (5) No. (6) Our book on Duck Culture will give you this information. Space will not permit here. (7) At about six months.

Question—(1) I have a coop the inside dimensions of which are 7 feet 3 inches by 11 feet 2 inches. How many Leghorns can I keep in there during the winter and how many perches (the length also) and nests do I need? (2) On my older chickens' legs the scales kind of separate and the sand gets in, the legs lose their yellow color and the chickens pick at them. Is this what you call scaly legs or is that the way with all old chickens? (3) I have a R. C. W. Leghorn cockerel that began crowing when it was 1 month 21 days old and annoying the old hens when it was 2 months 4 days old. Will the eggs from his pen be unfertile? (4) Are the R. Comb and S. Comb White Leghorns equal for laying purposes? Iron Mountain, Mich. H. C.

"Ringlet" Bargain Sale

For 1910 is the Event in Barred Ply. Rocks

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

My Special Sale List is now ready for mailing, and I am glad to offer to the people all over the world the most striking price reductions and the most emphatic bargains ever set in type.

This is now the time to call upon the almost unlimited resources of my "Ringlet" Farm and secure New York Winners and Sons and Daughters of New York Winners and birds of this New York line of blood at the marked down bargain prices.

Birds bought at the prices in my Special Sale List will pay you extraordinary dividends

The list covers emphatic bargains in single birds, pairs, trios and breeding pens and lots to meet the needs of all, no matter whether wanted for fine breeding or exhibition in competition that you feel will be the strongest. They are mated by me personally; which insures the best results.

The "Ringlets" are the proud product of more than a quarter of a century of Barred Rock breeding; they have the most fashionable barring and even blue color of the present day. They sell when no others will by reason of their matchless quality. "Ringlets" are known in every land and play their part in the commerce of the world.

It will be to your interest to have this Special Sale List and take advantage of this opportunity to buy now at the cut down bargain prices. It is sound business judgement to buy what you want when offered for dollars less than it is worth—it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Sale Figures. The List will be mailed promptly upon request.

Eggs from the World's Best Exhibition Matings. Elegant 58-page catalogue upon application.

SEE MY OTHER AD
ON BACK COVER

Address E. B. Thompson, Lock Box 510, Amenia, N. Y.

Answer—(1) Fifteen. One perch, full length of building. (2) Scaly leg is the forming of a crust or scab on the leg. See our Poultry Doctor book for full description. (3) We cannot tell. (4) The Single Comb White Leghorns have been bred to a greater degree of perfection as layers than the Rose Combs.

Question—Would a rock base concrete block poultry house be practical, or what are the faults, if any? I do not see any in this part of the country. Dayton, Ohio. S. G.

Answer—A concrete block poultry house is practical if properly constructed to avoid dampness.

Question—(1) At what age does a cockerel have to be to become a cock? (2) How many hens should I mate to a two-year-old cock to have fertile eggs? (3) I only feed one regular meal, and that at night, with plenty of table scraps, and green stuff during the day, and my fowls seem to thrive and do well. Would you advise more feed and oftener? (4) How much oats would you advise for one cock and ten hens (Columbian Wyandottes)? (5) What causes the feathers to be bare on the breast of my Cornish Indian Games? Their breast bone is perfectly bare; seems to be almost raw. L. D. M.

Answer—(1) One year. (2) Not more than ten. (3) If you are getting good results from your present system of feeding, don't change it. (4) As much as they will eat up clean. Oats will not make them too fat. (5) Lice is probably the cause.

Question—(1) We have some Black Minorca chicks. Would it be best to mate a rooster out of the same setting with the pullet, or should we exchange roosters? If we do not exchange roosters will the chicks from these chickens be less vigorous and smaller? (2) Most of our chicks were hatched in April; when ought they start to lay? (3) Which are the best layers, Black Minorcas or Single Comb White Leghorns. W. H.

Salem, Ohio.

Answer—(1) Unless you understand the system of line-breeding it would be best to procure another male bird to mate with your pullets. (2) By the middle of October. (3) The Leghorns will probably lay more eggs; but the Minorca lays the largest eggs.

Question—I would like to have you tell me through your monthly about the cause and cure of the wheezing which has troubled my hens since last March. They seem to gasp for breath at times and make a most distressed noise, holding the beak open. Often when eating they make this noise. Some of them have recovered; others are still troubled and are quite thin in flesh. It is not roup, as the head does not swell, and there is no discharge from the nostrils. I put camphorated vaseline on the throat and a little in the mouth. W. A. P.

Carlisle, Mass.

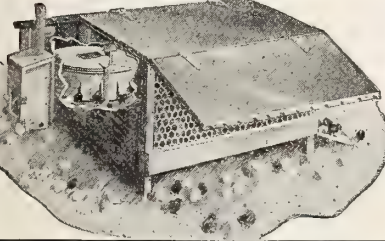

Answer—This is bronchitis, caused by a severe cold. Heat a kettle of water to the boiling point, then add a few drops of carbolic acid. Hold the head of the fowls over the kettle and let the fowl inhale the vapor arising from the boiling water. A few treatments will generally effect a cure. See our

A Great Record

No incubators or brooders on the market can show such a record as that achieved by The Prairie State machines. Their popularity which has made them the choice of both beginner and expert to the extent that they are considered the highest type—most practical and successful of all others is the result of actual superiority of material, construction, hatching and rearing principles.

Prairie State Incubators and Brooders

have always embodied the very best known principles of artificial incubation, supplemented by the best skilled construction and high-grade material. That's why they prove the best in actual use. The Sand Tray feature alone is sufficient reason for preferring a Prairie State to any other incubator. The Universal Hover is years ahead of ordinary brooding devices. When such experts as Edward Corning, of Bound Brook, N. J. endorse and use them exclusively they must be the best. He writes:

"After trying your Universal Hovers we have discarded all others, and intend to use them exclusively, as they give perfect satisfaction."

Let us send you our 1910 catalogue—it will deeply interest you. Write for a copy to-day.

THE LITHOTYPE COMPANY
ELGIN, ILL.

Poultry Doctor book for full particulars about this and other diseases of poultry. Price, 50 cents.

Question—(1) Why is it that all the large egg farms are stocked with White Leghorns instead of Buff or Brown? (2) How long are they kept as egg layers before replaced? (3) Is there a ready market for the old stock or is the meat too tough? (4) What month should one hatch Leghorns for winter eggs? A. B.

Fargo, N. D.

Answer—(1) Because the White Leghorn has been bred for egg production to a greater extent than the others. (2) Two seasons at the most. (3) There is always a ready market for poultry. (4) April, May and June.

Question—(1) Would it degrade the quality of my stock to mate the cockerels and pullets of one hatch? (2) What is line breeding? (3) How large a house does it require for fifty chickens, Leghorns-Brahmas? (4) Is oats a good feed in the sheaf? Athens, Ohio. H. L. M.

Answer—(1) Yes. (2) See article in this issue. (3) A house 12x24. (4) Yes.

Question—(1) Habits of the guinea fowl? (2) Care and management? (3) Market for the stock? C. L. M.

Royal Oak, Mich.

Answer—The book, "Guinea Culture," will give you more information than we can in this department. Price, 25 cents. Guineas are being raised very extensively in the southwestern states at the present time and are being marketed in the large cities, where they are being used in place of wild game. There is a big demand for them, and this demand is rapidly increasing.

Question—Will you please give me through the columns of your paper the Standard size of exhibition coops for chickens? H. H. H.

East Liverpool, O.

Answer—24x24x30 inches.

Question—(1) How many B. P. Rocks can I keep in a house 10x12 and a run 75x20? (2) Is a tin brood coop unhealthy for chicks? (3) What is the best cure for scaly legs? (4) What should a B. P. Rock cock weigh? Thanking you in advance for your favors, I remain, J. J. P.

Germantown, Pa.

Answer—(1) About 35. (2) No. (3) Sulphur ointment. (4) Nine and one-half pounds.

Question—(1) Let me know what is the cause of turkeys' heads swelling up on one side, run sideways and seem to be blind, but won't move until made to? Head keeps on swelling for a few days and then they die. (2) Is one gobbler enough for twelve hens? Central Lake, Mich. M. D.

Answer—(1) This is what is known as black head. There is no cure that we know of. See our "Poultry Doctor" book for full particulars about this and other poultry diseases. Price, only 50 cents. (2) Six females to one male is about right proportion.

Question—Will you kindly answer in your "Question" column of the next issue of American Poultry Journal whether New Haven, Conn., and that vicinity desire a brown-shell egg in preference to a white-shell egg, and if

Look Him Right In The Eye

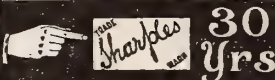

Two sorts of agents claim that disk-filled or other complicated, hard-to-wash, out-of-date cream separators are modern and easy to clean. One sort knows better, but hopes you don't, because he wants to sell you that kind of machine. Look that fellow right in the eye—tell him you do know better and that he can't fool you. The other sort of agent is simply mistaken—he does not know the facts. Tell him to look at a

Sharples Dairy Tubular Cream Separator

Tell him it has neither disks nor other contraptions, yet produces twice the skimming force, skims faster, skims twice as clean and washes several times easier than common separators. Wears a lifetime.

The World's Best. World's biggest separator works. Branch factories in Canada and Germany. Sales easily exceed most, if not all, others combined. Probably replace more common separators than any one maker of such machines sells.

March catalogue just issued.

Send for it today. : : :

Oakes Mfg. Co., Box B, Tipton, Indiana

Question—(1) Which makes the best winter and early spring pasture for chickens, rye, wheat or winter oats? (2) Are eggs that are tested out (unfertilized) fit for any use? If so, what, and how long will they keep? W. E. W.

Hidalgo, Ill.

Answer—(1) Rye. (2) Unfertilized eggs that are tested out the third or fourth day may be used for cooking purposes. After the fourth day they should be used for feed for the little chicks. They should not be kept for any great length of time.

Question—I have fourteen Rose Comb Rhode Island Reds that are two months old. When they were about three weeks old the front half of their comb got a dark blue and is that way yet. I feed the prepared feeds and table scraps. Is this a serious trouble? If so, what is cause and remedy? W. F.

Steward, Ill.

Answer—This is probably indigestion. Give plenty of green food and grit; also see that your brood coops are properly ventilated.

Question—What is the matter with my young chickens? They stand around with their eyes closed; they eat heartily; have free range to oats, and I feed corn and wheat. They were hatched by hens. Freetown, Ind. M. F.

Answer—An overabundance of lice is the trouble. Procure some good lice powder and use as directed.

Question—(1) How many points should there be in the comb of a Single Comb White Leghorn cock or cockerel? Is six or seven too many or four not enough? (2) How many White Leghorns can be kept in a divided house 15x10, making two parts, each 7½x10, with a yard about 7½x20 for each pen? (3) In a double-walled house, well covered with roofing material, if the windows are replaced by muslin ones, does there need to be curtains in front of the roosts? (4) Last winter when I went out in the morning the walls inside were covered with frost. Can you give the cause of this other than the hens keep it warm while on the roost, and after they get off in the morning it grows cold? H. K. D.

Essex Junction, Vt.

Answer—(1) Five points. (2) Twelve in each pen. (3) Yes, in a cold country like Vermont. (4) This is caused by poor ventilation. Where the house is properly ventilated frost will not accumulate on the walls.

Question—(1) Is poultry raising practiced extensively on the Pacific coast, especially in the states of Washington, Oregon and nearby states? (2) How do you figure the climate there would be adopted to general poultry raising? (3) Do you think it more preferable climate in Washington than here in Iowa, where we have very severe weather, both hot and cold? M. L. P.

Council Bluffs, Ia.

Answer—(1) Yes. (2) Good. (3) Yes. The Pacific coast is rapidly forging to the front in the production of poultry, and some of the largest and most successful poultry farms in the world are located in California. There are several good poultry papers published on the coast, including the Pacific Poultryman, Seattle, Wash., and the Petaluma Weekly Poultry Journal, Petaluma, Cal.

Are you befogged?

You can't get befogged about roofing when you steer straight for Genasco, and get it for every building on the farm.

Genasco Ready Roofing

is made of the only perfect waterproofer—Trinidad Lake Asphalt, Nature's own product. No mystery; no guess-work. Genasco has the life that lasts. Proven by over thirty years' use of natural asphalt.

The Kant-leak Kleet is the greatest help yet in applying roofing. Makes seams positively watertight without cement. Saves time. Enhances beauty of the roof. Supplied with Genasco rolls, when ordered.

Ask your dealer for Genasco. Gold Medal (highest award) Seattle, 1909. Mineral or smooth surface. Look for the hemisphere trademark on the roll. Refuse substitutes of similar looks. Write for samples and the Good Roof Guide Book.

ORR'S POULTRY FOODS.

For over a quarter of a century the name of D. Lincoln Orr has been favorably known to the poultryman as a breeder and fancier and manufacturer of poultry foods. In this time he has also been favored with election to the highest offices within the gift of the American Poultry Association, and his contributions to poultry literature have received world-wide recognition. From first to last and at all times Linc Orr has held the confidence of his fellowmen, and in particular the esteem of the poultrymen.

With all this, he is probably best known as a manufacturer of poultry foods. Orr's Digestible Mash and his Superior Brand Scratching Feed have been before the public for years, and today, by merit alone, enjoy a universal demand.

Of late Mr. Orr has included Alpha Meal in his line. This is a thoroughly baked preparation similar to toast—many call it grape nuts—and will keep in any climate under any conditions. Regarding this, Mr. Orr writes: "My reputation and guarantee are with this food." In Alpha Meal we believe Mr. Orr has a product that will prove its extra food value under every condition. In particular we can recommend it for growing chicks and moulting and laying hens. Here it will surely prove a popular favorite among poultrymen looking for profitable results from poultry.

Write for samples and further particulars. Address D. Lincoln Orr, Box 5, Orr's Mills, N. Y. H. P. Schwab.

"THE WYANDOTTES."

We are just in receipt of a revised edition of a book entitled "The Wyandottes," published by the Reliable Poultry Journal, Quincy, Ill., and find that it is an authoritative text book and instructive treatise devoted to the different varieties of the Wyandottes, viz.: Silver, Laced, Golden, White, Buff, Black, Silver Penciled, Partridge, and Columbian. The text and illustrations are based on the changes to appear in the 1910 American Standard of Perfection, and the book is invaluable to breeders of Wyandottes who wish to anticipate future Standard requirements. It was edited by J. H. Drevenstedt, a breeder and judge of twenty-five years' experience.

"The Wyandottes" consists of 160 pages, 8½x11½, printed on first-class paper, and is bound in heavy paper, with a handsome embossed cover design. It is fully illustrated by Franklane L. Sewell, A. O. Shilling, I. W. Burgess and others, and in addition to eight full-page latest type Wyandotte charts by Sewell there are three Sewell color plates of Silver Laced, White and Partridge Wyandottes.

The price of "The Wyandottes" is \$1 per copy, postage prepaid. Send your order to American Poultry Journal, Chicago, Ill.

CORN HARVESTER.

A most practical corn harvester is made by the New Process Manufacturing Company, of Salina, Kan. It will do almost anything that a corn binder will do, and costs only a fraction as much. With it a man can cut and shock from four to six acres a day, and it is so simple in construction and operation that a boy can run it. It has been sold in every state in the Union and has given universal satisfaction. It will pay for itself in less than one season, and is so compact and well made that it will last for years.

If you will write them, mentioning this paper, they will send you full particulars.

Frank J. Overstreet, Kiowa, Kan., the old and well-known breeder of Barred Plymouth Rocks, has some choice stock that he is anxious to exchange for some of Uncle Sam's promise-to-pay. Mr. Overstreet has in the past produced some exceptionally fine specimens and is now prepared to supply the wants of those who desire good stock and at prices that are right.

George M. Kline, Downers Grove, Ill., the man who knows how to produce good White Wyandottes, reports some extra good cockerels this season and says they will be sure winners at the coming shows. Better secure one now while you can get first choice. Write him and mention American Poultry Journal.

G. A. Barnett, R. 1, Clinton, Ill., reports 200 fine Barred Rock cockerels ready to ship, and if taken soon will sell for \$3 each. Later these birds will be priced at \$10. Now is your opportunity. Order one or more today, and mention American Poultry Journal.

SPECIAL RATES FOR JULY

We will sell eggs from our best pens of Buff and Black Orpingtons during months of July and August at \$2 per setting of fifteen.

Rock-Bottom!

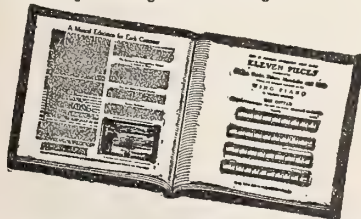

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. **Remember: all freight charges prepaid, no matter whether you keep the piano or not.**

Send for the best, safest, most instructive book of piano-buying information ever compiled; the **Book of Information FREE!**

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

ORPINGTONS

acknowledged the world's best. After June 1st I will offer eggs at less than half their value. This is chance of your life to get in line for some of my strains of Orpingtons. Never in my twelve years breeding Orpingtons have I had such youngsters as I have at present time large broad, deep bodies, heavy bone, shape and color to burn. As I was the first importer of Buffs to America and have won over 1,200 prizes, I believe I have some of the best birds in America today. June is month to hatch the winner for late winter shows and can furnish the eggs that will set you in line for blue ribbons. Write for prices. Booklet free. : : C. E. Vass, Washington, New Jersey

R. and S. C. Black Minorcas and R. C. Brown Leghorns

Special sale on Leghorns this month, 100 females that must be sold. Also 50 S. C. Minorca hens. These birds were used in our own breeding pens this year. After Sept. 1, we will offer 500 youngsters for sale. The birds will be ready for the fall fairs, and will be fit to win at any show. Our big 30-page catalogue and special list is free for the asking.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

ROYAL BLUE BARRED ROCKS

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York, 1909.

SWEEPSTAKES CHAMPIONS

—AT—

New York and Boston, 1909.

The "Royal Blue" Barred Rocks have produced more winners at the World's Greatest Shows for 25 years than All Others. I sold three Royal Blue Cockerels in my recent New York exhibit for \$500. I breed White Rocks, White and Columbian Wyandottes that win in strongest competition. 2000 CHOICE Exhibition and Breeding BIRDS FOR SALE at honest prices. EGGS from Prize Matings—1 Setting, \$5.00; 2 Settings, \$8.00; 3 Settings, \$10.00. \$25.00 per 100. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

"BOSTON BLUE" First Prize Sweepstakes Champion and Lawson Cup Winner at Boston, 1909.

BUFF WYANDOTTES THE KIND THAT WIN

At Chicago, 1909, in one of the strongest classes of Buff Wyandottes ever shown in the West, my birds won 1st, 2d cock, 2d, 3d hen, 4th, 5th ekl., 2d pullet and 3d pen, besides several specials, and

Again Show Their Superiority

Am now booking orders for eggs from prize winning matings at \$3, \$5 and \$10 per 15. Also have a few extra choice breeding and exhibition birds to spare at reasonable prices, considering quality.

Write to the largest Buff Wyandotte farm in the world for catalogue; mention A. P. J.

Successful Egg Farming

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them **regularly**, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of **over \$12,000 last year**. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the **Farm Journal**, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the **Corning Egg-Book** and the **Farm Journal** for two years, and **American Poultry Advocate** 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
727 Hogan Block, Syracuse, New York

Special Sale, Kellerstrass Strain. Having sold the farm on which I am now located, and not having found another suitable location, I have decided to offer for sale for Sept. and Oct. delivery all of my May and June hatched chicks at the following prices: Pullets, \$2; cockerles, \$3. Terms cash with order. This is your opportunity to get quality at a little more than butchers' prices. Order today.

L. A. Glessman, 2 Member Am. White Orpington Club - Mars, Pa.

L. A. Glessman : Member Am. White Orpington Club : Mars, Pa.

At four large shows, i. e., Kenosha, Chicago, Milwaukee and Waukesha, during the past season, we won 8 firsts, 4 seconds; 7 thirds, 6 fourths, silver cup and several shape and color specials and at Milwaukee, besides winning 1, 2, 4, 6, 7, 9 and 10 on pullets, we won the grand specials for best display in the American class. Our prize winners and their sires and dams are all in our yards from which we will sell eggs at \$5 per 15; \$9 per 30; \$12 per 45. Half price after May 15th. Will also sell 10 males and 40 females that are in our breeding yards at a great sacrifice.

Geo. H. Bie : : **Racine, Wisconsin**

REMEMBER, I have been breeding many of the most noted winners for past fifteen years for the leading shows of the UNITED STATES AND CANADA.

WHITE WYANDOTTES Many owe their SUCCESS to my strain. Past year I bred the winners for MADISON SQUARE, N. Y., ALASKA-YUKON EXPOSITION AT SEATTLE, CHICAGO, KANSAS CITY, LOUISVILLE, KY., INDIANAPOLIS, PITTSBURG, PA., MCKEESPORT, PA., YOUNGSTOWN, O., BOSTON, MONTREAL, OTTAWA, ONT., and several other shows—all the past season, a record not equaled by any other breeder. These were prominent winners of many 1st prizes and specials for shape and color. My type is the ideal type and that is why they win under so many different judges. I have the best lot of young stock I ever had and many early ones ready for the early shows fit to win in any competition. Now all stock purchased can be returned at my expense if not satisfactory. If you have not had the results, try me. **YOUR SUCCESS IS MY SUCCESS.**

J. H. JACKSON : LOCK BOX 88 : HUDSON, MASS.

The Range With A Reputation

A Perfect Baker Economical In Fuel

That's what every housewife seeks in a range—one that is absolutely dependable, every day, year in, year out.

Built on honor, of the best materials, the Great Majestic outwears three ordinary ranges. It is the only range made entirely of charcoal and malleable iron. Malleable iron can't break—charcoal iron won't rust like Steel.

The seams of the *Majestic* are riveted (not put together with bolts and stove putty)—they always remain air tight, neither heat, nor cold affects them. The *Majestic* is lined throughout with pure asbestos, 1/2 inch thick, held in place by iron grating—you can see it—and it stays there always. Air tight joints and pure asbestos lining assure an even, dependable baking heat, saving one-half the fuel.

The Great and Grand
MAJESTIC
Malleable and Charcoal Iron
RANGE

All doors drop to form rigid shelves. No springs. Malleable iron oven racks slide out automatically, holding whatever they contact. The open end spans down away from shoveling ashes. ventilated ash pit prevents floor from catching fire.

The Great and Grand
MAJESTIC
Malleable and Charcoal Iron
RANGE

The reservoir is all copper and heats like a tea kettle, through a copper pocket, stamped from one piece of copper, setting against left hand lining of fire box. It boils 15 gallons of water in a very few minutes and by turning a lever the frame and reservoir moves away from the fire. This feature is patented and is used only in the *Majestic*.

It is the best range at any price—a range with a reputation and it should be in your kitchen. It is for sale by the best dealers in nearly every county in 40 states. If you don't know who sells them in your vicinity, write us and we will send you our book, "Range Comparison." Everyone thinking of buying a range should first read this booklet.

From the Kellerstrass Farm

Last month we made some awfully big statements in our advertisement in this journal. Well, if you will read the following 3-page ad you will see that we always do as we agree. We are always in a position to produce the evidence.

Now the following 3 pages ought to be very interesting to the poultry industry all over the world. It simply goes to show what can be done if you breed and raise the right kind of stock—stock that has vitality behind it—stock that is bred right.

Some people might ask why it is that the Kellerstrass birds produce such wonderful results. Well, for the first time in history we will tell you why: **Because we started with the right kind of stock.** The first male bird that we purchased for a foundation, with which to start the strain, was bought at a price of **Five Hundred (\$500.00) Dollars** which we paid to Mr. Kirby for **one single cock bird** years ago. This evidence has never been published, nor has it ever been shown to any one outside of Mr. J. W. Crawford, Secretary of Madison Square Garden Show at New York City, to whom this evidence was shown last year.

We simply make mention of these facts to show you why it is that the Kellerstrass Strain produces such wonderful results. Kindly go over each testimonial carefully and see what our customers say. Remember that each and every one of the following testimonials are from our customers—reputable people. Also kindly note the dates of these testimonials—the majority of which came into the office within two weeks' time. **The editor of this paper** has the full name and address of every one of these parties, and any one wishing any more information can write to the editor of this paper, and we will give One Thousand (\$1,000.00) Dollars if we cannot show the original letters and original sworn affidavit for the following testimonials:

Georgia, August 8, 1909.

Mr. Ernest Kellerstrass, Kansas City, Mo.

Dear Mr. Kellerstrass: Pardon my delay in not mailing the egg record asked for before, but as I wished to keep the original I had to make you a copy, and I have been too busy to do this before; and besides, the original was not as neat as I would like to send out.

I also enclose you affidavit properly executed and signed by Mr. J. W. D., overseer of my poultry yards.

Trusting that you will find the above papers satisfactory, I beg to remain,

Yours very truly,
(Signed) P. J. H.

I hereby certify that Hen No. 503, of the Kellerstrass Strain, laid 263 eggs in 272 days, from November 16, 1908, to July 15, 1909, and the egg record furnished Mr. Kellerstrass is true and correct to the best of my knowledge.

(Signed) J. W. D.

State of Georgia:

August 9, 1909.

Then personally appeared J. W. D. and made oath that the foregoing statement, by him subscribed, is true to the best of his knowledge and belief.

(Signed) _____
Notary Public.

Oklahoma, June 19, 1910.

Mr. Kellerstrass.

Dear Sir: I believe I have as good a layer of your strain as there is anywhere on record, but not thinking it necessary, I have not kept a record of her.

She began laying when about 6 months old. It was on the 10th day of October she laid her first egg. She laid every alternate day about one week, then laid an egg every day, and she laid right through the entire winter and up till the first of May, then went broody. I broke her up, and she was laying again in ten days. I have only ten hens. I set two of them on twenty-six eggs, hatched twenty-five healthy chicks. Later I set two hens on thirty eggs and hatched twenty-seven fine chicks. I have never had a crippled or deformed chick among them, but from the time they are hatched they are large, big-boned, big-footed and fine. I have made not less than \$60 clear from my ten pullets this spring, besides hatching a fine flock of my own and returned lots of money. I have hens that weigh 9 and 10 lbs., snow-white. The Kellerstrass strain Crystal White Orpingtons is the best fowl on earth for any purpose—they lay, weigh and pay. I would not take \$500 for my small flock, and wish to thank Mr. Kellerstrass for kind treatment and honest dealing.

Mrs. B. S.

California, June 28, 1910.

Dear Sir:

In a setting of eggs from you I got just one pullet. She laid at 5 months and in her fifth, sixth, seventh and eighth months she laid 100 eggs—225 in the year. All the eggs from her pullets were sold. They laid nearly as well as she, but I have no report of hatches from them. The report is what she did by her lone self and one male bird to help.

Report—Five-months-old pullet; what I did with one pair:

Eggs.	Eggs.
Laid first month..... 24	Laid eighth month..... 15
Laid second month..... 26	Laid ninth month..... 20
Laid third month..... 23	Laid tenth month..... 15
Laid fourth month..... 27	Laid eleventh month..... 15
Laid fifth month..... 20	Laid twelfth month..... 5
Laid sixth month..... 25	
Laid seventh month..... 10	Total..... 225

Two hundred eggs set; 25 eggs sold; 151 eggs hatched; 62 were pullets—eggs laid by these were sold; 89 were cockerels; 50 pullets grew to maturity—sold all their eggs; 80 cockerels matured.

S. G.

Mississippi, June 18, 1910.

Mr. Ernest Kellerstrass, Kansas City, Mo.

Dear Sir: I feel that it is my duty to write you of the amazing success I have met with in my first year as a breeder, as every success is a boost to the fancy end of the business, and as you have done, and are still doing, so much to further the interest in fine stock.

I have used an average of about thirty hens in my breeding pens and have done very little advertising and have done something over \$1,000 worth of business since last fall. My advertising had to be discontinued, as after it has run a limited time I was simply swamped with orders, and I have returned as much as I have accepted. My facilities will be largely increased another year, as I am now planning and installing quite an extensive plant with unlimited room.

Wishing you and every breeder of White Orpingtons great success, I am,

Yours very truly, S. B. S., Jr.

West Virginia, June 16, 1910.

Mr. Kellerstrass.

Dear Sir: We are more than satisfied with the results from the trio you sold us last November. We had twenty-three fine chicks hatched the 12th day of December, and those chicks commenced to lay eggs (part of them) when they were four months and three days old, and the very day they were five months old three of them were setting on their own eggs. Now, Mr. Kellerstrass, we certainly feel gratified with the results from our Kellerstrass pen, and, what is more, that we are dealing with an honest man. In this batch that I have been telling you about we have two pullets that are almost perfect, so near perfect that we think might compare favorably with Peggy, but I do not know what you might think about it. Going further to show the percentage of fertile eggs, Dr.

_____ bought seven eggs of mine (from your hen 150, could not let him have a full setting at that time) and put them in the incubator at the same time that he had gotten a setting of eggs at \$1 an egg from Mrs. _____ of _____ and put them under a hen. Seven of Mrs. _____'s eggs hatched out of fifteen—four of mine hatched and one died in the shell. Since then Dr. _____ told me that he had been won over to the Crystal White Orpingtons, as he had never seen as beautiful nor as sturdy stock as those we have in our yard of 30x75 feet.

Continued on Next Page

From the Kellerstrass Farm

As to the financial point, I sold seven two months old chicks this afternoon for \$20. I don't know whether I sold them too cheap or not—did I? I could have sold all the eggs I had at \$5 a setting, but have only sold five settings and a half, being all I could spare.

This is all. Hoping that your patrons are as well pleased with their dealings with you as we have been,

Yours truly, Mrs. W. T. R. & Son.

New York, June 22, 1910.

Ernest Kellerstrass.

Dear Sir: Will say that I have done a good business from the few that I have. The eggs I received from you were hatched out the 29th of April, 1909. Pullets commenced to lay first of November and kept it up all winter, and still at it up to this date, June 22. All my neighbors slacked up on eggs in May; not so mine. June 17 I gathered an egg for each hen on that day, something you can't say yourself. I advertised stock direct from you and have sold all I had to spare at \$5 per setting, and all my customers have had first-class results from my eggs, and some have had a chicken for every egg they paid for. I have had not one customer as yet find any fault, nor I haven't had to duplicate a single order. How is that for my first season with Kellerstrass White Orpingtons? And have shipped eggs into Vermont, Connecticut, Pennsylvania and some around in my own state (New York). I have had a great many inquiries for price that did not materialize, although they all want Kellerstrass stock—they want it for nothing. Now, Mr. Kellerstrass, you know I paid you \$10 per setting for eggs, and I didn't consider \$5 per setting any too much for mine, so that's the price I set, and that's the price I have received for mine, and at that I have turned away some orders. Ten dollars was a large price for me to spare for eggs, but it has paid me well and all these folks that are afraid to put up \$5 or \$10 for your eggs I can only say are losing money every day, and I think they are looking for dollars to grow on bushes, and they will never make an extra cent with poultry, for it can't be done with dung hills. Now can you say you have beaten me in your very first season, and only twelve pullets to start with?

Thanking you for your courteous and liberal treatment, I am

Yours very truly, E. W. F.

California, June 18, 1910.

Ernest Kellerstrass, Esq., Kansas City, Mo.

My Dear Sir: I have a pen of one rooster and four hens a year old last April. The first egg was laid on the first day of last December, and within ten days or by the 10th day of December all four pullets were laying. Since then I have gathered from the four 531 eggs, ranging from 122 lowest to 147 highest. In December I either ate or sold the eggs in market, as I considered it too early to save for breeding. Since the first of May there has been little demand for hatching eggs and again most of them have gone to the table or the market. I have no record of the returns on such eggs, although I have a record of all sold for hatching. Altogether I put in my incubator 100 eggs, from which I hatched seventy-one chickens, and have raised sixty-eight. I sold 152 eggs for hatching at 50 cents each. I duplicated orders where a poor hatch resulted from careless handling by the carrier to the number of forty-eight eggs. I gave away two hatchings, or thirty eggs, and exchanged two hatchings, or thirty eggs.

Thus I have from my pen of four pullets, besides what I have eaten or sold in the market, \$76 in cash and sixty-eight beautiful young chickens, most of them two-thirds grown. At a recent poultry show in Marysville, Cal., I exhibited a trio of young ones and was awarded a sweepstakes over all competitors. This sweepstakes carried a prize of a beautiful Axminster rug, worth probably \$15. I have sold a trio of the young ones for \$20. Hence my total assets from the pen of five, raised from eggs secured from you, are three cockerels, sold last fall, \$15; hatching eggs sold, \$76; one cockerel and two pullets sold, \$20. On hand, the original breeding pen and sixty-five young chickens, which I am holding (for what I can spare) at \$5 apiece and up. This makes no account of what eggs I ate or sold to the trade.

In conclusion, I will say that I am proud of my birds and satisfied with the returns—\$436 in twelve months.

Very respectfully yours, J. A. F.

Secretary, California State Agricultural Society.

Illinois, June 22, 1910.

Ernest Kellerstrass, Esq., Kansas City, Mo.

Dear Sir: I have made up a record of egg-laying of one of my pens of the Kellerstrass Crystal White Orpingtons for four months, from January 9, 1910, which I enclose. I kept no record of the individual egg hatching, but that of the pen of four. I consider the record of sufficient interest to send it to you.

Very respectfully yours, E. P. B.

Record of pen of four pullets of Kellerstrass Crystal White Orpingtons, raised by Dr. E. P. B.:

No. 52—Laid first egg on January 1, 1910; laid in January, 17 eggs; February, 27 eggs; March, 27 eggs; April, 24 eggs. Total, 95 eggs.

No. 53—Laid in January, 7 eggs; February, 22 eggs; March, 31 eggs; April, 29 eggs. Total, 89 eggs.

No. 54—Laid in January, 3 eggs; February, 20 eggs; March, 21 eggs; April, 10 eggs. Total, 54 eggs.

No. 55—January, 3 eggs; February, 22 eggs; March, 19 eggs; April, 1 egg. Total, 45 eggs.

A total of 283 eggs from the four pullets during the four months. One hundred and eleven chickens have been hatched and raised to this date from these four hens.

E. P. B.

Virginia, July 4, 1910.

Mr. Ernest Kellerstrass, Kansas City, Mo.

My Dear Sir: I am just a little bit over a year since I began to sell my first eggs from a pen of utility birds bought of you late in the season before, and since—from the descendants of those five birds—I have sold \$1,000 worth of stock and eggs. The inquiries are coming in well just now and I hope to double that amount in the rest of this year.

I kept the record of those four hens I got from you summer before last for the first year and you have been publishing it in some of your papers this season. It has advertised me quite a bit. I am more and very much obliged to you.

Last year that pen I got from you the season before had raised from them over a thousand chickens. This season I will have 1,000 from them and their children on my yard, besides having sold 2,000 eggs and quite a lot of chickens. Some of my pullets this season are laying before they are five months old.

I think I am in a fair way to have success with my White Orpingtons beyond my most extravagant anticipation.

Like a half-witted negro who used to work for my mother used to say, "I thank you and thank God too."

Yours very truly,

Mrs. L. C. C.

New York, June 29, 1910.

Mr. Ernest Kellerstrass.

My dear Mr. Kellerstrass: The hen received and she is a beaut.; laying every day. Thanks! I myself think a man that had Kellerstrass Crystal White and would advertise simply Crystal White is a fit subject for the Hill.

The man that has brought Kellerstrass White Orpingtons to the front has spent thousands of dollars to do so and has gotten together such a strain that anybody wanting Orpingtons would have no other. Don't worry; I will have some of the benefit of your money and brains and honesty when I want to sell my eggs.

In regard to what is in it: On my flock I have sold \$75 worth of eggs from several hens and have about 100 beautiful young chicks worth at least, just as they are (quick sale), \$200, besides we have had lots of eggs to eat. In all I think I can kind of make some of the so-called poultry fellows sick. I have taken Plymouth Rocks, Wyandottes, Buff Orpingtons and some half Orpington and half Rocks, and put them right under the same hen, given them exactly the same attention and feed, etc., and they can't stand for a minute what my Kellerstrass chicks stand. We have had only about three die, and others I have mentioned, we have lost at least fifty. How is that? What does that show, only vitality? I could write you a book about mine, of facts that would make them sit up and wonder, but I don't wish to tire you reading. I will, in closing, say that I for one certainly do appreciate your treatment and I trust you realize it. Believe me, I am

Sincerely your friend,

J. H. C.

Mississippi, June 12, 1910.

Mr. Ernest Kellerstrass, Kellerstrass Farm.

My dear Sir: Have had more orders than I can fill. My hens have made a net profit of \$20 per hen since the 1st of

From the Kellerstrass Farm

January, not counting the stock that I hatched from them for my own use. I have pullets that were hatched the 25th day of January, commenced laying on the 10th day of May (3½ months old to the day). Now how is that?

My eggs have hatched exceedingly well this year and have only had one kick from all the eggs that I have sold and just for luck I sent the party another setting, free of charge. Will say here that your ribbons helped me out in a number of cases and helped me to land some orders with the doubting Thomases, but still I didn't need these orders. I could have sold thousands of dollars' worth of stock and eggs if I had them to advertise. The whole South seems to be crazy for Kellerstrass Crystal White Orpingtons. The demand is far greater than the supply and will be for several years to come, especially down in this country. These people have just woke up to the crow of the Crystal White Orpingtons and they won't rest until they get together some of the brown berries from the pretty white "Biddies."

Hoping these few lines will be of some interest to you, and wishing you still greater success with the best chickens in the world, I am, yours for a booster of the Crystal Whites,

A. B. McC.

Texas, June 20, 1910.

Mr. Ernest Kellerstrass, Kansas City, Mo.

Dear Sir: I will write and tell you a little about my chickens. I have only had eleven hens to get eggs from this season and this is the only season that I have ever advertised eggs for sale, and I only had a short card in the Dallas News three months. It brought more calls for eggs than I could fill. I advertise the Crystal White Orpingtons, Kellerstrass Strain. I have not kept strict account of what any one hen has produced in all, but have kept some account of my fowls for my own reference. My estimate is made up to June 15. I have sold 515 eggs; set for myself and branch farm 318 eggs; used culinary purposes, 81 eggs. So the total number laid since January 1 were 913 eggs in 4½ months. I have two pullets that were hatched January 9, laying. One laid her first egg June 12, when she was five months and three days old. The other laid her first egg June 17, when she was five months and eight days old. Of the cockerels that were hatched January 9, I weighed three of them April 21, at the age of fourteen weeks and four days; they weighed 4 lbs. each.

I have one hen that began laying December 1 and laid until March 15, 105 eggs; then got broody, set two days, laid one more egg, which was 106 eggs. I have some more good layers, but she is my best. I could write chicken talk till you would get tired of reading, so I guess I better close for this time.

Very respectfully,

Mrs. W. A. R.

Missouri, June 18, 1910.

Kellerstrass Farm.

Dear Sir: I have only the Kellerstrass Strain of Crystal White Orpingtons. When I advertise, I always use the words Kellerstrass Strain, because I get better prices and more orders.

Last spring I had one pullet which commenced laying in less than four months. In September she laid almost every day. I saved the eggs and set them at various times under different hens and hatched fifty strong chicks. Last winter and early this spring I again saved and set the eggs laid by this same pullet and hatched seventy-five strong chicks.

The pullets hatched in September and October commenced laying first part of March and latter part of February. I saved and set these eggs and hatched 175 chicks.

This single female produced 300 chicks in one year.

I have tried several breeds, put them in separate pens, also Crystal White Orpingtons, Kellerstrass Strain, in different pen. I fed all birds alike; all had same conditions. I kept this up for six months during the winter. The result was that the

Crystal White Orpingtons laid twice as many eggs as any of the other breeds. I also find that the Crystal White Orpingtons are very hearty, easy to raise, grow quickly. My experience has proven me that it is the best all-around bird.

Yours truly,

Dr. A. W. G.

Tennessee, June 16, 1910.

Mr. Ernest Kellerstrass.

Dear Sir: I have kept no individual record of any hens, but have of the pens. Pen 1 has four hens and has done the best. Since January 1 I have sold and set nearly 300 eggs. I have 75 chicks out of the 100 eggs, ranging from nearly five months to ten days old. Some of the pullets are laying. Have sold twelve settings at \$5 and ten chicks eight weeks old at \$2 each. This averages, for the 5½ months: Cash for eggs, \$15; cash for chicks, \$5. Total, \$20 per hen in cash. Eighteen chicks per hen, now living, and are worth at least \$1—around \$18 value in chicks, thus making returns so far, per hen, of \$38 for six months or \$76 per year.

Did not begin to keep record until June 1. I have sold all the eggs I could spare and am behind now on orders.

Yours truly,

W. T.

Pennsylvania, June 16, 1910.

Mr. Ernest Kellerstrass, Kansas City, Mo.

My Dear Sir: I have only a town lot—say 200 by 45 feet. I can keep only a few birds, but on this lot I raise about 150 chicks. At present I have about 100 Orpingtons—all your strain—and about 75 Rocks. My birds are all doing well, considering that we have had rain almost daily for the last 1½ months. As to Rock, contemplate cutting them out, as nine-tenths of my egg sales were Orpington. Yes! I advertised your strain, and was unable to fill the orders; returned several checks and have only about thirty eggs on hand now. From eighteen hens and pullets I sold over \$200 worth of eggs for setting, and every one of them were sold away from home.

Kindly quote me a price on a 1 or 2-year-old cock that you think good enough to win in some of the smaller shows this winter.

Pardon me for taking up so much of your valuable time.

Very truly yours,

J. C. P.

Indiana, June 24, 1910.

Ernest Kellerstrass, Kansas City, Mo.

Dear Sir: I herewith enclose you a report from one of the pullets I raised from eggs I bought of you in 1908. I named this bird Dora. She was hatched May 28, 1908, and laid her first egg November 3.

Eggs.	Eggs.
She laid in November.... 14	June 25
December 17	July 16
January, 1909 22	August 20
February 21	September 16
March 26	October 12
April 21	
May 19	Total.....229

Now I did not set the eggs from this pullet from the following months: November and December, 1908, and October, 1909, which is 43 eggs which I did not set. And I set the 186 eggs under different hens and hatched 156 chicks from those eggs, and I raised 87 pullets and 62 cockerels. Now I have several more hens from your strain that are very nearly as good. Now I have kept this hen as a test bird, as I am raising the Mr. — strain also, and I was anxious to know which strain was the best laying strain, and my experience has taught me that the Kellerstrass Strain are the best-laying birds.

Yours very respectfully,

Mrs. J. H. W.

We simply publish the above testimonials to show the commercial side of the Kellerstrass Strain of Crystal White Orpingtons, simply to show what "Big Egg Producers" they are, and what money-makers they are.

Remember, we have testimonials and affidavits even far better than the above, but they are of earlier dates. We have testimonials and affidavits showing where some of our customers even produced over Four Hundred (400) chicks from one hen in less than twelve months' time. From time to time we are going to publish all these things in this journal. There will be more and interesting facts in our advertisement next month in this journal.

Kellerstrass Farm, 98 Westport Road, Kansas City, Mo.

ONLYA FARM**WHITE WYANDOTTES**

1st Boston ckl., 1909, and one of his mates.

We now have upwards of a thousand young promising cockerels and pullets, some ready for the September shows, bred from seven carefully mated pens headed by such birds as the first Boston cockerel, 1909; 1st and 2d and 1st pen cockerel and 1st cock, Morristown, N. J., and 2d cockerel, Orange, N. J., 1910. All these birds were mated to carefully selected females, chosen not only for their qualities as show birds and good breeders, but also for their ability to produce eggs, our theory being that a bird—no matter how good a show bird—unless she is up in egg production she is useless as a breeder, as like produces like and therefore is useless to nine out of ten poultry raisers.

All our young stock are now on free range and we have been collecting eggs from our earliest pullets for the past three weeks.

Let us know your wants either for show or utility purposes and we can suit you in birds as well as price.

ONLYA FARM. Pox B, MORRISTOWN, N. J.

HALBACH'S WHITE ROCKS

Have you succeeded in raising birds that you think will win at that early show? If not, we can supply you with cocks, cockerels, hens or pullets that will surely "turn the trick" for you as we reared more and better chicks this year than ever before. This is saying a whole lot, when you consider the QUALITY it takes to win at CHICAGO, where we won the CHAMPIONSHIP in Jan. 1907, Dec. 1908 and again in Dec. 1909. Get in line with the strain that produces a larger per cent of show birds than any other. Remember that in producing QUALITY we have not lost sight of the practical UTILITY points of this grand breed. We have a fine lot of utility cockerels at \$4 each. These are well bred, big, husky fellows. If you want the best in either old or young stock, write "THE POULTRYMAN WHO TRIES TO PLEASE."

H. W. Halbach, Box A, Waterford, Wis.

ORPINGTONS

Buff, White, Black and Diamond Jubilee

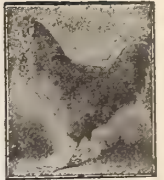

I have high class quality at low down prices. The genuine low down body and correct type stand out prominently in strain and color equal to any.

I Can Please You

If you will give me a trial order. My flock of young stock is extraordinary fine this year. Better order now. Will dispose of some of my breeders at greatly reduced prices and eggs are half price the rest of the season. Write me for prices.

Pine Ridge Farm, H. B. Prescott, Box 38, Derry Village, New Hampshire

SIBLEY'S R. C. RHODE ISLAND REDS

(Good as the best, better than the rest). Our birds have won 136 prizes at 16 shows; an average of 8 1/2 prizes at each show, (including 49 first prizes), at Chicago, Detroit, Indianapolis and Buffalo, since Jan., 1906. Compare these winnings with all others. Birds from our yards are winning first prizes all over North America. We will sell a limited number of choice young birds after September 1st. Catalogue sent on request. Please mention American Poultry Journal when writing.

To Know How Far the Hen is Toward the Laying Point.....	25
How to Pick Out the Hen That is Laying.....	28
To Know the Hens That Are the Most Prolific Layers.....	28
To Know How and When to Cull the Non and Poor Layers Out of the Flock.....	35
To Know the Ones to Sell and the Ones to Keep.....	42
Why Early Spring is the Best and Most Practical Time to Cull the Poor and Non-Layers Out of the Flock.....	43
How to Tell the Hen That Has Laid Out a Batch of Eggs, and Other Information Regarding Setting Hens.....	44
The Best Way to Break Up the Broody State.....	48
How Eggs Can Be Produced in Winter, and Some of Nature's Laws Regarding Egg Development Explained.....	51
How the Laying Organs Are Affected When the Hens Are Infested With Vermin.....	60
How to Avoid Wintering Hens That Are Likely to Be Poor Winter Layers.....	61
How Overfeeding Before Egg Development Starts May Reduce the Egg Production.....	64
The Laying Hen Should be Educated, When, How and Where How to Separate the Poor Layers from the Good Without Handling, or How They Will Separate Themselves.....	69
How to Buy Hens in the Fore Part of Winter, That Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring.....	73
How Roup and Similar Diseases Affect the Laying Organs of Hens; Also How the Laying Organs Become Disabled by Other Causes.....	74
Ten Ways to Suspect Hens That Are Not Laying.....	102
Three Ways to Prove Their Laying Condition.....	102

DON'T KILL The LAYING HEN

NO, don't kill your layers, for they are payers. And if you knew the **POTTER SYSTEM** you not only could pick out the laying hens, and thus avoid killing them, but you could also pick out the non-layers and drones and save your feed money. How many times have you taken a hen to the block and then after killing and dressing her found to be in full laying condition? Real money in her (in eggs) and you didn't know it. If you know the Potter System you will never purposely kill another hen, and this alone means the saving of many dollars in a short time.

NEW BOOK ON THE POTTER SYSTEM

Of Selecting Laying and Non-Laying Hens,
and Egg Production

Contains 100 Pages and 30 Illustrations

When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets, it contains, cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others; therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "Secret" family, and stop killing the laying hen, thereby greatly increasing your poultry profit.

The price of this great book is only \$1 and it will save you hundreds of dollars. It has done this for others and will do it for you. In order to provide every poultryman with a copy of this great book we will give you this book, a copy of **PROFITABLE POULTRY RAISING**, (treating on the subject of scientific and systematic poultry feeding for rapid growth and development and large egg production), and a full year's subscription to the oldest, largest and best poultry paper in America, all for \$1.25.

“Afton Farm”

Breeders For Sale

**S. B. & E. W. TWINING : "AFTON FARM"
YARDLEY, PENNA.**

Don't Build

the new hen-house or think of fixing up the old one until you get our large 100-page catalogue (over 100 illustrations) telling all about **POTTER SANITARY POULTRY HOUSE FIXTURES**, **VERMIN PROOF ROOSTS**, **PERFECTION FEED HOPPERS**, **SIMPLEX TRAP NESTS**, feeds and supplies of all kinds—just what the progressive, up-to-date poultry keeper wants to more profitably carry on his work. **POTTER FIXTURES** have been on the market over eight years and are used and recommended by thousands of poultry raisers. They are complete, convenient and sanitary and great savers of time and labor. The henhouse outfit shown above is but one of three styles and twelve different sizes which we make, so no matter how your house or pens are arranged, they can be completely and cheaply fitted up with **POTTER SANITARY FIXTURES**.

THE POTTER PORTABLE SANITARY HEN-HOUSE shown above is but one of several styles and sizes which we make. This house is 6x10 feet in size, completely equipped with two Potter Outfits, two pens, room for 15 hens in each. Can you beat this house for \$40? We now make the complete line of Portable (K. D.) Poultry Houses, Brood Coops, Pigeon Lofts, etc., formerly made by the Sanitary House Co., of Lemont, Ill. Any poultry keeper wanting complete, up-to-date and cheap houses and coops of any kind should not fail to get our catalogue fully describing these goods.

are what every poultryman wants, so that when eggs are high every hen more than pays for her keep. A full egg basket means a full pocket-book. Why not take time by the forelock and get in line to have a flock of all laying hens, not half layers and half drones and barren hens that keep you just even because of expensive feed. It's easy to have a flock of all laying hens if you will only do the same as thousands of other poultry keepers are doing and use

of selecting laying and non-laying hens and increasing egg production. This is the original system which tells you how to keep a flock of only laying hens and thus get more egg money. Right now is the time to lay your plans for a flock of winter layers by using the Potter System and picking out the layers from the non-layers, so that you keep only laying hens. You should not kill or sell a single hen until you know whether she is a layer or not. The Potter System teaches you this. Our 100-page book entitled, "DON'T KILL THE LAYING HEN," contains the complete POTTER SYSTEM and all the secrets of selecting laying and non-laying hens and increasing egg production. Below we give a list of some of the subjects covered.

How the Egg Grows; Nature Controls the Laying Organs; The Secrets of the Fetter System; How to Pick Out the Non-Laying Hen; How to Determine the First Stage of Egg Development; To Know How Far the Hen is Toward the Laying Stage; How to Pick Out the Hen That is Laying; To Know the Hens That are the Most Prolific Layers; To Know How and When to Cull the Poor and Poor Layers Out of the Flock; To Know the Ones to Sell and the Ones to Keep; Why Early Spring is the Best and Most Practical Time to Cull the Poor and Non-Layers Out of the Flock; How to Tell the Hen That Has Laid Out a Batch of Eggs and Other Information Regarding Setting Hens; The Best Way to Break Up the Broody State; How Eggs Can be Produced in Winter, and Some of Nature's

Laws Regarding Egg Development Explained; How the Laying Organs are Affected when the Hens are Infested with Vermin; How to Avoid Wintering Hens That are Likely to be Poor Winter Layers; How Overfeeding Before Egg Development Starts May Reduce the Egg Quality; The Laying Hens Should be Fed Well—When to Feed and When Not to; How to Separate the "Poor Layers" from the Good Without Handling; or How They Will Separate Themselves; How to Buy Hens in the Fore Part of Winter, That Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring; How Roup and Similar Diseases Affect the Laying Organs of Hens; also How the Laying Organs Become Disabled by Other Causes; Ten Ways to Suspect Hens That are not Laying.

If you want your hens to make you more egg money this winter than ever before, you will not delay in writing for our large catalogues and circulars telling all about our fixtures, houses, etc., and the Potter System. Send two red stamps to cover postage on our catalogues and your request will have prompt attention. Potter Poultry Products are for Particular Poultry People, and if you are particular, you will write us today.

VICTOR POULTRY YARDS

Canada's Best R. C. and S. C. Black Minorcas

Winners of the Red and Blue at the largest shows on the continent. During the last three years we have won more Red and Blue Ribbons than any other breeder of Black Minorcas on the continent at such shows as Boston, New York, Buffalo, Guelph, Toronto and London. We have also supplied a great many winners for our customers. We bred and raised the following winners at the last Madison Square, N. Y., Show: 2d S. C. cock, 1st S. C. cockerel and 2d pullet. When we sell a customer once he generally becomes a regular customer. We made the following sales last season to W. F. Lindenburg, director of American Black Minorca Club, Fort Wayne, Indiana: November 1st, 1909, 1 S. C. cock, 1 S. C. cockerel and 2 S. C. pullets, price \$100; December 5th, 1909, 2 S. C. pullets, price \$200, one of these pullets won 1st at Chicago; January 15th, 1910, 1 S. C. cockerel, price \$50; February 7th, 1910, 2 S. C. pullets, price \$50; February 7th, 1910, 10 S. C. hens, price \$100; February 15th, 1910, 3 S. C. pullets, \$15. Mr. W. F. Lindenburg made nearly a clean sweep at the Indiana State Fair. Please note the following letters from satisfied customers. We will give you some more next month.

Michigan City, Ind., Dec. 2d, 1909.

Mr. T. A. Faulds, London, Ont.
Dear Sir:—The birds arrived. They certainly are a prize lot and must say they are the best I ever saw. I am the proudest man in town today and cannot say too much about them. Which is the best bird, the smallest or the largest? I admire the smallest. Wishing you success, I beg to remain,
Yours truly,
E. F. Michelson.

Somerville, Mass., Nov. 18, 1909.

Mr. T. A. Faulds, London, Ont.

Dear Sir:—Birds arrived yesterday in good condition. The cock is simply elegant and is the first bird out of hundreds that I have purchased that was better than description, or even come up to description. He would be cheap at \$50. (Price of cock, \$10; hen, \$5.) Why, Mr. Faulds, you gave me this bird. If he can't win at Springfield good birds are certainly plentiful. It is a little too soon to report on the hen, but to tell the truth my eyes are all for the cock bird. Now, Mr. Faulds, you have done me a favor; have practically given me as good a cock bird as I ever saw or owned. Now, for goodness' sake, what can I do for you to show you my appreciation? I wish to say you are the squarest man I ever dealt with in the poultry business. I remain, Yours truly,
Chas. A. Holmes.

Uno Park, Feb. 23, 1909.

Mr. T. A. Faulds, London, Ont.

Dear Sir:—The cockerel arrived on Saturday in first class condition. I think he is a nice bird and well worth the money. He was crowing lustily this morning in answer to the other birds. I guess this is the first bird you have shipped into the Cobalt country. Hoping that your business will prosper as you deserve. I remain, Yours very truly,
H. A. Parks.

Mitchell, Ontario, May 7, 1910.

Mr. T. A. Faulds, London, Ont.

Dear Sir:—The Single Comb Black Minorca cockerel I bought from you last fall, I think, is one of the best in America. I got fourth prize with him at the

We have about 400 of the best chicks this season we ever raised and will be ready for the fall trade about the 15th of September

T. A. Faulds : Life Member of the A. P. A. Member of the A. B. M. Club : **London, Ontario**
Vice-President of the I. N. Rose Comb Black Minorca Club

Guelph Show. It was the largest and heaviest bone bird at the show. All he needed was age to make him fill out and he would have easily been the winner at the big show. I will right now give you an order for another next fall. I want another like him.
Yours truly,
A. Goble.

Hespeler, Ontario.

Mr. T. A. Faulds, London, Ont.

Dear Sir:—I certainly had great luck with the eggs I got from you last season. I hatched out 17 fine chicks, and at 6½ months I had cockerels weighing 8 to 9½ pounds and pullets 8 pounds. At Galt Poultry Show Judge Oke said I had the most perfect cockerel he had seen. That was the one you paid me \$25 for. I have another I call Hugo, which I value at \$50. (I have since bought this chl. also.) I have had several good offers for him, but he is worth more than that to me to breed from. I have sold \$89 worth of birds from the two settings of eggs besides the pen of pullets I have. I consider I have the finest pen of S. C. pullets in the country, for which I owe you all the credit for being a man of honest dealing. I remain,
Yours truly,
William Etherington.

Hartwick, N. Y., Dec. 18, 1909.

Mr. T. A. Faulds, London, Ont.

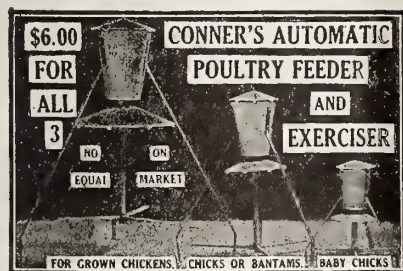

Dear Sir:—I received the R. C. Black cockerel on Dec. 10. He is all right and I like him very much. He is just the kind of a bird I wanted. I will mate him with my best hens and he will likely produce good chicks. Hoping you will have success with your birds. Price \$3.50. I remain, Yours, Moyer D. Mickle.

Rochester, Pa., U. S., May 5, 1909.

Mr. T. A. Faulds, London, Ont.

Dear Sir:—Received the last setting of eggs some time ago; set them and they came off Monday. They were good and fertile—eleven out of fourteen—will say I have fine large chicks for their age; nine living. I think you deserve great credit for your trouble and expense in filling my order three times. I see that you mean to please a customer. Yours sincerely,
Joe W. Winn.

INVESTIGATE

- It feeds, exercises and keeps your chickens healthy.
- It will increase egg yield with less feed bill.
- It will save time, labor, feed and scratching material.
- It will feed your chicks and keep them growing and healthy.
- It will keep old hens from getting too fat; hence more eggs.
- It will pay to buy a feeder if you have only ten hens.
- It feeds all kinds of grain without being regulated.
- It will prevent you from having any drones in your flock.
- It will keep sparrows, rats and mice from getting your profits.
- It can be used either inside or outdoors, being rain proof.

What Others Say

MESSRS. GILBERT BROS. & WAKELEY, of Knoxville, Pa., write:

The Self Feeders which we bought of you are all you claim them to be. Their practicability far exceeded our expectations, and we hope to use more of them later on.

MR. H. F. BERGNER, of South Chicago, Ill., says:

I am pleased to inform you that the shipment of Automatic Exercisers and Feeders was received in good order, and are now installed in my yards.

I am indeed surprised at the saving of feed, as I have always been troubled with a large flock of sparrows. This trouble is now a thing of the past, and not a grain is lost or wasted, and I think a Feeder will pay for itself at the present price of feed in about 30 days at the rate I have been losing it, to say nothing about the saving of time. I have always fed my birds two or three times a day; now I fill the hopper once a week and the chickens do the rest.

I congratulate you on having produced something that fills a long felt want, especially eliminating the trouble caused by sparrows. It is also rat and mice proof, and should be in every yard where poultry is kept, whether on a large or small scale.

MR. HERBERT STRONG, of Chatham, N. J., writes us:

Your Automatic Feeders were received by me, and after giving them a thorough trial I am convinced that they are all right, for the following reasons: They save a great deal of waste and loss of feed; the pens in which I have the Feeders require about 25 per cent less feed than the others. They will not overfatten themselves with these Feeders, as they have to do their work before getting the grain. It requires about 10 days for a hen to get used to operating it perfectly.

OWEN FARMS

A FRANK QUESTION

OWEN FARMS asks you a frank question: "How much will you give for cock, hen, cockerel, pullet or pen to win your fall fair?" It is not unusual for you to buy what you want in this way. It certainly pleases us to have you tell us this right off in your first correspondence. You know as a buyer that if we do not think your offer is enough to win your fair we will not accept it. If we think it is, however, and we can win your fair we will accept it. Always the only difference between a would-be customer and Owen Farms who wants any particular stock, quality fully described and understood by both our customer and ourselves, comes in the price to be paid. We are especially confident that we will agree upon this price. Write us, then, right away and get down on business. We tell you squarely that you do not commit yourself in any manner unless the bird is satisfactory at the price. You always must keep this in view.

EARLY SHOW BIRDS

Have we many? More than ever before. 5,000 birds raised from our very best in our different varieties and not a bird less. We commenced to hatch in January and have been hatching ever since and shall hatch up to the last of August. We know that females and males can be furnished at absolutely the right condition of feather and ripe for the show especially as we shall have birds that are exactly the right age for the time when the show occurs. How good are these early show birds? Better than we have ever produced in all of our varieties and there is no show that has any terrors for us and which we do not gladly welcome an opportunity to supply winners for, guaranteed to win. The condition would be such as you would expect in the top form of the bird for the time and place and the price would fit the quality. Remember that. Always with Owen Farms, the price is never high, but always only sufficient to cover the quality desired and necessary.

FITTING WINNERS

OWEN FARMS paid Harry W. Graves, now dead, \$100 and expenses six years ago to fit their string of birds for New York and thought it cheap. Today our Mr. Delano has to take off his hat to no living man in America in fitting birds to win in the show room. Just think for one moment that you get this without extra cost whatever. Don't you believe Owen Farms did well to spend that \$100 that year? If you do, you must know that you would do well to insure fitting such as OWEN FARMS through our Mr. Delano can give you. We match pens to win. Winning every pen in N. Y. last year is the best evidence. Five first pens at Boston clinched the argument. We mean business and how far pride in continuing this great record goes in fitting and matching pens for our customers, we leave you to judge.

BOOKING WINNERS

When is it best to book your orders for the ensuing year? We say "Now." Never mind how far off the date of your show if you are sure that you are going there now is the time to write about it and to book your engagement with us as early as possible. Early fall shows, midwinter or late shows. February have been already booked by us in very large numbers, because our customers appreciate one great advantage. What is the advantage of early booking with Owen Farms? If you can get Owen Farms to say that they will win a certain show for you at a certain price no living man can buy a bird to compete against the bird sold for that show, never mind what the offer might be. You realize in making such an early booking that you are uniting all the possibilities of Owen Farms' large flock from which they can select absolutely and exactly the right bird fit for the moment to win in your interest and name.

UTILITY COCKERELS IN OCTOBER

In past years we have had a remarkable demand for big, husky utility cockerels having our best thoroughbred blood and ready for early breeding. This year we expect even a larger demand and we have prepared to fill it and the price will be \$5 each. These cockerels are of the finest breeding, full of life and vigor and from flocks that are not excelled as producers of large, brown eggs and many of them.

WHAT WE HAVE TO SELL

What we offer to you are birds of the breeds most popular in the show room. Our breeds form the largest classes constantly at New York, Chicago, Kansas City, and, in fact, every poultry show in America. We also say that we have demonstrated ourselves by our show record to be at the very head and front of each of these breeds which we offer. You do not have to take our word for this but study the records. You can find our winnings in our catalogue and you can secure the winnings of any other breeder and if ours do not compare favorably and to our advantage we ask you to write and call our attention to some other existing record that seems to you to surpass ours. Our breeds are

Buff Orpingtons
White Orpingtons
Black Orpingtons
Barred Rocks

White Rocks
White Wyandottes

Your correspondence is urgently solicited

ARE OWEN FARMS PROGRESSIVE?

If there is one thing more than another that we wish everybody to believe about Owen Farms, it is that they are alive, wide-awake and up-to-date; that they are restless on the one great question of improving all of their flocks of birds which they have at present and in recognizing quickly the merit of any breed of poultry, especially where that breed has found ready, enthusiastic acceptance on the part of poultrymen nearly all over the country.

Rhode Island Reds

Five years ago Owen Farms, from some of the best stock in the country, secured stock and eggs in Rhode Island Reds. We raised one year 2,000 birds of this variety. We have been carefully and consistently interested in every show which has taken place since in this variety. We believed then as we believe now that its future is a great one and it was only that Owen Farms did not wish to enter the show room unless it could enter in the hardest and strongest competition with as reasonable certainty of winning as they have had in any of their other varieties that we did not commence earlier for a show record.

We are now prepared to say that in Rhode Island Reds, Single and Rose Combs, we have at Owen Farms one of the finest flocks in this country, with shape as near the ideal as they are grown, with color that is rich, dark and even and with perfection of points in Rhode Island Red growing that have never been equalled in any flock in this country. This is one of the strongest statements Owen Farms have ever made, but it is one of the truest statements they ever put before the public. We are prepared to furnish Rhode Island Reds for showing in any show in this country, guaranteed to win. Our Mr. Delano judged Rhode Island Reds at New York two years. He has been more earnestly sought to judge for the Rhode Island Red Club than perhaps any other judge of the variety. I frankly submit to you the question, if we do not know where we stand in quality in this variety who could know?

In conclusion, let me say that if there are more enthusiastic breeders in any other variety than the breeders of Rhode Island Reds I wish you who read this advertisement would write and tell me who they are. To you, breeders of Rhode Island Reds, therefore I say, and I urge you to consider the matter, that if you want good birds at fair prices, always subject to your final decision and approval, in Rhode Island Reds, write to us fully and with the usual frankness we ask and encourage, and you will be absolutely glad that Owen Farms has undertaken to furnish you with what you are wanting in this grand variety.

Foster & Johnston, R. R. 7, Ft. Wayne, Indiana

YOU GET \$8 A POUND FOR

GINSENG

Start Your Bed This Fall

You do not need a farm to do it. A patch of a few square rods will give you a better profit than you can make out of a 100-acre farm.

For over 30 years the price of ginseng has been steadily advancing, never going down. And you are always sure of a market. A great Chinese importing merchant who came to America last year to arrange for larger future shipments reported that America could not possibly glut the Chinese market in the next 50 years.

The World's Greatest Paying Crop

Prices last year ran up to and even above \$8 a pound. Profits are truly wonderful after you get started. A single acre, rightly cultivated, may be made to produce many thousand dollars a year. Even if you have a farm you can't afford to let the ginseng bed go. If you haven't a farm, use the back end of your lot, but get your bed started now. In 3 or 4 yrs. it will be making you big money. We are headquarters for the genuine seed of the American variety. Start in right—don't make the mistake of planting the Japanese ginseng which is nearly worthless. Our excellent book will tell you everything you want to know—all about planting, growing, drying, marketing, all about varieties and where and how to sell to get the high prices. We will gladly mail you a copy free. Write for Ginseng Booklet A.

Newtown Producing Company, Newtown, Bucks Co., Pa.

BUFF AND CRYSTAL WHITE

ORPINGTONS

Largest winners at 1909 Chicago show. If you want to win, send to the men who raise winners. 1,000 young and old stock for sale. Better Quality--More of it

U. R. FISHEL'S WHITE PLY. ROCKS "The Best in the World"

There is no doubt but what the poultry crop throughout America is the shortest ever known. We are pleased to be able to say to you that we have better quality, and more of it, than ever before. Remember, our birds are all farm-reared, strong, vigorous fellows—birds that have not only strong blood lines behind them, but the stamina to "make good" for you no matter where placed—in the show room, breeding yard or utility pen they make good.

We have the best lot of exhibition birds we have ever owned, and in as much as we seldom show any more, we are in position to supply you with birds that will "do the trick" for you.

We have selected breeders by the thousands, as also utility flocks that will give you better results than any breed. It is a conceded fact the world over that U. R. Fishel's White Plymouth Rocks are the most beautiful and profitable of all breeds. Send 2 dimes for 56-page catalog; worth dollars to any one. Write me your wants, please, and do not forget

THE EGAN POULTRY FOOD CO.
Jackson - Michigan**The Best Hotel In All New York**

Where to Stay If You Want To Be Comfortable, Live Well, Be in the Center of Everything and Pay Only Moderate Prices

Almost every hotel in New York has claims to advance as being the "best" in the city in some particular, but it is safe to say that in all the city over there is no hotel which can seriously rival the Famous New Grand Hotel and Annex.

Within a stone's throw of the new Pennsylvania R. R. Station, right in the heart of everything, this beautiful Home Hotel is located at the corner of Broadway and Thirty-first street.

This is the favorite stopping place for merchants visiting the metropolis, for commercial travelers, for sight-seers, for globe trotters and all travelers who appreciate home comforts, attentive personal service and quiet home-like refinement.

Here one can enjoy the most tempting French, German and Italian dishes as well as the finest of good American cooking. Dainty club breakfasts may be had as low as 25 cents, while for \$1.25 the finest Table d'Hôte dinner ever offered at such a reasonable price can be had every evening or with wine of choice Vintage \$1.50 each. You will appreciate the beautiful Moorish Dining Room and other attractive and special features of the New Annex.

Handsomely furnished rooms as low as \$1.50 per day—rooms with private bath, or fine suites at equally reasonable prices. Fifty large, light sample rooms for the convenience of commercial travelers—The Grand with its fine, large, new Annex are absolutely fire-proof and modern in every respect.

By sending your name and address to George F. Hurlbert, President and General Manager, you may obtain free of charge a practical guide to New York (with maps.)

"SNOW FLUFF STRAIN"—My ten pens of choice breeders are now for sale at exceptionally low prices, quality considered. All are bred directly in line with my first prize winners at late Cleveland show and are second to none as egg producers. Limited number of early hatched pullets. Write me your wants and mention American Poultry Journal.

White Feather Poultry Farm, H. T. Whitney, Prop., Rocky River, Ohio

2000 WHITE AND BUFF LEGHORNS

Choicest Selections for the Season of 1910-1911

Exhibition Cocks, Cockerels, Hens, Pullets and Pens now ready for shipment. Important—1500 of this grand lot are the cream of 5000 cockerels and pullets hatched and raised this season. They are the product of the finest breeding pens, headed by our New York and Boston Blue Ribbon Winners and other males fully equal in breeding qualities. Bred from winners. They are sure to win in the show room and produce winners.

500 are yearling and two-year-old cocks and hens, including many of our best show specimens and choicest breeders. Fine exhibition cocks and hens are hard to get at any time at any price. As the demand for this class of stock is greater than supply, purchasers are requested to send in their orders early.

Our 1910 Catalogue gives accurate and reliable information on the mating, breeding and conditioning Exhibition White and Buff Leghorns, and also contains a complete record of the prizes won in the past five years by Monmouth Strain of Buff Leghorns, the largest and finest flock in the world, and of our justly famous strain of Stay White, Low Tailed White Leghorns.

Remember: All stock is farm raised, line bred, vigorous and hardy. Satisfaction guaranteed.

The A. P. A. Convention

The Thirty-fifth Annual Meeting of the American Poultry Association Held at St. Louis, Mo., August 15-20, 1910—Acceptance of the Standard Illustrations the Most Important Matter Disposed of—New Standard Ready Dec. 1st

The thirty-fifth annual meeting of the American Poultry Association was called to order by President Bryant on Tuesday, August 16, 1910, at 9 o'clock a. m., and a welcome address delivered by W. W. Henderson, of St. Louis, who in behalf of the mayor of St. Louis bade the members of the association welcome and hoped their stay in the city would be a pleasant one.

At roll call 141 members were present, which was not nearly up to expectations. However, a number came in later, but the total number in attendance did not exceed two hundred.

Only preliminary work was done in the morning of the first day's session. In the afternoon session the secretary made his report on result of contest for separate breed Standard, which showed the Leghorns so far in the lead that there was practically no second. Therefore the Leghorns will be the third variety to have a separate breed Standard, the Plymouth Rocks and Wyandottes having been passed at previous meetings.

At the opening of the Wednesday morning session Mr. Robinson asked for information as to just what the association was to do or could do in regard to illustrations for the new Standard. Mr. Kimmey, as chairman of the editing and publishing committee, endeavored to explain that the revision committee, consisting of nine members, had made a contract with the artists to do the work at a certain price, and that it was up to the association to accept or reject the pictures when presented at this meeting.

Mr. Hicks asked how the vote stood on price of pictures as given by the artists. To this Mr. Russell replied that the vote was four to four as to whether halftone or line drawings would be used, and that the matter of price did not come up at that time.

At this point the discussion was becoming quite heated, with more or less insinuations and when Mr. Rankin asked if there was not an understanding between the artists as to the price to be paid for the drawings Mr. Bryant said that there was no doubt but what the artists got together and decided on a uniform price to be charged by all and soaked the association in good shape, but did not blame the artists if they did.

At this point Mr. Curtis introduced a resolution asking that a committee of five be appointed to investigate certain charges that had been made against him and his artists. He also asked the chair to retract the statement made by the chair that the artists had got together and "soaked" the association. The chair refused to retract.

After much discussion on the resolution introduced by Mr. Curtis a motion was made to table it. This motion carried and what for a time seemed to be a serious matter to the welfare of the association and a matter that would delay the new Standard indefinitely was disposed of in a manner that we believe was best for all concerned. After this exciting matter was disposed of Mr. Hopper introduced a resolution to the effect that any member of the association who advertised the fact that his birds had been used as models from which a

picture was made for the Standard would be expelled from the American Poultry Association. This was passed by a unanimous vote.

At the afternoon session on Wednesday the artists were called upon to exhibit the drawings they had completed. The Barred, Buff and White Rocks were the first to be criticised and were referred to a committee for suggested alterations. The Silver, Buff and White Wyandottes were the next in order and after much discussion were referred to a committee for alterations in accordance with the new Standard.

The retouched photos of Javas were accepted as presented.

Light and Dark Brahmas were referred to committee of two, Mr. Rankin and Mr. McGrew, to confer with Mr. Sewell and decide on changes necessary.

Cochins were referred to same committee and Mr. Hare and Mr. Kappy were added to this committee.

The Langshan pictures were referred to a committee of three consisting of Pierce, Kimmey and Wilson.

Minorcas were criticised severely and referred to a committee consisting of Pierce, Holden and Chase.

White Faced Black Spanish accepted as presented.

Dorkings referred to a committee of three, Graham, McClave and Lamon.

Orpingtons referred to a committee of five, consisting of Robert Kellerstrass, Delano, Coleman, Graham and Byers.

On the presentation of the Polish varieties it was moved that the pictures of the Silvers be adopted as the ideal for all Polish varieties and the artist to be instructed accordingly. This motion was carried.

The pictures of Hamburgs were referred to a committee of three, Russell, Heimlich and Southard.

Houdans referred to committee of three, Heiser, Marshall and McClave.

Games and Game Bantams were referred to committee of three, consisting of Southard, Emery and Palmer.

Silver Sebright Bantams were accepted as presented.

The pictures of the Cornish fowls were not finished and on motion were left in the hands of the artist and the editing and publishing committee.

R. C. Black Bantams referred to a committee of two, McClave and Phillips.

Buff and Black Cochins Bantams were then presented and on motion all but the Black female were accepted. This one was referred to a committee for alteration.

The Black-tailed Japanese Bantams were found very faulty and referred to the committee on Bantams.

The picture of the Bronze Turkey male was accepted as presented, but the female was referred to committee of three, consisting of Pickett, U. R. Fishel and McClave.

Pekin Ducks referred to committee of three, Pickett, McClave and Graham.

The artist informed the association that he was unable to finish the pictures of the Leghorns in time for presentation at

this meeting, and on motion was instructed to finish them and send photos of the completed ideal drawings to the presidents of the various specialty clubs for criticisms.

Indian Runner and Aylesbury Ducks referred to same committee as the Pekin Ducks were and Knapp, Windsor, Delano were added to this committee.

The idealized pictures of Toulouse Geese were accepted without comment.

Adjournment taken until Thursday morning at 9 o'clock.

Upon the opening of the Thursday morning session it was announced that owing to the fact that applications for judges' licenses had not been received within the time specified by the constitution, same were not granted.

The pictures of R. I. Reds were submitted for criticism and on motion were referred to a committee consisting of Zimmer, Delano, Buschman, Tompkins, Bryant, Sibley and Pierce.

REPORTS OF COMMITTEES.

The report of committee on Wyandotte pictures was accepted and a motion made by Mr. Delano to reconsider was lost. Mr. Delano objected to shape of tail on female.

The committee on Plymouth Rock pictures recommended their acceptance with a few minor changes on B. P. Rock female and the artist be instructed to use the type of B. P. Rock male for all the pictures.

The Brahma committee recommended that the picture of the Dark Brahma female be accepted without change and only a few minor changes in the male.

Many times a winner. River Home Poultry Yards, Box B, Perrysburg, Ohio.

The Pekin Duck committee recommended several changes and after some discussion their recommendations were concurred in.

The recommendations of the Indian Runner Duck committee, after much discussion relative to color of this variety, were accepted.

The committee on Orpingtons recommended the acceptance of the female with a few slight changes, but the picture of the male was referred back to the artist with instructions to make a new picture and to send photos of the new picture to the various specialty clubs and same to be returned to the artist within ten days. Carried.

The Black Langshan committee recommended several changes in the picture of Blank Langshans and acceptance of same. Carried.

The Bantam committee recommended a new picture be made of the Black-tailed Japanese female and many changes in the male.

Games were referred back to committee and Mr. Denny added to this committee.

The committee on Minorca pictures recommended that a new picture be made of the male and with various changes the female was accepted.

The committee on Hamburgs recommended so many changes in the pictures of S. S. Hamburgs that the whole matter was referred back to them for further consideration.

On motion it was decided to have made and inserted in the new edition of the Standard an idealized photo of White Laced Red Cornish, Silver Penciled Plymouth Rocks, Columbian Plymouth Rocks, Embden and China Geese and Rose Comb White Leghorns.

The Houdan pictures were rejected and the artist instructed to make new ones and submit photos of the new ones to the Houdan clubs for criticism.

Mr. E. T. DeGraff made application for reinstatement. Not allowed.

Charles E. Cram was suspended for exhibiting a bird that had been faked.

On motion it was deemed advisable to instruct secretaries of associations, that are members of the American Poultry Association, not to accept entries from E. E. McAvoy.

In the matter of infringement of copyright the executive board recommended that they deemed it advisable to take such legal action as would be found necessary. On this motion Mr. Nofztger, at whom the action was aimed, stated his position, and said that if he had done wrong in the matter it was unintentional and he was ready to make any reasonable amends that the association seen fit to impose upon him. A substitute motion was then offered by Mr. Curtis to employ an attorney to ascertain the validity of the copyright of the American Standard of Perfection. This motion was carried unanimously. As we understood it this relieves Mr. Nofztger of the charge of infringement of copyright.

Our friend Dr. Clark, from Indianapolis, requested that thoroughbred Games be admitted to the Standard, but after considerable discussion for and against the advisability of admitting this variety the meeting decided against their admission.

The application for admission to the Standard of Aseel Games and Barred Minorcas was not granted, as the breeders of these varieties had not complied with the requirements of the constitution.

The committee on the pictures of R. I. Reds reported and recommended that the picture of the male bird be returned to the artists with instructions to make a new one. They also recommended several changes on the picture of female. Report accepted.

It was moved that the editing and publishing committee order 25,000 copies of the new edition of the Standard and have same ready for distribution by December 1, 1910.

AMENDMENTS TO THE CONSTITUTION.

The amendments to the constitution offered by Miller Purvis, dividing the United States and Canada into districts and appointing ten organizers for each district whose duty it will be to visit the principal poultry shows and solicit members for the American Poultry Association with the understanding that for each member secured they shall be allowed \$3.00, was carried.

The amendment offered by C. W. Zimmer changing the vote of branch associations from one vote for each five absent members to one vote for each twenty-five absent members, was lost.

The amendment to Article V, Sec. 4, offered by Fred L. Kimmey, to the effect traveling and hotel expenses of all officers which accrue before the commencement of their respective terms of office and which accrue after the termination of their respective terms of office shall not be paid by the association was lost.

All amendments to the by-laws offered by John B. Robinson were lost.

Amendments to constitution offered by Reese V. Hicks, authorizing the secretary to receive applications for life membership upon payment of \$2 with the application and the further payment of \$1 per month for ten consecutive months thereafter and applications so received not to be voted into membership until the last month of the payment had been made. This amendment caused considerable discussion and upon being put to a vote was lost.

The amendment to the constitution offered by Henry Steinmesch, to the effect that the traveling and hotel expenses of officers of the association will not be paid by the association, was, after considerable discussion, lost.

The amendment changing the constitution so that no officer except the secretary could serve more than two terms in the same office was lost.

The following amendments were passed:

Amend Art. 7, Sec. 1, striking out the words "in August" and substituting therefore the words "between July 15 and November 15."

Amend Art. 7 by adding "Sec. 3. No annual meeting shall be held in connection with any poultry exhibit or display."

Amend Art. 3 of the By-Laws by substituting the word "ten" for the word "two" in Sec. 9, fourth word in the first line.

Amend Art. 3 of the By-Laws, Sec. 3 by substituting in the third line from the fourth word to the last word of the section

the following: "On special banks provided for in Sec. 10 of this article."

Amend Art. 3 of the By-Laws by adding, "Sec. 10. The Executive Committee shall prepare a special blank mentioned in Sec. 7 of this article and also a blank to be used by the five judges who endorse applicants for license. These blanks shall be complete in every detail, showing applicant's experience, ability and integrity as a poultry judge, as well as his standing in the community in which he lives.

Sec. 11. All judges shall file annually with the Secretary of the American Poultry Association a list of shows judged by them the past season, showing dates, estimates of number of specimens exhibited, and Secretaries' addresses.

All other amendments offered were either lost or referred to executive board for further consideration.

Invitations for the next annual convention were received from Toledo, Buffalo, Detroit, St. Paul, Boston and Denver. Toledo guaranteed 125 new members if the next convention was held in that city. Mr. Peters of the new Colorado State branch guaranteed at least 300 new members for the American Poultry Association if the next convention is held in Denver, Colo.

Mr. Delano moved that a supplement to the Standard be issued on cockerels and pullets. Referred to executive board.

Mr. Curtis moved that a committee of three be appointed to revise the constitution and by-laws. Carried.

Moved that editing and publishing committee be continued for another year. Carried.

The committee having in charge the express matters reported and requested further time. This was granted.

Theodore Hewes moved that Mr. Kimmey be re-elected election commissioner. Carried.

Secretary Campbell moved that membership committee be continued. Carried.

After various motions and resolutions had been passed thanking the entertainment committee and the citizens of St. Louis for the many courtesies extended to members of the association, the convention adjourned.

NOTES OF THE A. P. A. MEETING.

Denver is certainly making a strong bid for the next A. P. A. meeting.

* * *

The temperature at St. Louis during the week of the convention was certainly not conducive to the temperment of man and the only wonder is that things were as harmonious as they were.

* * *

We understood that Curtis and Hicks buried the hatchet. Let us hope so, as strife of this kind does not help the A. P. A. in the least.

* * *

Illinois was well represented at the meeting; but the eastern attendance was extremely small.

* * *

Editor Robinson was there and of course was on the opposite side of all questions that came up.

* * *

Dr. Clark is persistent in his demands that Thoroughbred Games be admitted to the Standard. He may have better luck next time.

* * *

Five hundred and fifty new members was secured during the past year. This looks good. Let us make it one thousand this year.

* * *

Illinois now has a separate state branch of the American Poultry Association. Now let us make this the largest branch. This can be done with very little effort.

* * *

Dave Nichols was there as usual handing out souvenirs. What would the association do without him?

* * *

That draft for \$1,150 for new members from the west looked good.

* * *

C. S. Byers, Hazelrigg, Ind., gave the ladies a treat in the form of an automobile ride around the city. Carl don't do things by halves.

* * *

The Partridge Plymouth Rocks were admitted to the Standard without a dissenting voice. Mr. Noftzger is now in the front of the band wagon.

* * *

The artists will earn their money all right on some of the varieties at least, as they have to make entirely new pictures in several cases.

SCENE ON PINE TOP POULTRY FARM, HARTWOOD, SULLIVAN CO., NEW YORK.

December 1, 1910, is the date set for the new edition of the Standard to be ready for distribution. Let us hope it will not be later, and sooner if possible.

* * *

Many of the familiar faces were missing, and in their place were many new faces of those who had never attended a meeting of the A. P. A. before.

* * *

The illustrated lecture given by Prof. Morse, of Washington, D. C., was listened to with interest and much valuable information learned on diseases of poultry.

* * *

The dates of holding the annual meeting of the A. P. A. has been changed to read that the meeting may be held between the 15th of July and the 15th of November. This change was made at the earnest solicitation of the southern members, so that at some future time the South can bid for the convention, and have it held when the weather will be favorable in that locality. This was a good move.

* * *

Henry Steinmesch was certainly on the job at all times to see that the members of the A. P. A. and the ladies were properly entertained while in St. Louis.

* * *

Baseball games, auto rides, theater parties, boat rides and visits to the amusement parks was part of the entertainments provided for A. P. A. members while at St. Louis, and many took advantage of the hospitality extended.

* * *

Charles V. Keeler was there, stopped off on his way back from Texas where he had been judging. He said St. Louis was hotter than Texas. We took his word for it. It was too warm for argument.

* * *

Some good amendments to the constitution were lost because they were not properly explained to those in attendance. The only thing to do is to try again.

* * *

Secretary Campbell was ably assisted in his work by Mrs. Campbell, who was on the job at all times.

* * *

Secretary Campbell deserves the thanks of all members of the A. P. A. for the good work he has done the past year.

* * *

President Bryant says that he will not under any circumstances be a candidate for re-election. Wonder who the next President will be.

* * *

We can see nothing but peace and prosperity ahead for the A. P. A.

* * *

Vice-President Baldwin was given the position as official reader during the sessions. A good pair of lungs is a mighty good asset.

—o—

MAKE A START RIGHT NOW

There is quite a lot that can be done around the poultry yard along now. Those who have no thought for the work of getting ready for winter should get busy at once. It is well not to put it off, for if you do the chances are that something will be overlooked or have to go undone for lack of time. Getting ready for winter should engage the attention of every poultry-keeper. There is much to do. Start in by culling out and keep only the most desirable and profitable members. When the cold weather sets in house room will be at a premium and it is foolish to jeopardize the results from the whole flock and spoil the returns from good fowls by holding on to a bunch of worthless rubbish.

During the warm autumn days the poultry houses should be renovated, or new ones built if needed. If you have not a good poultry house do not expect good returns from your poultry. Money spent on a comfortable house now will be well repaid in the way of more eggs this coming winter and better health to the flock. Nothing elaborate or expensive is necessary, simply a house that will fully protect the birds from the elements. An old house which at first may seem beyond hope can often be transformed by a thorough cleaning, a coat of limewash and some decent roosts. The roof may probably need some attention, so it would be well to see to it. The floor also may need renewing, either with boards or fresh earth. Take a while and go over the walls of the house and see if they are sufficiently close to keep out the cold. These walls can be put to rights

with a roll of tar paper. Remember a shivering hen is never a profitable one. Artificial heat is not to be recommended for grown fowls, therefore the sleeping quarters should be free from draughts. Now don't delay commencing work on the house if you have not yet begun. A long rainy spell or a spell of disagreeable weather may at any time hinder you later on and outdoor work will be somewhat disagreeable. The other year a breeder had just such an experience. He waited until late to commence work on a new poultry house, and the result was that cold weather, rainy weather and blustery weather commenced before the house was nearly completed and greatly hindered the work, and so makeshifts had to be substituted in several instances. For one thing he had intended filling up the inside of the house to the depth of a foot or more with gravel, but the weather made hauling impossible and in this respect, as well as several others, the house was not perfected until the following spring. And in the winter when the fowls needed every comfort and convenience, the very worst time, was the very time when it was impossible to supply them. This year he is profiting by this experience and is getting ready for winter early so that when it comes he will be fully prepared.

Now others can profit by his experience or they may have to undergo the same sort of experience and pay the costs. Experience is a sure teacher all right enough, but sometimes she is hard on the pocketbook, to say nothing of the fond hopes she dashes out.

But the poultry business seems peculiar in that individual experiences differ so widely, and almost every one who enters the business has trials, troubles and perhaps losses peculiar to his own individual case. But by absorbing and profiting by the experience of others one can avoid much embarrassment in the experiences which are common to all poultry keepers.

There is no one going to dispute the claim that the poultry business is now right in the front. Poultry and eggs are much esteemed the world round as a highly nutritious and palatable food. There are few people who do not relish good poultry and eggs, and that is one reason why there is no danger of the business being overdone. These articles have only one rival as a natural, complete and nutritious food, namely, milk and milk products. The entire industry rests solidly upon the actual value of poultry and eggs as food and will endure therefore as long as mankind exists.

A. T. H. Fortescue.

Chatham, Ont., Can.

—o—

FEEDING FOR EGG PRODUCTION

To get the best results we must cause them to consume large quantities of food, food that is palatable and also easily digested. The man that weighs out his rations on a pair of postal scales is not apt to have to have larger scales to weigh his eggs on. They must have all they can eat, and their appetites kept whetted up sharp at all times with something spicy. A little salt and pepper and such vegetables as potatoes, turnips, beets and carrots, thoroughly cooked; in fact, anything that tickles their palates. A delicate morsel tickles their palates and makes the saliva flow, and mixes with the food, and this aids digestion. Nobody for a moment questions but that such flavoring and seasoning serves a most beneficial purpose with the human species. All fowls have those glands in their mouths for the secreting of the saliva, and the mixing of the saliva with its food is as necessary to digestion as in the case of man.

Fowls in order to be profitable to their owner must be always in condition. Their appetites must be always good. They must be able to consume large quantities of food. A certain portion of the food consumed is always a sustaining ration. That is, it goes to sustain the life of the fowl. The food consumed over and above the sustaining ration is the food that returns the profit. The more food consumed, provided it is digested and assimilated, the greater the profit. There is very little danger of overfeeding laying stock.

Providing they have room for plenty of exercise, such as a deep litter to scratch in, a hen that is physically built for laying will seldom get too fat. I have kept thirty hens under such conditions in a building 12x16 feet, and had a 75 to 80 per cent egg yield through the coldest months of the year, by feeding the Maine Experiment Station ration with plenty of green food and grain scattered in the litter, consisting of wheat, oats and on extremely cold nights some cracked corn, with charcoal, oyster shells and grit before them at all times. I would not advocate the use of the Maine Experiment Station ration for birds kept for breeders, as it is a little too forcing, and they should not be forced too hard to insure a large per cent of fertility, but for laying stock I say season their food to make it appetizing and keep them healthy and watch results.

Frank H. King.

Trumansburg, N. Y.

WHO'S WHO IN HENDOM

"Well, boys, here we are again," as Billy McNiel says when they all get about a hotel table again at some show or other. This month, however, most all the boys are away from home. You see, I write this during the hottest of mid-August days while the A. P. A. is making some more of its brand of history down there in St. Louey. When I 'phone the boys about the country asking them if they have any objections to being lampooned more or less or not at all, I find them all away. I have given up getting any matter for this department several times this month, but a something I could not see and cannot describe drives me forward to meet the check with which I shall purchase a cockerel from one of the Pillars of Poultrydom and thus vanquish my mortal enemy, then afterwards strutting up and down the aisle telling skeptics how to produce such a bird as he.

September is the month of the first fall exhibitions. The fall fairs will wind up in October and the big gun down East will be Hagerstown and in the West the American Royal at Kansas City. These are two fitting ends for the early shows. So let us take a little trip around among the big fairs and the near-big ones, stopping from time to time, long enough that we may be sure we pass no one without a shake of the hand and a touch in the region of their purse.

The wondrous noise heard down there in the bowels of Iowa is nothing more than the state fair. Perhaps this season it will be greatly augmented by the reports of the students as they turn in their examination papers to Chicken Billy, of Ottumwa, and The Sage of West Liberty, the western chicken Sphinx, the pair of whom it is said will conduct a school for near-judges as soon as they have finished their work of placing the winners at this excellent state exposition. That is to say, they may conduct a school for judges if the would-bes turn up with the necessary amount of the ragged green stuff. In these days schools for judges of feathered bipeds are not conducted for the health the promoters get out of it. There's Chicken Billy, for instance, who has more health than he knows what to do with. What in the world would he do with more if it were tendered in payment for judging instruction? Why, he is so full of health now that he eats anything that takes his fancy and is wonderfully unaware that he has a copper-bound, cast-steel stomach.

And look at The Sage! Why, man, he is so radiant with health that folks call him the Walking Healthatorium! He has a little place on the outskirts or petticoats of West Liberty, where he digs health from the soil and the chickens. Don't talk health to him. He is slopping over with it. But let us get out of the sideshow and over into the big top, where the hens are!

There we will meet Clyde Easton, assistant superintendent; Mr. Pike, head of the department; Uncle George Stout, dean of all Iowa exhibitors; Earl Roberts, with his string of birds of all colors and shapes; Page, of Waverly; Dr. Cooper, Dick Richards, Myron Buck, Dr. Day, A. E. Warner, J. J. Elliott, O. J. Easton, and a hundred others, all of whom have put their shoulders to the wheel to make the fair a success.

Waltzing across the broad prairies and buffalo wallows of Iowa and over the river into Nebraska, we hit the little burg of Lincoln, which claims something like sixty thousand burghers. They have the state fair in the hollow of their hand. They have had it so long that it cannot get away. If it should, it would get homesick and go back again. Omahans took the state fair for a period of five years and then could not break it of its homesick habit. The poultry department of this state fair is housed in two adjoining buildings; one for the fowls and one for the appliance manufacturers. This works well.

For years C. M. Llewelling was superintendent of this

L 5

department, but latterly it has been in the hands of Arthur H. Smith, than whom there is no more painstaking man with an exhibit in his charge. He has his helpers well in hand for the care of the birds in his charge. He makes no mistakes in the recording of decisions made by the judge, and thus has much to his credit with the exhibitors. Through the aisles we find Elmer Smith, the largest exhibitor in the state, showing White China geese and Wyandottes; H. H. Hadley, the Black Orpington breeder of most prominence beyond the river; Charles Green, Ed. H. Eggert, Frank Miltenberger, of Columbian Wyandotte fame; Charley Rhodes, who is lately placing the ribbons; Judge

Norval, who has lost his love for the Rocks; John Fulmer, of Buff Rock and Red note; Guy Schreff; C. M. Whitecomb, of Friend, and breeder of the bed-ticking variety of Plymouth Rocks; John Bishop, Orville O. Jones, W. F. Holcomb, Orlo T. White, Mr. Lake, J. C. Seacrest, of Poultry Topics; Ralph Searle, H. H. Rankin, John Cherny, E. A. Pegler, W. D. Barrett, Campbell and Minshall, of Adams; Campbell, of Osceola; Mrs. Lowery, M. M. Johnson, and all the other good men and true who have made the display of the three thousand birds every fall the high-class show that it is.

Nebraska agriculturists are rich. They all breed good stock of some kind, and the hen comes in for her due share on most of the Nebraska farms. The poultry display at the annual fair, taking place yearly, held once every fall, being the yearly showing of birds in autumn, is something that has done a great deal to push forward the chicken business out there in the country that has lost its wooliness and never is wild unless Beafalo Bull is on the lot with Running Heifer or Standing Cow.

Taking the train to Show Me Land and alighting at Sedalia, that town of pretty girls and fine state fair buildings, we cross over the street to the Smoke House to see who is in town. The Cockran brothers tell us the exhibit is going to be bigger and better than ever, which is some pleasing. Then we go over the registers at the Huckins and the Antlers—goodness! What a lot of the boys are there. While lighting your cigar, preparatory to going out to the grounds over the Katv route, a big mit slaps you in the middle of the back and you turn to meet Archie Maxwell, hale and hearty and not a day older than he was when you saw him a year ago. Archie asks you if you have been to the grounds, and on your reply says that he is just about to go out and wants you to go with him.

On the way you meet Hicks, Palmer, short and rusty; one of the Roberts brothers, August Mahnken and a parcel of others. Then you no sooner get through the gate than you see M. S. Brady and E. C. Branch, Tom Woods, W. S. Robison, John Hettich, John Miller, J. A. Heether, Tom Quisenberry, Boze Bridgeman, C. A. Morton, Henry Steinmesch, et cetera and so forth. The names of the boys come to me so fast that I cannot mill them down quick enough to name them all. This makes me sad (as I wanted to get them all in. There! I almost forgot Knorpp, of Pleasant Hill. But we may see some of them down at the American Royal, so we will go on over to K. C. without stopping here longer.

After getting located in K. C. we take the Stock Yards car behind the postoffice and after a fifteen minutes' ride we alight at the entrance to the American Royal live stock and poultry show. The first thing that attracts our attention is the banner which tells the way to the Kellerstrass exhibit and points out Peggy. This is located at the entrance to the poultry department. It is always thronged with people. The papers have been full of Peggy, dope and flocks of folks cannot get within sight of her and turn away without getting a glimpse of her.

Further along we run plumb into Tom Southard, Ted Hale and Bob Walbert, the latter telling his celebrated self-

defense story. Bob has a stock of them stored away that makes him the prince of story tellers. Not far on we see A. E. Glass, Bob Kellerstrass, Fred Nye, Charley Rhodes, Branch, Dr. Stark and George Tippee, A. E. Blaker, Kaufman, Divinia, of the Barred Rocks. They are thicker than flies on a new keg of cider in Divinia's orchard.

The ribbons begin to go up. What beauties! They certainly cost the management a pretty penny. Through the courtesy of T. S., I have a set of those handsome ribbons hanging on the wall of my den, and they are the prettiest and most expensive of all the ribbons I ever saw offered on pure bred fowls.

Next comes the big Illinois event. All the fanciers of note are on the spot with the best birds the state affords. Bickerdike, Zimmer and Hare holding a confab about the forthcoming Standard, and the facts are that none of us know anything about the time the work will be out. A private enterprise would have issued the work in a month after it was O. K.'d by the A. P. A.

The poultry building at Springfield is a good one. It is newly equipped and roomy and plenty of air circulated through it. Illinois is one of the states that provides a good premium list and this brings out entries from the best flocks round about. Good birds are an educational exhibit. Farmers and stockmen who come to the fair are always more or less interested in pure bred fowls. They want to see something better than they have and are good buyers. Illinois farmers' wives are all growing pure bred fowls. They have found that they get more pounds of meat and more dozens of fresh eggs from good poultry with the same outlay of feed and time that they gave to the old-fashioned scrubs.

Obe Lash is a haswuzzer at Springfield. In fact they have forgotten him. The eaters at the pie counter have elbowed dead ones away from it. Breeding reputations with pure bred poultry are made and unmade so fast these days that it is hardly the same crowd one meets every half decade. But over there in Illinois they hang on mighty well. I cannot take the time to count them all this shot, so I will have to move on to Minnesota, where they hold the state fair at Hamline.

This burg is a little town between Minneapolis and St. Paul and the fair grounds postoffice bears this name. It is a pretty name. Lots of folks think it is way off in one corner of the state and wonder what the poultry show of the state fair is like.

Hamline is an accommodating little village of one barn, a main street and two alleys. It lies there in the bright sunshine and shade all the season waiting for the next annual state fair. Kind, isn't she? Ralph Whitney and L. G. Tubbs are the chief bell ringers for the main show. Leslie Parlin is dean of the bunch, however, and gives the orders. And you can bet a stick of dynamite to a bag of peanuts that they are obeyed. The boys whom he has in hand to help him care for the birds that are sent to the poultry show of the state fair all like him, and that is why they obey.

Fanciers from Albert Lea, Rochester, Austin and dozens of other poultry towns such as Winona, Red Wing et al., all congregate at the poultry building just to see the chickens and watch Holden place the ribbons. Holden has been Holden onto this task of ribbon distributing for years up here. He knows how, says little, favors the birds and not the owners, and we all like him.

Doctor Graham, of Brackenfield Farms, the northwestern home of the Orpingtons, comes out with a grand string of ribbon eaters. He is bound to do some of the winning, for his flocks have been founded right and bred right. This with right feeding makes winners. Ask the man. He knows. The cool summers and the abundant shade found on most every place where good birds are bred in Minnesota make for white plumages and clean colors. The birds in the state are hardy. They come from hardy stock. Roup and the like are generally fatal in cold climates and while Minnesota is some hundreds of miles south of the Big Nail that drove Peary into fits and Cook into the asylum, still the weather is pretty stiff about the steenth of January.

As I am writing I can see the caretakers traveling up and down the aisles of the Minnesota fair poultry building, the anxious exhibitor who is from the local fancy somewhere and making his first showing, the antics of the amateur judge who is hoping to get some benefit from placing the ribbons in a few of the isolated classes where his mistakes, like those of the doctor's, are easily covered up,—I can hear the crowing of the cocks at 3 a. m. and later rouse myself as the cattle in the dairy buildings begin calling for their North

Dakota bran and Wisconsin red dog. These and more come crowding through my head as I sit here and poke this dream through this typewriter.

Every year I look forward to the Minnesota fair just as I have done in the past. I hate the crowds and all that, but just the same I go again and am glad to see the boys and tired when I get home. It's all in the fancy, and I like it, and yet hate it. I sometimes wonder how rich I would be if I had put my time and efforts that have been blown into the poultry game into the business of running a peanut roaster. But just as I get my hands into the exchequer of the dream I am waked up by the barking of the dog as he rushes to the gate to head off the neighbor lady who is coming to see if I will not at last take 70 cents for the 75-cent roaster.

But getting back to Hamline: I know just what I will see every time I go up there, yet I go just the same. Force of habit? No. The boys are calling me—those self-same boys who have made me at home year after year amongst them, and I cannot find the nerve to resist. So while the tears dim mine eyes and the mists of sweet memories drown my looking forward to further fall fairs and shows, I will close this month's rambles and sit back and enjoy the visions that pass before me.

A. B.

LICE A COMMON PEST

I have always raised chickens on a small scale for my private use. Lice have always been my greatest trouble, particularly in the hot, sultry summer months. In the past a few occasional general cleaning ups and free use of sulphur and lime has been sufficient to keep them down.

Unfortunately my two hen-houses were not originally built for the purpose of housing chickens or I would not have had the trouble I had this summer. One house is half of a shed containing a loft above. The other is an enclosed end of a shelter shed. Both are, therefore, inconvenient to get at with whitewash and not by any means tight. My former method has been to stop up holes and crevices as far as possible with newspapers and burn sulphur. The newspapers unfortunately protected the lice in the cracks and it would be impossible to reach them all with whitewash, particularly in the ceiling. I imagine a great many back-yard poultry keepers are similarly troubled and believe I have the best remedy so far.

Last summer I helped fumigate a flour mill. They used cyanide of potassium in the same manner used to fumigate fruit trees. It thoroughly killed bugs, mice, larvae, etc. My other methods failing I tried the same plan in my poultry houses with success.

A good sized stone jar holding at least two gallons is necessary. It will not be damaged by the chemical action. Put this in the center of the house and fill first with five pints of water, and then add three pints of sulphuric acid, slowly. Two pounds of cyanide of potassium is now placed in a paper sack and tied to a string, which runs through the key-hole of the closed door then drops through a screw-eye in the ceiling, swinging the sack over the jar. All the very large holes in the house must previously be stopped up with rags, soaked in coal oil in order that they will not harbor lice. The small cracks are left open.

When the string is cut the potash falls into the jar, where a vigorous action takes place freeing very poisonous vapors. One breath of this vapor will kill a man. Hence one can imagine the effect of the gas on vermin. It is very penetrating and heavy, seeking all cracks and crevices. Once into the open air it does no harm, but any insects in the cracks through which it passes are goners. Out of the many thousands of lice which must have been in my worst infested house I could find none alive. Dust baths, and thorough applications of insect powder, together with daily scaldings of the roosts got all those left on the chickens, and my flocks are contented, and free I hope, for a long time to come, and all time, with a little more daily attention.

Great care must be taken in the handling of the acid and cyanide. The cyanide is a very deadly poison. Neither it nor the acid should be allowed to touch clothing or hands. The cyanide will not affect tin, glass or stoneware, and the acid only the first. Do not put your cyanide in the sack until the last minute for it requires only a few minutes to eat through paper.

If this hadn't succeeded I was ready to try a method used by my grandmother. She placed a little carbolic acid in the chickens water. Nothing bothered the chickens thereafter. It did not affect their eggs in quantity or quality; but did impart a disagreeable flavor to their flesh, thus requiring separate fattening pens, which is generally the case anyhow.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to C. B. Snively, Lititz, Pa., and the second prize to A. V. Meersch, Poughkeepsie, N. Y.

THE IMPORTANCE OF COURAGE AND PERSEVERANCE.

DO not blame the man who makes mistakes unless he makes the same mistake the second time.—James Oliver.

I think more men fail from a lack of these qualities than from all other causes combined. So long as a man stands up and fights he has not failed. When he loses his "grip," when he gives up and lies down in the furrow, the end has come. So many men say they could have succeeded "if"—and then follow the account of some obstacle. How many times I have caught myself saying if only things were not in the shape they are I could get along all right, and then the thought has come to me, "Successful men are those who succeed in spite of these adverse conditions." There is an old saying that almost anyone can sail a boat in fair weather, but it is the storms that try a sailor's seamanship. If there is any time in a man's life when he needs to stand up and be a man, to summon up all of his courage and perseverance and exercise good judgment, it is when everything is going "dead wrong."

Just because your first trial with an incubator proves a failure does not prove that artificial incubation is not a success.

If you are using a heated brooder during the winter months and the lamp goes out for lack of oil, don't blame the mechanism if you find your chicks chilled the next morning. It is your own fault and there is no excuse for it.

I wish every one of the readers of American Poultry Journal and could enjoy and profit by the perusal of that excellent magazine "Little Journeys" on the life of the late James Oliver, the head of the great Oliver Chilled Plow Works. Let me give you a little extract: James Oliver was a successful man, but it was not always smooth sailing. In the early days the plow plant caught fire at night and was absolutely consumed. Returning home at 3 o'clock in the morning, exhausted and with clothing wet and frozen in a sheet of ice, this man, sorely kicked by an unkind fate, turned a chair over on the floor before the fireplace and reclined on it there with eyes closed, endeavoring to forget the trying scenes of the night. Mrs. Oliver had made coffee and prepared a simple breakfast for the tired man. But rest was never for her or her family when there was pressing work demanding attention. "James, why are you wasting time? Drink this coffee, put on some dry clothes and go at once before daylight and order lumber and brick so the men can begin at 7 o'clock to rebuild. We have orders to fill!" And the man aroused himself, obeyed the command; at 7 o'clock the lumber was on the ground and the men were at work preparing to rebuild. James Oliver was a man of courage, but his patience, persistence and unfaltering faith were largely the reflection of his wife's soul and brain.

There is no use in prolonging the review of the book; the factory was rebuilt and today it is the largest in the world.

Mistakes need not be discouraging, although it is very disappointing to lose a flock of chicks through some unknown cause. But the time to wake up is before the second flock disappears. Your loss should be an object lesson. You really must have this experience before you can see the importance of the little details. A successful poultryman usually goes through the entire mill before success eventually comes.

If you have spent the most of a good part of your life in idleness or at a disadvantage and you would now like to do something worth while, don't let the fact that you have wasted a part of your time prevent you from improving the present and future. "It's never too late to mend," even if it's your last day on earth. But, above all, do not let criticism or comment keep you down nor let repeated failures discourage you, because it is a rule of fate that you must fail just about so many times anyway before you succeed.

A great loss, as by fire or flood, seems to ruin some men—others are simply aroused to greater energy. How often when a newspaper plant is burned we hear how by means of the telegraph a new outfit is on the road before the ruins have ceased smoking. This is the true spirit.

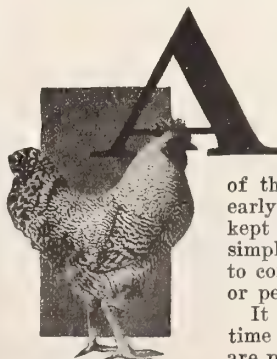

In this same line I remember an account in an old school reader of two gardeners whose early peas were killed by an untimely frost, and a few days later one went to commiserate with the other over their loss. Casting his eyes over the land, he noticed two long rows of something green stretching away across the garden. Upon examination he found them to be peas, and exclaimed, "What, didn't the frost kill your peas?" "Yes," was the reply, "but I planted some more the very next day." "And they are coming up already," exclaimed the disconsolate one. "Why, I have done nothing but mourn and lament my loss ever since it came."

If you lose your young chicks, if disease gets into your flock, if a dozen other misfortunes come upon you, don't lose your courage or perseverance.

When there is trouble so many lose heart and become dismayed, neglect everything until the trouble is over. Don't do this. Take care of everything in the best possible manner. After the trouble is all over and fortune smiles once again, as she surely will, don't be forced to say, "Oh, if I only had taken care of these things, how different it might have been." Keep everything up safe and snug, even if there is trouble. Unless we can accept these little disappointments in the right spirit we cannot succeed, for disappointment usually accompanies success.

Lititz, Pa.

EARLY MOULTING.

AN early moult is generally a quick one and in many respects to be encouraged. The majority of poultry keepers, however, keep fowls only for a supply of eggs, and if possible they wish their birds to lay throughout the year. And to arrange this, one portion of the flock should be induced to moult early, whilst the rest of the birds are kept laying late in the season. The simplest way to bring on the moult is to confine the hens in small, warm houses or pens.

It does not matter if for the short time that the birds are shut up they are provided and cramped for space. The supply of food must be lessened, not more than one-fourth of the usual quantity being given. Wheat is very good; some Epsom salts should be put in the water, a teaspoonful of salts to a pint of drinking water. The hens should be kept confined until the feathers begin to fall freely. When

the moult has commenced the salts must be discontinued and plain water given.

As the moult progresses the feeding can be gradually increased, though the change must not be made suddenly. Soft food should then be used, such as ground oats and barley meal mixed with equal quantities of middlings. For grain in the evening, oats and wheat alternately can be given. As the fall comes on, and the moult is partly commenced, a little meat or fresh cut bones every other day will help to bring the hens on to lay. The time when they commence laying again will depend to some extent on the date when they were hatched.

October or November ought to find the egg basket being contributed to, and when the hens have once begun they ought to continue throughout the winter. The addition of a cockerel to the pen when the moult is well over will be advantageous. During the moult it will be better to separate the sexes. Many exhibitors show birds in the best condition that have been moulted in exhibition baskets and win with them. They give the birds a run in the open for a short time once a day.

While some of the hens are being managed for an early moult, it will be necessary in order to keep up a supply of eggs to induce others to continue laying as long as possible. Particularly it is advisable to do this with those hens to be disposed of after they cease to lay and before they shed their feathers. To postpone the moult the birds must be kept in as cool a house as available; the door should be left open, night and day.

No change of food should be given beyond substituting one kind of grain for another in the usual way. Hens that become broody can be allowed to sit on a nest egg, for ten days or so. The rest will do them good, and when they are removed from the nest they will probably go soon into moult and get over it quickly.

Special care should be taken that the fowls when moulting have access to shelter during rainy weather. A thorough soaking when they are nearly bare of feathers may result in cold or roup, which will last for many months.

Poughkeepsie, N. Y.

A. V. Meersch.

PREPARING FOWLS FOR THE SHOW ROOM

How to Feed and Care for the Fowls—How to Wash and Train Them Previous to Shipping Them to the Show—These are Hints From an Old Time Exhibitor

WHEN fowls show their very best is when they are in the very best of health. The first requisite is to so rear and treat the birds that they will be in perfect health. To do this is to rear them in full liberty. Birds can be raised in small inclosures, but the usual results are far from perfect physical bodies. Apple orchards or part grass and part shade is the ideal run.

There is no other treatment as far as getting a perfect growth but liberty and three full meals a day.

The next step is to overcome the wildness. Birds reared in the open, especially the smaller breeds, are quite fearful of man when first penned that they take all positions but the natural. I begin to handle them when half grown. I strew the corn around my feet when feeding, or if that will not bring them near enough to pick up I throw some in a nearby angle of the fence. After a half dozen handlings they begin to see no harm is coming and half the battle is won. This I continue until they are full grown, taking them into a coop a few times to accustom them to it, as well as persons.

When the time comes to ship I see that the feet are clean. If Barred Rocks I have at times washed them, depending how clean they are. Brown Leghorns I never wash. I use a clean cloth to wipe well the whole body. I always feed a special condition powder I discovered to fortify them against taking colds and roup. It does the work, too.

At times the combs of the Single Comb Leghorn females are too small from moulting or age and I bring them into a warm room for twenty-four or forty-eight hours, as the case may require. The Rose Combs never need such treatment. They often need the opposite treatment—cold and starvation—but that will destroy the luster of the plumage and the general looks, therefore it is seldom done.

The next job is to wash the white breeds. Have two or

three washtubs half full of water as warm as a bird can well stand it. Have some one to hold it by the feet, so you have your two hands to do the washing. I take a small dish brush and with plenty of Ivory soap thoroughly wash them all over. You need not fear to make them look as if they would never come back to nice feathers, for they will if you get all the soap out again. When you are sure, be very sure, you have the dirt all out, begin to rinse.

Use the first tub until you think you have all out you can get with it, then use the second, putting a little bluing in it. Rinse about twice as much as you think necessary, and you must be sure the soap is all out, if you must take another water, for on this will depend the looks of the fowls when dry. I take two towels and get all the water out I can with them, but do not rub the feathers too much.

Have ready clean coops in a warm room. If the weather is cold do not fear to have them near the fire, for you can judge by yourself, if you are so wet, you would want plenty of heat, yet you do not want them to get so warm that it will bring out oil on the white feathers.

You will have to look after them to see that none are holding their tails in a corner, for they will be crooked. I had a White Rock I was preparing for Madison Square dry its tail crooked. And it had to stay crooked, for it was too late to do anything. Of course I lost even a chance to win. I saw birds at West Chester one year that were not washed clean and were full of soap. You may well guess the washing was worse than wasted, for they would have looked better not washed.

I once washed a pen of White Rocks and put them in a house with a sand floor. It was years ago, let me say, for my credit. The hens promptly took another bath, but one more to their liking. They looked pretty red. So you must be mindful where you put them after you wash them.

If there is much at stake it is well to have some one with them all the time. As soon as they soil any part of the coop it can be removed at once. This preparing of white fowls for the show is one objection to white birds. It is too much of a task for me, and I have not shown many whites in the last six years. One of my men is a good hand at it, and has prepared a number of White Wyandottes, but the White Leghorns have had to stay at home many times because of the washing.

The last thing is banding, or the first, whenever you wish to do it. Better put a sealed band on them, and keep an exact record of them. Sometimes white birds are so clean they can be shown without tubbing them. This is true for local shows, but for the big ones do not risk it.

LINE BREEDING

How to Introduce New Blood Without Injuring the Blood Lines—Careful Study Necessary in Making Selections for Special Matings

Written for American Poultry Journal by C. W. Sixt, West Park, Ohio

THE object of line breeding is to retain the good qualities of the strain and at the same time eliminating the defects. Therefore, it is foolish to practice line breeding with poor stock, as there is nothing in such a strain that we would want to keep. I will not undertake to tell here how long we can mate our birds without introducing new blood; everyone must decide this question for himself. But there is one thing sure, and that is, the longer you can keep the blood lines free from foreign blood the greater will be the per cent of good birds raised from your strain, and the more they will resemble the parents.

There is no chance for like to produce like if we are continually changing the blood lines.

Now, if we are sure that we need new blood in our strain, or if we have some defect in our strain that we would like to get rid of, and we know of some breeder that has line-bred stock, and we also know that blood from this man's strain will overcome the defect in our strain (so that we may not only receive new blood but we may also overcome the defect), we will purchase a male or female, whichever suits us best; for example, we will purchase a male. We will mate this bird to one of our yearling hens and would be very careful in picking the female for this mating. We would

want this female to resemble her line of ancestors as much as possible.

We would want to raise all of the chicks possible from this pair, and be sure to toe mark them as soon as hatched, so we can distinguish them from our other chicks.

During the winter we will have plenty of time to study our birds, especially the birds from this special mating. Now, for our second year's mating we will select the best male that we raised from this mating and mate him back to his dam. Chicks from this mating will be three-quarters of the blood of the dam and one-quarter of the blood of the sire.

Now, we have used this new blood two years, but have only used it in one mating each year. The idea is to get the blood of our own strains well established in the new line before using it in our general matings, so that if there was anything in the new blood that did not nick with our strain it could not do a great deal of damage. I also believe it is best to buy your new blood from the same breeder that you bought your first stock or eggs from, as his birds will nick better with your strain than any other, because they are from the same line. Do not introduce this new blood into your whole flock until you have tested it for at least two years. If after the second year you see no bad effects, and you notice the chicks resemble the parents, you can feel safe. Now, for the third year's matings, select as many cockerels as you need for your matings, be very careful to select the ones that resemble birds of your own strain. With the exception of the defect, it may be possible that you can overcome the defects. Now mate these cockerels to hens of your original strain. I also believe it is a good idea to test the breeding qualities of the new blood three years instead of two, for the reason that it will give the breeder more time to study its characteristics, and by this time he will be able to decide whether the two blood lines will nick.

Some people will say that this plan requires too many years to establish the new blood, but I will say that it is a sure way, also a safe way.

Now, to all breeders that have the idea that they require new blood at regular intervals, would say: Buy your new blood two or three years before you need it and have it ready. This would require an extra pen, but I assure you it will pay for itself. In this way you can have new blood at hand at all times, and you need not fear of its injuring your strain.

Now, I do not wish to have it understood that I advocate introducing new blood as often as some breeders, but if it must be done, be sure to get at least three-quarters of the blood of your own strain in the new line before using it in your general matings. If, as some say, blood will tell, you will be able to tell after the second or third year.

I had an experience a few years ago along this line. Something told me that I needed new blood in my strain, so I purchased a male. I mated a few birds to him, and the first season's crop of chicks proved to be a very poor lot. Now, this male was a very fine bird; he was good in all sections. In fact he was a better show bird than a breeder. His breeding showed that he came from a very poor line.

As soon as I found his breeding qualities I disposed of him and all of his chicks. I learned by this that the best show birds are not always the best breeders. I also learned that I did not need new blood in my strain at that time, for that season's crop of chicks from our own strain was the best lot of chicks I ever raised. The eggs hatched well and the chicks grew fine.

It is not safe to introduce new blood without first testing it, as parents do not reproduce themselves, but the strain

which they represent. So if we take the best male we have and breed him to females of his own progeny his good qualities will be retained in the offspring, and the more we use this bird the more we establish his good qualities in our strain, and we could expect a large per cent of birds like the original sire, providing he comes from a good line.

THE BACK YARD FANCIER

The largest group of poultrymen today is composed of the back-yard fanciers,—those men who are confined to offices and stores all day secure diversion and pleasure from their little pen of thoroughbreds. While handicapped to some extent their success is often greater in proportion to their number of birds than that of the more extensive poultry men.

The most important difficulty they have to contend with is lack of room. To overcome this, Mr. B. Y. Fancier must (1) not overcrowd, (2) secure, as far as possible, natural conditions, (3) maintain perfectly sanitary conditions, keeping his fowls, houses and yards free from lice and dirt. This last is probably the most important of the three.

The greatest difficulty lies in raising the young birds. Here natural conditions should be secured. As their yards are necessarily small, a bed of green food, such as lettuce or rape, should be provided outside, to feed in small quantities as needed. The old fowls must all be provided with lawn clippings or other green food. To secure best results, animal food of some kind must be provided. This is most conveniently procured in the form of beef-scraps, although cut bone or fresh meat is recommended by some. In grain, the best feed is the mixed feed, as this supplies the variety of seeds they obtain under natural conditions. For the man who is away from home all day dry grain, hopper fed, is convenient. Also fresh water and grit must be kept before them all the time. Dry bread, obtained at a wholesale bakery for two cents a pound, is good feed and supplies variety.

Young birds must not be over-crowded. This promotes disease and hinders correct growth and development. In crowded space a larger profit can be made with fifteen birds than with twenty-five. Open front houses, such as are rapidly coming into favor, are the most sanitary and successful form of houses. There should also be shelters from the sun where natural shade is not provided.

Birds cannot develop in badly ventilated or dirty houses. They should be whitewashed and cleaned three times a week. Also the runs should occasionally be spaded under.

Lice are more troublesome in the city than in the country, probably for the reason the English sparrows are so prevalent. You cannot raise chickens and lice in the same house and obtain good results. The roosts should be painted once a week and the houses sprayed several times a year with a good liquid lice killer. Whitewash is cheap and should be used freely.

In the winter birds in a crowded, close house do as badly as those in a damp, draughty one. A house partly open on the south and tight on the other sides is best. With curtains before the roosts at night and a good litter and warm water in the day time the fowls will be warm and contented during the winter. A good variety of grain fed in the litter gives them needed exercise and cut bone and green food should be supplied regularly. Cabbages and other vegetables, alternated with steamed alfalfa make the best green food.

By maintaining these conditions and not neglecting details there is no reason why a back-yard fancier should not succeed and make a good profit on his investment.

Paul R. Anders.

Galesburg, Ill.

62,000 A. P. J.'s for September, 1910.

State of Illinois, County of Cook, ss.
J. G. Budde, secretary and treasurer of Began Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding sixty-two thousand copies of the September, 1910, issue.
J. G. BUDDE.

Subscribed and sworn to before me this 23rd day of August, 1910.
[Seal.] Henry G. Eisert,
Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

The A. P. A. Convention

The thirty-fifth annual convention of the American Poultry Association is a thing of the past. It is now past history. In another part of this paper we have tried to tell our readers what was done at this convention. What we consider the most important business transacted was the acceptance of the illustrations and ordering the editing and publication committee to have printed 25,000 copies of the new edition of the Standard. These to be ready for distribution by Dec. 1, 1910. We know this will be welcome news to our thousands of subscribers who are anxious to procure a copy of this new edition and find out how near their birds comply with the requirements of the new standard.

Another Milestone

The American Poultry Association has reached another milestone, and is today on a stronger foundation than ever before. The increase in membership during the past twelve months has been most gratifying; but instead of 2,000 members we should have 10,000. Let us all get busy and get them. Every member of the American Poultry Association should appoint himself a committee of one to secure at least one new member within the next sixty days. Stop a minute and think what this would mean to the association. It would mean 100 per cent increase in membership at once.

Of course, some breeders say they will not join the association because they do not like the way the affairs of the association are handled. These are just the ones who should join the association and help correct the evils in the association, if evils do exist. They cannot do this by remaining outside of the association. So we say, send in your application for membership now and let us have an associa-

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and worldwide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

tion so large and so strong that no poultry breeder can afford not to be a member thereof.

The Standard Illustrations

At the late meeting of the American Poultry Association the artists who had been given the contract for making the idealized photos for the new edition of the American Standard of Perfection submitted their work for approval or rejection, as the case might be. In the main the work proved to be satisfactory, which speaks volumes for the ability of the artists. They were not trying to satisfy one man, but a large body of men, many of whom have an idea that they know more about art than the artist does. Therefore the artists had a most difficult proposition to face, and we believe it will be conceded they did remarkably well.

Out of the large number of pictures submitted only four were rejected and the artists ordered to make new ones. Many were accepted without alteration. Some few were accepted with only slight alterations.

Considerable has been said in the columns of the poultry press about the price paid for these illustrations, but be it too much or too little, we believe it will be conceded by all that the artists did their work well.

A Fraud

The public is hereby notified that a man representing himself as agent for American Poultry Journal is offering six cups and six saucers, together with a year's subscription, to American Poultry Journal.

This man is a fraud and should he appear in your vicinity please wire us at our expense. He is described as being about 5 feet 3 inches tall, weight 135 to 140 pounds, yellowish hair, smooth-faced and reddish complexion. He has

been working his game in the vicinity of South Holland, Ill., Hammond, Ind., and Cedar Lake, Ind., and has been giving the name of Chas. Bennett to subscribers during the past weeks. Watch for him.

"Going West"

N. W. Ayer & Son, Philadelphia, Pa., the well-known advertising agency, recently opened a large branch office in Chicago at 181 LaSalle street, where with extended facilities they hope the better to serve their western clients, old and new. This we consider a move in the right direction. This firm was established April 1, 1869, therefore have been in the advertising business over 41 years, which is conclusive proof that they serve their patrons in a satisfactory and profitable manner. They now recognize that the center of population, and therefore the center of business, is no longer confined to the East, and have taken Horace Greeley's advice to "go west." This move we believe will be to their advantage, and will be a good thing for the advertiser, the publisher and the advertising business in general.

Illinois Branch Granted a Charter

A temporary organization of the members of the American Poultry Association was perfected July 22, with Fred L. Kimmey, president; H. H. Cowen, Virden, Ill., secretary-treasurer, and an executive committee of eleven members scattered throughout the state. The application for permission to withdraw from the Middlewest branch and for a charter for an Illinois branch had the name of some fifty-five members attached and when presented to the executive board at St. Louis a charter was granted for an Illinois branch.

Mr. Fishel was present and informed the board that Indiana was preparing to ask for a state charter and Iowa

has also called a meeting for the same purpose.

Several applications to the A. P. A. through the Illinois branch was presented and acted on favorably by the board. A meeting of the Illinois branch was held after the charter was granted and every officer present tendered his resignation that some other member in a part of the state not represented could be put in his place.

Only two of these resignations were accepted. Louis A. Stahmer resigned from the executive committee in favor of Mr. Meyers, of East St. Louis, and F. C. Hares' resignation was also accepted because Quincy was also represented by D. E. Hale.

The offered resignation of every officer present, including the president, was conclusive proof that no frameup or ring of any kind existed and proved beyond a shadow of a doubt the promoters of this organization acted only for the upbuilding of the poultry industry in our state.

A beautiful badge for the branch was secured, consisting of a button with the official emblem of the state of Illinois with a wide ribbon pendant, which is colored in vertical stripes red, white and blue, on which is printed "American Poultry Association, Illinois Branch."

The badge was generally admired and many complimentary remarks passed. A sufficient number was purchased that all A. P. A. members residing in our state may secure one by writing the secretary, H. H. Cowen, Virden, Ill.

General good feeling prevailed and many members pledged themselves to secure three, four, five and even ten new members during the year and it was the consensus of opinion that we should at least double our membership during the coming year.

We now have a state branch of our own and if you are not a member of the A. P. A. you should join at once. If you are a genuine fancier you certainly should be affiliated with the organization that promotes and fosters the fancy poultry industry.

Better join it now. Just write H. H. Cowen, Virden, Ill., and send him ten dollars. It pays you up for life and half of it stays in the Illinois branch.

Say, Martha, I jes been readin' in the American here whar it say that chickens should be trained in an exhibition coop fer tew weeks befor the show, to get 'em tame and sich.

Now, these R. I. Red we got of the Winona Farms at Lansdale, Pa., are comming along fine and are as purty as any I ever see, and the fair is only tew weeks off, so if we 'tend to enter them we better be gettin' ready.

That's jes what I'll do, go over to Mr. Rudy and see if I can't borrow one of his coops; he has them with them round sticks in front and civered with white muslin. I hear Jedge Schaub is to place the ribbons, and that he's a regular expert and has jedged at New York. Oh he's all right, no mistake about that.

Yes, Martha, I'll see tew making the entries and we'll show at the fair. Won't we feel proud if we should win?

Poultry Press Association of America

On the 13th of August a number of poultry publishers met at the Planters Hotel in St. Louis, Mo., and formed an association to be known as the Poultry Press Association of America, the objects of which is to promote harmony of action and friendly co-operation among poultry journal publishers and to correct the abuses that have crept into the business, and to adopt uniform rules and thereby make the poultry press of greater value to the reader, the advertiser and the poultry business in general.

One of the main objects in forming this association was to correct the evil that during the past few years has crept into the subscription end of the business; to stop the taking of subscriptions at fairs and poultry shows for one-half the subscription-price and al-

lowing the agent to keep this one-half. This system of soliciting subscriptions was degrading to the great industry the poultry press represented, and we are glad to announce to our readers that after October 15 agents for poultry papers will not be offering to send this or that poultry paper to your address for one year, if you will pay the postage.

The readers of the poultry journals certainly get their money's worth even when they pay the full subscription price, which they will be asked to do in the future, and which we believe they will do without hesitation, and by so doing will enable the publishers to give them a better magazine, one that will be more instructive and one that will be designed primarily for the reader.

The formation of this association we consider to be the most important

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS

It is acknowledged the world over to be the greatest laying and exhibition strain. I have 500 grand yearling hens for sale now at \$2 per head, and hundreds of cockerels and pullets after Oct. 1st.

D. W. Young : Box 1-A : Monroe, New York

Big Bargains in Reliable Breeders

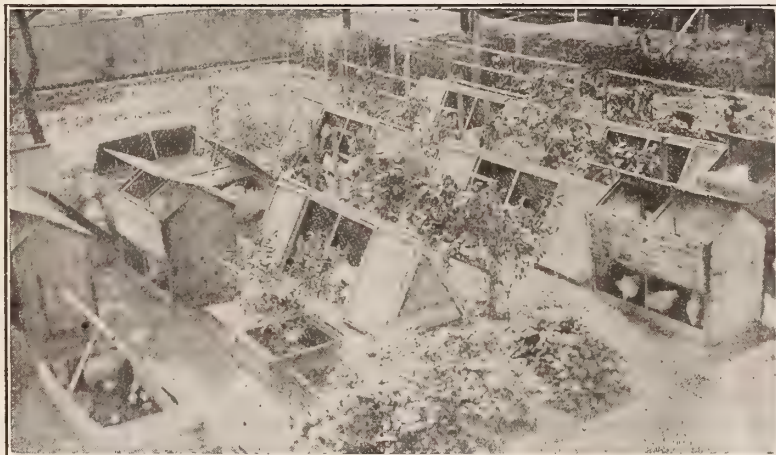

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

A LIVING FR

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

TO the average poultryman that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the

Philo System

The Philo System Is Unlike All Other Ways of Keeping Poultry and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, **The Philo System of Poultry Keeping**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., April 19, 1909.

Mr. E. R. Philo, Elmira, N. Y.
Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last December. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35c a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season.
Yours truly,
A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

Mr. E. R. Philo, Elmira, N. Y.
Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$960.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are,
Very truly yours,
(Mrs.) C. P. Goodrich.

Special Offer Send \$1.00 for one year's subscription to the **POULTRY REVIEW**, a monthly magazine devoted to progressive methods of poultry keeping, and we will include, without charge, a copy of the latest revised edition of the Philo System Book.

E. R. PHILO ————— 14 LAKE ST

POULTRY

The Poultry Review

*A Monthly Magazine Devoted to Progressive Methods
of Poultry Keeping*

The POULTRY REVIEW is edited by E. W. Philo, author of the Philo System Book and founder of the Philo National Poultry Institute. It is edited and printed on a practical poultry farm, where experiments are being conducted and reported in full in the REVIEW. New discoveries and improvements are described and illustrated, and each issue contains a number of letters of experience and suggestion from followers of the Philo System.

Rev. W. W. Cox, our associate editor, is conducting a Philo System Plant, and his "Notes from a Six Hen Plant" in each issue have created considerable interest, and contain much valuable instruction. The first year's work on this plant netted over \$500.

In addition to the best original articles it is possible to obtain, a review of the best articles from over a hundred publications is made—the "cream" of the poultry press arranged for the busy reader.

Another thing that is proving of great value to our subscribers is our Information Department. Our editors are always ready to help subscribers. When any difficult problem arises and you see no way of solving it, write us, and we will give you a prompt personal reply. It is quite probable that we have had a similar experience and can help you. Although no charge is made for this service, it is worth many times the subscription price.

For 1911 the POULTRY REVIEW guarantees the largest circulation of any paper of its kind—over 100,000 copies monthly, reaching the best class or poultrymen in every state and over thirty foreign countries.

TESTIMONIALS

E. R. Philo, Publisher Poultry Review, Elmira, N. Y.

Dear Sir:—Of all the poultry journals I take, I would fail in all rather than in the Review, as I really like your paper the best of them all. Now I do not say this to curry favor, nor for any other purpose, because I really like your paper for the pithy and sound articles. There is no dry reading in it as there is in other poultry journals, such as accounts of poultry shows that do not really concern any one but those who are written about. I do not think that any one in any part of the country cares who wins and who does not. It is all right in a local show, written and published by a local paper. Well, success and great success for the Review, and I hope to receive it regularly in the future.

Very sincerely yours,

R. G. Wetmore.

E. R. PHILO — 14 LAKE STREET — ELMIRA, NEW YORK

event that has ever taken place in the poultry world, as it is going to get the poultry press out of the old groove in which it has been running so long. Of course, this will not be accomplished in a day or a month, but we look for a vast improvement within one year.

This association is not made up of a few of the larger papers or a few of the smaller ones; but is made up of the large and the small, the weak and the strong, and we are all going to work together, with but one object in view, to foster and build up the poultry industry in the United States and Canada.

Following is the constitution adopted at the formation of this association:

Article I.—Name.

The name of this Association shall be the Poultry Press Association of America.

Article II.—Objects.

The objects of the Association shall be as follows:

Section 1. The advancement of the interest of its members in all legitimate ways.

Sec. 2. Promoting harmony of action and friendly co-operation among poultry journal publishers.

Sec. 3. The formulating and adopting of rules of business from time to time, which will establish more satisfactory and equitable relations between the poultry press and its patrons.

Sec. 4. The promotion of a closer personal relationship among publishers for the discussion and adoption of uniform rules which will make the poultry press of greater value and interest to all breeders of poultry and thereby foster and build up the poultry industry.

Article III.—Membership.

Section 1. Membership in the Association shall be in the name of the publication and not in the name of individuals.

Sec. 2. Membership in this Association shall carry with it the obligation to abide by and conform to the constitution and by-laws of the Association, also to such rules and regulations as may be adopted by a three-quarter vote of the total membership of this Association, except in cases where a member declines to vote in favor of a rule or regulation, said member is not to be bound thereby, but shall be temporarily suspended from the enjoyment of the privileges of membership, and shall have the right to withdraw from membership if the member so desires, on giving three months' notice, as provided in Article X hereof.

Sec. 3. Each publication holding membership in this Association shall be entitled to one representative at the meetings of the Association, each such representative shall be entitled to take part in all discussions and enjoy all privileges of membership, and shall be entitled to one vote upon any question. The name of the individual who shall exercise the voting power for a member shall be given to the secretary of the Association in the application for membership, and if at any time or meeting it becomes necessary or desirable that some one else shall cast the vote of a member the secretary shall be furnished with written credentials duly signed by such member.

Sec. 4. The membership fee shall be \$10, payable to the secretary of the Association at the time of filing appli-

cation for membership. The annual dues shall be \$10, payable in advance.

Sec. 5. New members may be elected to membership at any meeting of the Association or by mail. At a meeting of the Association the application shall receive the majority vote of the members present; by mail vote, the applicant shall receive a majority of the total membership entitled to vote.

Sec. 6. Any member desiring to withdraw from membership in the Association shall give written notice to the secretary-treasurer at least three months in advance of such action, stating in detail the reasons for withdrawal, but all members by the act of joining the Association and subscribing to this constitution agree to be bound during the said three months by the constitution and by-laws and by the rules and regulations of the Association, except as provided in Sec. 2 of Article III.

Article IV.—Meetings.

A regular annual meeting of the Association shall be held once in each twelve months, the time and place to be fixed by mail vote of members June 15 of each year at the same time election ballots are sent out. Called meetings may be held at any time upon petition to the president by five or more members of the Association. Upon receipt of such petition the president shall call said meeting at some reasonably central location, and each member of the Association shall receive notice from the secretary of the Association thirty days in advance of the date when such meeting is to be held, said notice to state upon whose request the meeting was called and the object or objects of same. Any business not otherwise provided for in this constitution may be transacted at a called meeting, even though not specified in the notice to members, but before becoming effective any action taken at such meetings must be ratified by a three-quarter vote of the membership by mail or at a regular meeting.

Article V.—Officers.

The officers of the Association shall consist of a president, vice-president, secretary-treasurer, election commissioner and an executive committee of five members, including the president and secretary-treasurer of the Association.

Article VI.—Election of Officers.

The election of officers shall be held by mail each year and is to be conducted by the secretary-treasurer. May 1 the secretary-treasurer shall send out nomination ballots to all members, such ballots being returnable to the election commissioner within thirty days. June 15 the secretary-treasurer shall send out election ballots containing a full list of nominees, these ballots to be made returnable to the election commissioner within thirty days. The voting shall close July 15 following, and nominees for each office receiving the greatest number of votes shall be declared elected. Newly elected officers shall assume their positions at the first regular annual meeting following election.

Article VII.—Duties of Officers.

Section 1. President—The president shall discharge the customary duties of his office and act as chairman of the executive committee.

Sec. 2. Vice-president—The vice-president shall, in the absence or in-

ability of the president, perform the duties of the office of president.

Sec. 3. Secretary-treasurer—The secretary-treasurer shall discharge the customary duties of his office; shall conduct the correspondence of the Association; shall keep the list of membership and all records and valuable papers belonging to the Association; shall collect and disburse all moneys of the Association, subject to the instructions and approval of the executive committee; shall keep itemized accounts of all collections and disbursements, the books and records of the Association to be open at any time to the inspection of the members; shall furnish at the expense of the Association a satisfactory bond in the sum of one thousand dollars (\$1,000), to be approved by the executive committee; shall call meetings and conduct the elections of the Association as provided in Articles VI and VII, respectively hereof; shall use his best endeavors to promote the interests of this Association and of its members as per the object and provisions of the constitution and by-laws and shall carry out any other plans and instructions that the executive committee may order.

Sec. 4. Duties of the Executive Committee—In the interval between meetings the executive committee shall have full authority to act in behalf of the Association, subject to the constitution and by-laws and to rules and regulations adopted by the Association. Three members of the executive committee shall constitute a quorum for the transaction of business. This committee shall audit all bills and accounts and authorize checks to be issued in payment thereof. Special meetings of the executive committee may be called at any time by the president or by written request of a majority of the members of the committee. In case of action of the executive committee affecting the interest of members of the Association appeal may be taken to the Association by the member or members thus affected, such appeal to be made at any regular or called meeting within eighteen months of the date of such action.

Sec. 5. Election Commissioner—The election commissioner is to receive, count and preserve all nomination and election ballots cast for the election officers of the Association; is to make a list of the nominees and return same promptly to the secretary-treasurer; is to make a list of the votes cast for the election each officer and return it promptly to the secretary-treasurer, at the same time sending a certified copy to the president of the Association.

Article VIII.—Financial Remuneration.

All officers of the association and members of the executive committee, except the secretary-treasurer shall serve without financial remuneration of any kind. The secretary-treasurer shall be reimbursed for the legitimate expense of conducting his office, all such items of expense to be approved by the majority vote of the executive committee before being allowed. If the members in attendance at any regular annual meeting of the Association constituting a majority of the total membership shall deem it consistent to remunerate the secretary-treasurer for services rendered during the previous twelve months, he shall be paid such amount as may be determined upon not to exceed \$100, provided that after

such payment there shall be not less than \$100 remaining in the treasury of the Association over and above the amount necessary to liquidate any outstanding indebtedness of the Association.

Article IX.—Mail Voting.

Matters of importance may be voted upon by mail at the request of five or more members on call of the president who shall issue such call through the secretary-treasurer upon request in writing of five or more members. In such cases the question shall be submitted to all members by registered letter and the ballot held open for thirty days after the date of submitting the question and asking for vote. In cases where members neglect or refuse to vote they shall, after the lapse of thirty days, be temporarily suspended from the privileges of membership and the matter reported to the chairman of the executive committee, which committee shall take such action in each case as it deems to be in the interests of the Association. Temporary suspension from the enjoyment of the privileges of membership, as here provided, does not release the member from obligations of membership, except as to the rule or regulation on which he refused to vote or be governed by.

Article X.—Quorum.

A quorum at a regular or called meeting shall consist of ten members present and voting.

Article XI.—Amendments.

This constitution and by-laws may be amended by a three-quarter vote of the total membership, and such action may be taken either at a regular annual meeting or by a mail vote.

All poultry publications that have not as yet joined the association should do so at once. Send to the secretary, E. E. Richards, Cedar Rapids, Iowa, for full information.

MORE EXPRESS TROUBLE.

Hon. W. H. Shaw, of Canton, Ill., has the best of standing, wherever known, and his word is as good as his bond, which is A. No. 1, says The Farm Home.

Mr. Shaw prides himself on the very superior quality of his Barred Plymouth Rocks, and his winnings at the leading shows is familiar history to the readers of poultry literature. He gives his experience in shipping eggs, which may explain why some buyers of high-class eggs do not receive what they order. He writes to The Farm Home:

"In April I shipped via Adams and Pacific Express Company, one basket of two settings, thirty eggs, of Barred Plymouth Rock eggs, and eighteen chicks hatched from those two settings, viz.: Thirteen Barred Plymouth Rocks and five Rose Combs and Leghorns hatched. The lady wrote me a stinging letter and stated she was a breeder of Rocks for eighteen years, but the proof of the pudding was the wind up of her letter when she asked me if I pen and date marked each egg, which I certainly do.

"Her second letter in answer to my letter, she states there was nine or ten eggs not pen or date marked. I pack my shipping eggs in baskets with excelsior and granulated cork and cover it with heavy cardboard and strap well with heavy twine. I have taken the matter up with the express company, and hope to get a definite solution of who switched the cut, and in the future

will seal my shipments with a lead seal. Hoping this information will be of some use to poultry breeders, and would like to hear of someone who has had a like experience. Very respectfully,
W. H. Shaw."

H. B. Prescott, proprietor of Pine Ridge Farm, Box 38, Derry village, N. H., breeder of Buff, White, Black, and Diamond Jubilee Orpingtons, reports his large flock of young birds are

doing extraordinarily well this year and he has many fine specimens to dispose of. See his ad elsewhere.

Dr. Wilbur Dace, Rushville, Ill., has purchased Queen Alice and several other fine S. C. Reds formerly owned by William Z. Bennett, of Canton, Ill. These fine specimens added to the doctor's fine flock puts him in the foremost ranks of Rhode Island Red breeders.

RESULTS are what count! They prove SUPERIORITY

FAIR OAKS FARM
EGGS OF QUALITY—STRICTLY FRESH
FANCY FRESH KILLED POULTRY

Darien, Conn., July 30, 1910.

THE HALL MAMMOTH INCUBATOR CO.,
Utica, New York.

Gentlemen: We have operated the nine thousand egg machine which you installed for us two seasons ago **continuously with excellent results** and we find it **far superior** to the kerosene lamp machines, several of which we had in use prior to our using the **Hall system**. Its **ease of operation** and **economy of fuel consumption** make it an **ideal machine for anyone** desiring to hatch on a large scale.

Very truly yours,
(Signed) L. C. SULTZER.

ORCHARD VIEW POULTRY FARM
BREEDERS OF
BRED-TO-LAY WHITE WYANDOTTES

Acushnet, Mass., July 14, 1910.

THE HALL MAMMOTH INCUBATOR CO.,
Utica, N. Y.

Dear Sirs: Chicks are better with us this year than ever before. Our last lot of 275 hatched June 3rd, are **all living** but 5 which were weak and we killed them. Our total loss up to date out of **853 chicks has been 21, which is not quite 2½ %**. Our chicks this year received the same care as last year when we ran lamp brooders and lost **18 %**. It must be the **Hall Brooder System** that's helping us turn the tide.

Yours truly,
(Signed) HEMMANN BROS.

The superiority of the Hall Equipment is appreciated by every poultryman who has availed himself of his privilege of inquiry.

Now is a good time to consider the installation of a Hall Mammoth Incubator or the Hall Brooder System.

The Hall Catalog is free.

HOME OF PRINCE RINGY.

During the latter part of July we had the pleasure of visiting the poultry plant of W. D. Holterman, Ft. Wayne, Ind., home of the "Aristocrat" B. P. Rocks, and we will endeavor to tell our readers what we saw there.

Taking the interurban electric car that runs between Ft. Wayne, Ind., and Lima, Ohio, we enjoyed a ride of about

the outside we had no difficulty in entering, where we found Mr. Holterman very busy playing ball with the boys. Right here we wish to say that Mr. Holterman does not believe in working all the time, but judging from the amount of work that has been done on this place during the past year we are convinced that he does work sometimes.

After receiving a very cordial welcome from Mr. Holterman we were es-

house with words, we asked Mr. Holterman for a photo of it, the result of which is the accompanying picture.

After examining this house on the inside we came to the conclusion that it certainly one of the most convenient and roomy poultry houses we have ever been into, and we have been in a few.

The outside yards spread out in fan-shape from the building and are large and well shaded with huge elm trees so that the fowls have plenty of shade at all times of the day.

In one of these yards we saw "Prince Ringy," the bird that so much has been written about. This bird is now five years old, but is almost as lively and vigorous as a cockerel. At this season of the year all fowls appear in their poorest condition and it would be folly for us to attempt to give a description of the birds that were used in the breeding pens the past season, but do wish to say that the evidence of quality was everywhere apparent.

With the young stock it was different and we saw several hundred head of young stock that have all the ear-marks of prize-winners, and especially the cockerels which showed large bone, clean yellow legs and barring that cannot be beat anywhere.

Mr. Holterman will have about fifteen hundred of young stock to dispose of the coming season and he is now booking orders for the early fall and winter shows.

Mr. Holterman has charge of the mail order department of the Ft. Wayne Drug Company, and as the winter time is their busy season he finds it almost impossible to take in any of the large poultry shows and therefore has to be satisfied with supplying winners to his customers. However, he hopes to be so situated in the near future that he can devote all his time to his Barred Plymouth Rocks, and when that time comes the present day exhibitors will have to look to their laurels, as it is his aim to be the largest breeder and exhibitor of B. P. Rocks in the country.

After spending a very pleasant day with Mr. Holterman and his family we took our departure, thankful that we came and sorry we could not stay longer.

Editor.

Poultry House on the Farm of W. D. Holterman, Ft. Wayne, Ind. Home of the Aristocrat Barred Plymouth Rocks.

four miles and got off at a station called Pennets Grove. A walk of about a quarter of a mile brought us to the farm gate and as the latch-string is always on

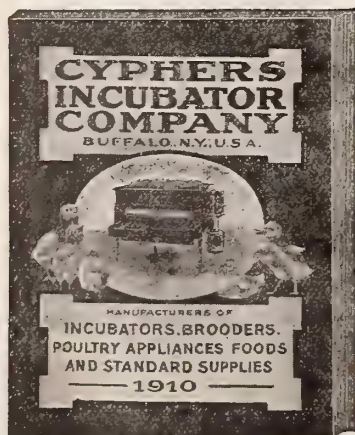

corted to his new residence, which he is just completing, and was here made welcome by Mrs. Holterman.

In due time we wandered outside and just naturally drifted over towards an odd shaped building a short distance from the house, and upon examination found it was a chicken house, and not feeling able to adequately describe this

Cyphers Mammoth Incubators

Are Doing Highly Satisfactory Work In Hatching Chickens And Ducklings
READ THE TWO FOLLOWING REPORTS AND JUDGE FOR YOURSELF

HOW WELL THEY HATCH HEN EGGS

WHITE HOUSE POULTRY FARM

BREEDERS OF BARRED PLYMOUTH ROCKS AND S. C. WHITE LEGHORNS
CENTER MORICHES, LONG ISLAND, N. Y.

OSCAR FROWEIN, PROPRIETOR

Cyphers Incubator Co., Buffalo, N. Y.

Center Moriches, July 28, 1910.

I have just taken off my next to last hatch for this season with the 6,000 egg Mammoth Incubator that you installed for me last fall, and it has averaged 83 1/2% for the full capacity, and one section or compartment set with S. C. W. Leghorn eggs gave me 98%.

The chicks are much stronger than those hatched in the lamp heated machines.

The regulator is perfect and I have saved over two thirds on fuel used this season.

The brooder house heater and regulators that you installed for me last season work perfectly, keeping the temperature within two degrees either way. You can enter my order for a heater and regulator for immediate delivery for a brooder house 90 ft. long.

Wishing you the best of success,

Very truly yours,

O. FROWEIN.

We are prepared to supply the latest improved models of these Mammoth Machines for either hen eggs or duck eggs, in capacities ranging from four thousand eggs up to any size the customer may desire. The Cyphers Mammoths, 1911 pattern, are shipped knocked-down at low freight rates, with

photographs and blue prints that will enable the purchaser to set up his own machine. Any handy man can do the limited amount of work required.

SPECIAL CIRCULAR:

If you are interested in custom hatching, or are selling day-old chicks, or are operating or planning to operate a large practical plant of any kind, write at once for our special circular (just printed) showing pictures of the latest pattern Cyphers Mammoth. Prices and full particulars furnished on request. Address factory and home offices or nearest branch house.

HOW WELL THEY HATCH DUCK EGGS

OCEANIC DUCK FARM

CAPACITY, 40,000 DUCKS ANNUALLY
SPEONK, LONG ISLAND, N. Y.

E. O. WILCOX, PROPRIETOR

Cyphers Incubator Co., Buffalo, N. Y.

Speonk, July 30, 1910.

Please quote me price on twenty sections of your Hot Water Mammoth Incubator, to be installed on my plant this fall. I would want them attached to the forty sections that you installed for me last year. This machine has given perfect satisfaction. It is easily operated, as the quality and quantity of the ducks hatched are much ahead of those hatched in lamp heated machines.

I have operated 20 lamp heated machines of another make this season, and the Mammoth Incubator has outhatched them. The temperature regulation is perfect, and I figure that I have saved at least \$150.00 on fuel alone this season.

During the Brooding, the death rate has been very low, as the ducks were extra strong when hatched. I would be pleased to recommend your Mammoth Incubator and have done so to a number of parties who contemplate installing Mammoth Incubators this season.

Wishing you continued success, I am,

Very truly yours,

E. O. WILCOX.

REMARKABLE SUCCESS WITH THE PHILO SYSTEM.

1850 Chicks on the Rear of a City Lot
in a Space 40x40 Ft.

The remarkable story which we have to tell recounts the wonderful success attained by Mr. Victor C. McFarland, of 1428 St. Joe boulevard, Ft. Wayne, Ind., and simply shows what it is possible for any one to accomplish who will intelligently follow the instruction given by Mr. Philo in his book.

Mr. McFarland lives in the city and

had taken off twenty-two hatches in these various sized machines, ranging from 50 to 94 per cent and making an averaging of 83 per cent for all the hatches.

This is doing remarkably well when you consider they do not own a single old fowl, but buy all their eggs from farmers. Of course the chicks are a mixed lot, being mostly a grade of Barred Rocks, with some Columbian Wyandottes.

Up to the present time they have hatched just 1,850 chicks since March 11, and at the time of our visit, July 30, they had over 1,400 chicks in their Philo brood coops, the rest having attained suitable size and been sold as broilers. We

result of the care and cleanliness to be found here.

The following system of feeding is used for every hundred chicks: Take one quart of dry bread, pulverized to fine crumbs, and one quart of the regular mixed chick feed, to which add two hard boiled eggs (boiled one hour) and some charcoal and a little salt. This is moistened slightly with milk, which has been scalded, so it is a crumbly mass. This amount of feed will about be consumed by 100 chicks during the day.

When the chicks are two weeks old the hard boiled eggs are omitted, as they are too expensive, and two quarts of bran and one pint of oats soaked in cold water over night is added to the feed, which is preferably moistened with scalded milk, yet water may now be substituted.

From four to six weeks the feed for 100 consists of one quart of Globe mixed feed, one quart of bran, one quart of soaked oats and one quart of unbolted cornmeal.

From six to eight weeks the same feed is used except the bran is reduced and in its place middlings are added and some cracked corn and wheat is also fed. At two weeks old a little green food is fed until they are four weeks old, then the green food is dropped, as at this time the fattening food is commenced and they believe the green food hinders the fattening. The chicks are made to weigh one and one-fourth pounds at eight weeks and then marketed.

Their method of feeding is to feed three times a day in pans and give sufficient to last until the next feeding time. Clean water is kept before them all the time. The picture shown herewith gives you a good view of the plant. To the left hand is south, so with the tops of the brooders raised the chicks are shaded all day. To the right of the house and beyond the brooders you will see the garden.

Remember the McFarlands have everything to buy and they knew nothing about raising chickens before they started this plant. Then realize they have hatched 1,850 chicks and there are 1,400 in these coops when the picture was taken, and with the eggs in the incubators they will have over 2,000 chicks. They are very enthusiastic over the possibilities in the chicken business, and are anxious to get located on a larger piece of ground, where they can have their own stock to furnish them the eggs for incubating. They now have some eighty White Orpingtons, which they intend

THE PHILO SYSTEM IN A BACK YARD.

has only a part of an ordinary city lot, and only some 1,200 square feet of that being devoted to his poultry, the rest being in garden. First we want to say Mr. McFarland is ably assisted by his wife, who is thoroughly infatuated with the work, and we also desire to inform you they were not fanciers and had no experience before, having never seen an incubator until they procured one of their own. They now have five machines in all, ranging in size from 50 to 200 eggs, and the five give them an incubating capacity of 550 eggs. Since their first hatch on March 11 to July 29 they

were shown some that were dressed ready to fill an order, and they were as nice and plump as could be. Only the local market is catered to, and while the prices received were nominal yet we were assured there was a good profit for them. A strict book account is kept of everything, so they know exactly what they are doing. We saw the books and can vouch for the truth of these statements.

The McFarlands believe in cleanliness, and all the coops are cleaned every day. No lice are to be found and we did not see a sick chick in the 1,400. This is a very remarkable fact and is purely the

using for breeding stock. Mrs. McFarland says any man working in an office during the day could easily attend to a similar plant, perhaps not quite so extensive, and not only be benefited financially but gain in health as well.

One of the remarkable things was that we failed to see a sickly or a puny, scrawny chick in the 1,400. This is due to the cleanliness, every brooder being cleaned every day and the straw removed and replaced by fresh.

We give you the story of the success of the McFarlands in detail to show you what has actually been done and what you can do if you try.

C. W. Zimmer.

LIVE STOCK EXHIBIT AT THE STATE FAIR.

There has been an unusually heavy demand this year for space at the State Fair to exhibit horses, cattle, swine, sheep and poultry. Every stall for heavy horses has been assigned. The light horse barns are rapidly filling, notwithstanding more room has been provided this year. The pony barns are filled to overflowing. Welsh ponies have been added for 1910. Many will exhibit in tents. Reservations for dairy herds exceed all expectations, and the beef cattle exhibit will far surpass last year's. The sheep and swine pens are filled to the limit. There are over 2,000 new and strictly modern sanitary homes for poultry, and we are assured that the poultry exhibit of 1910 at the Illinois State Fair will be the largest and best ever shown in the world. Notably among these will be "Taft," a 65-pound young gobbler. No education is complete without taking in the State Fair at Springfield.

To accommodate the business, America's most popular railroad, the Chicago & Alton, will make special rates and run special trains. It is "The Only Way" to "The Only Fair."

To Our Friends and Customers:

We beg to announce that owing to our business having grown to such an extent, it is absolutely necessary that we should give our entire attention to our farms. Therefore, we have appointed Harries & Benedict Company, Inc., 67 Barclay street, New York City, our sole agents. They have taken over our supply business in its entirety. It will be continued at the same place, and the fact that Mr. Fred Harries of the above mentioned firm having been our manager, will guarantee every customer of Lakewood Farms the same personal attention they have had heretofore.

Kindly address all communications relative to poultry supplies to Harries & Benedict Company, Inc., 67 Barclay street, New York City, and make all checks payable to them for this branch of the business.

Thanking you for your past patronage and hoping you will continue same to our agents, we are

Very truly yours,

Lakewood Farms Products Co.

Mr. Harries is well known to most of our readers, he having been a breeder and advertiser for a number of years, and it will be recalled that it was his pen of White Orpingtons that won first at the last Madison Square show. Mr. Harries is thoroughly familiar with every detail of the poultry supply business and having many friends and acquaintances we predict nothing but success for Harries & Benedict Company.

Let Chas. A. Cyphers Save you 50% On A Standard Buffalo Incubator

"Ninety-seven incubators of different makes, but the Buffalo is far superior to any of them." So says Patrick McEvoy, Manager of the Crystal Springs Poultry Co., in his unsolicited testimonial below. He has had thirty years experience in the poultry business so he ought to know. Read his letter. It tells the whole truth about my wonderful new standard Buffalo Incubator. As thousands of poultry raisers know, I formerly built two of the best known high-priced types of incubators, but when I found I could produce a better incubator at half the price, I cut loose from old ideas and staked my all on the new Buffalo. It's a winner too. Biggest success ever heard of in poultry equipment. It's right in every way—materials, constructive principle, and pre-eminently right in price. For the sake of your own pocket book,

Don't Buy An Incubator Before Writing To Me

I want to tell you all about the standard Buffalo Incubators. I want to put all the facts in your hands, so you can see why the standard Buffalo is best of all and why I can save you half on the cost.

200 Egg Size - Only \$16.00

100 egg size for \$12. I save you one-third on brooders, too. Standard Buffalo Brooders are the best I ever turned out—strong, durable, temperature automatically regulated. Get all the facts about the Buffalo line so you may be prepared for a big fall hatch. Write me today—a postal card will do.

**Chas. A. Cyphers, Pres.
Buffalo Incubator Co.
4700 Ellicott Square Buffalo, N. Y.**

Read This Letter

The Crystal Springs Poultry Co., Oil City, Pa., markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the standard Buffalo Incubator, and beg to advise you that it is the largest per cent of fertile eggs taken off this season—ninety three per cent."

We have ninety-seven machines of different makes, but the standard Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, "do not change it—in the standard Buffalo you have a world beater."—Patrick McEvoy, Mgr.

This is but one of many letters that tell of the wonderful supremacy of the standard Buffalo.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

NEWS NOTES OF ILLINOIS STATE FAIR.

Sept. 30-Oct. 8, 1910.

Special Attractions.—Wright Bros.' aeroplanes every forenoon and every afternoon, except Sunday. Barney Oldfield and his team of racing automobilists, three machines, every forenoon on the race track. Saturday, October 1: Automobile day, races and last event a five-mile race between Oldfield and a Wright biplane. Varieties of pheasants and birds from Illinois game farms.

Sunday, October 2.—William J. Bryan lectures in Coliseum on religious topic.

Improvements on Grounds.—Handsome new main entrance, \$10,000; hard road, four varieties from Woman's building to Swine pavilion, built by Illinois Highway Commission. Cement walks, 20 feet wide on both sides of this roadway. All buildings have been rewired for electricity, with complete safety appliances.

Every county in the state will send two boys, one from city and one from rural schools, to the State Fair. Instructors will be provided for them and after the fair they will write a report of the fair for their county farmers' institutes and local papers.

An exhibit of old-time farming implements and utensils.

Machinery.—Every inch of ground is filled inside and outside Machinery Hall. The demand has become so urgent that the board of agriculture has determined next year to provide more space for this exhibit.

Horses.—Every stall for heavy horses has been assigned and stalls are now being built for tents. The light horse barns are rapidly filling, more room having been provided this year. Many Kentucky stables have made reservations. The pony barns are filled to overflowing. Several will exhibit in tents. Welsh ponies have been added to the classification for 1910.

Cattle.—Extraordinary endeavors have been made this year to properly provide for all cattle. Reservations for dairy herds exceed all expectations, and the beef cattle exhibit will far surpass that of last year. Especial attention will be paid to the cattle departments this year.

Poultry.—Five hundred new coops have been bought, which with the 1,600 new ones added last year gives over 2,000 new and strictly modern sanitary homes for poultry. Assistant Superintendent McCord asserts that the poultry at this year's Illinois State Fair will be the largest and best ever shown in the world. "Taft," a 65-pound young gobbler, will be on exhibition.

Swine and Sheep.—Notwithstanding the refusal of the legislature to provide adequate quarters for Illinois sheep and swine exhibits, exhibitors continue to show their stock. The sheep and swine pens are filled to the limit and many will be content with outside pens.

Speed.—The speed programme embraces cash prizes of \$18,000, and as

usual will excel in point of entries that of the preceding year.

The Illinois State Fair for 1910 will continue to be the greatest fair on earth—a million dollar exhibition of farm products and farm machinery.

THE GREAT INTERNATIONAL.

When the Chamber of Commerce and Manufacturers' Club of Buffalo signified their intention of assisting financially the Great International Show of Poultry, Pigeons, Pet Stock and Canaries, to be held January 23 to 29, 1911, by giving a part of the \$100,000 just raised for the booming of Buffalo, the poultry boys held a jollification meeting and began at once to devise plans by which all exhibitors at this coming show will be well cared for, with a magnificent list of cups and well distributed cash specials, while every exhibiting member of the live specialty clubs will receive from 15 per cent to 25 per cent of their entry money back, together with their share in one of the five grand cash prizes which will be awarded to the five specialty clubs making the largest entry. This rebate on the entry will help the specialty clubs to increase their membership, and the fancy will be bettered thereby. The judges secured are: Butterfield, Schwab, McNeil, Burgott, Maunder, Webb, Card, Ewald, Lange and Kirkover.

The superintendents are: Poultry, G. M. Soverhill; pigeons, H. J. Young; pet stock, Wm. Gaude; canaries, Mrs. A. Butterfield.

The Buffalo Poultry and Pigeon Club, with a membership of over 300, will assist the show association in every way, and will look after the entertaining of all visitors to the show.

The International idea will be carried out again at the 1911 show. The Canadians are coming over strong and expect to clean up again, as they did in 1910, but Uncle Sam won't be caught napping. Premium list ready December 1. International Show, 308 Brisbane building, Buffalo, N. Y.

DENVER, COLO.

After expending a quarter of a million dollars in preparing the buildings and grounds for the Interstate Fair and Exposition, which this year is to be of a national character, the management has found it necessary to double the size of the poultry building and make extensive additions in other departments to accommodate the exhibits which are pouring in from all parts of the South and West. The city of Denver is expending a large sum of money on a concrete walk, which will traverse the entire length of the grounds and extend to a point 300 yards south, affording comfort and convenience for pedestrians and automobiles approaching the main entrance. The premium list aggregating \$50,000, which has been sent out, offers inducements explaining this rush of entries and the stimulus to the interest, which heretofore has been confined to a small group of states ad-

One of the finest dairy farms in the U. S.

Briarcliff Farms, Inc., Pine Plains, N. Y., covered with J-M Asbestos Roofing

The Everlasting Roof!

That is what this roofing has been called by those who use it, because it is practically indestructible. It makes any building immune against every enemy that can attack a roof.

J-M ASBESTOS ROOFING

is a combination of the famous Asbestos (rock) fiber and the great weatherproofer, Trinidad Lake Asphalt. Fire, time or weather cannot affect it.

The quality of its service and durability place it in a class by itself. No other roofing can compare with it.

It will stand fire tests for any length of time that would destroy in a few minutes any of the so-called fire-resisting roofings.

J-M Asbestos Roofing never requires painting, graveling or repairing.

It saves money and worry from the day it is laid. Fifty years of experience behind it, and we not only declare, but can prove, its surpassing superiority over any or every other ready roofing on the market.

All dealers sell J-M Asbestos Roofing. If your dealer doesn't happen to have it in stock, send his name to our nearest branch and ask for samples and Booklet No. A 26.

EMPIRE POULTRY SHOW.

The Empire Poultry Association (incorporated) will hold their fourth annual show at the Grand Central Palace, a large, well-lighted and centrally located hall in New York City, Nov. 18, 19, 21, 22, 23, 24, 1910. Moderate entry fee will be charged and a large list of specials offered in connection with the regular premiums. The hall will be closed on Friday, the first day of the show, while the judging is in progress at 6 p. m., when the doors will be open to the public, the ribbons will be up, and on Saturday and Monday the different varieties will be demonstrated by the judges to the exhibitors and others. They have engaged the following judges: Geo. W. Weed, F. H. Davey, W. B. Atherton, C. H. Welles, W. H. Card, C. D. Cleveland, Geo. Ewald, J. C. Punderford, James M. Cutting, Geo. Young, J. B. N. Fitch, Geo. Josenhans, Jas. Glasgow, C. H. Ellard. Any one wishing any information about the show address Robert Seaman, Manager, Jericho, N. Y.

KANSAS CITY, MO.

The Missouri State Poultry Show not only has the reputation of holding one of the largest poultry shows in the world, but the quality of the birds is equal to any in America. This reputation has been established and it means much to the exhibitors and winners at this show. For an example, after the last state show, held in St. Louis, one exhibitor sold \$800 worth of stock within three weeks after the show to people who saw his birds in the show and heard of his winnings, and another exhibitor sold over \$4,000 worth of stock and eggs the past season as a result of his winnings. Many others had sales nearly equal to these, and the egg orders from the exhibitors have been enormous. Dozens of letters have been received from exhibitors stating that they never before had such an egg trade and that they will sure be with us at Convention Hall, Kansas City, November 29-December 3. T. E. Quisenberry, Secretary State Poultry Board. Columbia, Mo.

TRI-STATE SHOW, MEMPHIS, TENN.

The officers of the Tri-State Poultry Association, Memphis, Tenn., are bringing out a feature which should be encouraged and supported by every exhibitor. C. L. Baker, secretary, sends us the following:

"Realizing that the exhibitor who is unable to attend, sometimes thinks himself at a disadvantage over the one who does attend, we have decided not to allow the judges in the poultry building until time for the judging to begin. While the judging is being done no one except the officers of the show will be admitted to the poultry building."

This, we believe, is a step in the right direction, as there has been a lot of dissatisfaction among exhibitors that were unable to attend the shows, thinking that because they could not be present their

birds would not receive an equal showing. Of course, this is not meant as a reflection on the judges, but merely to satisfy those that exhibit and are unable to accompany their birds.

COOPS FURNISHED FREE AT KANSAS CITY.

Arrangements have been completed whereby uniform cooping will be provided for all exhibits shown at the great poultry show to be held in connection with the Missouri Valley Fair and Exposition at Electric Park, Kansas City, Mo., September 24 to 28, 1910, and at the pigeon show on September 29 to October 2.

An entry fee of 25 cents on singles and \$1 on pens, same birds competing. This fair offers a most liberal cash prize list and a great number of cash specials. Seventeen silver cups are already placed on poultry and more will be added.

Do not forget this show. For list of premiums and specials address C. S. Hunting, 1304½ Main street, Kansas City, Mo.

MONTGOMERY, ALA.

Montgomery expects to have one of the largest and best poultry shows next October in connection with the Alabama Agricultural and Industrial Exposition ever held in the state. Great preparations are being made and an attractive premium list offered; 75,000 people will attend this exhibit and many of the large manufacturers are expected to make exhibits of incubators, brooders, poultry supply fixtures, etc., for which special space will be provided and all invited. No entrance fee or cost for space for such exhibits. For any information address R. L. Todd, Director of Poultry, Montgomery, Ala.

NOTICE TO POULTRY SHOW SECRETARIES.

North Manchester, Ind., July 27, 1910.

TENNESSEE STATE FAIR POULTRY SHOW.

The fifth annual exhibition of the Tennessee State Fair Poultry Show will be held at Nashville, Tenn., September 19-24, 1910. This show is conceded to be the South's greatest annual poultry event. It is the greatest market place for pure bred poultry in America. Thousands of people attend the Tennessee State Fair Poultry show each year for no other purpose than to purchase stock and eggs. Big premium list and many cash specials. Send for premium list and entry blanks to **John A. Murkin, Nashville, Tenn.**

AN ILLINOIS BRONZE TURKEY CLUB NEEDED.

I have been a Bronze Turkey breeder for twelve years, have read the American Poultry Journal for two years, and have never read of an Illinois National Bronze Turkey Club yet. Is it the writer's fault, that he has overlooked it, or is it possible that there is no Bronze Turkey Club in the great state of Illinois? I notice in the premium list of the Illinois State Poultry Association's sixteenth annual show for January 3-8, 1910, that a number of clubs—the National Partridge Wyandotte Club, specials; the National Single Comb Buff Orpington Club, specials; the National White Holland Turkey Club, specials, etc., etc.—offered handsome silver cups and ribbons, but no Bronze Turkey Club special. Therefore I only entered four of my Bronze Turkeys at the state show of above date. If there is a Bronze Turkey Club it ought to be more extensively published, for I think there is no breed of poultry that is more profitable on a farm than the turkey. In the spring, when the old mother turkey is turned out of the coop with her brood, for exercise, it is interesting to see the little fellows, rushing hither and thither, snatching up the insect pests that are so destructive to our crops. But very little feed is required for them, until frost in the fall, or until the insects are all destroyed; then within a very short time they can be fitted for the Thanksgiving market, when they will sometimes reach the enormous weight of 25 lbs., owing to the age and breed. So let us hear more about the turkey, especially the Mammoth Bronze.

Rose Hill, Ill. T. H. Lambert.

NOTICE TO BREEDERS OF ROSE COMB BLACK MINORCAS.

The International Rose Comb Black Minorca Club is preparing to issue one of the best catalogues they have ever gotten out. All those who wish to become members of the club this season and to receive full benefit of same should send in their application for membership now, so that their name and address will appear in the new catalogue. Those desiring copy of same may send their address now with postage included if possible and a copy of the catalogue will be sent as soon as it is off the press.

Those who expect to compete for club specials at the coming winter shows should call the attention of their local show secretaries to the specials offered by this club. For application blanks, information, etc., address the secretary, **Lloyd C. Mishler, North Manchester, Ind.**

"YOU DESERTERS."

Of late there has been considerable talk in regards to the "National Columbian Wyandotte Club." It seems that every club meets a time in its existence when certain members come to the conclusion that things are not running right; that the funds have been misappropriated; that the secretary has done, or has not done, this, that or the other thing, that he should have or should not have done. In so far as we find discordant members in nearly every lodge, fraternity, society, or club, it is not at all surprising that such should be found in the "National Columbian Wyandotte Club."

It is not the purpose of this article to cause any more ill-feeling among the members of the N. C. W. C., but rather to present what the writer thinks is the right and only course for discordant members in any lodge, fraternity, society, of club to take.

Certain members of the club are not satisfied with the way the secretary has carried on his work. They think the club is not booming the breed as it should be boomed. They were angry, because certain prizes were not offered at Madison Square Garden, when there was plenty of money in the treasury to purchase same with. These and possibly some other minor kicks are the cause of these certain members raising up against their club and bending their efforts to form a new one.

Now I don't care what they have found in the club that is not satisfactory to their manner of thinking. That is not the point I wish to get at, at all. The point is this: Are these men justified in the position they are taking? Are they showing true fraternal spirit? Will the position they are taking make right that which they think is wrong? No, it will not.

You are a member of a certain lodge. In joining the same, you become a part of the body of the lodge. Everything goes along satisfactorily for a while, then of a sudden you awake and find that the secretary has not done this thing, or he should do that. The president has not performed his duties as he should have done. The funds have not been spent as they should have been spent. Are you as a member of that lodge going to draw away from it, and try to form a new one that will be run as you think it should? Wouldn't you accomplish much more if you would set to work to try and overcome what you think is wrong? Present your arguments to your brothers. They are working for the club and, if your arguments are reasonable, if what appears wrong to you, appears wrong to them, they are with you and will help rectify the wrongs. This is the position every member of any club ought to take. It is the only one that will make wrong right.

You few men who see something in the club that does not suit you, tell us what, as a brother, you want to do to overcome this. Don't say you are going to form a new club and do things right. In so doing you are telling us you are a deserter from our ranks, and as such how can you expect us to join you in another club? Our club is as good today as it was the day you joined. This officer or that member may have done wrongly and you, as a true honest member of the club, as you should be, want to see things run right. If you stick to your cause you will win, for every other honest member will be with you.

Remember that the officers are human like yourself, and are as liable to mistakes as you are. You elected them to do your bidding, and there is not one but will stand ready to abide by the wishes of the majority. They have the good of the club at heart as well as you have. They are working as hard to make the club a success as you are. They are as willing to rectify mistakes as you are.

You fellows who have gone at this thing wrong, can't you see you are wrong? You would not desert your home for a wrong, you would stick and make it right. You would not desert the Odd Fellows, the Woodmen, or what not, and form a new lodge in order to right what you see is wrong. You would have little respect for two sons who were not loyal enough to stand by each other in right or wrong. You would have little respect for a brother who deserted his brother in the club. Then why do you desert?

You fellows again. Get back where you know you will accomplish your desires. Every brother is with you for right. Every brother member and officer is with you to the end to help you make all that which is wrong right, and to put the National Columbian Wyandotte Club where it should be, the leading specialty club of the country.

Without an exception our variety is superior to any. It has all the public desires and none of the undesirable. Do

not injure by your actions a breed that is making such progress towards the front ranks as the Columbian Wyandottes.

Walter G. Fenton,

Vice-President Nat. Col. Wy. Club.

LETTERS from our SUBSCRIBERS

Editor American Poultry Journal.

Dear Sir: It will be only a few weeks now until the fall fairs and poultry shows will be in order and it is none too early to commence preparing your exhibit specimens for the show room. I know that you do not wish to be among those who will go to the show and witness the splendid specimens which will be exhibited and then be heard to say, "Oh, I have something better than that at home." Of all the things in the world around a show room that makes me tired, it is to hear that remark coming from those who should know better. If you have something good enough to show or better than is usually taken to the show room—for heaven's sake take it there or else shut up like a clam when the other fellow wins. If you think your birds are not good enough to win and your neighbor has taken something that is not nearly so good and does win—you should have a certain amount of respect for his wisdom by keeping your mouth shut—especially if you are interested in the fancy and wish to see progress along these lines. Just put a little of the Golden Rule into practice. Suppose you were somewhat in doubt whether you had a specimen that would win or not, but you mustered up courage enough to take him to the show. Would you like to hear spectators make such remarks when reviewing your exhibition? I believe not.

The show room is to a certain sense a schoolroom because it lets you see where you are strong and it also shows up your weak points. Many a man has thought he had a prize-winner until he reached the show room while others have underestimated the value of their stock. I know of an instance where a man paid a fair price for a Rhode Island Red cockerel and after receiving it he wrote the breeder a very insulting letter and took the matter up with the publishers for advertising such stock. The matter was turned over to the field representative and he was asked to investigate the matter. It was only a short time afterwards that this field man met Mr. Kicker in the show room and he had the bird there on exhibition. This bird proved to be a prize-winner and he had a chance to sell the bird at a good price right there if he wished to do so. Now had Mr. Kicker hesitated about taking his bird to the show room he would have probably remained under the impression that he had been "skinned" and there would have been a sense of injustice all along the line, but as it was, everything was cleared up to the satisfaction of all concerned. By all means take your birds to the show and if you win—do not be afraid to spend a little money advertising the fact and if you lose—do not give up. Try it again the next show. Unless your bird has been badly beaten you stand a fair show of winning the next time because every few weeks adds a

little to his symmetry and perfection providing he is of the right kind of stock.

Last winter one of the most prominent breeders in the United States exhibited at the Madison Square Garden show and lost. He took the same birds to another show in the East and exhibited right along with the same exhibitors to a large extent and beat them to it. He lost in the first instance, because his birds were weary and needed a little rest. The next trip was a shorter one and they had improved to the degree that they won the blue.

The man who can take either a winning or a loss without emotion is the man who will get to the front in the poultry business.

There is one thing that you must not forget when you are at the fairs and in the show room—that the representatives of the poultry journals are your friends. While they are there in the interests of their various publications nevertheless it is to your interest to give them a welcome, because they can do you more good than you will imagine. Treat them right—tell them what you have been doing and if you can possibly do so give them an advertising contract. It will more than pay you. Take my advice. Try it and you will see I am telling you the truth. Every representative is asked hundreds of times where certain varieties can be purchased and it lies within his power to make many sales for you even though you may never recognize the source.

When you meet your competitor have a friendly feeling for him. He is made of a good deal the same kind of stuff you are and he will appreciate the glad hand and your good fellowship. He comes to the show room with the same fears and doubts—also with the same ambition that you do and you should have a friendly feeling towards him even though he beats you to it. You know you would have beaten him had you been able to do so.

Don't think you know more about it than the judge. Possibly you do, but don't let him think you do. These judges don't know it all, but they usually know more than the average exhibitor and there is sometimes a chance to learn something at their hands.

Have some nice cards printed and any other little advertising matter that will be easily handled so you can give them out to those who may feel interested in your exhibit and you will be surprised at the amount of good you will receive as a result.

Now then let us all go to the fairs and shows this fall and take our birds along and help keep up the enthusiasm for the better class of poultry. It is the greatest business on earth today and it is growing each season.

G. C. Pennington.

Lincoln, Neb.

Editor American Poultry Journal.

Dear Sir: I always read with interest the A. P. J. and realize how hard it is for you to provide new reading matter on such a threshed-out subject as Chicken Raising, but as I have never heard of any system exactly like mine, by which I keep dogs, poultry and have a garden on a small city lot, I thought it might interest some of your readers who are situated like myself. In the first place, I am rather a busy man. Besides being book-keeper for a large wholesale house, I have an interest in a retail store, that I devote my spare moments to in the day time, and also operate a farm some few miles out in the country; therefore, I have not much time for the chickens. Our lot is 50x150 feet, on which is a seven-room cottage, stable, outhouses, a small garden wired off, 20x20 feet, in which I grow nearly enough vegetables for our own use. The yard is covered with ashes and not a blade of green is visible, and as I have three bird dogs and a horse, there is not very much room for the chickens, but from an average of fifteen hens, we raise about fifty chickens each year, and have enough fresh eggs for our own use, at a cost of about \$2 per month.

In the winter time I throw the hens their feed in the morning, and my wife gives them the same of an afternoon. Besides having a clean, warm place for them to roost in and a dry place for them in wet weather, we do not give them any attention. But in the spring time I get busy. I set two hens on a Saturday, so that they are ready to come off together on a Sunday. Both broods I put with one hen and put up in a room built for the servant over the stable. This is free from rats, cats, dogs and other vermin, always dry; the floor is sprinkled with sand; it takes us just about five minutes three times a day to feed them; snow or rain they are always protected; no bother whatever. At the expiration of three weeks I have two more hens coming off. I treat these the same. Those upstairs I then take down and put in a pen, 18x18,

a six foot wire fence all round, with leanto shed on one side, about five feet high, open in front, with floor half way up from ground, under this is the scratch pen, always dry and shady. I coop the hen up for a day or so on the floor, so as to get the chickens in the habit of going up and down the steps (we call it the drawbridge) which is lifted up every night, so that no rats can get them. Cats cannot climb a six foot wire fence, and they are safe from young puppies. I take the old hen away and they take care of themselves. From four settings of fifteen eggs each I generally hatch enough; if not, I set two more hens, so as to give me the desired number. I like to get the hatching over in one month, as it is a nuisance to have little chickens all the summer through. As I have no green stuff on the place, I gather a basket of green clover every morning, cut it up fine for them. This they enjoy, and I derive a lot of pleasure in rising early of a summer morning or early spring, and fooling with them before breakfast. I feed as suggested by other subscribers in your paper. Whenever I read of a good thing I try it and if successful adopt it. When one gets sick I have a bottle of physic handy, composed of oil turpentine, witch hazel mixed together. Take a feather and rub it up and down their throats a few times, and I believe it will cure anything that chicken flesh is heir to, except a broken leg. In three months' time my chickens weigh two pounds alive. I do not care to eat them smaller, and we then commence to weed them out. I have the Rose Comb Rhode Island Reds. If a young rooster shows a white feather, smut, or single comb, he is doomed. I do not know much about other breeds, but I never took much interest in fowls until I had these Reds. I like to watch them develop, and I think there is nothing prettier than a lot of these fowls on a fresh cut lawn. I could have sold lots of eggs, but I have not yet got my flock up to my standard of excellence, so as to feel justified in selling the eggs at a fancy price, but this spring I bought a very fine cock and only set the eggs from four of my best hens. I hope to get in a position next year to get some of my outlay back, but as we keep them as much for pleasure as profit, I suppose my good friends will be glad to get a setting or two.

I have not had a chicken die so far this season. Once in awhile one mysteriously disappears. Three years ago a few had the gapes, but since then have been very fortunate. My neighbors on each side can never raise any at all and get very few eggs. I am not at all surprised. It would be a miracle if they did. If they would spend 50 cents a year for a good poultry journal and intelligently follow out the hints and suggestions therein they would derive both pleasure and profit. It requires intelligence, industry and adaptiveness to succeed in chicken raising, as it does in any business or farming.

My dogs have a very bad reputation, so I am not molested by chicken thieves, a condition that we have to guard against in the South.

In conclusion I can only condemn in the strongest terms those people who wilfully advertise and sell eggs from inferior stock, or those who imagine they can buy a few eggs and sell the products of these eggs at fancy prices, regardless of whether the birds are well mated, or anywhere near the Standard. It pays to buy the best from breeders of repu-

Could They Be More Foolish?

The best proof that common cream separators are out-of-date is the fact that they contain 40 to 60 disks or other contraptions. They need such contraptions simply because they lack skimming force. Since they lack skimming force, they are neither modern nor properly built. In view of these facts, could any maker or agent of common cream separators be more foolish or incorrect than to claim that disks or other contraptions make, or are needed in, a modern machine?

Sharples Dairy Tubular Cream Separators

Dairy Tubular Bowl. Made right. No disks needed.

are entirely different from all others. They produce twice the skimming force of common separators. Dairy Tubulars neither use nor need disks or other contraptions. They

skim faster, skim twice as clean, wash many times easier, and wear several

times longer than common separators.

The World's Best. World's biggest separator works. Branch factories in Canada and Germany. Sales exceed most, if not all, others combined. Probably replace more common separators than any one

maker of such machines sells.

tation, otherwise you will waste a lot of time before you can take a premium at a good show. H. J. How.

Editor American Poultry Journal.

Dear Sir: If you have space, there is a subject I would like to call the attention of Illinois breeders to; namely, the Illinois State Poultry Association. What we need is united action, to take hold in Illinois and "boost" the poultry industry. It seems as though most poultry raisers have an idea that they are too "small" to join the association and leave it to the other fellow. Now what we want is to get busy and take interest in the work, and if we are only one, do our part and by so doing there is bound to be good result. Think what benefit a complete poultry course at the Illinois Agricultural College at Urbana would be to educate our young men and women who desire to make a business of poultry raising; a short course in January for us older breeders, who have yet much to learn. One crying need in my part of the state is a poultry show, and if one was to suggest it there are few who would understand what was meant, their idea being something like the county fair used to be, where about half a dozen coops of chickens were exhibited. Now down here are lots of breeders of good birds, but they need to be rounded up, gotten together, and if the association was strong enough to put competent men in the field and get them organized (the breeders), much good would surely come of it. I haven't a doubt but what there are other parts of the state as much in the dark as we, and I am in hopes at no long distant day something may be done to show the breeders here and elsewhere that they are needed to put their shoulder to the wheel and help push the Illinois poultry industry up in the front rank. My home town would be an excellent location for a poultry show; there are good accommodations for visitors and there are four railroads running through. Yet a little place like Duquoin will have very creditable shows and we lag behind. There is so much good the association could do, if we would wake up, take hold and do our part; if we, everyone, would get the idea firmly fixed in our mind that we are needed in this grand movement, what a short time until the membership would swell to 1,000. Then we would be able to get any reasonable legislation and appropriations we should ask. As it is now, the Agricultural College has all the work on hand that it has appropriations for and of course, until something can be done, the matter can not be taken up and put through. So I would again urge all breeders, large and small, to study this matter over, think of the good results a thorough organization would do—and get busy. If interested and want particulars, address O. L. McCord, secretary, Danville, Ill.

Better organization means better shows, a chance for poultry husbandry at our State University as well as poultry institutes and bigger appropriations from the state.

Now, dear fellow breeder, I mean you when I say, boost poultry in Illinois. In my way of thinking, Illinois is a great state and I believe she can do as good as any state in the union, if not a little better. I may be a little prejudiced in favor of my own state, but that is only natural. Let's try and show the rest of the fellows any way.

Centralia, Ill.

H. L. Reogsdale.

Editor American Poultry Journal.

Dear Sir: I often see an article on getting winter eggs, and as I have done fairly well I will give you my method, and if you think worthy you may use it in your Journal; if not, consign it to the waste basket.

I keep only the White Wyandotte. Twenty hens laid 2,968 eggs in six months, and were housed and fed as follows: I have a house 7x9 feet, 4 feet high in back, 6 feet 6 inches in front. Door in east end; entire front open except 12 inches at each end, this covered by 12-inch board; entire front wired in with poultry wire. I have roost along back side, with dropping board 1 foot below roost, and nests made of soap or canned-tomato boxes, with the upper half of one end cut away so the hens can enter better. These boxes rest on two boards about 1 foot from ground. In making my nests I first put a couple of handfuls of tobacco stems and leaves in bottom, then put in plenty of soft straw. This I change about every two months, and paint the inside of the box with liquid louse killer. I also paint roost once a month with same. When I set a hen I dust her three times before the hatch comes off, and I have very little trouble with lice. I also use slacked lime on droppings.

I feed in the morning a mixture of the following chops: Wheat, Kaffir corn, sunflower seed and oats, this fed in 6 inches of clean straw. At night I feed the same with wheat bran added, and all well mixed with clabber or buttermilk, this fed on boards. I keep grit, oyster shells and charcoal and

fresh water before them all the time. I feed the same food to all my young stock after they are three weeks old, and I never saw them grow off and do better. I keep an extra cockerel on hand in a pen to himself, and when a hen gets broody I place her with him and she soon begins to lay again. I think anyone can increase their egg yield by feeding the above. My chickens have plenty of green feed, as they have large, grassy runs.

Paragould, Ark.

A. W. Fligor.

Editor American Poultry Journal.

Dear Sir: There is pleasure as well as profit in having a small flock of fowls, especially in the suburbs of cities and towns, as the women and children take much interest in them. Even on the farm the fowls can be well managed by the women and children, if the flocks are not too large, and women are more successful as managers than men. It is excellent for them, keeping them out of doors more or less, thereby greatly benefiting their health. It is good exercise for the children to have something to have the care of on the farm. They are generally interested in chickens, and like to take care of them. By allowing the children a share in the profits, an additional interest would be excited in the work, and the training they thereby receive would be beneficial in after life. The pleasure derived is not to be overlooked, as happiness is what is sought by all, but it is well, in poultry keeping, to aim to combine pleasure with profit.

Southboro, Mass.

Mrs. L. H. Graves.

ALICE IN WONDERLAND AT THE STATE FAIR.

The Illinois State Fair has done itself proud this year in the number and character of attractions. In addition to Wright brothers' aeroplane and Barney Oldfield's racing automobilists, the speed program embraces cash prizes of \$18,000 and will excel all previous years in point of entries. The improvements on the buildings and grounds have been vast and costly. Every inch of ground is filled inside and outside Machinery Hall. The horses, cattle, swine, sheep and poultry exhibits are filled to their capacity. An exhibit of old-time farming implements and utensils will be a novelty worth witnessing.

Reduced rates will be made by the Chicago & Alton. This line has also promised adequate special train service to and from Springfield all during Fair week. Fully 25 per cent increase in attendance over last year is expected. The Chicago & Alton and the State Fair have become so closely associated that they are already called "The Only Way" and "The Only Fair."

POULTRY DEPARTMENT UNIVERSITY OF MAINE.

The college of agriculture of the University of Maine, Orono, Me., offers through its poultry department the following courses in poultry husbandry: First—The poultry work in the regular four years' course leading to the B. S. degree in agriculture. Second—The poultry work in the two years' school course. Third—The three months' course. Fourth—The three weeks' short course. Fifth—The poultry institute. This department is doing grand work and should be encouraged. Send for full particulars.

COLUMBIAN WYANDOTTES

Last year's breeders at \$2 and \$3 each; males \$3 and \$5. Indianapolis winners, 1910.

B. N. Stephenson - Expert Judge - Salem, Indiana

GOLDEN WYANDOTTES.

CONSIDERABLE more interest is being taken in this variety of the Wyandotte family than at any previous time. At a number of our largest shows during the last season they were very much in evidence and the rapid strides they are making is something worthy of notation.

The classes at these shows were much larger and more attractive than at any time and the enthusiasm displayed in this variety was something more than usual. At the Chicago show last winter the class was a grand one and in all probability the best showing ever made by the breeders of Golden Wyandottes in this country.

It was quite common to hear such expressions as these among the patrons and breeders of this great show: "Have you seen the Golden?" "The Golden Wyandotte boys are surely doing something." "Never saw such a class of Golden." There is no question in the mind of the breeder who has ever given them an opportunity to prove their

worth of their excellent merits as a persistent layer, a quick grower and a superb table fowl.

As a breeder of Golden Wyandottes for years I can safely say without overreaching the mark in any way that these Wyandottes are naturally persistent layers. I do not believe and I speak from my own experience largely that in comparison with other varieties and breeds that they are unexcelled as layers and quality of their eggs by any other variety.

I am financially interested in Golden and such a statement may seem somewhat strenuous and made from a pecuniary standpoint but not so, but I do wish to give this excellent fowl its just due. I am sure, however, that they have not had the chance for reputation and advancement that other varieties have enjoyed and what they deserve.

What reputation and popularity they have attained is solely due to their merit, they have made it themselves—and not their breeders.

Very little is ever seen in the poultry press and but little information is given

out by the breeders themselves, and I would therefore like to say a few words in regard to the breeding of Golden Wyandottes which may be of interest and value to the many new breeders who have lately taken up the Golden and those who will join the rank this coming season.

In the first place let us take up shape, this we consider especially important with reference to Golden, as it is with all other breeds, as shape determines the breed and color the variety. In beautifully laced fowls, such as we have in the Golden, we are too apt to neglect this all important matter, having our minds on the perfect lacing and other details all of which are required, but shape should have our first consideration.

We must get away from the long backs, long necks and long legs. I believe in using males of undersize rather than the larger and more growthy specimens to accomplish this, though they may not be so perfect in lacing, the smaller males being usually more shapely. There will be no trouble as to size as we have plenty to go on in Golden.

Make Your Hens Lay

When Eggs Are Worth Most

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens must have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

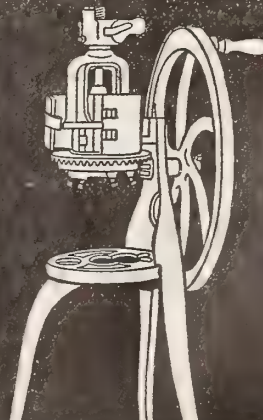

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on 10 Days' Free Trial—no money down. If satisfied after the trial, buy it. If not, return it at our expense.

You want our good books, at any rate, send for them. We'll forward by return mail.

For rates, time of trains and other information consult

Local Ticket Agent

The females, however, should be Standard size, or near it.

Now a word as to color: We find different ideas as to color with both breeders and judges. The lighter male bird with hackles approaching a straw color and the darker richer specimens and deeper colors making the main difference of opinion as to color.

As a rule our experience leads us to favor the darker birds. I like the deep rich centers approaching the shade of mahogany with a lacing of greenish black which apparently stands up as an embossing around the center.

This to us is wonderful beauty and should be encouraged by every breeder of Golden. Birds of lighter hackles may be used for special mating for some specific purpose, but not as a rule.

The idea that females should be made lighter in order to hold clear centers through the moult is not my route in making and breeding Golden Wyandottes.

I would urge the beginners to study their birds closely and not be led, or influenced too far by any one, or two special points to the disregard of others, but take them as a whole and consider of first importance shape and a well balanced specimen.

We have great confidence in the future of Golden Wyandottes—having noticed their steady and substantial growth for the last eight years, and to beginners, we would further advise the careful selection of stock as a foundation for a good flock and one that will breed right.

The mixing up of different blood lines by buying stock here and there should be carefully avoided. The resulting stock has little power for reproducing themselves. The cross breeding of different strains destroys the powers of prepotancy and produces stock of widely different and various characteristics.

The National Golden Wyandotte Club is a live wire, but we need more wide-awake members who have the energy to help push a good thing.

J. H. McDanell.

Warsaw, Ky.

A NEW ORPINGTON CLUB.

A copy of a letter from the National Rose Comb Orpington Club has just reached us, setting forth the advantages and possibilities of their birds. We understand their list is growing very rapidly, and it will probably be of advantage to all breeders of Rose Comb Orpingtons to write to their secretary, Mr. A. R. Pollock, of Piqua, Ohio, for full information and advantages of the club.

Editor American Poultry Journal.

Dear Sirs: While reading your Bantam talk in the August A. P. J., I notice you boom Prideaux and Penn, of Delavan, what wonderful birds they have and what they have won and that Prideaux has best in Partridge Cochins Bantams. Please do not make an assertion like this until these breeders come to New York Madison Square Garden and sweep the deck as you say.

Yours respectfully,

A Bantam Fancier.

The above communication was received from New York City, but owing to the fact that the writer forgot to sign his name to it we do not know who the author is.—Ed.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—Will you kindly tell me in your next issue what I should do to get eggs from my chickens? I am a beginner and have 160 hens and for the past two months have not got one dozen eggs.

Comanche, Mont.

P. P.

Answer.—No one can expect to get eggs out of hens unless they put something into the hens to produce the eggs. Any flock of hens can be made to lay if properly fed and cared for, and there must be something radically wrong with your system of feeding. The poultry journals are full each month with instructions on the various methods employed by different breeders, and if you will adopt some one of these methods and stick to it you will get results, but we cannot give you in this department detailed information on this subject.

Question.—I have a fine Black Minorca rooster a year old and he has a corn on each one of his middle toes. What would you advise me to do?

G. L. F. C.

Answer.—Pare off the thickened epidermis, without causing bleeding; and apply boric acid ointment or paint the parts with tincture of iodine.

Question.—I have a cock which has been fighting with another cock through a poultry wire fence and now his legs are almost twice the size they should be. What can I do to get the legs to the natural size?

H. B. D. M.

Answer.—Soak the legs in hot water, to which has been added a little Pond's Extract. Do this twice a day until the inflammation is reduced. The water should be just as hot as the hand can stand it.

Question.—Do you think a brooder house profitable or the small lamp brooder, like the Prairie State, or do you think the Philo cold brooders placed in small colony coops 3x6 and in two departments, one with floor and other on ground?

H. F. H.

Egypt, Pa.

Answer.—All three systems mentioned have been operated successfully, and we are not in a position to state which is the best, as the success of either depends to greater or less extent on the one who is taking care of them.

Question.—I have in one pen three month's old Buff Wyandotte, Buff Plymouth Rock, and Buff Orpington chicks. Will you please give the difference between the three kinds so that I can place them in separate pens?

Delavan, Ill.

X. Y. Z.

Answer.—The Buff Wyandotte chicks have a rose comb. The Buff Plymouth Rocks have yellow legs and the Buff Orpingtons have white or pinkish white legs.

Question.—Had a White Wyandotte

that seemed healthy, had red comb, but when killed had two large lumps of eggs, like hard boiled eggs, the size of large goose eggs, each in a bag, one on each side, and the small eggs had commenced to decay, and like white worms were in her gizzard.

Mrs. H. E. D.

Beaver Falls, Pa.

Answer.—This is caused by inflammation in the oviduct, which absorbs the albumen and prevents the formation of calcareous matter. Treatment in cases of this character is very difficult, as the condition is not observed until it is too late. Worms may be removed by giving a few drops of spirits of turpentine. See our poultry doctor book for full information about this and all other diseases of poultry.

Question.—(1) Can the same amount of hens be kept in the same size house winter and summer, figuring a house 16x32? If not kindly state the amount that can be kept and at what season. (2) Where a man wants to utilize all his ground for raising chickens would it be any saving to him by buying all his feed or devote half to chickens and half to raising the feed? (3) Do you approve of the continuous laying house system, and say 16x100 for dividing same in five pens and then giving each a yard divided from the other by wire, each yard 16x150 feet, or to allow them all to run together without the yards?

G. F.

Brooklyn, N. Y.

Answer.—(1) Yes. (2) Mr. Kellerstrass, who is one of the most successful poultrymen in the country, says that he finds he can buy his feed much cheaper than he can raise it. We believe this is so in the majority of cases. (3) This depends on whether it is an egg plant or a plant to produce exhibition and breeding birds. If the latter it must be

"Ringlet" Bargain Sale

of Yearling Birds is Now in Full Swing

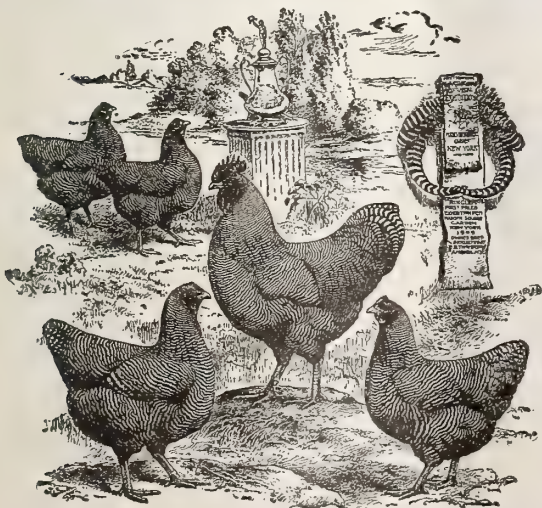

All desiring to benefit by the matchless bargains in my "Ringlet" Barred Rocks should write for my Special Sale List at once and make selections.

You will find in this Sale List just what you want, from fine breeders in single birds, trios and pens to New York winners and top notch show birds at cut down bargain prices and in lots to suit. This is your opportunity and I urge your quick acceptance.

In this year's cockerels and pullets I have the finest I ever owned in all my thirty years' experience as a Barred Rock breeder; they show that elegant blue color, and bright, snappy, narrow "Ringlet" barring that has made my Barred Rocks the leading Silver Cup and Trophy winners at Madison Square Garden, New York, since 1887—nearly a quarter of a century. These cockerels and pullets will be the winners this fall and winter for the leading shows of America. Orders booked now for delivery when wanted.

New 58-page catalogue mailed upon request; it is full of original pictures of New York winners from life.

NOTTINGHAM, OHIO

MY ENTIRE STOCK OF White Wyandottes TO THE HIGHEST BIDDER

Providing his price exceeds \$2.50 each, taking the whole lot, including all my prize winners at Youngstown, Ohio, and other shows. Every winning bird that I have owned during the past two years are in my yards and included in this sale. Absolutely nothing reserved. All my cuts, cups, ribbons and good will to go with this sale. I have over \$150 worth of silver cups and other prizes. I have spent a large amount of money to put my birds where they are today and only necessity could persuade me to let them go.

An Established Breed With An Established Reputation

and practically at your own price. Write at once if you want to get into the breeding of White Wyandottes with very little expense. This stock is good enough right now to go in and win the blue ribbons for you. Write at once for full particulars.

F. D. Sutton, 68 St. Louis Ave., Youngstown, Ohio

A Great Record

No incubators or brooders on the market can show such a record as that achieved by The Prairie State machines. Their popularity which has made them the choice of both beginner and expert to the extent that they are considered the highest type—most practical and successful of all others is the result of actual superiority of material, construction, hatching and rearing principles.

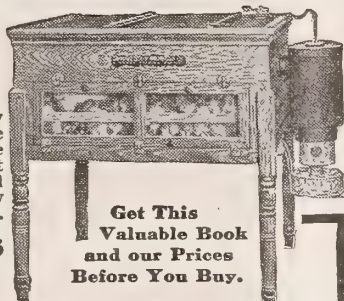

Prairie State Incubators and Brooders

have always embodied the very best known principles of artificial incubation, supplemented by the best skilled construction and high-grade material. That's why they prove the best in actual use. The Sand Tray feature alone is sufficient reason for preferring a Prairie State to any other incubator. The Universal Hover is years ahead of ordinary brooding devices. When such experts as Edward Corning, of Bound Brook, N. J. endorse and use them exclusively they must be the best. He writes:

"After trying your Universal Hovers we have discarded all others, and intend to use them exclusively, as they give perfect satisfaction."

Let us send you our 1910 catalogue—it will deeply interest you. Write for a copy to-day.

Before You Buy.

divided. If the former, they may be kept in large flocks with good results, providing they have plenty of free range.

Question.—I have lost some of my goslings and if you can give me any advice it would be greatly appreciated. They have plenty of pasture and I feed same cracked corn. After they were good size they had access to swimming water, but after I lost the first one I did not allow them water to swim in but had plenty to drink. They grew fine until they were nearly feathered, their legs seemed to get stiff and they would sit around for a while, then get up again, but finally die.

Sidney, Ohio.

C. J.

Answer.—This is evidently a form of rheumatism. Keep them in a dry place and give a tablespoonful of common baking soda to each quart of drinking water. Stop feeding cracked corn and feed more green food.

Question.—Can you tell me what is the trouble with one of my Barred Rock chickens? He shakes all over and is very unsteady on his legs; he eats well and seems all right in every other respect. I feed cracked corn, mixed feed and beef scraps.

G. E. E.

Concord, N. H.

Answer.—This is a nervous trouble; but unless we knew the cause could not give remedy. Conditions of this kind are sometimes brought about by breeding from unhealthy stock. Would suggest that the bird be placed in a coop by himself and given special attention in the way of feed and care.

Question.—Why is it that some of my chicks' first wing feathers grow up and when they put on their winter coat they lay flat like the rest? I have marked these very ones and they have proved to be tip-top birds at show time.

Utica, N. Y.

A. C. P.

Answer.—We are unable to state what causes this. Most breeders have the same trouble.

Question.—Would you please tell me how to feed my W. Orpington chickens? They are being fed cracked corn twice a day. Have free range and plenty of fresh water. They seem to grow but are very poor. There don't seem to be any flesh on their bones to speak of.

So. Hammond, N. Y.

R. S.

Answer.—You are feeding too much cracked corn. Feed more ground oats, bran and cornmeal, to which add a little beef scraps and clover or alfalfa meal, moistened with sweet milk. Give plenty of milk to drink. Milk will soon make them fill out and look plump.

Question.—What is the trouble, cause and cure (if any) of my little chicks? They seem to do all right until about two weeks old. Then their wings droop and they stand around with their eyes shut; seem to be poor and weak, fall over on their sides and have not got strength to get up—just die. They are not lousy, were hatched under hens, but am raising them by hand. I fed them for a week or so bread crumbs and a little chick feed with plenty of grit, then give them cracked corn.

E. D. C.

Morenci, Mich.

Answer.—In the first place little chicks should not be fed cracked corn until they are four to six weeks old. In the second place your chicks are lousy. They simply cannot help but be when they are hatched by hens. They have head lice without a doubt. Use lard to which has

WASHINGTON, D. C.

been added a few drops of kerosene oil. Rub this mixture on the top of their heads. Several treatments is sometimes necessary.

Question.—Would appreciate a suggestion through your journal as to a way to prevent "pip."

F. B. H.

Vicksburg, Miss.

Answer.—Pip is caused in most cases by micro-organisms of feeble virulence, which are able to make some headway when the digestive organs are deranged. Therefore if the fowls are fed and cared for properly this disease will be unknown. When fowls have this disease no hard grains should be fed, as this will cause irritation and aggravate the trouble. Dissolve fifteen grains of boric acid in an ounce of water and use freely on the tongue and mouth of the bird. This disease is sometimes caused by slight colds, which stop up the nostrils and compels the fowl to breathe through the mouth, which causes a drying and irritation of the membrane. If this is the cause the cold should be treated first. Our Poultry Doctor book gives full information about this and all other diseases of poultry.

Question.—(1) How large ought a pen to be to accommodate fifty fowls? (2) Which chicken lays the best, the Minorca or the W. L. Rock? (3) How long does a hen generally lay? (4) What is the difference between a W. P. Rock and a W. Wyandotte? (5) Where can I get a catalogue on W. P. Rocks?

H. H.

Van Buren, Ark.

Answer.—(1) A house 12x24 will accommodate fifty fowls. (2) Minorcas. (3) A hen should lay nine months of the year. (4) See American Standard of Perfection for description of the two varieties. (5) From any of our advertisers who breed this variety.

Question.—(1) I have four White Plymouth Rock hens which I purchased April 19, 1910, and which lay from two to four eggs a day (average) and have not failed to lay an egg on but one day since I bought them. Do you think this is a good record? (2) I have some fowls which shake their heads a great deal. Is this a disease? If so, what will cure it? (3) Are White Plymouth Rocks as healthy as any fowl? (4) Which do you think are best, White Plymouth Rocks or White Orpingtons?

L. H.

Van Buren, Ark.

Answer.—(1) Yes. (2) This is only a habit that some fowls get into, or they are troubled with lice. (3) Yes. (4) We do not answer questions of this kind.

Question.—(1) We have some chickens hatched about April 15, also some Rhode Island Reds hatched the last week in June. About when had they ought to lay? (2) What is the proper food for chicks six (6) weeks old? (3) How many chickens can be kept in a coop 8x8 feet?

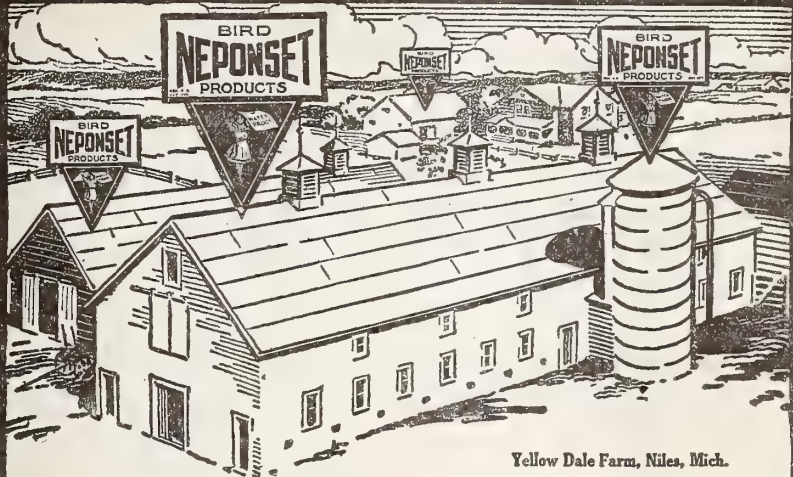

H. C.

Passaic, N. J.

Answer.—(1) Those hatched in April should begin to lay by October. Those hatched in June about December 1. (2) Any of the standard feeds now on the market, or a mixture of cracked corn, wheat and oats, together with plenty of green food and fresh water, or they may be fed dry or wet mash, consisting of bran, ground oats, alfalfa, meal and beef scraps. (3) Ten.

Question.—(1) Is Florida a suitable state for poultry raising, especially about

Are You Going to Build?

Yellow Dale Farm, Niles, Mich.

Buy Your Roofing on Proof—Not Claim

The one and only basis on which you can afford to choose your roofing is that of *proof*—proof of what it *has done*, not claims of what it *may do*.

Do not be deceived by extravagant claims and high-sounding guarantees. They are merely made for lack of proofs of what a roofing has done. Insist upon seeing roofs that have given satisfaction for years.

We can point out roofs of proof, right near you, where Neponset PAROID Roofing has lasted as long as the highest-grade shingles. It has been on Government buildings, dairy barns, stables, poultry buildings and railroad and industrial buildings everywhere for over a decade. We have been in one line of business for over a century and the experience gained in all that time is back of

NEPONSET PAROID ROOFING

NEPONSET Roofings enable you to choose the roofing that best meets your needs. There are different roofings for different types of buildings.

NEPONSET PAROID Roofing for barns and general farm buildings. Slate in color. Does not taint rain water. Resists fire.

For such poultry buildings, brooder houses, sheds and temporary buildings as require low-cost roofing, you will find that NEPONSET RED-ROPE Roofing lasts three times longer than tarred felts.

NEPONSET PROSLATE Roofing and Siding for residences and all buildings requiring an artistic roof or siding. Rich-brown in color, much more attractive and lasting than shingles.

Each roll of Bird NEPONSET Roofing contains directions for laying and complete fixtures, including square metal caps.

NEPONSET WATERPROOF Building Paper under clapboards, shingles, slate, metal, etc., insulates against exterior cold, heat and dampness. It costs little and cuts the fuel bill one-third every winter.

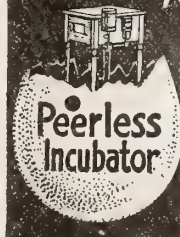

These are facts and not claims—write us and we will prove every statement

Consult Our Building Counsel Department—tell us the nature of the buildings you propose to erect or repair, and we'll send you the Bird NEPONSET Book which treats your special case. There are dealers in Bird NEPONSET Products everywhere. If you do not know the one in your locality, write us and we'll tell you.

the middle of the state along the Gulf of Mexico? (2) Is the climate too hot or too moist? (3) What breeds do best there? (4) Would White Orpingtons do well? (5) Could eggs and live or dressed poultry be shipped from there to northern markets or would transportation be too high? (6) Can ducks be raised in Florida? **H. H. C.**

Williamsport, Pa.

Answer.—(1) Yes. Poultry can be raised successfully in any state in the Union. (2) No. (3) The lighter varieties, such as Leghorns, Hamburgs, etc. (4) We know of no reason why they would not. (5) Eggs could be shipped with a profit, but doubt very much if live or dressed poultry could be. (6) Not with much profit to the raiser.

Question.—(1) Will you kindly tell me what is the matter with my chicks, also the cure? I had a White R. C. Leghorn cockerel three months old, was apparently well at night, next morning he was standing with his head straight out in front and acting like he was pecking at something; his eyes were blinking very fast; he couldn't eat; his comb was nearly black. I bled the comb and he seemed to get better, but finally died in the afternoon. His comb was very large, measuring $2\frac{3}{4}$ by $1\frac{1}{2}$ inches. Had that anything to do with him dying? (2) I had a chicken, Brown and White Leghorn mixed, about eight weeks old; its head was turned to the right, one eye looking straight up; would eat hearty but run backwards, and if it fell down had to be helped up. We killed it. I had a hen last fall the same way. We killed her. The chickens have run of the farm. We don't feed them nothing but corn and oats, except the cockerel. He was on another farm, where he run in a wheat and rye field.

Marengo, Ind.

Mrs. L. E. J.

Answer.—(1) This was evidently caused by too much blood and lack of sufficient exercise. (2) This is caused by a contraction of the muscles of the neck, and in our opinion is a form of rheumatism. We have cured fowls in this condition by giving them common baking soda in the drinking water, a tablespoonful to each quart of water.

Question.—What can be done or what should be done with a dealer who ships mixed-bred baby chicks for guaranteed pure-bred S. C. B. Leghorns? I ordered 25 pure-bred S. C. B. Leghorns and since they are feathered there is not one that is not half white, and this dealer advertises in your journal. S. C. Brown Leghorn specialist, 27 years experience.

Larryville, Pa.

H. P. S.

Answer.—Cases of this kind should be reported to publishers of poultry papers, and they should investigate the matter and if the breeder is found guilty of practicing fraud he should be exposed and refused admission to the advertising columns of the poultry press.

Question.—(1) Wish you would say in your next issue what you consider the best forage crop for poultry in this locality on high rather light sandy soil? Is sweet clover ever used for this purpose? It thrives here profusely as a noxious wild weed. (2) What would cause month-old chickens to puff up just under the skin, making them twice their natural size on one side? **A. W.**

Saginaw, Mich.

Answer.—(1) Rye, oats and rape are all excellent and will grow in your locality. We do not consider sweet clover

1000 BUFFS THAT ARE GOLDEN

Orpingtons, Rocks, Wyandottes, Leghorns and Cochins, 5,000 prizes. Prize breeders and show birds at half price. Sale circular free. 100-page poultry book, 4c stamp. The Buff Poultry & Bee Farm, Austin, Minn.

A few choice cock birds for sale. Several hundred fine, pure white, line bred cockerels and pullets, from a long line of winners maturing for the fall and winter shows and our customers.

R. F. D. 12, Indianapolis, Indiana

of much value. Alfalfa is better. (2) These are what is known as wind tumors. We do not know the cause. With a pair of sharp scissors cut out a small diamond-shape piece of the skin to let the wind escape, after which apply a little carbolic ointment to the cut.

Question.—Please let me know through your paper whether Rhode Island Whites are recognized as standard by the poultry associations. J. M.

St. Louis, Mo.

Answer.—They are not.

Question.—I have four S. C. White Leghorns hatched about July or early August last year, I am not quite sure, as I bought them. One commenced laying in December, another in January and the other two in February. One has layed right along. They have layed for the four months from March to June, inclusive, 317 eggs. Is that good, bad or indifferent? One of my chickens lays a larger and a whiter egg than the others and is a better looking bird. Altogether counting the five months, February to June inclusive, she has layed 98 eggs. Will you kindly say in your question and answer column if she is a good bird to breed from? H. S.

Ishpeming, Mich.

Answer.—This is a remarkably good record for four months, being an average of a little less than three eggs per day from the four hens. The hen that layed 98 eggs in five months is no doubt a good hen, but we cannot say as to her breeding qualities.

Question.—(1) Is 20 ounces counted good weight for a seven week's old Barred Rock? (2) What do you think of Barred Rock pullets laying at the age of four months and 10 days? That is my record this season. J. E. G.

Knoxville, Tenn.

Answer.—(1) Very fair. (2) This is not uncommon at the present time. It goes to show, however, that the stock has had proper care and is very vigorous and thrifty.

Question.—(1) Is stale bread crumbs good for chickens old or young? (2) I put 60 eggs in the incubator and after testing found that 20 were not fertile. Have five hens to one cock and all the eggs were gotten from four pens of one cock and five hens to a pen. Is not that too many infertile eggs under those conditions? (3) Is corn bread good for them? Mrs. B. J. S.

Jackson, Miss.

Answer.—(1) Yes. (2) Practically all eggs should be fertile under these conditions; but your hens may be too fat. (3) Yes, if not fed in too great a quantity.

Question.—Through your question and answer department will you kindly enlighten me on the best way of killing chickens for table use. I have used the hatchet method because it is the easiest, but do not like it. Would be pleased to have you tell me how to use the killing knife. K. A. B.

Detroit, Mich.

Answer.—Suspend the fowl by the legs, take the knife, which must be sharp, in the right hand; grasp the head of the fowl with the left hand, the comb of the fowl resting in the palm of the hand, and with thumb and index finger open the mouth of the fowl; insert the knife into the roof of the mouth, well back towards the opening of the nostrils. Withdraw the knife and allow the fowl to

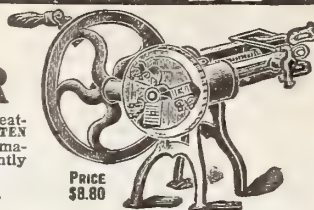

How to Get More Eggs

You can get more eggs than you ever thought possible from your hens by feeding them cut bone. It keeps them laying regularly, in season and out. The

bleed to death, which will be only a short time. This is the method employed by all first-class market poultrymen.

Question.—(1) Do you think that hemp seed will be a good food for laying hens? (2) Is the vetch the same as cow-peas? (3) Which is the best exercise for laying hens, the scratching shed or the automatic exercise feeder? (4) Have some hens not willing to eat the beef scrap when given at roosting time; eat with very great relish by the cockerels. What ought to be done to make the hens eat the beef scrap? (5) Is the line-cloth for windows better than the muslin curtains? (6) Which are the best feeds for laying hens? (7) How many grains an ounce contains? (8) Which is the best feed for broilers to mature early? (9) Which are the best as broilers, Orpingtons, Plymouth Rocks or Wyandottes? (10) How many grains of Epsom Salts should he give occasionally to the laying hens in order to keep them healthy? A. J. X.

Lisbon, Portugal.

Answer.—(1) No. (2) Very similar. (3) They are both good, but we prefer the automatic feeder, which scatters the feed in the litter. (4) Keep the beef scraps before them at all times. They will soon learn to eat what they desire. (5) We prefer the muslin. (6) Wheat and oats in equal proportions, together with plenty of green food. (7) We never counted them. (8) A mash consisting of bran, cornmeal and ground oats, moistened with sweet milk, just so it is in a crumbly state. (9) They are all good and we are not inviting trouble by saying which is the best, as we might be mistaken. (10) 20 to 30 grains.

Question.—(1) What is the best way to break a broody hen? (2) After a hen has been broody how long will it be before she will lay again? (3) How often are hens broody? (4) How long should little chicks be kept with the mother hen? (5) When will a hen begin to lay after having her chicks taken from her? (6) How old are ducks (Pekin) when they begin to lay? (7) How should ducks be housed? (8) What is the best food for ducks? (9) I have had two double-yolked eggs this week, what causes it? (10) Have found four eggs (one soft-shelled) on the dripping-board within a week. All birds seem well. What is the trouble? (11) I have had 271 eggs from eight R. I. Reds in two months. Is this above the average? Mrs. J. C. C.

Brooklyn, N. Y.

Answer.—(1) By confining in a small coop without litter of any kind. (2) From ten days to two weeks. (3) This varies. Some hens will become broody only once in a season, others two or three times. (4) Until they are well feathered out. (5) We cannot tell. (6) About nine months. (7) They should be housed in a moderately warm house and in the winter should be supplied with plenty of litter to prevent freezing of the feet. (8) They may be fed a variety of food, such as cracked corn, wheat, chopped feed, cooked vegetables, etc. (9) This is caused by inflammation in the oviduct, and can be remedied by feeding plenty of green food. (10) The same as question 9. (11) This is a good average and above the ordinary.

"BIRDS of QUALITY" LAPHAM'S BUFF PLYMOUTH ROCKS.

"CATALOGUE FREE"

S. D. LAPHAM, DEARBORN, MICHIGAN

THE WRIGHT BROTHERS' AEROPLANES AT SPRINGFIELD.

The Illinois State Fair, ever in the forefront, will spare no expense in making this year's fair by far the greatest state fair on earth. The attractions already secured include many of the latest achievements in science, notably the Wright brothers' aeroplane, in air races every forenoon and afternoon from October 3 to 8, inclusive. There will be a novel race between a Wright biplane and a racing automobile, which will undoubtedly prove an exciting and attractive feature.

To accommodate the heavy travel this year the Chicago & Alton will run special trains every day of Fair week and will make special low rates. It is "The Only Fair" and "The Only Way."

WRIGHT'S NEW BOOK OF POULTRY.

One large quarto volume, 600 pages, with 45 full-page plates in color and black and white. Durably bound in cloth, gold lettering, gilt edges. Published by Cassell & Company, 43-45 East 19th St., New York.

The name of Lewis Wright has been known to poultry fanciers everywhere ever since he published his, up to then, exhaustive work, "The Illustrated Book of Poultry," thirty-five years ago. Mr. Wright was a young man then, but for a long time his book was the standard work on poultry in England as well as America, and for many years fanciers were of the opinion that, beyond some little revision and some notice of new varieties, it was hard to see how the work could be improved or whatever new there was to write about.

But the advances in poultry culture slowly but surely revolutionized the industry and the book became pretty well antedated before thirty years had passed.

A very cursory glance through the pages of Mr. Wright's sumptuous "New Book of Poultry" shows better than any other illustration what great changes and advances have taken place in poultry culture in the last three decades. Even in regard to the treatment of varieties it is noticeable how much more definite are now the rules and practice of breeding.

"The New Book of Poultry" is not in any sense a new edition or revision of Mr. Wright's earlier work, but a "new" work, entirely rewritten from first to last. Its scope is thoroughly modern and really world-wide; every modern method of raising poultry for profit (and this is ever the dominant aim of the work) is described, whether European or our own. In essentials, European methods and our own are practically identical.

The distinctive feature of Mr. Wright's book is its thoroughness. We have not

seen a more exhaustive poultry book than this. And to assure its absolute authoritativeness, it is characteristic of the author that he should have gone to the highest authority (in his opinion) on breeding for a contribution, rather than express his own expert opinion, however weighty. These two features—thoroughness and authority—distinguish each of the thirty-nine chapters of the work, twenty-four of which are given over to the full individual discussion of every breed, and fifteen to the treatment of Poultry Houses and Runs, The Science of Feeding, Practical Management, The Egg Setting Hen, Incubation, Rearing and Care of Chickens, Poultry for the Table, Poultry Farming, Exhibition Poultry and Utility, Pedigree of Line Breeding, Practical Breeding and Rearing of Prize Poultry, Exhibiting, Shows, Judging, Trimming, Technical Terms, Poultry Diseases and Vices, etc., etc.

On the easy terms upon which it is now

ANNUAL MEETING OF THE "TYCOS" SALESMEN.

The branch managers and principal salesmen of the Taylor Instrument Companies held their annual "get-together" meeting recently at the factory, where "Tycos" products are made, in Rochester, N. Y.

Three busy days were spent by the officers of the companies and the men in reviewing general conditions in the thermometer industry and prospects for the coming year.

The Taylor Instrument Companies are just closing their most successful year, and the sales force, to a man, is enthusiastic over the outlook for passing all records in the year of 1910-1911. "Tycos" products are now found all over the world and wherever found they represent the highest standard of efficiency and quality. The "Tycos" Incubator, Thermometer and

possible to own "Wright's New Book of Poultry" (see announcement elsewhere), it is hard to find an excuse for its absence in the library of any practical poultryman. We believe that for even a few of the valuable suggestions it contains the book is worth very many times the price to any fancier who can utilize them.

F. D. Sutton, Youngstown, Ohio, reports that he has sold his old stock and now has only young stock to dispose of. He has decided to dispose of all his White Wyandottes to the highest bidder and in the future will devote his attention to S. C. White Orpingtons exclusively.

Hygrometer are well known by every successful poultry raiser and the "Tycos" Thermometer is considered as one of the distinguishing marks of popular incubators.

The accompanying photograph shows the men grouped before the entrance to the main building of the "Tycos" factory. Although the present plant of the Taylor Instrument Companies was occupied only in 1906, the growth of this corporation has been so rapid and substantial as to necessitate considerable additions to facilitate in the making and handling of "Tycos" products.

QUICK FEATHERING BIRDS WIN AT EARLY SHOWS HENS THAT MOLT QUICK LAY WINTER EGGS

Robert H. Essex

QUIC-MOLT is a new Specific originated and now put on the market for the first time by the Model Incubator Company. It provides a means to surely get more money—much more money from your fowls by securing early egg production. Write today for full particulars telling how to molt your fowls to get winter eggs.

QUIC-MOLT is also in great demand by Exhibitors who wish to make their show-birds feather fast. It was originated by Mr. Essex, long experienced in exhibiting, and fills the need that Exhibitors have so long felt.

QUIC-MOLT should be used NOW. This is the season for it. Get your show birds just fit. It makes a big difference in your winnings. Write today for full particulars how to make your birds feather fast and have brighter plumage.

AT THIS SEASON you may need Remedies for Chicken Pox, Colds, Roup, Diarrhoea, Scaly Leg, Gapes, or any other disease. Get our Free Laboratory Catalog which describes the diseases and gives the remedy. Model Remedies are also Preventatives. They are put up in our own Laboratory under the supervision of our Chief Chemist and are most reliable. Ask for Model Remedies and accept no other kind. If your dealer does not keep them, ask him to get them for you; or write direct to us.

MODEL POULTRY SUPPLIES ARE SUPERIOR

Model Poultry Supplies Are Superior, yet they cost no more than the ordinary kind. Let your Food Holders and Wall Founts be of good, heavy, galvanized iron, well made; especially when they cost no more than the low-grade, easily-bent kind. See below the list of goods we manufacture. Every article made in our own Factory or Laboratory is guaranteed.

(ROBERT H. ESSEX, Pres.)

The Terrace and Henry St., BUFFALO, N. Y.

completion, measures 100 by 160 feet, and will be used exclusively as a woodworking shop for the preparation of all the lumber entering into the making of wood-back thermometers for household use, weather and temperature indicators, etc. A dry kiln is also under construction for the proper drying out of all the rough lumber used by these companies. These buildings, together with a new wing being added to the main building, make an addition of more than 40,000 square feet of floor space to the present plant—a nice little plant in the additions alone.

Rochester, N. Y., is unique in ranking first among the cities of the world in importance in the thermometer industry, and is rapidly coming to be known the world over as the city "where thermometers come from."

AMONG OUR ADVERTISERS.

H. C. and C. W. Sixt, West Park, Ohio, the well known breeders of S. C. W. Leghorns and White Wyandottes, report a fine lot of young stock that are going to be blue ribbon winners the coming season.

Charles C. Coulter, Frankfort, Ind., breeder of R. C. R. I. Reds, reports that on his farm of 150 acres he is producing some of the best Reds to be found anywhere, and is now in a position to supply R. C. Reds that will win in the strongest competition.

Our friend, H. A. D. Leggett, of Gouverneur, N. Y., who has been advertising his Harvester strain of hardy S. C. White Leghorns and Columbian Wyandottes in these columns the past year, has evidently been delivering the goods, as he has sold nearly all his surplus stock, but is prepared to supply young stock of both varieties at reasonable prices.

J. H. Jackson, Hudson, Mass., the well known White Wyandotte breeder, reports a fine lot of birds for the season's trade and many ready for the strongest competition. During past years he has supplied winners for the leading shows in the United States and Canada, and you run no risk in ordering from him, as he will take back, at his expense, any bird that is not satisfactory.

Wm. C. Bowman, manager of Oakland Poultry Yards, Trenton, N. J., informs us that they have a new farm of 140 acres and will establish one of the finest poultry farms in the East. The buildings alone will cost upwards of \$40,000. This year they have raised some fine exhibition White Wyandottes and some fine exhibition S. C. White Leghorns and can supply winners.

The Winona Farm, Lansdale, Pa., is one of Pennsylvania's progressive plants and they have just closed the most successful season of their career.

They have had great success in raising young stock and their S. C. Rhode Island Reds and S. C. White Leghorns could not look better. In order to take the best possible care of their youngsters, they are offering their 1910 breeders at very tempting prices, as you will notice by their very interesting ad in this issue.

When it comes down to brass tacks, Winona Farm's Reds and Leghorns are going to be in the race this year from start to finish. Their fine plant is located just on the outskirts of Lansdale and is a sight well worth seeing at this time of the year, with the young stock coming on. Take a trip to Winona Farm. If this is impossible, get in touch with them.

Coops that are neat and attractive go a long way to display your birds in the showroom to the best advantage and cut an important figure in the general appearance of the hall. First appearances are lasting. The visitor's favorable impression is well worth any attention given to pleasing appearances. The nicely painted, light blue coops made by the Gem Incubator Company, Trotwood, Ohio, make a very pretty effect lined up in the showroom. For the past twenty years this firm has made a specialty of manufacturing exhibition coops during the summer and fall months. Hundreds of exhibitors will no doubt recall seeing this coop in use in both large and small shows throughout the country. The small exhibitor and the Association alike should investigate the merits of the Gem Exhibition Coop. At the low price so desirable a coop is sold no exhibitor can afford to use an unsightly coop. Look up their ad in this issue. Send for circular and samples.

CUT 3/4 OFF YOUR FEED BILL

THE greatest discovery of the 20th century. Is not a patented or prepared food. You buy one bushel of common grain and make FOUR BUSHELS of feed, which will contain more and better food value than the original bu. of grain. Clarence Ward's book

Successful Poultry Culture

tells you how to prepare this food. Contains 128 pages and 90 handsome illustrations of fowls and practical plans for building poultry houses. It is a thorough and scientific treatise on raising poultry for profit, and is especially designed for the beginner. If instructions are followed success will surely crown your efforts; the chapter on "Scientific Feeding" is alone worth many times the price of the whole book. This book has always sold heretofore for \$1.00.

We have reduced the price to 50c. Send 50c and get a copy of this book at once. Address

American Poultry Journal Publishing Co., 358 Dearborn St., Chicago, Ill.

DOUBLE YOUR PROFITS.

\$12,000 From Plain Poultry IN EIGHT YEARS!

No fake "Secrets," no humbug "System," no cooped fowls, but a PRACTICAL, open-air BUSINESS METHOD of making every hen pay a clear profit of over \$4.00 a year. GRUNDY Fireless Hatcheries and Brooders, Vermin-Proof Coops, Food-Saving Feeders, Dirt-Proof Water Founts, Hen-Protecting Nests, Lice and Mite-Killers, Chick and Laying Hen Foods and everything you need. Better than any others and cost LESS THAN ONE-THIRD as much. See my free Booklet.

F. GRUNDY, Poultry Expert, - - Morrisonville, Illinois.

A WORD OR TWO FROM PINE TOP POULTRY FARM.

We wish to extend to our many friends and patrons the appreciation we feel for the aid received in making the past season one of the most successful in the poultry world, and we take pleasure in announcing to those who intend exhibiting at any of the coming shows that Pine Top has added a wonderful selection of birds bred from our blue ribbon winners at Madison Square Garden, Boston and other leading shows during the past year, which are bound to win honors unparalleled.

For the benefit of those desiring to obtain utility birds for next year's breeding, we are this month offering fine yearlings at a sacrifice.

Write to us direct for prices, etc., and keep watch of the American Poultry Journal for the progress of "Pine Top" birds. Address Pine Top Poultry Farm, Hartwood, Sullivan county, New York.

R. I. REDS AT OWEN FARMS.

In this issue of American Poultry Journal Owen Farms, Vineyard Haven, Mass., makes the announcement that they are now prepared to furnish our readers with as good stock in Single and Rose Comb Rhode Island Reds as can be found anywhere. They have been working on this variety for the past five years and have now got them as nearly perfect as it is possible in accordance with the American standard of perfection. That is, they have bred them up to a state of perfection that is on a plane with the other varieties bred on this noted farm, and therefore feel justified in now bringing them to the attention of our readers and soliciting their patronage for this variety. See their page ad elsewhere in this issue.

F. S. Smith, of Hamilton, Ohio, reports to us that through his ad in the American he has had a wonderful trade this year in eggs, day-old chicks and stock of his great laying strain of S. C. Buff Leghorns. He had mated this year forty pens and has raised over 8,000 young birds and will show this winter at most all the leading shows.

Mr. Smith is the largest breeder of S. C. Buff Leghorns in the world and has no other breeds, except 400 Indian Runner ducks. He expects to have 2,000 layers for next year and will mate his forty pens for the egg trade. He is still shipping eggs to the southern states and reports a grand business in the South.

Mr. Smith has over 500 yearlings that he will sell cheap, to make room, and over 6,000 youngsters, including hundreds of show birds. He has purchased for next year twenty 250-egg incubators and fourteen 400-egg machines. This will give him over 10,600-egg capacity. By counting chickens before they are hatched, he expects to raise next spring over 25,000 chicks and 5,000 Indian Runner ducks.

Mr. Smith sold thousands of day-old chicks this year, so if you want Buffs, write him, as he has a grand lot of them and will guarantee to please you in every way.

His winnings last winter at Hamilton, Dayton, Cincinnati, Columbus, Toledo, Cleveland, Indianapolis, Chicago and the great St. Louis shows were record-breakers.

Greenwood & Yeoman's

Exhibition Light Brahma Breeders. Choice stock for sale. Eggs a specialty. Correspondence a business. Box 1334 - Paterson, New Jersey

PERFECT PORTABLE POULTRY HOUSE

Affords perfect laying conditions the year round for a dozen hens. Ready built, durable, convenient, two-story, arranged to give standard room inside. One of our forty designs

Rock-Bottom!

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. Remember: all freight charges prepaid, no matter whether you keep the piano or not.

Send for the best, safest, most instructive book of piano-buying information ever compiled; the

Book of Information FREE!

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesman's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

Early Molting

means Winter eggs and big prices. Molting hens must have a tonic which will help them shed out and grow new feathers quickly.

Pratts Poultry Regulator

is recognized by Poultry Experts as the surest Regulator to help fowls molt quickly and to keep them healthy the year 'round. Give your hens Pratts Poultry Regulator NOW and watch them slip through the easiest and quickest molting season they have ever experienced.

If your dealer does not keep PRATTS, write us at once and we'll see that you are supplied. 25 lb. pail—\$2.50. Also in small packages and 100 lb. bags.

Guaranteed Or Money Back

Send for PRATTS Poultry Wrinkles, a helpful book free for the asking.

Pratt Food Co., Philadelphia, Pa. Dept. I

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

Incubator Exchange :: Brookfield, Illinois

at bargain prices. Young stock for sale. Bred from Boston, Port Huron and Chicago winners. Get my prices on single birds, pairs, trios and breeding pens. I can furnish winners for the best shows. Write your wants to the great specialist-breeder.

Have been bred right for the past fifteen years. Send for free booklet of winnings; mention this paper.

Continues, as we have 700 or 800 more birds than we can properly winter. $\frac{1}{4}$ to $\frac{1}{2}$ value to close out surplus. EXPRESS PAID on early orders. Hens, ekls, pullets, cock birds, Barred, White and Buff Rocks, White Wyandottes and Buff Upringtons. Great show birds that have won at leading shows and we will guarantee to win for you or return part money. Utility birds bred for high egg production for years. Pens have averaged 244 eggs per year, single records higher.

TURKEYS—Bourbon Reds and Bronze. My turkeys have won at Madison Square Garden and at leading shows. Very cheap for early sales. They will win in any show. I guarantee this.

PEKIN AND INDIAN RUNNER DUCKS—Fine show and utility stock cheap.

FREE—A beautiful catalogue giving my winnings, how I started in the poultry business to succeed, egg records of our stock and other valuable information. Write exactly what you want, giving size of show, likely competition and as near as possible what you want so I can price them intelligently. Remember all early sales cheap.

THAT'S it—Practical Reds. The kind that lay eggs like a Leghorn and make a roast like a Rock.

We have the best strain of Practical Reds in the U. S. We sell eggs that hatch. Send \$6.00 for 100 eggs from utility pens or \$10.00 for 100 eggs from selected pens. Get your order in now—don't wait until the last minute.

After years of careful breeding we are giving the fancier an opportunity to buy from our best stock at an exceptionally low price.

YOU can have

ORPINGTONS

acknowledged the world's best. After June 1st I will offer eggs at less than half their value. This is chance of your life to get in line for some of my strains of Orpingtons. Never in my twelve years breeding Orpingtons have I had such youngsters as I have at present time large broad, deep bodies, heavy bone, shape and color to burn. As I was the first importer of Buffs to America and have won over 1,200 prizes, I believe I have some of the best birds in America today. June is month to hatch the winner for late winter shows and can furnish the eggs that will set you in line for blue ribbons. Write for prices. Booklet free. :: C. E. Vass, Washington, New Jersey

Special sale on Leghorns this month, 100 females that must be sold. Also 50 S. C. Minorca hens. These birds were used in our own breeding pens this year. After Sept. 1, we will offer 500 youngsters for sale. The birds will be ready for the fall fairs, and will be fit to win at any show. Our big 30-page catalogue and special list is free for the asking.

OF

Pigeons and Bantams

By F. W. DeLancey

One hundred pages, handsomely illustrated. The best ever published on the subject, because it goes into details; illustrates and describes all the leading varieties.

It Tells You---

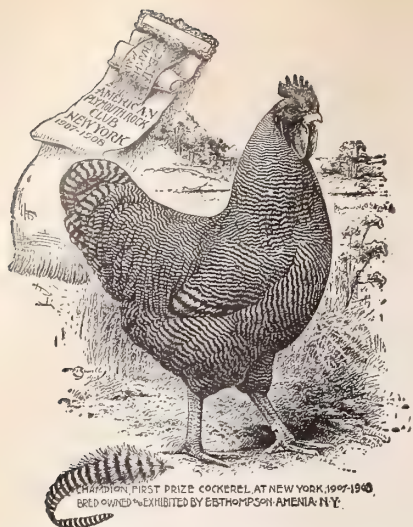

How to mate---How, when and what to feed---How to tell males from females---System of feeding---Training the racing Homer---Disease---Building and construction of houses---History and origin of the different varieties. The most complete pigeon book published.

Bantams

It not only describes and illustrates the leading varieties, but tells you all about the mating, care and keeping. Articles by America's foremost breeders and best authorities. No Bantam or Pigeon breeder can afford to be without this valuable guide.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

ROYAL BLUE BARRED ROCKS

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York, 1909.

SWEEPSTAKES CHAMPIONS —AT— New York and Boston, 1909.

BURHANS' PURE BRED PRIZE WINNING FOWLS

MY SPECIALTIES:

All Breeds Plymouth Rocks All the Orpingtons
All Varieties Wyandottes All the R. I. Reds

I breed all varieties of birds as above and breed them in their highest excellence. The newer varieties, such as Silver Penciled Plymouth Rocks, Partridge Rocks, Columbian Rocks, Columbian 'Dottes, are here in my yards in all their gorgeousness. I have one thousand head to offer to the trade, all bred from my choicest pedigree matings and direct from the yards of the originators and winners at Chicago, Boston, New York, Buffalo and the big state shows. My big annual poultry book filled with practical matter and full of the secrets of success for two red stamps to pay postage.

Also breed Cornish, Buckeyes, Pit Games and Bantams. My yards are the most complete in the northwest. I make a specialty of breeding trios at ten and fifteen dollars. Every bird banded with my name on sealed band to insure quality. I bear in mind that you want something better than you have. Let me know what you want.

Successful Egg Farming

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, winter and summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
727 Hogan Block, Syracuse, New York

"RINGLET" BARRED PLY. ROCKS

In their purity and positively the very best. Our birds made another clean sweep at the Wis. State Show, 1910. Our prices are right and we positively guarantee to please you or refund your money cheerfully. Our 32-page catalog, containing show record and scores of strong unsolicited testimonials from our customers, will convince you of the truthfulness of every claim we make. Sincerely yours,

KING BROTHERS

OSHKOSH, WISCONSIN

BIE'S BARRED PLYMOUTH ROCKS

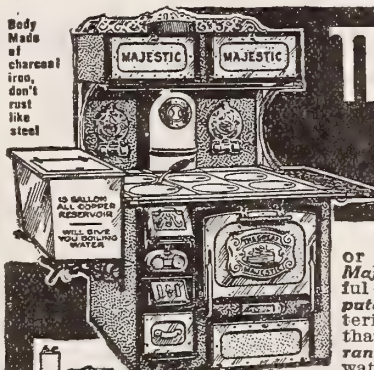

At four large shows, i. e., Kenosha, Chicago, Milwaukee and Waukesha, during the past season, we won 8 firsts, 4 seconds; 7 thirds, 6 fourths, silver cup and several shape and color specials and at Milwaukee, besides winning 1, 2, 4, 6, 7, 9 and 10 on pullets, we won the grand specials for best display in the American class. Our prize winners and their sires and dams are all in our yards from which we will sell eggs at \$5 per 15; \$9 per 30; \$12 per 45. Half price after May 15th. Will also sell 10 males and 40 females that are in our breeding yards at a great sacrifice.

Geo. H. Bie :: Racine, Wisconsin

WORLD'S FOREMOST WHITE WYANDOTTES

REMEMBER, I have been breeding many of the most noted winners for past fifteen years for the leading shows of the UNITED STATES AND CANADA. Many owe their SUCCESS to my strain. Past year I bred the winners for MADISON SQUARE, N. Y., ALASKA-YUKON EXPOSITION AT SEATTLE, CHICAGO, KANSAS CITY, LOUISVILLE, KY., INDIANAPOLIS, PITTSBURG, PA., McKEESPORT, PA., YOUNGSTOWN, O., BOSTON, MONTREAL, OTTAWA, ONT., and several other shows all the past season, a record not equaled by any other breeder. These were prominent winners of many 1st prizes and specials for shape and color. My type is the ideal type and that is why they win under so many different judges. I have the best lot of young stock I ever had and many early ones ready for the early shows fit to win in any competition. Now all stock purchased can be returned at my expense if not satisfactory. If you have not had the results, try me. YOUR SUCCESS IS MY SUCCESS.

J. H. JACKSON :: LOCK BOX 88 :: HUDSON, MASS.

The Range With A Reputation

You don't want to buy a range every day, or every year, but when you do, the Great Majestic Range is worthy of your most careful consideration. It is a range with a reputation, built on honor of the best materials, and while the first cost may be more than some others, it outwears three ordinary ranges; this, and its fuel saving, baking and water heating qualities make it the cheapest in the end.

The Majestic is the only range made entirely of malleable iron and charcoal iron. Charcoal iron won't rust like Steel—Malleable iron can't break. Majestic Ranges have absolutely air tight joints like an engine boiler, because they are put together with rivets, and they stay air tight, because neither heat or cold can open them.

The Majestic is lined with pure asbestos board, 1/4 inch thick, covered with an iron grate and it's put there to stay—you can see it. This assures a steady, even, perfect baking heat and saves fully one-half your fuel.

The Great and Grand
A Perfect Baker
MAJESTIC
Malleable and Charcoal Iron
A Fuel Saver
RANGE

The reservoir is all copper and heats like a tea kettle through a copper pocket, stamped from one piece of copper, setting against left hand lining of fire box. It boils 15 gallons of water in a very few minutes and by turning a lever the frame—and reservoir—move away from the fire. This feature is patented and is used only in the Majestic.

All doors drop down and form perfect and rigid shelves. Malleable iron oven racks slide out automatically, holding anything they contain. The open end of a pan does away with the shoveling of ashes out of ash pit. The ventilated ash pit prevents the floor from catching on fire and the ash cap catches the ashes that would otherwise fall to the floor.

No springs anywhere to weaken, or get out of order. It is the best range at any price—a range with a reputation and it should be in your kitchen. It is for sale by the best dealers in nearly every county in forty states. If you don't know who sells them in your vicinity, write us and we will send you our book, Range Comparison. Everyone who is thinking of buying a new range should first read this booklet.

Majestic Manufacturing Co., Dept 18 St. Louis, Mo.

It Should Be In Your Kitchen

Chickens Noted For Success

ARE WHAT YOU WANT

The Newtown White Leghorn chickens are world-famous for purity of strain, vitality, egg-laying qualities, exhibition purposes—in short for money-getting. These are the points you want in your stock if you mean to be successful in chicken raising. We are ready for your orders now in

Breeding Stock and Exhibition Birds

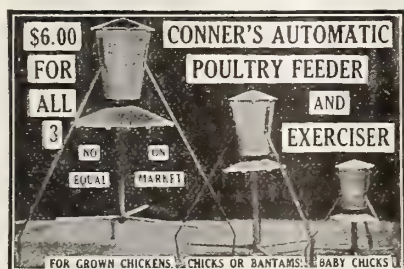

FROM

Poultry of Proven Profit

Write us today just what you want for the present or for the future, and we will give you the benefit of our experience and success. You'll never regret that first letter addressed to the

Newtown Producing Co., Box 173, Newtown, Bucks Co., Pa.

INVESTIGATE

- It feeds, exercises and keeps your chickens healthy.
- It will increase egg yield with less feed bill.
- It will save time, labor, feed and scratching material.
- It will feed your chicks and keep them growing and healthy.
- It will keep old hens from getting too fat; hence more eggs.
- It will pay to buy a feeder if you have only ten hens.
- It feeds all kinds of grain without being regulated.
- It will prevent you from having any drones in your flock.
- It will keep sparrows, rats and mice from getting your profits.
- It can be used either inside or outdoors, being rain proof.

What Others Say

MESSRS. GILBERT BROS. & WAKELEY, of Knoxville, Pa., write:

The Self Feeders which we bought of you are all you claim them to be. Their practicability far exceeded our expectations, and we hope to use more of them later on.

MR. H. F. BERGNER, of South Chicago, Ill., says:

I am pleased to inform you that the shipment of Automatic Exercisers and Feeders was received in good order, and are now installed in my yards.

I am indeed surprised at the saving of feed, as I have always been troubled with a large flock of sparrows. This trouble is now a thing of the past, and not a grain is lost or wasted, and I think a Feeder will pay for itself at the present price of feed in about 30 days at the rate I have been losing it, to say nothing about the saving of time. I have always fed my birds two or three times a day; now I fill the hopper once a week and the chickens do the rest.

I congratulate you on having produced something that fills a long felt want, especially eliminating the trouble caused by sparrows. It is also rat and mice proof, and should be in every yard where poultry is kept, whether on a large or small scale.

MR. HERBERT STRONG, of Chatham, N. J., writes us:

Your Automatic Feeders were received by me, and after giving them a thorough trial I am convinced that they are all right, for the following reasons: They save a great deal of waste and loss of feed; the pens in which I have the Feeders require about 25 per cent less feed than the others. They will not overfatten themselves with these Feeders, as they have to do their work before getting the grain. It requires about 10 days for a hen to get used to operating it perfectly.

Show Birds

Poultrymen having fancy birds to exhibit at the approaching poultry shows should begin at once to use Little Red Hen Poultry Tonic. It will put the birds in fine condition for entry, bringing out every point to the best advantage.

We make this special appeal at this time particularly to attract the attention of the man who has birds for exhibition and because the show season is at hand. He should begin feeding this Tonic at once. It will make show birds look better; it will make hens lay more; the eggs will be more fertile and the chicks will be stronger and will grow faster. The good results obtained from the use of Little Red Hen Poultry Tonic will surprise any one using it for the first time and will furnish us a satisfied and continuous customer.

This Tonic is prepared and shipped in quadruple strength. 1 qt., \$1; 3 qts., \$2.75; 6 qts., \$5. Booklet free.

Wayne Poultry Tonic Co., 213 Shoaff Bldg., Fort Wayne, Indiana

Fairview White Rocks

Bred for size, shape, pure white plumage, fine head points and eggs. Choice young stock bred from my Louisville and New Albany winners. Cockerels, \$3, \$5, \$7 and \$10; pullets, \$2, \$3 and \$4 each. High-class exhibition stock a matter of special correspondence. Every bird guaranteed to please.

Guy Daily - - - **Jeffersonville, Indiana**

Edgemont Poultry Farm, W. O. Chase, Box B, Hillsboro, Ill.

BABY CHICKS WILL PAY YOU

Install a Candee Incu-Brooder and Make at Least 100 Per Cent Profit

YOU ONLY HEAT compartments in actual use. Exclusive Candee feature.

SEPARATE HEAT REGULATION of each compartment. Exclusive feature.

SIMPLICITY OF OPERATION,
requiring but two minutes night and
morning to fire.

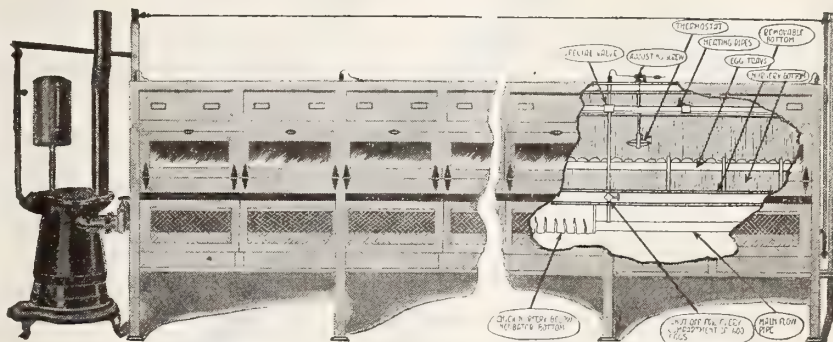

SECTIONAL CONSTRUCTION
which can be added to as your business
grows. Exclusive feature.

SANITARY TRAYS of zinc. Un-
necessary to raise or lower them. Ex-
clusive feature.

DOUBLE AUTOMATIC heat control, regardless of outside weather conditions. This is very important. Exclusive feature.

ITS LOW COST. Burns chestnut or pea coal and during February and March, 1910, it cost but 1½ cents per 1,000 eggs to operate.

WORKMANSHIP. Sections are made by machinery, from selected materials, resulting in absolute uniformity and quicker installation.

The Incu-Brooder is made with a capacity of 2,400 (smallest) to 20,000 eggs in sections of 600 each .

It Will Do the Same for You Conservative figures show that day old chicks bring at least 12 cents each, and using the Incu-Brooder, the total cost of eggs, labor, etc., is less than six cents, leaving a net profit of at least 100 per cent. Many can do better. For instance, the Yesterlaid Egg Farms Company, of Pacific, Mo., writes that it recently secured a hatch of 957 good chicks out of 1286 untested eggs set, or from 50 to 55 chicks out of every 65 eggs set.

Candee Hot Water Brooding Systems

**First, Last and always the
cheapest. Even the first cost
is cheaper than for oil ma-
chines of the same size.**

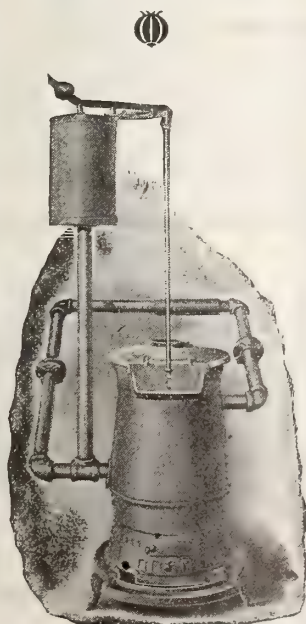

No Possible Danger. There is no chance for deadly fumes like from oil, and hot water is absolutely safe.

Operating Expense. This is far below cost of oil, without considering the vast difference of time between tending the heater and filling and trimming lamps.

Healthy Chicks. Hot water is the healthiest heat and the healthiest chicks result. This means better prices.

Let Us Send You Our Catalogue

Our catalogue tells all the facts about the Candee Incu-Brooder, hot water brooding system, our unequalled hovers, hot water and steam heating plants, greenhouse and dairy outfits. A post card request will bring it to you free and postpaid.

I Tell You How

I made \$3,600.00 in one season from 30 hens, on a lot 24x40, by feeding the scraps from my table three times a day. I'll give you the names of those who paid me over \$2,000 for the eggs alone from these fowls—you can refer to them.

I'll tell you how I make my chickens weigh 2 1-2 pounds at 8 weeks of age.

I tell how I prepared my chickens for the show room, so that I won over 90 per cent of all the blue ribbons offered during 1907 and 1908. This has never been published before.

How I raise ninety-eight chickens out of a hundred that I hatch—how I feed my chickens for egg production—how I keep them healthy and free from disease—how I tell the layer from the poor layer—how I break up my broody hens without injuring them. I tell you how to pack eggs to keep them fresh—how I mate my chickens for breeding and fertility—how I run my incubators and supply moisture—how I raised my famous \$10,000.00 hen, "Peggy"—how I bred my big egg-laying strain. I tell you all about broiler plants, egg plants, etc.

I tell you about everything that is necessary to success in the poultry business.

It also gives you my opinion and experience that I have had with advertising solicitors of poultry journals.

It also gives you my opinion and experience that I have had with poultry judges in the show room, and why, in my opinion, the little fellow don't get what he thinks he ought to have in the show room. I tell it just as I have seen it and experienced it. There are several pages in this book taken from my records, and from my cash book and ledger. There are no secrets—I tell it all.

See what others say on opposite page.

"I Made \$18,178.53

NET PROFIT

In One Year, Selling Chickens & Eggs"

I took a flock of 1,638 chickens and made them net me a profit of \$11.09 per bird in 12 months' time.

My farm and books are open for inspection to any State Poultry Experimental Station. If your station doesn't find the above statements true, I'll donate \$1,000.00 in cash to your institute.

My New Poultry Book Tells How I Did It.

It covers all branches—it tells everything necessary to success with poultry. It tells you what I have done—how I started.

Try my way and you can raise them by the thousands

It shows you a picture of the first hen house I built, 6x6 feet in size. It contains over 50 full-page pictures of buildings and views taken on my farm. It was written from actual experience

Send \$1.00—and a Copy of the Latest Revised Edition of the Book Will be Sent You by Return Mail.

NOTE—Ask the editor of this Poultry Journal or any "licensed" poultry judge as to my reputation as a breeder.

“KELLERSTRASS WAY”

The Kellerstrass Farm,
Kansas City, Mo.

Burnett, Cal.

I received your book sent me Saturday a. m. It would have been worth to me \$500.00 if I had had it last spring. "Good Book," common sense learned by hard-earned experience. Worth \$1,000.00 to me. Respt.,

L. R. HAYWARD.

Clinton, Ia.

Kellerstrass Farm,
Kansas City, Mo.

The book, "The Kellerstrass Way of Raising Poultry," received, and will say it is the most sensible and practical book on poultry that I have ever read, and I would not part with it for ten times its price if I could not get another one. Very truly yours,

H. C. HEINSEN.

Albany, N. Y.

Ernest Kellerstrass.

Dear Sir:—I received your book. Comparatively speaking, it is WORTH MORE MONEY.

Very truly yours,

GEO. W. CAMPBELL.

The American White Orpington Club,
Richmond, Va.

Dear Mr. Kellerstrass:

Received the book O. K., and it certainly is brim full of meat; you have the other fellows beat a mile for real down-to-earth information, and I have all of the books, as well as some practical experience in the 15 years I have been breeding.

Fraternally,
F. S. BULLINGTON.

Hurst Pierrepont,
Garrison-on-Hudson, N. Y.

Mr. Kellerstrass

I have read your book with deep interest, and want the satisfaction and pleasure of telling you how much I admire your wonderful enterprise, your unbounded success and your most beautiful and peerless poultry. I have the greatest wish to visit your farm, and as I am honored with a permit, I hope some day to avail myself of the privilege.

It must be a great satisfaction and joy to you to have been able to do all you have done, and to have given inspiration to very many people.

It is not probable that it would be possible for anyone to excel you. You have no doubt brought poultry raising up to the goal of excellence, but if in the future there should happen to be others capable of following your great example, you will have reason to rejoice that you were the first to give them such an inspiration. What greater good can we do in the world than to be an example so perfect in whatever way that others may desire and succeed in following. What most people need is inspiration. Many talents lie dormant. The desire has not been roused to put forth interested efforts.

When one such as you and Luther Burbank come to the fore it has the effect of stirring desire and ambition. Blessed are such individuals; they have accomplished a great work, and posterity will not forget them.

Sincerely yours,

M. BECKWITH.

Winchester, Kans.

Dear Sir:—Received the book all O. K. this a. m. and find same very interesting and full of GOOD SOUND LOGIC.

Yours truly,

CHAS. FORSYTHE.

Mr. E. Kellerstrass,
Kansas City, Mo.

Buffalo, N. Y.

Dear Sir:—Received your book all right. Am well pleased with book; best dollar's worth I have ever received.

Yours truly,

CHAS. P. GOETZ.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Adah, Pa.

Dear Friend:—The book at hand. I got so much interested in the book that I couldn't lay it down. It is the best book that I ever opened on poultry talk. I think every person that has a bird on his lot or farm should have one of these books. I was surprised when I read where you opened those chicks and found lath nails and tacks in their craws. I never heard of such a thing; it stands to reason that would kill them.

H. M. GROVER.

Irrington, N. J.

Ernest Kellerstrass:

Dear Sir:—Received your poultry book; it is worth many times the price, and should be in the hands of everyone handling chickens, as it contains information that would take many years to learn.

Yours very truly,

JOHN SELFELDER.

Kellerstrass Farm,
Ernest Kellerstrass, Prop.,
Kansas City, Mo.

Elyria, Ohio.

Dear Sir:—I was very much interested in your book, as I believe that it gets closer to nature than any other book that I have seen, and am much interested in your Crystal White Orpingtons.

Yours very truly,

H. H. CLOUGH.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Augusta, Ga.

Dear Sir:—Yours of a recent date to hand, also your book of "Kellerstrass Way of Raising Poultry," which I appreciate very much. I must say I think more of it than all the other books I have ever received.

Thanking you again for the book you sent me, and assuring you that I am and will from now on follow your way and no other,

Yours truly,

G. K. JOHNSON.

Hot Springs, Ark.

Mr. Ernest Kellerstrass.

Dear Sir:—Please excuse my apparent slothfulness. I have not had a chance to write to you since I received the book. I would not take three times the cost of it for it. It is all good common sense, and no man could have known it without experience, and it takes time to find out such. I am a thousand times obliged to you. I feel as if you had given it to me. I am not a breeder of any particular breed. I just raise a few for home use, but I like to make them pay. I am an admirer of the work and hope in the near future to go in it for a business.

Thanking you again, I am,

Respectfully yours,

R. S. TONEY.

Grey Bull, Wyo.

Received book all right. It suits me fine. Is worth its money in any man's country. Yours as ever,

J. T. ROBINSON.

Oklahoma City, Okla.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Your late poultry book received, and I have received very much valuable information therefrom. I believe I can now begin the poultry business intelligently and successfully.

Very respectfully,

T. W. SHACKELFORD.

Jennings, Kans.

Ernest Kellerstrass.

Dear Sir:—Enclosed please find \$1.00 for your book, "My New Poultry Book." Your ad. was sent me by one who has your book and thinks it is a grand book.

MRS. C. H. DANLEY.

Calgary, Alta, Can.

To Kellerstrass Poultry Farm,
Kansas City, Mo.

Dear Sir:—Received your book O. K., for which I thank you for the quick reply, and having read it through, may say that in my estimation the book is worth its weight in gold to anyone who has or takes interest in poultry.

Yours truly,

B. DICKINSON.

Victoria, B. C.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Received your poultry book and enjoyed reading it. I like that kind of language you talk. Your book cheers me up, and I have decided now to go into the poultry business.

Yours truly,

WM. COLLEN.

Asbury, Mo.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I like the book fine, and would not part with some of the information for many times the price of book.

Very truly yours,

C. J. RHOADS.

Birmingham, Ala.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Sir:—Have just received your book—found it very interesting. Am sure it will be of much help to me. Don't see how I could do without it.

Yours truly,

J. W. GILLESPIE.

Brandon, Manitoba.

Mr. Ernest Kellerstrass.

Dear Sir:—I received your book, and think it far ahead of all others. Everything so plain and to the point.

I remain,

S. E. WOODLEY.

Chicago, Ill.

Mr. Ernest Kellerstrass.

Dear Sir:—I have your late book on your way of raising poultry, and have been reading it. Am very much taken with your way—am proud of my book.

W. PICKENS.

New York City.

Ernest Kellerstrass,
Westport Station,
Kansas City, Mo.

Dear Sir:—Please find enclosed check for \$2.00 for two copies of your "New Book on Poultry." I received a copy of this book from you some weeks ago, but it was so admired by a friend that I gave it to him, and now want one for my own use.

Very truly yours,

THEODORE CRANE.

RIVER HOME POULTRY YARDS

BOX B, PERRYSBURG, OHIO

MOST of the readers of this journal know that we are high-class poultry breeders and have been engaged in the business for years, and that we have one of the largest and most modern poultry plants in the country and are extensive breeders of high-class, purebred

Light Brahmas AND Barred Ply. Rocks

We have published two of the handsomest poultry catalogs that have ever been put out. One of them tells about our Light Brahmas, and contains beautiful unretouched photographs of our Light Brahmas, and the other catalog is equally as beautiful and contains photographs of our Barred Plymouth Rocks, and tells all about them. The catalogs cost us 40c each when we order thousands at a time. Send 10c today, telling us which variety you want, and we will mail you a catalog telling all about our N. Y., Chicago, Toledo, Detroit and Indianapolis winners.

We want now to tell you on this page about the

Norwich Automatic Exerciser and Feeder

We found by experience in our own yards that the Norwiche Automatic Exerciser and Feeder is the greatest invention in poultrydom. We finally installed over fifty of them in our own yards, and have used them for about two years. They have saved us their cost in feed at least four times every year, and the saving in labor amounts to even more than the saving in feed. We had no intention when we purchased the Exercisers and Feeders of taking the agency for their sale, but the merits of the Exerciser and Feeder are so great that we simply felt compelled to tell other poultry breeders about them just as a matter of duty. So many people saw our Exercisers and Feeders and wanted to buy them right at our yards that we finally were forced to ask for the agency in order to supply the demand, and the demand has now become so great that we are buying the Exercisers and Feeders in carload lots and are shipping them out as fast as we can get them from the factory.

The Norwiche Automatic Exerciser and Feeder is practical and simple. The price of grain will be higher this fall, and this Exerciser and Feeder will cut your bill one-fourth by preventing all waste. Yards, whether large or small, equipped with it are entirely free from sparrows and rats, because there is no feed laying around to attract or feed them. It saves time and labor. Fill the hopper once or twice a week and your birds will do the rest. They will take better care of themselves than you can. You can adjust it for birds six

weeks' old and over so that they can get just enough and no more. They cannot gorge themselves, and yet will never go hungry.

The Exercisers and Feeders are made in four sizes, and are equally valuable and useful on the city lot and to the largest breeder. Every chicken in the United States should get its feed from one of these machines.

GUARANTEE

Every Norwiche Automatic Exerciser and Feeder is sold under the following positive guarantee:

- 1st: It will pay for itself in the saving of grain in ninety days at the present price of grain.
- 2d: It is absolutely RAT and BIRD proof.
- 3d: It is absolutely RAIN and DAMP proof, and the enormous loss of grain from feed becoming damp by lying on the ground will be eliminated.
- 4th: Every kernel of grain put in the hopper will go into your flock, and not a grain will be lost from any cause.
- 5th: The labor of feeding, except filling the hopper when empty, will be eliminated. On large plants one boy can do the feeding for 1000 pens.
- 6th: The exercise given by the action of the machine is just sufficient to keep the flock in perfect condition. Too much exercise is equally as bad as too little. Our machine strikes the happy medium.
- 7th: The machine will increase the growth of young stock more than any other method of feeding, and will increase the egg production twenty per cent.

The machine is light and easily moved outdoors in summer and indoors in winter. It is manufactured entirely of metal and is not affected by weather conditions. It is inexpensive.

We are the exclusive general agents and distributors for the Norwiche Automatic Exerciser and Feeder in the following states:

ARKANSAS	MISSOURI
ILLINOIS	NEBRASKA
INDIANA	NO. DAKOTA
IOWA	OHIO
KANSAS	OKLAHOMA
KENTUCKY	SO. DAKOTA
LOUISIANA	TENNESSEE
MICHIGAN	TEXAS
MINNESOTA	W. VIRGINIA
MISSISSIPPI	WISCONSIN

If you live in any of the above states write to us for our free booklet telling about the Norwiche Automatic Exerciser and Feeder, and explaining our free 30-day trial offer.

If you do not live in any of the above states, write to the Norwiche Automatic Feeder Co., Norwiche, Connecticut.

Remember, if you are interested in Light Brahmas or Barred Plymouth Rocks, send 10c in silver or stamps for our handsome catalog, telling us which variety you want, but in any event send today for our free booklet telling all about the Norwiche Automatic Exerciser and Feeder and our FREE 30-DAY TRIAL OFFER.

COUPON

Fill out this coupon and mail it today. Draw a line through the name of the breed you do not want, or draw lines through both Light Brahma and Barred Plymouth Rock if you only want the Norwiche Automatic Exerciser and Feeder booklet.

River Home Poultry Yards,
Box B, Perrysburg, Ohio.

Please mail me your Light Brahma Barred P. Rock catalogue, for which I enclose 10c.

Also send me your free Norwiche Automatic Exerciser and Feeder booklet telling about the thirty days' free trial offer.

WE HAVE THEM AT RIGHT PRICES : YOU SHOULD WRITE US YOUR WANTS TODAY

J. G. BUDDE & CO., OAK PARK, ILL.

**HAYNER'S BAR'D ROCKS**

At the great International Show, Buffalo, 1910, made an unprecedented record at the annual show of the American Barred Plymouth Rock Club in competition with "the cream" of the greatest yards in the U. S. and Canada. Five regular and special prizes on 3 entries. My pullet Queen Buffalo won 1st prize and specials for shape and color and special for championship female. She was pronounced by leading Barred Rock breeders and critics to be the best Barred Rock female of the season.

I now have the best lot of both old and young stock I ever raised. Will not show this fall, and offer all my best stock for sale. About 1,000 birds to select from. Describe your wants and how much you can invest and I will tell you what I can do for you.

JONAS HAYNER, LIVINGSTON, N. Y.

BEAUTIFUL

PROFITABLE

U. R. FISHEL'S WHITE PLYMOUTH ROCKS

"THE BEST IN THE WORLD"

I WANT every reader of the American to read the above lines carefully and then glance at the pen of fowls illustrated below and see if my claims are not well founded. When you look at a U. R. Fishel White Plymouth Rock with that snow white plumage (no brassy backs) and rich yellow shank, showing vitality and strength; when you consider there has never been produced a fowl to equal them as egg producers; when you sum the whole matter up, you will find there is no variety of fowls so beautiful and profitable as the

U. R. Fishel White Plymouth Rocks

Our chicks are reared on absolutely free farm range, giving them strength and vitality. If you are looking for exhibition birds we can surely supply you with winners. If you want selected breeders we have them in any quantity; not birds without vitality, but strong, husky birds that are line bred. If you want utility stock no man can sell you better egg producers, for, if there is ever a 400-egg-per-year hen it will be a Fishel White Rock. Write me your wants, please.

Send 2 Dimes for 56-page Catalog

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago, Ill.

LAYING HENS

Are the only ones that pay for their keeping. The eggs they lay are what pay for their feed, your work and perhaps a little profit besides. But why not get bigger profits by keeping a flock of "ALL LAYING HENS." In many flocks less than half the hens are laying. The non-layers, the drones and barren hens take all the profit from the good layers. But there is a way and an easy and sure way whereby every poultry keeper can get rid of all the non-layers, drones and diseased hens, and that is by using

THE POTTER SYSTEM OF SELECTING LAYING AND NON-LAYING HENS AND EGG PRODUCTION

By using our system any poultry keeper can go into his flock and in a few minutes can pick out the layers from the non-layers. Dollars may be saved in a year in feed alone and you do not run the risk of losing your best layers when you want to kill or sell some hens. Keep only your best, healthy laying hens and breed from them only. That's the way to build up a heavy "all the year round" egg laying strain of hens. Isn't this worth doing? We can prove to you that any poultry keeper not using the POTTER SYSTEM is losing dollars—perhaps hundreds—every year.

OVER 30,000 POULTRY KEEPERS

Now use the POTTER SYSTEM on their flocks and are thus able to keep only laying hens and make bigger profits. Read the letters to the right, then decide for yourself about not knowing the POTTER SYSTEM. No poultry raiser can afford to keep hens and be without our wonderful POTTER SYSTEM BOOK which gives information on the subject of egg production never published before. Every person having our book has a gold mine on this subject and a sure means of making larger PROFITS from his poultry.

"DON'T KILL THE LAYING HEN"

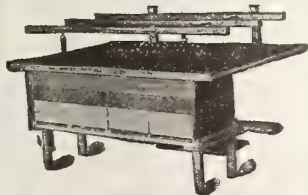

Is the title of our Potter System book and this warning has helped thousands of poultry keepers to start on the right road to successful and profitable poultry raising by keeping only the hens that lay the eggs. Right now is the time to use the Potter System, when you want to get rid of your surplus stock. But DON'T KILL OR SELL ANY hens until you have sorted out the layers from the loafers, the healthy hens from the diseased hens, keeping only the best laying hens. Our Potter System book contains over 100 pages and 30 illustrations on the subject of laying and non-laying hens and egg production.

POTTERIZE YOUR FLOCK

By using the POTTER SYSTEM. Join the ranks of thousands of poultry keepers who are more successful and satisfied because they do use it. We repeat again that no poultry keeper can afford to be without our POTTER SYSTEM book. Potterize your flock and get in line to make more money on it this winter by using the Potter System. Fill out the coupon in right hand corner and mail to us and you will get our large catalogs and circulars telling all about our goods and how you can get our Potter System book FREE.

DON'T BUILD

That new hen-house or think of fixing up the old one until you have gotten our large catalogues telling all about Potter Poultry House Fixtures and POTTER Portable Poultry Houses and the complete line of other poultry goods which we manufacture and handle. Our catalog on fixtures and supplies contains 100 pages and over 100 illustrations. Our catalogue on portable poultry houses, pigeon lofts, brood and roosting coops, etc., contains 20 pages and 20 illustrations. They are the most complete catalogs ever issued.

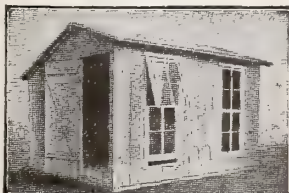

A \$5.00 HENNERLY OUTFIT

Potter Portable Hennerly Outfits are made in 3 styles and 12 sizes, and are made to fit any house, whatever size or arrangement. The cut shows a No. 16, style "A" outfit, complete with 5-foot two-perch roost and drop-board and four-box elevated nesting system. Just right for 18 hens. Occupies space 32 inches wide, 60 inches long. Price \$5.00. Buy and try one; if not satisfied your money will be refunded. Potter fixtures have been on the market nearly ten years. Thousands of poultry keepers use them.

A \$40.00 HOUSE

We make PORTABLE houses and coops in 20 different styles and sizes. Our large catalog shows all. The house shown here is a No. 5, 8x10 feet, style "A". The most popular house we make. It is equipped with an 8-foot two-perch, style "A" Potter outfit complete (same as outfit shown above only 3 feet longer.) Painted two coats; complete with windows, hardware, roofing paper, etc. A fine house for 30 hens. Price \$40. This house is made right, the price is right and you have our guarantee of satisfaction or money refunded. If you want to know more about Potter goods before ordering, send for our catalogs and circulars. These cost us hundreds of dollars for printing, but we send them to interested and progressive poultry keepers for 4 cents to cover postage. Potter Poultry Products are for particular poultry people and if you are at all particular you will write us today.

30-Day Special Offer

Until November 1st only, will accept orders for this size house and ship, freight prepaid, into following states: Illinois, Indiana, Ohio, Michigan, Wisconsin, Iowa, Minnesota, Pennsylvania, New York, New Jersey, Rhode Island, Massachusetts, Connecticut.

WHAT OTHERS SAY READ THESE LETTERS

"Worth Ten Times What You Ask for It"

Dear Sirs:—Some time ago I sent for your book, "Don't Kill the Laying Hen." I studied it through pretty thoroughly and as I had a number of hens to dispose of, tried the plan in your book, and can say that it worked to a tick. I killed several hens for table use and did not make a mistake on one. It is worth ten times what you ask for it and is so plain that anybody can understand it. Yours very truly—W. J. English, R. F. D. No. 2, Chenango Falls, N. Y.

"Worth Five Dollars"

Dear Sirs:—I just received your letter stating that you have a new book on your system of selecting the laying hen. I have one of the old booklets and if the new book is as good as the old one it is all right. I have found everything as represented in the old booklet. It has been worth \$5 to me. I will send later for your new book. Yours truly—John H. Burkart, 1208 W. Lawrence St., North Topeka, Kansas.

"Would Not Part With It For Many Times What It Cost"

Dear Sirs:—I have received your book regarding the laying hen and am pleased to say it has done a great deal for me. I would not part with it for many times what it cost if another could not be had. Yours respectfully—John Van Schoar, 3095 W. 100th St., Cleveland, Ohio.

"All It Is Claimed to Be and More"

Dear Sirs:—I received your booklet, "Don't Kill the Laying Hen," and must say it is all it is claimed to be and more. I now want you to send me your booklet on "Profitable Poultry Raising," remittance for which you will find enclosed. Yours for success—Geo. J. Griffee, 614 Boas St., Harrisburg, Pennsylvania.

"Made One Hundred and Ninety Dollars"

Dear Sirs:—Your circulars at hand. The best thing I can do is to get the new book, "Don't Kill the Laying Hen." Your method has made me \$190 and is still making more, and only a few chickens; from 70 down to 44 now. Yours truly—G. W. Normac, Renfrow, Oklahoma.

"\$5 Worth of Satisfaction"

Dear Sirs:—I received your book and tried Test No. 1, and it was all right the first time. I have had \$5 worth of satisfaction out of the book already. Your system is O. K. Yours truly—Wm. Thummor, 412 Hoffman Ave., Oil City, Pennsylvania.

"Worth More Than You Ask For It"

Gentlemen:—Enclosed find remittance for your booklet on "Profitable Poultry Raising." If it is as good as your book, "Don't Kill the Laying Hen," it certainly is worth a great deal more than you ask for it. Yours truly—The Sunnyside Poultry Farm, Rutland, Vermont.

"Would Not Take \$50 For It"

Dear Sirs:—Your booklet entitled, "Don't Kill the Laying Hen," is a great help to the poultryman. Makes dollars where you made cents. I wouldn't take \$50 for my booklet. Yours truly—Clarence K. Honeyman, Proprietor, Spring Creek Poultry Farm, Troy, Ohio.

T. F. POTTER & CO., Box A1, Downers Grove, Illinois.
Gentlemen:—I am interested in your Potter System book, also Portable Poultry Houses and Hennerly Fixtures. Send me at once catalogs and circulars describing your goods. I enclose 4c in stamps to cover postage.

OWEN FARMS

A FRANK QUESTION

OWEN FARMS asks you a frank question: "How much will you give for cock, hen, cockerel, pullet or pen to win your fall fair?" It is not unusual for you to buy what you want in this way. It certainly pleases us to have you tell us this right off in your first correspondence. You know as a buyer that if we do not think your offer is enough to win your fair we will not accept it. If we think it is, however, and we can win your fair we will accept it. Always the only difference between a would-be customer and Owen Farms who wants any particular stock, quality fully described and understood by both our customer and ourselves, comes in the price to be paid. We are especially confident that we will agree upon this price. Write us, then, right away and get down on business. We tell you squarely that you do not commit yourself in any manner unless the bird is satisfactory at the price. You always must keep this in view.

EARLY SHOW BIRDS

Have we many? More than ever before. 5,000 birds raised from our very best in our different varieties and not a bird less. We commenced to hatch in January and have been hatching ever since and shall hatch up to the last of August. We know that females and males can be furnished at absolutely the right condition of feather and ripe for the show especially as we shall have birds that are exactly the right age for the time when the show occurs. How good are these early show birds? Better than we have ever produced in all of our varieties and there is no show that has any terrors for us and which we do not gladly welcome an opportunity to supply winners for, guaranteed to win. The condition would be such as you would expect in the top form of the bird for the time and place and the price would fit the quality. Remember that. Always with Owen Farms, the price is never high, but always only sufficient to cover the quality desired and necessary.

FITTING WINNERS

OWEN FARMS paid Harry W. Graves, now dead, \$100 and expenses six years ago to fit their string of birds for New York and thought it cheap. Today our Mr. Delano has to take off his hat to no living man in America in fitting birds to win in the show room. Just think for one moment that you get this without extra cost whatever. Don't you believe Owen Farms did well to spend that \$100 that year? If you do, you must know that you would do well to insure fitting such as OWEN FARMS through our Mr. Delano can give you. We match pens to win. Winning every pen in N. Y. last year is the best evidence. Five first pens at Boston clinched the argument. We mean business and how far pride in continuing this great record goes in fitting and matching pens for our customers, we leave you to judge.

BOOKING WINNERS

When is it best to book your orders for the ensuing year? We say "Now." Never mind how far off the date of your show if you are sure that you are going there now is the time to write about it and to book your engagement with us as early as possible. Early fall shows, midwinter or late shows in February have been already booked by us in very large numbers, because our customers appreciate one great advantage. What is the advantage of early booking with Owen Farms? If you can get Owen Farms to say that they will win a certain show for you at a certain price no living man can buy a bird to compete against the bird sold for that show, never mind what the offer might be. You realize in making such an early booking that you are uniting all the possibilities of Owen Farms' large flock from which they can select absolutely and exactly the right bird fit for the moment to win in your interest and name.

UTILITY COCKERELS IN OCTOBER

In past years we have had a remarkable demand for big, husky utility cockerels having our best thoroughbred blood and ready for early breeding. This year we expect even a larger demand and we have prepared to fill it and the price will be \$5 each. These cockerels are of the finest breeding, full of life and vigor and from flocks that are not excelled as producers of large, brown eggs and many of them.

WHAT WE HAVE TO SELL

What we offer to you are birds of the breeds most popular in the show room. Our breeds form the largest classes constantly at New York, Chicago, Kansas City, and, in fact, every poultry show in America. We also say that we have demonstrated ourselves by our show record to be at the very head and front of each of these breeds which we offer. You do not have to take our word for this but study the records. You can find our winnings in our catalogue and you can secure the winnings of any other breeder and if ours do not compare favorably and to our advantage we ask you to write and call our attention to some other existing record that seems to you to surpass ours. Our breeds are

Buff Orpingtons
White Orpingtons
Black Orpingtons

Your correspondence is urgently solicited

ARE OWEN FARMS PROGRESSIVE?

If there is one thing more than another that we wish everybody to believe about Owen Farms, it is that they are alive, wide-awake and up-to-date; that they are restless on the one great question of improving all of their flocks of birds which they have at present and in recognizing quickly the merit of any breed of poultry, especially where that breed has found ready, enthusiastic acceptance on the part of poultrymen nearly all over the country.

Rhode Island Reds

Five years ago Owen Farms, from some of the best stock in the country, secured stock and eggs in Rhode Island Reds. We raised one year 2,000 birds of this variety. We have been carefully and consistently interested in every show which has taken place since in this variety. We believed then as we believe now that its future is a great one and it was only that Owen Farms did not wish to enter the show room unless it could enter in the hardest and strongest competition with as reasonable certainty of winning as they have had in any of their other varieties that we did not commence earlier for a show record.

We are now prepared to say that in Rhode Island Reds, Single and Rose Combs, we have at Owen Farms one of the finest flocks in this country, with shape as near the ideal as they are grown, with color that is rich, dark and even and with perfection of points in Rhode Island Red growing that have never been equalled in any flock in this country. This is one of the strongest statements Owen Farms have ever made, but it is one of the truest statements they ever put before the public. We are prepared to furnish Rhode Island Reds for showing in any show in this country, guaranteed to win. Our Mr. Delano judged Rhode Island Reds at New York two years. He has been more earnestly sought to judge for the Rhode Island Red Club than perhaps any other judge of the variety. I frankly submit to you the question, if we do not know where we stand in quality in this variety who could know?

In conclusion, let me say that if there are more enthusiastic breeders in any other variety than the breeders of Rhode Island Reds I wish you who read this advertisement would write and tell me who they are. To you, breeders of Rhode Island Reds, therefore I say, and I urge you to consider the matter, that if you want good birds at fair prices, always subject to your final decision and approval, in Rhode Island Reds, write to us fully and with the usual frankness we ask and encourage, and you will be absolutely glad that Owen Farms has undertaken to furnish you with what you are wanting in this grand variety.

How Overfeeding Before Egg Development Starts May Reduce the Egg Production.....	64
The Laying Hen Should be Educated, When, How and Where.....	68
How to Separate the Poor Layers from the Good Without Handling, or How They Will Separate Themselves.....	69
How to Buy Hens in the Fore Part of Winter, That Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring.....	73
How Roup and Similar Diseases Affect the Laying Organs of Hens; Also How the Laying Organs Become Disabled by Other Causes.....	74
Ten Ways to Suspect Hens That Are Not Laying.....	102
Three Ways to Prove Their Laying Condition.....	102

DON'T KILL
The LAYING HEN

NO, don't kill your layers, for they are payers. And if you knew the **POTTER SYSTEM** you not only could pick out the laying hens, and thus avoid killing them, but you could also pick out the non-layers and drones and save your feed money. How many times have you taken a hen to the block and then after killing and dressing her found to be in full laying condition? Real money in her (in eggs) and you didn't know it. If you know the Potter System you will never purposely kill another hen, and this alone means the saving of many dollars in a short time.

NEW BOOK ON THE
POTTER SYSTEM

Of Selecting Laying and Non-Laying Hens,
and Egg Production

Contains 100 Pages and 30 Illustrations

When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets, it contains, cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others; therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "Secret" family, and stop killing the laying hen, thereby greatly increasing your poultry profit.

The price of this great book is only \$1 and it will save you hundreds of dollars. It has done this for others and will do it for you. In order to provide every poultryman with a copy of this great book we will give you this book, a copy of **PROFITABLE POULTRY RAISING**, (treating on the subject of scientific and systematic poultry feeding for rapid growth and development and large egg production), and a full year's subscription to the oldest, largest and best poultry paper in America, all for \$1.25.

Poultry Book****ORIGIN AND HISTORY OF
ALL BREEDS OF POULTRY**

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

**Illustrated With 198 Colored
Pictures of Fowls Painted From Life**

Something Never Before Attempted by any Publisher

This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

HOW TO MATE

This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur.

You May Now Own Lewis Wright's Great "New Book of Poultry" for.. **50c** DOWN \$1 a Month

For only 50c down we will ship the newest revised edition of this great poultry book to A. P. J. readers. We have never before offered Lewis Wright's book on such easy terms. We know you will want it, but if you don't you may return to us and we will refund your money. You take absolutely no risk.

Each of the 600 wide double-column pages contains profit-making information—simply INVALUABLE to the practical poultryman. Lewis Wright is perhaps the best known of all successful poultry experts, and the results of a lifetime's study and experience are crowded into this big, handsome volume.

WHAT EXCUSE HAS ANY POULTRYMAN NOW FOR NOT OWNING HIS COPY OF

Wright's "New Book of Poultry"

The one pre-eminent virtue of Mr. Wright's book is acknowledged to be its intense THOROUGHNESS. EVERY breed you will find is exhaustively treated—EVERY question that has ever harassed a poultryman is answered and settled in the most practical and economical way—EVERY detail of the poultry business is discussed with authority. Examine the work in your home, on our Special Offer, and judge for yourself how valuable are the chapters on: Poultry Houses and Runs; The Science of Feeding; Practical Management and Feeding of Fowls; The Egg and Sitting Hen; Incubators; Rearing and Care of Chickens; Poultry for the Table; Poultry Farming; Exhibition Poultry and Utility; Pedigree or Line Breeding; Practical Breeding and Rearing of Prize Poultry; Exhibiting; Shows—Judging—Trimming—Technical Terms; Poultry Diseases and Vices—Vermin; etc., etc.

Poultry Spells Profit to Every Owner of This Great Work

This work tells how to convert egg failures into egg successes; how to systematize at all stages; and all about the management of the industry right down to the marketing point. Conditions in all great poultry centers and countries are discussed, and the best practical business methods of each explained. From beginning to end the book keeps the PAYING POINT strictly in view; all facts, figures and explanations are based upon ACTUAL EXPERIENCE.

One Encyclopaedic Volume of 600 Large Pages Thoroughly Indexed

Beautifully Printed and Illustrated and Strongly Bound

Forty-five full-page plates in color and black-and-white embellish the pages of this splendid work; all by J. W. Ludlow; and there are innumerable pictures scattered throughout the text. The work is finely printed in a large, clear, readable type and bound in stout, extra durable cloth binding with lettering in gold; gilt edges on three sides. Size of volume, 9½x11½. Weight, seven pounds. Without doubt the finest poultry book ever published.

The Best and Most Practical Poultry Book in the World

has been the verdict of experts everywhere, and we believe a thorough examination at our expense of this entirely new and rewritten edition of the book will convince you that this statement is no exaggeration. It is impossible in this limited space to set forth the innumerable details in which this book excels all others. An examination alone can do this. That is why we urge you to take advantage of our

Special Offer to Readers of American Poultry Journal

FERRIS' S. C. W. LEGHORNS

Make a Big Winning at the Recent Iowa State Fair, Including 4 Firsts

THIS splendid male won first as a cockerel at Toledo January, 1909, and headed our first pen at Pittsburg last February. He is a typical Ferris White Leghorn—notice his fine head, his concave back, his low tail, his style and finish.

His chicks show the same good points that have made him an easy winner, and many of them are early hatched, ready to sell now.

He is but one of several remarkably fine males that were in our breeding yards last season, including winners at

Louisville, St. Louis, Toledo, Detroit, Pittsburg, Grand Rapids and the Michigan and Indiana State Fairs

Hundreds of their chicks have reached their maturity; they are large, snow-white and typical in shape, with fine heads and low tails and they will win for you wherever you want to exhibit.

Prices are as low as such high grade stock can possibly be sold. Exhibition breeding males, sired by winners like the one shown above, at \$5, \$7, \$10 and \$15. Females at \$3, \$4 \$5 and \$7. These birds will win in ordinary competition, and are the kind that will breed winners. See our new catalogue for full particulars regarding them. Winners for the larger shows at \$25 and up for males and \$10 up for females.

I Ship Anywhere on Approval

Keep the birds three days, compare them with others and if you don't agree that they are worth a good deal more than I'll charge, send them back at my expense and I will refund your money at once.

Remember that we breed for size, health, vigor and profit as well as for standard requirements. We raise our chicks on free range and never breed from weak or unproductive birds, no matter how good they are from a fancy standpoint.

I want you to have a copy of my new catalogue; it tells all about Ferris Leghorns and why you need them. It shows photos of the birds I sell and gives a more complete description of my stock, farm and methods than is possible in this ad. Gives a complete list of winnings and will convince you that you need this strain of winners bred to pay. A postal brings it.

THE FERRIS POULTRY FARM

Geo. B. Ferris, Prop.

555 NO. UNION GRAND RAPIDS, MICH.

MODEL PORTABLE HENERY

Just the thing for the City Man, the Breeder, and for keeping hens on the Colony Plan—a complete hen house, Economy Trap Nests, simplest and most economical on the market. Pangalow Farm : R. F. D. 12 : Indianapolis, Ind.

HALBACH'S WHITE ROCKS

Have you succeeded in raising birds that you think will win at that early show? If not, we can supply you with cocks, cockerels, hens or pullets that will surely "turn the trick" for you as we reared more and better chicks this year than ever before. This is saying a whole lot, when you consider the QUALITY it takes to win at CHICAGO, where we won the CHAMPIONSHIP in Jan. 1907, Dec. 1908 and again in Dec. 1909. Get in line with the strain that produces a larger per cent of show birds than any other. Remember that in producing QUALITY we have not lost sight of the practical UTILITY points of this grand breed. We have a fine lot of utility cockerels at \$4 each. These are well bred, big, husky fellows. If you want the best in either old or young stock, write "THE POULTRYMAN WHO TRIES TO PLEASE."

H. W. Halbach, Box A, Waterford, Wis.

ORPINGTONS

Pine Ridge Farm, H. B. Prescott, Box 38, Derry Village, New Hampshire

DON'T PEN YOUR BIRDS WITHOUT The Norwich Automatic Exerciser & Feeder

Our machine will add to the benefits derived from the summer free range, and keep your birds in condition for the coming show season.

It is endorsed by the largest poultrymen in the country as the only **Perfect Automatic Feeding Device ever offered** and will positively effect a saving of over 20% in your feed account, increase egg production, eliminate the **labor and care of feeding**, while the average weight of the flock is materially increased **and every bird fit for market.**

THE NORWICH AUTOMATIC EXERCISER & FEEDER has been "tried out" for over a year on the largest plants in the industry, and on the results.

We **GUARANTEE** the purchaser absolute satisfaction in every respect, or money and expenses refunded after a **30 days' trial.** It therefore costs you nothing to prove our claims, and we want you to try our machine.

The latest advocate among our list of big poultrymen is **Mr. U. R. Fishel**, who puts his stamp of approval only on such articles as he knows are perfect, and just as represented. Full descriptive printed matter for the asking.

NORWICH AUTOMATIC FEEDER CO.

20 WATER STREET

NORWICH, CONNECTICUT

THE SECRET OF WINTER EGGS

Don't force your hens by feeding patent or prepared foods. These often lead to serious injuries.

Feed them on fresh meat scraps, green bone and substitutes for the green stuff of the summer, and above all, give them plenty of fresh water of the right temperature.

Cold water in summer acts as a tonic, whereas warm water at that season makes them listless and lazy.

Warm water in winter stimulates the fowls and acts as an invigorator; consequently it keeps them up and doing. Result — More eggs.

Weldon's Fireless Poultry Fountain and Hopper Feeder

has made it possible to keep warm water before your fowls during the cold winter months for 36 hours without the use

of a fire. It is built like a fireless cooker and works like a "Thermos" bottle. 64% of an egg is water. Your hens can't lay if they cannot supply the necessary moisture for the eggs. Coax them to drink by keeping warm water before them at all times during the winter in one of our fountains. **The egg yield will double and triple.** Get a copy of our **Free Book** giving the experience of successful poultrymen with this invention, by addressing

HOW TO GET BIG POULTRY PROFITS

Edgar Briggs, the most successful poultry expert in America, tells how to make the greatest success with poultry in his book, "Profits in Poultry Keeping Solved."

The new fourth edition covers every branch of poultry keeping and contains the many priceless secrets which you must know in order to get the largest profits from poultry. It also tells how to make the best poultry food for from 10c to 15c per bushel. Briggs' System calls for less equipment, labor and expenses than other plans and by it one can readily care for 2000 layers and 3000 chicks. Three editions of this book rapidly sold for \$5 per copy. Price of new fourth edition including one year's subscription to Poultry Success, only \$1. If you have but limited space, you should get our new book, just published, "The Smith Method of Poultry Keeping," which gives the best, most comprehensive and practical system we know of for keeping many fowls on a small lot. It cuts down the work and care required to the minimum, and does not require elaborate equipment. It is also well adapted for large plants. By this system others are making \$2,500 per year on a space 40x60 feet. Why not you? Price \$1.00 including one year's subscription to Poultry Success.

Our Great Special Limited Time Offers:—For \$1 we will send you your choice of either book, and include Poultry Success, the leading poultry magazine, for one year. For \$1.75 we will send you both books and Poultry Success for one year. For \$2.25 we will send you both books and Poultry Success for three years. For \$1 we will send you Poultry Success for three years. Regular price 50c per year. Leading and best poultry journal published; 21st year; 64 to 164 pages; best writers; beautifully illustrated; sample copy free. Send for free booklet containing many of the Briggs Secrets and other information.

FREE DISHES

We Give This Beautiful 33-Piece Dinner Set
For a Very Few Minutes of Your Time....

WE HAVE selected the prettiest set of dishes we could find to give to our friends. The above picture does not show all the dishes, but gives a faint idea of the beautiful Rose design and the size of each piece. As soon as you send in the coupon below we will mail you a large picture of the entire set with each piece in all the pretty colors of red, white, green and gold, showing just exactly how the set will look when you take it out of the box in your own home. In the center of each plate or dish there is a beautiful cluster of bright roses, surrounded by green foliage, all in perfectly natural colors. Around the edge of each piece there is a very heavy and artistic design in gold. The combination of gold, green, white and red makes the most popular design yet produced in tableware. The ware itself is pure white and dainty enough to delight the most fastidious housekeeper. When you get these dishes on your table you will have something to be proud of indeed. And we don't want you to pay us a cent of your money for them. What we ask you to do is so easy you will never miss the spare time it will take, and the pleasure these beautiful dishes give will be with you for years. Don't let this opportunity escape. It is positively the most liberal dish offer you ever did or ever will see.

Send No Money — Just Your Name

Fill out the coupon below and we will send you PREPAID 100 Sharp's best needles, sizes 3-9; 1-5, 4, 5 and 6, and 15 darners and bodkins, all fitted in a handy and convenient needle case. The darners are for cotton, wool, lace, gloves, carpet, etc. Every one of these 115 needles is high-grade, big eyed, extra quality steel. Rix and Rands' brands, made in Austria and Germany. The points are sharp, the eyes are wide. When you receive them show them to your friends, and also show them a copy of The Weekly Star Farmer, and ask them for twenty-five cents each in connection with a special offer I will authorize you to make. When you have collected only \$4.00 for us in this way the lovely dinner set will be yours. Put your name on the coupon and send it at once. We give two EXTRA PRIZES for promptness—so hurry

2000 WHITE AND BUFF LEGHORNS

Choicest Selections for the Season of 1910-1911

Exhibition Cocks, Cockerels, Hens, Pullets and Pens now ready for shipment. Important—1500 of this grand lot are the cream of 5000 cockerels and pullets hatched and raised this season. They are the product of the finest breeding pens, headed by our New York and Boston Blue Ribbon Winners and other males fully equal in breeding qualities. Bred from winners. They are sure to win in the show room and produce winners.

500 are yearling and two-year-old cocks and hens, including many of our best show specimens and choicest breeders. Fine exhibition cocks and hens are hard to get at any time at any price. As the demand for this class of stock is greater than supply, purchasers are requested to send in their orders early.

Our 1910 Catalogue gives accurate and reliable information on the mating, breeding and conditioning Exhibition White and Buff Leghorns, and also contains a complete record of the prizes won in the past five years by Monmouth Strain of Buff Leghorns, the largest and finest flock in the world, and of our justly famous strain of Stay White, Low Tailed White Leghorns.

Remember: All stock is farm raised, line bred, vigorous and hardy. Satisfaction guaranteed.

Monmouth Poultry Farms : J. Courtney Punderford, Owner : Egbert Wilson, Sup't : Freneau, N. J., U. S. A.

BLANCHARD'S WHITE LEGHORNS

The Leading Strain of Heavy Layers. Winners at Madison Square Garden, New York, 1903, 1904, 1905, 1906 and 1907

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are one of The Great Laying Strains of S. C. White Leghorns in Existence. No labor or expense has been spared in building up perfecting the strain, and while the production of large, pure white fancy market eggs has been the main object, Standard Qualities have not been neglected. They are Large, Vigorous, Active and Handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for Hatching. Stock for Sale. Illus. Circular Free.

2,000 WORLD'S BEST WHITE WYANDOTTES

Our Fall Announcement:

TO EVERYONE INTERESTED IN WHITE WYANDOTTES, GREETING: Our matings of the past season have produced the largest percentage of exhibition birds we ever bred; never before has such quality graced our yards. To make this claim means much. In the past birds furnished by us or bred from our matings have won thousands of prizes in every State in the Union. Poultry with us is an exclusive business. Years ago we took up the White Wyandottes and have bred them ever since. We have made them a life study; we have produced the result and our own winnings in connection with our customers and the fact that we have proven to the poultry world that our strain is the most profitable whether used fancy or utility. Our MOTTO has always been your money's worth or your money back, and you to be the judge. Some people may think our prices are exorbitant. This is a mistake. We can please you in quality and price.

Our Specialty is Furnishing High-Class Show Birds

Of course you want to win at the coming show. If you need cocks, hens, cockerels, pullets or pens, or a breeding yard to start in the business, then write us and send a dime for our handsome illustrated catalogue describing the world's best utility and fancy fowls. Trusting to hear from you, we are Very truly yours,

DOUBLE YOUR PROFITS.

CUT 3/4 OFF YOUR FEED BILL

THE greatest discovery of the 20th century. Is not a patented or prepared food. You buy one bushel of common grain and make FOUR BUSHELS of feed, which will contain more and better food value than the original bn. of grain. Clarence Ward's book

Successful Poultry Culture

tells you how to prepare this food. Contains 128 pages and 30 handsome illustrations of fowls and practical plans for building poultry houses. It is a thorough and scientific treatise on raising poultry for profit, and is especially designed for the beginner. If instructions are followed success will surely crown your efforts; the chapter on "Scientific Feeding" is alone worth many times the price of the whole book. This book has always sold heretofore for \$1.00.

We have reduced the price to 50c. Send 50c and get a copy of this book at once. Address

American Poultry Journal Publishing Co., 358 Dearborn St., Chicago, Ill.

PETERSEN'S HOUDANS

THE UNDEFEATED
CHAMPION STRAIN
OF AMERICA ❀ ❀

¶ Winners of blue ribbons, silver challenge cups, medals, gold specials and many other coveted honors at every noted show in the country and in the strongest possible competition. ¶ REMEMBER, no matter where you want to show, no matter what the competition, we can furnish the winners. ¶ Send for 80-page fully illustrated book on the Houdan. It gives full descriptive matters on the Houdan. "It will put you wise." Postage twenty cents. Please mention American Poultry Journal when writing.

REV. C. E. PETERSEN ❀ Pres't Am. Houdan Club from 1900 to 1907 ❀ BRIDGTON, MAINE

PARTRIDGE PLYMOUTH ROCKS

The greatest combined utility and beauty fowl ever produced. Can you imagine this most beautiful bird with its feathers most beautifully and delicately penciled with dark brown on a mahogany brown, making a rich chestnut coloring effect with a beautiful sheen that shines like satin? If you can imagine this, then you know how beautiful they are, and then you will want to go to the originator of this breed to secure further information. He breeds the best there is. This beautiful variety was

Admitted to the Standard

at the recent A. P. A. meeting at St. Louis, August 15 to 20, 1910. Start breeding this new variety **now**. Get in on the ground floor and be able to supply the demand which is bound to come with the advance of the season. **Get your stock from the originator.** I have the **grandest lot** of youngsters you ever saw, and many fine fowls from my breeding pens to dispose of. Send for a copy of my handsome illustrated book telling all about these fine birds, giving history, etc. Hundreds of birds for sale. Mated trios and pens. Write for prices.

S. A. Noftzger, - North Manchester, Ind.

SHOW BIRDS

for Chicago, Kansas City, St. Louis, Indianapolis, Cleveland, Pittsburg, Philadelphia, Boston, Madison Square Garden and other shows are now maturing among the

WHITE WYANDOTTES
 BARRED ROCKS

1st Boston ckl., 1909, and one of his mates.

1st Pen Wyandottes, 1st cock, 1st and 2nd Cockerel Barred Rocks N. Y. State Fair, 1910. This is the first year we have shown our Barred Rocks. We only sent up three birds in Rocks and secured two first and one second, such a win speaks for itself. We have a few cockerels for sale from the same matings as our winners, and if you are in need of a first class bird for show or utility purposes let us know and we can suit you in whatever you want. In Wyandottes we have still about a thousand cockerels and pullets just as good birds as were in our pen at the N. Y. State Fair last month. Cockerels \$3.00 to \$5.00; Pullets \$2.50 to \$5.00 for breeders both in Wyandottes and Rocks. If you wish show birds let us know about what you wish to spend and we can tell you if we can fill your wants. We also can send you a photograph of any bird that you may wish to purchase of our better birds to give you an idea of what you are getting, also photographs of our breeding cockerels and pullets taken from different birds in our flock.

A REMARKABLE STRAIN OF BIRDS

**Proven by Unique and Impressive History—Do They Not
Settle the Mooted Question—“The World’s Best”—
Fulfilling Better Everything Desired in
Poultry Production.**

Written for American Poultry Journal by John S. Orr, Augusta, Kentucky

MORE than a half century ago a variety of chickens was discovered in existence in the northeastern portion of this country, possessing such a peculiar attractive appearance that certain poultry lovers determined to breed them to the nearest point of perfection possible.

One man—an experienced poultry man—became famous by adding some features to the already attractive bird. In his experiments with them he discovered they were remarkable egg producers, besides possessing a

rare savory quality of flesh as fowls for the table. The general form of these birds was markedly different from any before known. And to their shape or form was attributed the quality of their meat texture—differing from other varieties.

The birds were very compactly built—very muscular—close jointed and presented every appearance of robust constitution. The flesh very solid, possessing rare gamy flavor. Thus as a great egg producer—such a rare table fowl—such attractive form and general appearance and robust constitution—it is no wonder that this experienced breeder became highly elated over his find. And his success in adding somewhat to their general appearance. Accordingly he published in the *Stockman and Farmer of Pittsburg, Penn.*, the number of eggs a pen of pullets had produced within a specified time, and otherwise described his new variety. This statement of egg production exceeded anything before known, and hence was generally accredited false. However, curiosity was somewhat excited, and further investigation made regarding them, with the result that the statement made was true, and that a wonderful new variety of fowls actually existed. Upon the public becoming acquainted with the substantial and reliable facts, there naturally sprang into existence a great demand for them.

Being few in number, the property of a single breeder, the public demand could not be supplied. This stimulated speculation among poultrymen and induced them to experiment how to reproduce them. In these experiments a bird was produced that very much resembled in color points, and thought was entertained that by careful breeding a true reproduction would result. Consequently this experimental bird being quite easily produced by a single cross of two well-known quite popular varieties, the public demand was supplied with the experimental bird at speculative and sometimes exorbitant prices—many made to believe they were obtaining the phenomenal bird so conspicuously advertised. It required but a single breeding season to demonstrate that the cross-bred was only the worst kind of mongrel and a fraud—far inferior to many of the then well-known popular varieties. Consequently the fame and demand for the sen-

sational bird faded away, and the mere allusion to them afterwards was made the subject of derision and ridicule—no more of them wanted.

Thus was experienced what has oft been repeated—that public opinion is easily moved to extremes, and that the impressions made in the fallen estimation of something erroneously reported of merit is exceedingly difficult to overcome, even though it be through the practice of fraud and deception.

But anything of real absolute merit will in time reassert itself and become reestablished upon a firmer foundation. Thus it was with this bird. Those who were fortunate to obtain the genuine realized a true and real satisfaction of all that was claimed for them. They were familiar with the facts that the fraud practiced had destroyed the market for them. Nevertheless, they knew their value and contented themselves with breeding them in quantities, knowing that the day would come again when such a valuable bird would be in demand.

All they had to do was to sell them upon a guarantee of what they were in reality; and such was true, for the history of this pure bred bird is that wherever introduced and properly handled, they are preferred because they excel in more points in what is desired in poultry production.

It required three years or more to entirely destroy the demand for this bird so sensationally advertised, and the poultry club organized to boom the sale of them, for signal failure to fulfill its object, withered into oblivion. Later some of the genuine bred birds found a home in a far distant country and the boast of egg production was repeated, which resulted in a challenge from a breeder of another variety of great laying strain reputation for a yearly contest for egg production.

This contest was extensively advertised to take place and the invitation extended to the entire world to enter the contest to decide the question of what strain or variety were the best all-year egg producers. This advertisement was answered and numerous entries of every known great laying strains and varieties were entered in the great world contest to decide the great mooted question of the best all-year egg producers. This great contest was won by the phenomenal bird whose history we are attempting to relate. After this great contest the contestants and others clamored for another year's contest under exactly the same regulations. That second great contest was won by the same birds. Thus was made reliable and trustworthy history to prove that in the two greatest contests the world has ever known, where competition was the greatest, this bird of which we write demonstrated beyond the least question of doubt that they are the world's champion all-year egg layers. After these contests this fraud besetted and reputed worthless variety of fowls began again to attract attention. A demand for them began to make its appearance. Breeders of them imbibed courage. The old club was resurrected, birds and eggs scattered sparsely in different parts of the country, with the common old result that wherever the true bred bird found a home and was properly cared for, one impression prevailed, and that was they fulfilled better than any other experimented with everything desired in poultry production, with the result following the experience to breed them exclusively or in large numbers. Hence the old club was revived and today can boast of quite a large membership of enthusiastic breeders. But life experience is that, in the midst of flattering prospects, storms of havoc appear with more or less devastation to follow. Here, just on the eve

(we may say) of this old bird winning the world's laurels and establishing itself as the world's best in everything wanted in poultry production, impediment in venturesome and improvident experiment by cross breeding to satisfy a fad in color points made its appearance. But, thank fortune, whilst the threatenings of demolition were prevailing, one prominent poultryman of well-known reputation of capability and broad experience made vigorous opposition to such hazardous innovation, and through him and his effort we have the true old bird yet preserved intact, with all its famous qualities and characteristics. But they are very few in number, because success in accomplishing the color points, even though at the cost of great sacrifice, was sufficient because of success in the show room to influence by far the largest majority of breeders to introduce into their flocks what they believed the best show type, and today many of the largest big advertising breeders are made to depend upon their show record to win them success in business, ignoring the loss of by far the most valuable characteristics of the bird they sacrificed to get what they now seem to think they possess. It is only recently that a symposium of many breeders of this popular variety appeared in a prominent poultry journal, admitting that the cross made for show points in this bird wrought injury instead of benefit, which was a virtual fulfillment of the

"TO-PEN-A-BEE."

First prize winner Rose Comb Rhode Island Red, as a cockerel, at Detroit, January, 1909. First prize winner as a cock at Indianapolis, September, 1909. Pronounced by Mr. George W. Tracy, as the best Rose Comb Rhode Island cock bird which he saw during the season of 1909-10. Sired by "Sibley's Old Red Jacket." Owned, bred and exhibited by Irving A. and Frank Churchill Sibley, South Bend, Ind.

prophecy of the prominent poultryman just cited. But whilst these breeders acknowledge the mistake made, they do not acknowledge that the cross-bred show bird blood is still in their flocks, which deprive them of maintaining and proving that the birds they now breed are the world's champion all-year layers, and the bird that can fulfill best every quality desired in poultry production, as can the few breeders of the true bred old bird of world-famed history. This latter class know what they possess, and know they will prove themselves against all comers in all points most desired in poultry production. These claims are not mere assertion—they have both history and experience to prove that the Ray-Whitaker-T. E. Orr strain of Silver Wyandottes, now known specially as the "Orr-Wyandottes," because the late T. E. Orr alone is entitled to the credit of preserving the old bird intact without any deterioration, the bird holding the proud distinction of not only proving itself the world's champion all-year egg producer, but best all-pointed

bird, fulfilling everything desired in poultry production better than any other. Whilst the cross-bred show bird is relied upon for success in the show room, yet these old birds wherever shown and where true qualities of the best selves are known to the judge (which is often not the case, for they are hard to judge correctly, and no judge but an experienced breeder of them ought to ever be permitted to judge them), these old birds are generally victorious because they furnish the true text of the Standard of Perfection, the cross-bred type not considered in the text.

What is here said in comparison of Silver Wyandottes is not to depreciate in estimation the cross-bred Silver Wyandotte to a point below any other bird in existence, only this old bird yet unmixed with any other blood than its own. We believe, on the other hand, that the Silver Wyandotte as bred today is the very next best bird in existence, for the simple reason it has more of the best blood on earth in their veins, viz.: this old bird. And now that it is conceded that a mistake was made in the cross for show purposes, they can greatly improve their birds in eradicating the ill effects of the cross by the introduction of more and more of the blood of the pure old thoroughbred bird, which can now be easily obtained from some of its reliable breeders.

The Wyandotte is the best blood of chickens the world has ever known. They possess more good points in highest degree of perfection. When honestly tested for their good points, will be retained. Believing this, we feel safe in making the prophecy that the Wyandotte fever will some day sooner or later dominate the world. It will be when all their good points in comparison with all other class of birds will become thoroughly known. Is this mere buncombe? Let us see. Take the history of the Wyandotte from beginning until now. What other bird's history is comparable? Take the experience of its breeders, who are such because of earnest search for the best, in tests made with all the reputed best, are still breeding them—many instances exclusively, especially of Silver Wyandottes, and more especially of true descendants of the old original bird. They were thus bred when generally unpopular because of ignorance of the public in knowing what they were in point of true merit and because of fraud and misrepresentation, and when the best specimens of the best fanciers would only command a far inferior price to that of some other varieties that the breeders of Silver Wyandottes know by experienced tests are far inferior in the greatest number of most useful and valuable characteristics. There are several popular varieties today for which questionable claims are made in the minds of many, especially Silver Wyandotte breeders, of their most valuable source of origin, especially birds of later introduction than the Silver Wyandotte and birds of earlier origin which have come into greater prominence because of more pronounced and better qualities since the introduction of the Wyandotte. It is claimed that the introduction of the Silver Wyandotte wrought a genuine revolution in general poultry industry in the revelations presented in their appearance and demonstration of their superior qualities to anything before known. Because of the actual existence and undisputed evidence of superiority, it is but human nature the world over that when any new thing is introduced far superior to what we then possessed, that afforded us an opportunity to improve what we have, and especially if we can do so and not let the world know that we have done so to prevent detraction from the estimated value of what we possess, we will not hesitate to employ the means thus afforded.

It may be claimed that the improvement noted is but the result of careful and intelligent breeding, which is true, but from whence came and how made known those superior points of improvement?

It is not only claimed, but proven by history, that the introduction of the Silver Wyandotte was a revelation in valuable features, presented to the world by a wholly nature-produced bird, without the aid or intervention of man. That it was simply and in its broadest sense a discovery—an existence of superior characteristics. This is proven by the futile effort made to reproduce them in all their significant value. Because of these generally made known facts the Wyandotte is and has been recognized the criterion for emulation and adoption. It is known that this nature-begotten bird can be used to accomplish various purposes essential for improvement in any strain or variety of chickens and yet not reveal the fact. Any cross made with the well-bred Silver Wyandotte will produce a good bird, be that a cross with a well-bred bird of another variety or a common dunghill.

The Silver male is a most wonderful potent progenitor to transmit excellent quality with its least effectiveness to transmit its distinguishing color points. Hence all colors, shades and varieties can adopt some of the very best quali-

ORIGINATORS *of* ALL the ORPINGTONS

PEN OF BUFF ORPINGTONS THAT WON FIRST AT PHILADELPHIA AND FIRST AT BALTIMORE.

ties of this bird and the fact of adoption be kept secret. Now it is known that some twelve or more varieties now existing honestly attribute ancestry to the old bird. There are others as much, or perhaps more, indebted to the old bird for their boasted merit that give it no credit whatever. As evidence of this fact—or surmise, if you wish—let experiment be made and see if a fac simile of the best specimens of some of those varieties that claim no relationship to the Wyandotte cannot by cross breeding be reproduced. The experiment properly made will prove that some popular varieties, claiming to belong to another or an independent class by demonstration of both appearance and profitable characteristics, are more indebted to the old Wyandotte than any other bird.

To establish more convincingly the truth we are trying to convey of the unparalleled superior of the Wyandotte, will specify more particularly some of their known characteristics that, together and as a whole, challenge comparison.

Its typical shape is the poultryman's ideal, because it indicates robust constitution with the largest proportion of solid flesh for frame. Its color markings are that of a real artist's admiration, because they are not ordinary, but extraordinary in symmetry and color blending and of greater variety than any other bird, each section being different, requiring special attention in mating to have every section

fulfill best requirements. The natural beauty of the most perfect type of the Silver Wyandotte is incomparable in the estimation of those of best cultivated taste, because of variety, symmetry and beautiful blending, as can only be produced by nature's inimitable touch, a true representation of which cannot be portrayed in art's best production, even though it be an oil painting, and a beauty that cannot be conveyed to the most scrutinizing eye in the dingy light of the best show room. It is only when viewed in nature's open canopy, untrammelled with obstacles of vision, that the sheen and blending presents itself in its natural gorgeous effulgent beauty.

The size of the Wyandotte is just what the general market requires—is neither too large or too small to command ready sale. This is significant because the general markets discriminate between the large and small bird. For table quality the first favorable impression is the carcass, of blocky, solid appearance, of rich golden color, its flesh solid and marbly and exceedingly toothsome, with the evidence of excessive fat absent in a well prepared, plump, heavy fowl for the table. This is a mark of superiority in the Wyandotte. Instead of fat being visible in lobes and globules on different parts of the body and on the inside, as is generally the case with fowls well prepared for the market, the Wyandotte is far less so. It seems to possess the peculiar

ability to absorb indiscernably what constitutes the excessive fat in others into its rich meat texture, to appear as only solid flesh. And the Wyandotte female is not so easily disqualified for the work of filling the egg basket. She possesses the disposition to absorb more food to turn to the profit of egg production; not so much inclined to grow over-fat and cease her profitable labor and die with apoplexy or fatty degeneration of the heart, and that even though the food is always before her. She thus preserves the strong constitution with which nature endowed her to prolong her life and usefulness. There is no breed of fowls that can exceed the true bred Wyandotte in length of days of profitable usefulness. Hens seven years old have been known to begin with the early pullets in early autumn and continue through the winter, all the next summer, and broody only in next autumn and just before entering the molt. This is no fish story, but likely not to be believed, as is the history of the doings of this old bird even from its very introduction. Nor will it be believed, as proven by experience time and again by breeders of this old pure-bred strain, that in every laying or breeding pen well cared for there is generally more than half, often two-thirds, of the number therein every-day layers, and in every ordinary flock of these birds can be found females that are as absolutely non-sitters as are other claimed non-sitting varieties. For egg production the Wyandotte blood counts wherever found, the old progenitors justly winning the world's championship honors, and are able to transmit the egg-laying quality more or less in every cross made with them. The high egg record began with Wyandotte introduction and can be traced to its potent influence today. The egg-producing quality is an unsolved problem with all poultrymen today, unaccountable, not known how to reproduce or properly cultivate, but in this nature's begotten bird we have presented to the world the greatest attainment—a gift of Providence to benefit mankind. Therefore, the wisest and best thing to be done is to borrow from this noble best bird its good qualities and transmit to other varieties and improve their qualities, the thing that has been done and is being done, but the wisest and best way to succeed in promoting the great and valuable feature of egg production is never to detract from the well-known and demonstrated qualities of this grand bird by the indiscreet thing of deteriorating it, by crossing it with inferior blood, with the foolish idea in mind of improving the qualities of this old bird. There is only one course to pursue and that to experiment in the mating of the same blood, and it is possible you may succeed in some improvement in some particulars in the specimens thus produced, but never, never by any other means. This egg-producing propensity of this old bird is simply wonderful. It has been known to develop at a very early age—instances reported at four and a half months from hatching time. One difficulty encountered with breeders of this old bird is to endeavor to hold the laying propensity in check in the young female until she has developed to the proper size to comply with the Standard of Perfection requirements, which is the maximum weight for any Silver Wyandotte for best practical purpose should be permitted to reach. Less size than the Standard requires would even be better for all profitable utility qualities.

The Wyandotte is a rapid developer; most profitable for the broiler-plant industry; most attractive shape; carries its round, plump form from the early hatch to maturity; flesh more solid; necessarily more flavory and toothsome. Two pounds in eight weeks and three pounds in ten weeks from hatching time is Wyandotte achievement. The Wyandotte is very quiet and tame; good sitters; just proper size for best hatching of a good nestful of eggs; not too heavy to break them; careful mothers; easily broken from being broody, etc., etc. We could mention other exceptional characteristics of this most perfect fowl, but said enough—article now too long. Close by saying, give the old Wyandotte the credit due from history and experience.

Grit and shell are necessary for fowls if best results are to be obtained.

Now is the time to put in your supply of green food for winter. This will help fill the egg basket when prices are high.

The season is now coming when all fowls should be given exercise. This can be furnished by making them scratch for their feed.

Don't try to house too many fowls in one house. Overcrowding of fowls results in sickness and loss. Prevent this by proper housing and care.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Thomas A. Tippet, Scales Mound, Ill., and the second prize to H. H. Karrer, Phoenixville, Pa.

SUGGESTIONS FOR BEGINNERS

THE aim in this brief article is to further the interests of prospective poultry raisers by offering suggestions and giving a few pointers as to how to make a start.

Of course some capital is required, but the raising of poultry is a business in which much may be accomplished with a very small amount of money.

We shall take \$25 as a working capital with which to purchase a pen of pure bred stock and erect a suitable place to have them comfortable.

The proper time to commence is right now—get busy, make the necessary preparations, and get your birds as soon as possible, as a better selection can be

made early in the season than can be had later, and if properly fed you are sure of a good profit from them during the winter, and can easily raise from one to two hundred birds next year. This is only a fair estimate; many have done much better. All depends on the amount of care we are willing to bestow on our flock. There are no secrets about the business; just use a liberal amount of common sense, plan your work, know what you are going to do, and then do it.

Any business proposition, however great or small, must be well planned if we expect to push it to a successful issue.

Decide on the amount of space you will devote to poultry, some of which should be a grass run. Next in order is a house, which need not be expensive but must be comfortable.

For a pen of birds a piano or large dry-goods box, or two such boxes, joined together and covered with roofing paper, will answer the purpose admirably at a very small expense.

We have housed some very expensive birds in a piano box by placing a window glass 12x14 inches in one end, a door in the opposite end; remove the entire front and fasten the boards together with strips, thus making the box easily accessible for cleaning. During the summer leave the front open or cover with screen wire; on the approach of cold weather cover the space with cloth, and during severe weather replace the boards.

To be sure, to commence with a pen of birds and a piano box is on a rather small scale, but for those who have no experience with poultry we advise commencing at the bottom and increase your flock with your experience to successfully handle the poultry business.

Ability to perform hard labor is not a necessary requisite in this business. Many who have ill health would be greatly benefited by taking up this line of work. A person caring for a flock of chickens is required to be in the open air a part of the time, and, the work being light, is perfectly adapted for women as well as men.

Some seem to shrink from the poultry business, thinking

that in order to raise poultry we must also raise lice and mites, but such is not the case if the house is thoroughly cleaned once every week and a liberal amount of coal oil used.

After having made the necessary preparations we are ready for our birds, and the proper variety to select is the kind you like best and the birds best suited for your purpose.

We have bred Barred Rocks and Black Langshans for more than ten years, and consider them second to none for an all-purpose fowl.

We have Rocks with records of 247 eggs per year, and Langshans that have laid 263 eggs in eleven months. This, however, did not come by chance, but is the result of careful selecting and breeding. Our aim is to better the laying qualities of our birds and breed them true to color. Culls and old stock of the above varieties bring a good price, we having sold hens weighing ten pounds each.

We have mentioned our birds simply to show why we selected the above varieties, our object being eggs and weight with all the fancy points obtainable.

We are not writing this to advertise our stock, nor advising anyone to commence with Barred Rocks and Black Langshans just because we like them best and have found them very profitable, but reiterate commence with the breed you like best and the kind best suited to your purpose. We would, however, advise that you get nothing but pure thoroughbred stock.

Every spare moment can be profitably taken up reading the excellent articles given each month in the poultry journals.

Four journals come to our desk each month, all of which are carefully preserved, and at the end of each year are bound or properly fastened together, making a book containing many valuable helps for reference.

Books are also published covering almost every branch of the poultry industry, which can be had for very little money, and the reading of good poultry literature will no doubt make a glowing success of what otherwise may have proven a disastrous failure.

Thomas A. Tippet.
Scales Mound, Ill.

STARTING WITH DAY-OLD CHICKS

ON March 17, 1910, we received twenty-six day-old Barred Rock chicks from a Pennsylvania dealer.

They were kept in the house until the 19th, then they were put outside in a brooder without heat. Half of the brooder had a floor; the other half contained about four inches of sand.

We fed small amounts of chick manna three times a day on the second day, and by noon of the same day all but five were able to scratch.

Seven of the twenty-six died between March 18 and 22, three of them on account of carelessness. They were allowed to run outside the mother early. One cold morning they became chilled and died.

We continued feeding manna four days with a small amount of chick grit sprinkled over it. A small quantity of chick feed sprinkled in the cut clover was given after the third day. This was increased gradually, and later cracked corn was substituted.

Wheat bran was kept before them from the start.

When they were about three weeks old the following mash was given: Wheat bran, two parts by weight; corn meal, four parts; middlings, two parts; linseed meal, one part, and beef scraps, two parts. This mixture was moistened with sweet milk and fed morning and noon.

By the time the chicks were five weeks old they were fed

two litter feeds of cracked corn and whole wheat, equal parts.

At the age of twelve weeks a commercial feed for growing chicks was substituted for the mash.

Having more cockerels than were needed, we disposed of six at the age of twelve weeks. The combined weight of these was over sixteen pounds.

When four months old two of the remaining cockerels weighed six pounds apiece. These were the largest from the start.

Our chickens have always been confined.

After they were too large for the brooder they were transferred to a house four feet wide and eight feet long. The lower floor contained sand and straw for scratching; on the upper floor were the roosts and laying boxes.

On July 10, at the age of three months and twenty-eight days, we received our first egg. During the balance of July we received twenty-five, and at the time they were five months old we had received eighty-eight eggs from ten pullets.

For the month of August the record shows 149 eggs received, eight being the highest number gathered in one day and forty-four in one week.

This being our first venture in poultry, we are very much encouraged with the results we have obtained. We have been informed by persons who are familiar with poultry raising that these results are remarkable.

There may be those who doubt the age of the pullets, but we can produce proof as to the time of hatching and also of laying.

These chickens were purchased as ordinary utility Barred Rocks—no particular strain. They have had the best of care; fresh water is given not less than twice a day, the droppings are removed every morning, good clean straw provided for litter, and nothing but good, clean, wholesome food given.

H. H. Karrer.
Phoenixville, Pa.

IS THERE MONEY IN THE POULTRY BUSINESS?

Indeed, there's millions in it, but the great problem is to get millions out of it. The majority of people who contract a malignant form of chicken fever firmly believe that all one has to do is to purchase the eggs, hatch out the chicks that are contained there (?) and in a very few months said chicks will reproduce themselves several times over.

If one buys eggs from pedigreed stock, and if "like begets like" (which it does not always do in chickendom), why, of course, one's fortune is soon made; but in any event a year's trial will go a long way toward reducing the temperature to nearly normal, without the aid of other medicine. Of course, I am only speaking from the standpoint of one lone chicken crank, and because I am of the gentler sex my ideas no doubt are not to be taken seriously.

I sometimes hear of pullets laying at the age of three and one-half and four months, and also of pullets that have hatched out a nice brood of chicks at five months, but my ancestors came from Missouri. I am frank to confess my pullets, all thoroughbreds, do not behave in such a manner. Indeed, if I had a pullet lay eggs at such a tender age, and then presumed to get broody before she had reached the months of discretion, I should feel inclined to spank her fluff and put her in a cold air box until she had decided that her mission in life was to lay eggs right along all winter and leave the hatching of chicks to the old hens at the proper time of year.

The millions we hope to get out of the chicken business is still concealed in the winter eggs which the majority of chicken men and women do not get. Why? Because their hens are not bred to lay in the winter. Any hen will lay in the spring, and she does not require a long pedigree to do so, for that is what nature intended her to do, but to induce her to lay all winter when the price of eggs (packed ones at that) is ranging from forty to sixty cents per dozen, it requires careful breeding for more than one year.

But, seriously speaking, and for the benefit of the beginner, the profit in the chicken business, aside from the sale of eggs and stock at fancy prices, must come from "winter eggs." These can only be secured in paying quantities by having proper winter quarters, sanitary environments, proper feeding of well balanced, wholesome rations, plenty of pure, fresh water, grit, shells, etc., and if the fowls are of a good, healthy strain to start with, a proper observance of the foregoing winter eggs will certainly be the result in paying quantities.

The following out of all this means work, and plenty of it, but I practice what I preach, and after moult in the late summer, my birds start in for early fall laying, and keep it up through the fall and winter. A visit to my coops last winter in January and February, when the snow was two and three feet deep on the level, found them singing, cackling, and contentedly dusting themselves in the dust boxes, and the egg basket was satisfactorily full at night.

O, yes, there's money in the chicken business, and it can be taken out in the shape of deliciously fresh, sweet eggs when the prices are soaring. There is not only money in it, but a whole lot of work as well, and worry and disappointment, dishonesty, etc., but at the same time there is nothing that can give more real pleasure than a flock of beautiful thoroughbreds, especially when you know they have been virtually transformed into little egg machines.

So here's to the hen of widespread fame, who until lately did not sport a name. But now we call her Queen, or Pet, or Bird, and names the like of which she never heard. I still think if some hen that's just "farm bred" should some day take it in her dear old head to make a nest up in the fragrant hay, and get to work and lay, and lay, and lay, and we should feed her nice sound grains of corn and wheat—being quite sure she had all she could eat—then give her lots of water, milk and grit, the "high bred" hen would either have to hump herself or quit.

Alliance, Ohio.

M. E. Crandall.

HOW TO PREVENT COLDS AND ROUP

As it is now nearing the time when we may expect roup and colds amongst our flocks, I feel that I would like to give a few hints for the prevention and cure of that disease. In the first place, have your house comfortable, and see that it is dry at all times. Nothing is more conducive to roup than damp, filthy quarters. On our plant the houses are built on the shed plan, are about 8 feet in front and 5½ to 6 feet in back; the front is entirely open, excepting one door 3 feet wide on the east and the same amount boarded upon the west, and every two feet there is a 6-inch plank running from the floor to roof. In these spaces we have heavy wire nailed on the inside to prevent the fowls flying out (also to prevent any one from getting in). At the top of each space there is a single sash containing four small panes of glass, securely hinged at top, and we keep them raised out all the time so in case of a hard rain there is no danger of it blowing in and getting their quarters damp. In winter we put one sash at bottom and cover the remaining opening with muslin. In a house sixteen feet long we have four such windows; each window is fixed this way: The houses are about twelve feet from front to back, and the entire house is covered with heavy roofing paper and then painted with tar. All droppings are removed every morning and the houses are whitewashed and sprayed every week. By this means we keep our birds healthy and happy. During the first approach of fall we begin putting one tablespoon of coal oil and about one-quarter teaspoon red pepper in every gallon drinking water, and should one show symptoms of cold dip a feather in spirits of turpentine and swab out the throat. Once a long time ago I had a cockerel that I intended showing and along in September he came up with a swelling on the right side of the head, and I'll admit I felt blue, but as I didn't like to give up I bathed his head in soapsuds and dried it and then applied vaseline all over the lump; gave him a two-grain quinine tablet, repeated the treatment three days and he was cured, and also made good. If all who love their birds will observe these simple rules there will be no trouble with colds. Keep them dry; see that there is no draught; feed well of the best feed, as there is no saving in using inferior stuff. Add a small quantity of coal oil to the drinking water and keep them clean. I have three breeds—Buff and Barred Rocks and Buff Orpingtons, and a finer lot of birds you won't find. And this is practically all I ever do for the prevention of roup. And as I have every breeder's interest at heart, I desire to aid them in any way I can, and believe if this plan is followed it will save much loss. I know it is true as I have used it for years, and have no loss, while other breeders around here lose almost all their birds, and try all the new remedies on the market, thinking coal oil is too simple to be effective.

Centralia, Ill.

H. L. Ragsdale.

Have you everything in shape for winter? If not, better get busy now. It won't be long before the fowls will have to be put into winter quarters and these should be ready to receive them.

WHO'S WHO IN HENDOM

Well, for goodness sake!
The fall is come again. We
said the same thing last year and
have managed to live through it,
hence the daring to say it again.
Fall is a nice time. I am tickled
to death with it. Do you not,
dear peruser of these lines, recall
the words of the poet:

Oh piffle, dear Dollie,
Please look who's here,
'Tis Autumn, Miss Autumn,
The best of the year.

These lines are Backyard Rip-
plings, or are they of Burns,
or Tennyson, the pote of the Irish
peoples? But no matter whose
they are, they be sweet lines.
The blackbirds have hit the trail
for the south, the robins are
packing, the nasty jays are gone and the crows will soon
be thinking of it. This is the season when the turkey ar-
rives at what Max Nordau calls the third stage of the human
development: Physical, mental and spiritual. The last for
Mr. Gobbler.

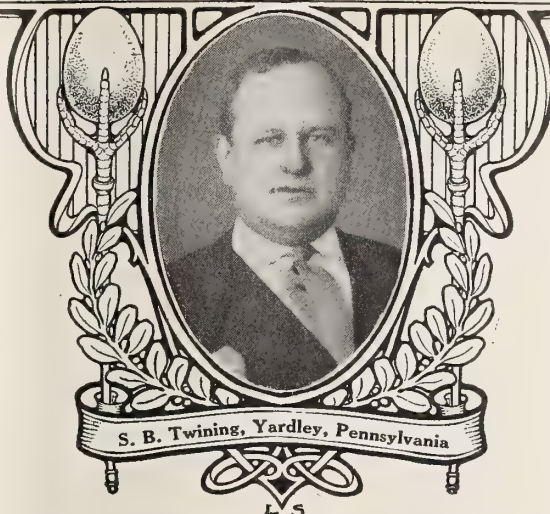

Well, I am over the roast I received in the last American
by the bantam fan so I will put on my old gray bonnet
and start out again for the fairs as the frost may be deep
on the pumpkin and the shock ere I return. Like Uncle
Tom in his characteristic saying in that well known drama,
"Has Anyone Here Seen Kelley," I will depart, but I shall
return.

I should have squeezed in Toronto's fair in the last issue
but those good Canucks will pardon me, I know, as they
can go ahead and get up a great fair no matter whether they
have help or not. Sometimes I think they are like the new
station master who took down all the signs telling one to
beware of pickpockets and changed them to read: Beware
of your friends.

Next comes the New York state fair. This fair is known
as the great peacemaker. The boys get together and decide
they are not competitors at all, but are friends, sweet
friends, and that the showing of birds in the hen depart-
ment is nothing more or less than an institution for the
dear love of comrades. For years it has been nip and tuck
as to which part of the original twelve and one colonies
should be the one and true cradle of the fancy. One year
the New York bunch, naughty boys, would claim it and
hold it. Next year the Brockton rascals would steal over
and take it way. Sometimes they took the kid with it.
Poor child. It makes me weep to recall how this strife has
made a dog's life for the cradle and the cradle-ee. I am
not good at recalling all the fellows who go down to Syra-
cuse, but the big bunch generally goes down there to
sea—to see the Rocks. Thompson and Graves and Miles and
the rest. There swarms from over the border the four
hundred of Canadian fancy, and they do say at Syracuse,
Hagerstown, New York and Boston that it might aptly be
termed the charge of the Modern Six Hundred. Syracuse
is some fair. Mary and I got lost there inside of twenty
minutes. It took about all the York state fellows that I
mentioned in my trip up state in a recent issue of the
American to find us. If memory serves me right I awoke
in the Oriental Bazaar, whatever that is. But let us go
on over to

Brockton

and see what the sky offers in the way of something damp.
There are a lot of familiar faces down there at Brockton.
Here are Arthur Smith and Mr. Bright, Charley Welles,
Uncle Dan Lambert, and down the road come A. C. Hawkins
and Arthur Duston, driving behind Hawkins' team of
steppers with pedigrees tracing to The Abbe, Minor Heir,
and Jesse James, damned by all the drivers of slower crow-
bait that have to take their dust. They are as clean
gaited as a model village, sweet tempered as a day in
June, tuned up like Babcock's Juggernauts and as delicately
mouthed as a Coney Island eunuch lion that earns his liver
by opening his jaws and encompassing the head of his

human brother. Isn't that poetic?
By George, I like that.

Off a little from the main
thoroughfare I notice Dan Lam-
bert's new eight cylinder honk
chariot and buzz buggy, Tran-
quillity. He named her (we
speak of them in feminine terms
because they are so expensive to
maintain) Tranquillity because he
is getting over the strenuous
years he put into making Death
To. He wants to be tranquil to
the end of his days. And the
idea is simply immense. The
man with the tranquil mind, per-
fectly poised and under his own
commands at all times is cool
and resourceful and one to pat-
tern after.

Uncle Ike Felch is there, too.
He holds in one hand his breed-
ing chart and in his other his pedigree that traces back to
the sunflower. He tells me that he is well along in years
and that he has yet to see the show in which he cannot
pick up some chicken information. Every other fancier
of the Bay State is on deck here at Brockton as well.
Many are there from the adjoining territory. But I have
so much ground to cover that I cannot get to all of them
and shake hands as Orville Wright is waiting for me to
carry a fellow traveler and myself back, back, back to

Allentown.

Allentown is some town. Ever since I could read it
might have been named Wittmantown. For years I thought
there was but one fancier in it. But Wittman got mighty
busy here of late years and has run some shows down there
that have helped the fancy. They have added to the rank
and file and status of the fancy in that end of the coun-
try. This season's fair is but the picking up of the plums
that Wittman has knocked off the trees with the thirteen-
inch advertising guns that he has been steadily firing. The
advertised fancier who has not received a copy of the Allen-
town list of premiums in the poultry department does not
draw breath, so thoroughly has Wittman scoured the coun-
try. Just think of ten thousand dollars and a carload of
specials at a fall fair given on poultry alone. Many a
state fair never hung up this much mazuma on all kinds
of stock and races and koochee shows. White Orpington
fans are offering a big list of money for birds in their
classes and all premiums are open to world competition.
Read this:

This fall fair poultry show is run on the lines of the big
winter shows, all features being right up to the minute. It
is exceedingly well advertised and has a prestige and name
which carries weight in the poultry world. The crowds, too,
are there, and it has a well-deserved reputation as a place
to do and to make business for poultry fanciers. The Ban-
tam and pigeon shows, too, are as big or bigger than some
of the big winter shows. First prize in Bantams, \$4, two
to fill a class. First prize in pigeons, \$2, two to fill a class.
The following is offered in Columbian Wyandottes: \$50 cup
for best cock, hen, cockerel, pullet and pen; \$50 cup for
best pullet, \$10 cup for best cockerel, \$20 cup for best cock,
\$20 cup for best hen, \$20 cup for best hen, \$5 cup for
best hen, full set ribbons National Columbian Wyandotte
Club. There are cups in nearly every breed and variety.
White Holland turkeys have two cups. Table eggs will be
a new feature this year. No entry fees. Four classes,
with first prizes, \$2; second prize, \$1.

It takes Old Tranquillity to hit up such scorching as this.
In fact, Wittman was once nearly jerked up for exceeding
the speed limit. Ten thousand cold rolled and Spanish
milled dollars! Why, Bo, the Spanish navy could be bought
for that. Think of it. Money enough to float a little empire
all being given to the poultrymen of this land to send their
birds down there and make a try for it. But here comes a
little

Ka-noxville,

who is not so little, after all, and wants us all to boost for

her coming Appalachian Exposition poultry show. This is another of the numerous times in which the pride and the glory of the South, as far as her fancy poultry is concerned, will make good. Knoxville has all the best southern breeders behind her. They are with her to a man. Birds will be at Knoxville from Illinois, Indiana, Kentucky, Tennessee, Missouri and other states that are not so far south. It should be remembered that one of the best bits of advertising that we all saw in the papers the past winter and spring was made on winnings gleaned at one of the big southern fairs last season. This sold the breeder a big lot of birds in new territory. It paid him well to make the exhibit. He will get business for years to come out of those very winnings. The South is one field we have been more or less prone to neglect as a rapidly developing poultry field.

And now we come to

Hagerstown,

the at one time great fall poultry show of the country and yet a leader among them. Hagerstown is a fair that showed the way and guided many another big one of the fall expositions away from the rocks and into safe channels. Winnings at this fair have made many a breeder. The war horses of the past used to congregate down there every fall. They do yet. My, what a host of them! The boys tell me that Hagerstown is still one of the best selling shows in the country. I believe it.

Every year as the leaves turn to a golden yellow and then chromatically shade off into carmine and sepia and crimson, the thoughts of Hagerstown get into one's head and do not leave till he has gone and seen for himself this annual dean of all poultry shows held in the fall. So many adjourned meetings of the A. P. A. have been held down there that one cannot remember them all. The faces we used to see included Rumbold, Blanton, Howard, Davis, Nevius, McGrew, Purvis, easterners by the score and southerners in numbers. From the western states there were a few with us and many are the members of the A. P. A. picked up there by the zealous workers.

Last month I omitted Denver in the list of the big western fairs. I should not have done this, as they hold a ten-days' fair and real western exposition that is a ripper. That bunch went down to St. Louis and produced the ten buck memberships in great shape. They dig 'em out of the ground out there and they are easily found, it seems. Chickenists are growing in great numbers from season to season. The fancy is on the boom and we are seeing more and better shows Denverward every winter.

The supper bell has sounded, reader, and as I am lank in the region of a perpetually empty bread basket, I am going to ask that you let me off till the moon changes, as I am saving up to roast the show secretaries in my next letter. They are a retiring lot, and the professional etiquette that exists among them used to be something fearful. They are going to get theirs. It will be good and plenty, too. Yet, I love them, and the wife says not to use too tough a switch.

PERFECT MATING OF BIRDS

**Sexual Selection in the Mating of Fancy Fowls—Cause of Infertile Eggs—
The Charmer of the Flock—The Nearer to Nature
the Better the Results**

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

possible to meet the Standard requirements, for this is what he is breeding for, or the purpose of the selection of birds suitable in shape, color and size requirements, which without

AFTER years of close observation we are forced to say that the above subject has received but scant attention from the breeder of fancy poultry, and this is more to be deplored because of the fact that it takes an important part in almost every mating made, for in natural selection it is one of the chief factors for the preservation of type and breed characteristics, but under artificial conditions the fancier becomes the selective medium and neither male nor female is taken into consideration from their own viewpoint of what constitutes beauty or attractiveness, but what is of the highest importance to the fancier is, that they come as near as possible to meet the Standard requirements, for this is what he is breeding for, or the purpose of the selection of birds suitable in shape, color and size requirements, which without

we fully recognize not much of an improvement could be made; but, on the other hand, if the choice of both female and male is set aside, sterility in very many instances has been the result, and as a consequence no issue from perhaps the best bird in the breeding yard, and, what makes it still worse, is the fact that if the breeder had noticed in the beginning that either the male or the female avoided the other, this condition could very readily have been changed and better results obtained.

I have on very many occasions had to deal with the above conditions, and there has not been a single year during an almost lifelong experience with poultry where both males and females absolutely refused to breed together.

In one instance I had mated a splendid specimen of a cock bird to a pen of several of my best hens, and one of them was in almost every detail a complete match to the master of the harem, and I expected great results from the eggs laid by this one hen, and of course took for granted that the cock bird would fertilize the eggs as readily as with other hens with which he had formerly been mated, for besides being a strong bird in the points that go into the making of what I, from a fancier's standpoint, call beauty, he was a strong, vigorous breeder and very prepotent in his issue, stamping his offspring with his own strong characteristics, and not only as far as his own side of the line was concerned, but his strong and excellent qualities would influence the female offspring as well, a thing which, by the way, is very seldom found in males, but which when found makes the great sire.

But all my expectations were rudely shattered, for from the very beginning of his introduction into this yard of fowls he took an instinctive dislike to this the best hen in the yard.

Cock-like, he courted one hen after another and showed himself as gallant as any male could possibly be expected to do, but whenever he came near the hen mentioned it was head down, hackle feathers erect, and abusive treatment followed.

I finally separated the hen from the others for a term of several days and then again put her into the pen, but with exactly the same results.

I then separated the cock bird from the hens, and after leaving him alone for several days, took the hen that I was anxious to have him mate with and put her into the pen with him, thinking that with only her for a female companion his antipathy might be set aside and a better and more agreeable understanding established.

But they knew one another as soon as they came together. He, without a moment's hesitation, began his pursuit and abuse of the female, and after several vain attempts I finally was forced to abandon my hopes of any results from this uncongenial pair of birds.

After the breeding season was over and I had turned out into an orchard something like twenty females, I took this same male and put him with the flock, and after making himself agreeable to the flock he discovered the hen to whom he had this strong dislike, and immediately began his persecution of her.

The following year I again tried to mate them together, but with exactly the same results, and I was forced to breed this hen to another male bird, and not only was she a most amiable hen, but a good layer and a very strong breeder with any other male, as he was when mated to other females.

This is an instance so pronounced in its different aspects that even a tyro in poultry breeding would have noticed it and made a separation and properly so, but there are many other less pronounced instances where it would simply be a matter of neglect; the male would treat the hen all right socially, but otherwise neglect her, and the eggs would of course as a consequence prove infertile.

I am thoroughly satisfied that in almost every instance where many fertile eggs cannot be secured from a certain breeding yard, that on close observation it would be found that the cock bird is vigorous enough, but that his attentions are bestowed on one or two or perhaps three females to the utter neglect of the other inmates of the pen.

And the same thing will take place as far as the females are concerned, for there are females which will not produce fertile eggs with some males which refuse their attentions and where a strong male uses force to subdue the unwillingness of the female, which often is the case, only imperfect impregnation takes place, if any, and the last is more often the result.

That a sexual selection takes place where a large flock is permitted full liberty and where a number of males run with the flock, cannot be denied, and even the casual observer has noticed that before many days each male has selected his own consorts and keeps them apart and gives them his par-

ticular attention. Even different breeds will not readily mix where full liberty is granted, but will keep separate with their own males and very seldom encroach on the premises of the others.

Now, to our idea, what I would call a perfect mating would be the one where there would be a perfect union between the male and the females, for without it no great results can be obtained.

Many a breeder has put his best females into one pen and mated to them a cock that he thought was strong and vigorous, and after some time the eggs would be gathered and after a few days of incubation tested and only found to be partly fertile.

More time was given; some other reason than the right one was relied upon as to be the cause of the infertility, only to prove in the end that the reasoning was false, because the infertile eggs did not decrease, but kept on coming in about the same proportion.

Then generally the cock bird is changed and another substituted, which in many cases is done reluctantly, because he is the best bird and the one on which a good many future results were built, but what is the use—he don't seem to fertilize as many eggs as he ought to and there is nothing else to do.

Now, there is something else to do! If a trap-nest system is in use, find out the females with which either he will not or they will not breed and remove them from the pen, substituting some other females, and a great improvement in fertility will take place, and the hens when mated to another

WHITE PLYMOUTH ROCK.

First prize cock Detroit State Show. Bred and owned by Lyman H. Hill, Jackson, Mich.

male will in turn prove fertile. A good many failures are simply due to lack of observation, and many a season's work has been retarded because the individual likes and dislikes were not taken into consideration.

There must be a strong attraction on either side to have strong potency, and it is a well-known fact among breeders of experience that the eggs first impregnated early in the season give the very best results as to the so much desired fancy points for which most all matings are made.

It is true that the chickens hatched early in the spring are in every way better than those hatched later, and the reason for it is not only because that the spring favors growth to a greater extent at this time of the year than at any other, but because that early in the mating season the strong inclination of the male to some females, or conversely, makes a still stronger combination to implant breed characteristics.

We are fully aware that Darwin meant a good deal more by sexual selection than what we have here set forth, but we are applying the term of affinity, which must be there to make breeding of fancy poultry successful.

On the other hand, the most beautiful and the strongest male bird is generally the one that becomes the charmer in the flock, and the female is willing to be charmed by him and will in turn charm the male, and the complete mating, as I may call it, is perfected. Wherever it is possible the fancier

should do his utmost to help out this perfect mating; he should select the most robust and best furnished male that he can find in his yards.

A male with imperfect growth of hackles, sickle and saddle feathers is not a good bird to breed from.

Let him be well spurred, well furnished, a good, vigorous crower—in fact, a regular spoiler for a fight with another male, and such a bird will be very attractive to the females and prove an excellent breeder.

Another thing experience has taught me is this—that the females in a breeding yard will breed better if two males are put in at the start, which, of course, will result in a fight.

But the breeder can regulate this matter in such a way that he feels sure that the bird he intends to leave with the females will come off the victor without getting himself hurt.

This may seem a peculiar proceeding to very many, but take my word for it, it will consummate a more perfect mating and give better results as to the final outcome.

It is nature's method, and the nearer we get to nature in our proceedings the better the results obtained; females like a good fighting male and will attach themselves to him more readily and even invite him to be charmed by them, and chicks from such a mating, other things being equal, will be the best in the flock, for, like the Frenchman's shoes, they were made in a moment of enthusiasm.

But enough has been indicated as to the importance of the subject, and so let me sum up in the words of a noted investigator as follows:

"The process might be set forth from the sexual standpoint as fourfold.

"First, the quest of the female by the male. (Pursuit.)

"Second, the struggle of the males for possession of the females. (Period of female interest.)

"Third, selection of the male from the females at his disposal. (Fascination.)

"Fourth, exertion of charm by the female. (Mating.)

"The order of the series of events is not important. The vital fact is that there is such a series of events in the sexual life of all multicellular organisms capable of true sexual life."

FEATHER OF THE BARRED PULLET

A Portrayal of the Defects of the Barred Plymouth Rock Pullet Feather in a Way That Will Delight Every Breeder of This Variety. The Proper Length, Width and Barring of the Feather, Together With the Proper Spacing and Width of Bars are Fully Explained.

Written for American Poultry Journal by S. T. Divinia, St. Joseph, Missouri

WIDER differences of opinion exist among Barred Plymouth Rock breeders as to the correct pullet plumage, than almost any other section of this beautiful, yet difficult breed. Standard shape is much more easily discerned than plumage.

The Standard description of breast, back, tail and comb are easier of interpretation than barring and color. Our fanciers generally agree on the Standard requirements so far as mere carcass measurements are concerned, but when we come to the feather of the pullet of this variety, even successful exhibitors hold widely different opinions.

There are very many shades of color shown by the winning females of our best American shows. These shades of color range from the fairly clean colored male-line female to the open, splotchy, barless specimen of some years ago.

Four Distinct Types of Pullets in Prize Pens.

The experienced eye of the Barred Rock breeder can often readily detect four distinct types of pullets in first prize pens at some of our best shows, and only by a wide stretch of the imagination could any one of them be called standard. I feel that this is true in too many of our high class exhibitions.

Unless there is more uniformity in our exhibits we are sure to lose that general attractiveness which helps greatly in keeping the interest in our chosen bird alive. The cause of this confusion is partly due, no doubt, to the fact that a few breeders have made such rapid progress in breeding

Barred Plymouth Rock pullets, that most fanciers, and not a few judges, have failed to keep pace with them. For long prices, these advanced breeders have placed some of their choice specimens in the show room in their customer's hands and even the judges did not know what to do with them.

What is the Ideal Length of Plumage?

One thing that will help remedy this matter: clear our ideas, give us more uniformity in judgment in a detailed study of the feather as seen on the pullet. In studying the feather of the Barred Plymouth Rock pullet, every part of it must be considered. How many of us have any idea as to the proper length of plumage for the Barred Rock pullet—taking section by section? It is easy enough to avoid extremes. We all agree that the close, hard feathering of Cornish type is to be avoided, yet at the same time, with extreme length of feather we introduce a number of characteristics which we do not want.

Longer Feathers Are Advisable.

There is no rule by which any one can determine the proper length of the pullet's feather for any given section. Generally speaking, however, I believe we would do well to lengthen the plumage of our females, for I am certain that we find more specimens with too short than too long feathers. Close attention to this detail will help us establish uniformity in the matter.

The shape of the feather is also important. By studying the outlines of feathers from different specimens, we can readily discern many different shapes of feathers. This may be unimportant, yet paying attention to details determines largely whether or not we are specialty breeders.

The Barred Rock Pullet Feather is Entirely Too Narrow.

Speaking generally, the width of the Barred Rock pullet feather is entirely too narrow. Of all the good pullets it has been my privilege to handle, those that suited me best, those that stood out from the rest as particularly good, had without exception rather wide feathers. I do not recall a single specimen in which the feathers were too broad.

Surely the shape and width of feather have much to do with displaying barring and surface color to the best advantage. Add to the length of feather, shape and width, substance, texture, weight, and you have a combination that will best show off whatever barring the feather possesses.

Illustration Shows Splendid Width of Feather.

I have before me a feather from a first prize pullet at a national show. The barring extends from end to end of the feather, and is quite uniform—there is no doubt but that the pullet was awarded the blue ribbon partly on this uniformity of barring, shape considered, of course—but if her feathers had possessed greater width, the barring would have shown to a much better advantage. By paying attention to width of feather, and selecting our breeders with this point in mind, we can gradually widen the feathers of all our pullets.

It is truly remarkable what has been accomplished with the barring. While feather itself—length, contour, substance and width has not had sufficient consideration, who will dare say that the barring of the feather has been neglected? But there are many details that still require attention.

Spacing and Width of Bars.

Let us now take, for an example, the spacing of the bars—"regular" is the term used in the Standard. The plumage of a great percentage of the Barred Plymouth Rock females seen in our shows, has a large open space between some two of its bars. An old breeder told me that the cause was the improper development of the bird—arrested growth at some stage of its development. This may or may not be the cause—we have no means of knowing it—but by proper selections as well as proper feeding we should seek to overcome the defect.

Shaft Should Be Barred With Web.

The bars should be the same width. They should cross at right angles to the shaft of the feather, and extend the entire length of the feather. There should be no broken bars. The shaft should also be barred, and barred in the same places as the web. Too often the shaft barring is in the light background, instead of corresponding with the dark barring.

Where the Greatest Progress Has Been Made.

I want to call attention to the edges of the dark bars. There must be a well-defined boundary line between the light and dark bars—as if drawn with a pen. In no section of Barred Plymouth Rock culture has better progress been made than in straightening the boundary line of the bars. It is truly remarkable what has been accomplished, for it

can be found in perfection. Taking the Barred Plymouth Rock show females as a whole, and also those in the yards of the foremost breeders, there is yet much to be accomplished. Pay attention to the upper edge of the bar, for it is almost universal that the lower edge of the bar is better than the upper. Examine any feather plate you ever saw, or the actual Barred feathers, and you will find that this is true.

Having noticed this fact, let us give it due consideration in reference to other matters, and select our breeders accordingly. If you have a pullet, with feathers, the bars of which both edges are distinct, mate her separately and note the results.

Ideal Tipping Presents a Difficult Problem.

Another matter that should receive due attention is the tipping. In this question we have a difficult problem to solve. It has a relation to the character of the surface color of the pullet. The length, width, manner of overlapping of the feathers are all to be considered in this surface color, and they all have a bearing on the tipping of the feathers. The number of bars of each feather that show on the surface has something to do with the ringy appearance so much sought after. I have seen one or two pullets with fairly good surface, showing rings on the rounded portions of the bird, with no tipping at all to the individual feather, yet generally speaking, in the best surface color we find the individual feather with a narrow, dark tip, the lower edge of which extends straight across the feather, the upper edge, of course, follows the contour of the end of the feather.

Tipping Alone Will Not Produce a Ringy Surface.

While there is a great demand now for this tipping of the feather, yet my claim is that tipping alone will not produce a ringy surface. The width of the feather, the number of bars that show on the surface, together with the character of those bars and the manner in which the feathers overlap, all play an important part in producing a handsome surface color on our pullets.

In conclusion I want to say that it is the upper half of the feather that is the most important. The under-color craze has almost run its course—it is the easiest of all details to obtain, and it is important only as it helps display what is above it.

SOME VALUABLE HINTS TO BREEDERS

Contaminated Land Detrimental to Fowls—Alternate With Crops—How to Introduce New Blood

Written for American Poultry Journal by Dr. H. F. Ballard, Chenoa, Illinois

NO longer is there any doubt but that where the same land is used for poultry year after year, that it becomes contaminated to such a degree as to make it almost impossible to keep the birds healthy.

Especially is this the case with the small breeders who have limited space for their fowls. More and better and healthier birds can be raised if the ground is divided into small pens, and some kind of crops be planted in half the pens; the birds and the crops being alternated, sometimes three or four times in one season. Almost any kind of garden vegetables can be planted in the pens, according to the season. Then such crops as rape, kale, turnips, lettuce; and late in the fall winter wheat can be spaded in and make green food until Christmas time.

No matter how much pollution and bacteria the ground may contain, it has never been proved that any disease can infect the plants to make them injurious for food, either for man or animals. In the assimilation into the plant, all bacteria and obnoxious parts are entirely broken up and chemically changed to become nutritious and assimilable to animal life so that the plant feeds the animal, the animal feeds the plant. I expect to carry this idea out much more extensively another year, and expect to have at least three different yards for the use of but one yard of hens.

It is much better to be able to change a pen of laying hens from one used yard to another green and fresh one containing a nice crop of lettuce, rape or turnips, than to depend on lawn clippings or any green food cut and thrown into the same dirty contaminated old pen the year round.

I do not think it necessary to whitewash your houses three

times a week, as one of your correspondents recommends. Once a month is often enough for whitewash. Besides there are better lice destroyers than lime. Kerosine and crude carbolic acid will kill ten times as many lice and not a fourth the work.

Mr. C. W. Sixt tells of his experience in introducing new blood into his flocks. He says the male he bought "was a very fine one, good in all sections. In fact he was a better show bird than a breeder. His breeding showed that he came from a very poor line. As soon as I found his breeding qualities I disposed of him and all his chicks." Yes, and there was where you made a very big mistake. I have an idea that if the man who bought "him and all his chicks" had mated him back to his own pullets the next season, he would have raised something that would have beaten your flock "all hollow." It ought to be known by all breeders of experience by this time that the first outcross in getting new blood is nearly always a seeming mistake; it is the second generation that will tell the tale, not the first; and the man who stops here has simply thrown his time and money away. The very fact that Mr. Sixt's bird was "good in every section" showed him to be a bird of good breeding; no "hit and miss" mating produces such specimens. My opinion is he has a long line of ancestry behind him, which had become fixed; and such a specimen will produce progeny in the first outcross, which will simply "go all to pieces." You must look forward to the second, third and fourth generation to produce birds like the grandsire. The first outcross in varieties like Barred Rocks, P. Cochins, Golden Wyandottes, and in fact all the Penciled, Barred and Laced varieties will almost certainly spoil the color; and you must immediately start in on the line breeding idea in the second generation to get back to your color markings. Now, I should have bred that bird the next season on his own pullets; and I should have used his cockerels on some of my old hens. If you had done that you would almost certainly have had a different story to tell. Try it the next time—if you ever succeed in finding another specimen "good in all sections."

POULTRY RAISING AS A BUSINESS

The majority of people in my opinion who raise poultry are in the business for the money derived from it, therefore every move you make towards buying or selling you should decide whether it will be a profitable move or not.

Some people seem to think that the more money they can squeeze out of their customers by cheating them the more their profit will be, but this is not true. They may make more money by cheating their customers but they hardly ever make any profit. It does not take very long for the

people to find a dishonest man and then he will be down and out.

Did you ever see a poultry farm grow up to do a profitable business that cheated their customers? I never did.

The poultry business in order to be successful must be based on the same sound business lines that a manufacturing establishment is based.

Before you buy any equipment for your plant you should first decide whether the article bought would cause a sufficient increase in eggs or meat to pay for itself and make a profit besides. Of course you cannot always exactly tell the results that can be obtained but if you figure close with good common sense you will come out all right in the majority of cases. Hard work alone will not make money for the poultry raiser. He must work out problems and keep on the outlook for new and better methods of caring for his poultry. He must get acquainted with all the poultry diseases and the cures for them.

The best way for the poultry man to learn all these valuable topics is to read the numerous poultry books and journals. Every poultry man should have at least one book relating to every department of the poultry business. No one can raise chickens successfully if they cannot take care of all the little details that require prompt attention. If a pipe should become loose about the incubator or brooder it must be fixed without delay. It would surprise anyone not familiar with the poultry business to see all the little things that require attention.

I suggest that if you are planning to start a poultry establishment, that you first go through some large poultry farm and you will be a wiser and more experienced poultry man when you come out.

The men who manage these large farms know what they are about; they have found by experience the best incubators and brooders, and their method of feeding and caring for their poultry has behind it years of experience. There is not a piece of machinery or a pen of birds on their farm that is not making money for them.

The large poultry farm makes a good example for the small poultry farm to follow. There is a lot of difference between the large and small poultry establishment. The man who keeps a hundred or so birds generally carries water by hand for his fowls. On a large farm, by turning a handle to a hydrant at one end of the poultry house, all the fowls are watered. To care for a hundred fowls in the ordinary way takes as long as it does to care for a thousand fowls on a large poultry farm.

Large poultry farms are springing up every year; more and more each year. This fact shows that the poultry man's profits are growing larger and larger each year. The business men of this country are looking more and more each year towards the poultry business as an excellent place to invest their money.

Louise Legg.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

An Interest in the East

For a long time we have published the best magazine ever given to the interests of poultry. To be exact, our record dates back to 1874, and from that time to this is the age of our experience. We have paved a long road that others have followed.

During all of this long period of deserved prosperity the American Poultry Journal has maintained headquarters only in Chicago. This city served us well. As far as finances are concerned we could have remained in Chicago, profitably, forever. But profit is one thing and coöperation another, and we will not think of profit apart from that on which it depends—unitedness—our unitedness with you.

So we have done this,—we have opened an office in New York City to aid us in the better accomplishment of our work for our readers and our advertisers.

Progress today is rapid and we, with our friends, must move fast. Every hour that we can save gives us just that amount of additional time to add to that which we give you. With our New York office convenient to the entire East, we do more than save time. We eliminate space and make the man who before was far away, so close as a friend that his personality, in an unforgettable way, is linked to ours.

Then, too, our work in the East will be the cause of large gains in circulation. Big circulation means more pages of reading matter and increased value to you. And besides all this we are on the ground to enjoy many new advantages, to render aid whenever it is needed and to study, study, study.

Our New York office will be managed by Mr. C. W. Zimmer, a man thoroughly known in the West and soon to be equally known in his new capacity. Mr. Zimmer can be depended upon for good advice on many subjects, not the least of which is "how to make advertising pay." He knows thoroughly the prin-

SUBSCRIPTION PRICE.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions, 75 cents.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake no matter how slight. Note the expiration date which appears thereon as American Poultry Journal stops with the issue marked on your wrapper.

Make a memorandum of the number above your name and refer to this number when writing in regard to your subscription.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

The columns of the American Poultry Journal are always open to you, and we want you to make use of them.

I extend to you a cordial invitation to come and see me at 170 Broadway. If you can't come, write me what I can do for you.

C. W. Zimmer,
Eastern Manager.

Important to American Poultry Journal Advertisers

For years we have been urging the advertising patrons of the American Poultry Journal to pay more attention to their copy, telling them of the importance of changing copy often. This has resulted in much good to those who have followed our advice. It has also resulted in giving us much more work and has made it necessary for us to set a date when all changes of copy must reach us. All copy for changes of ads must reach us by the 15th of the month preceding date of issue. This will give us an opportunity to give each piece of copy the attention it should have, and still get the American Poultry Journal in the mails on time. Can we have your co-operation in this matter?

Announcement

Our great serial story, "Wayne Wentworth," will start with the November issue.

As a treat for our readers we have had written a very interesting continued story, the first chapter of which will appear in our next issue.

This is a true story, and the hero, Wayne Wentworth, is a born poultry fancier, and even as a child showed his love of thoroughbred poultry.

The story is told in a very interesting manner, each chapter fully illustrated, and teaming with excitement. It tells how poultry aided Cupid in a pretty romance, and we are sure you will be interested in following the hero's eventful career. You won't want to miss a single chapter, and no

ciples that lead to success in that business and 170 Broadway is too near for any new or even old advertiser to remain away. Mechanical difficulties that often puzzle the contemplative advertiser become simple when explained.

Things are going to start with a bustle, but that is what we want. We will never be too busy to cordially greet all comers, for that is the real reason why we entered the East.

From this date we are equipped to handle all Eastern business from 170 Broadway, New York City, and we request that all correspondence, regardless of its nature, be addressed to this office. To be more explicit, we mean by Eastern business all of that received from New York, Pennsylvania, West Virginia, states east of these and the Atlantic coast states of the South.

Now, remember that we want you to bring all of your troubles to us and we want you to ask advice whenever you think we are the right fellows to give it. The sooner we can do this for you the better we will be satisfied, for the people that we help most always become our friends. And just now we are expecting lots of new friends.

We have made a great stride in the poultry publishing business by linking the two largest American cities together thus. We have annihilated distance to serve you.

Our New York Office

In assuming the management of our eastern office, I realize the responsibility, but trust, with your assistance and co-operation, to fill the same satisfactorily.

So far I have been very kindly received, and I feel you are going to make my life among you very pleasant.

We have located here in New York City that we may be close to you; know you more intimately, and thus serve you better. Hereafter it is the American Poultry Journal of Chicago and New York.

doubt, if you tell your friends about this new and interesting department, they also will want to subscribe for the American, commencing with November number, so as not to miss the story.

It alone is worth several times the subscription price.

Ladies' Auxiliary of the American Poultry Association

Recognizing the important part the women are taking in poultry culture and appreciating the splendid work which they have accomplished, and believing that the American Poultry Association can do no greater service to the cause it represents than to take an active part in establishing a woman's department to be known as "The Ladies' Auxiliary of the American Poultry Association."

The purpose of which shall be to assist the women who keep poultry, through this subsidiary organization to disseminate information, to encourage them to take part in Institute work, and to contribute articles on all phases of poultry culture to the poultry press. The Auxiliary to be conducted along the same lines as branch associations. All lady members of the American Poultry Association to be admitted to the Auxiliary without cost; new members to be admitted on the same terms as at present—\$10.00 for life membership.

Fifty per cent of each life membership fee coming to the secretary of the American Poultry Association, through the Auxiliary for membership in the American Poultry Association, shall upon the election of the applicant, be returned to the Ladies' Auxiliary. This organization will be the means of furnishing its members the opportunity of arranging entertainment at such times and places as may be deemed advisable.

You are requested to sign and return the enclosed application and in due course you will receive a certificate of membership. Very truly yours,

American Poultry Association,
Mrs. S. Theo. Campbell,
Temporary Secretary.

Mansfield, Ohio.

The above is a copy of a letter dated at Mansfield, Ohio, September 5, 1910, and we wish to go on record as saying that the objects as outlined in this let-

Well, Martha, what dew you think of that? Ain't that a dandy coop fer yer theabreds. Guess that ere Jedge Schwaub will give 'em a pleasant look when he sees that coop, eh. So you like it all right. And, Martha, dew you know those Reds seem tew be as much interested in this 'ere coop as if they knew it was fer them and they was to be in it at the Fair. Now you better write to Mr. Clark at Willoughby, O., and tell him how well we done with the eggs we got from him and that we will show the birds at our Fair next week, and we hope to get a ribbon, anyway, fer their jes as puerty as can be and they will eat oten yer hand.

Say, Martha, I mos' fergot to tell yer that I heard Mr. L. C. Buschman, what breeds R. I. Reds in Indianapolis, Ind., was going to show at the Fair, tew, and some wan told him that we had some purty fine Red an' we was goin' to take them, too, and he jes' laughed. Now, him that laughs last laughs best, eh!

ter meet with our hearty approval and unqualified support. There are hundreds of women who are interested in thoroughbred poultry and an organization of this kind, if properly organized and managed, will result in hundreds more becoming interested at no distant date. There is certainly a large field for an organization of this kind, and Mrs. Campbell is to be commended for starting the ball rolling. We hope to be able to announce in the near future that a permanent organization has been effected.

Don't forget or overlook the great Chicago show, the second week in December. A prize won at this show will be a money-maker for you. Theo. Hewes, secretary, Indianapolis, Ind., will give you full particulars.

INTENSIVE POULTRY CULTURE.

With all the matter that is written about intensive poultry culture we are evolving a constantly-growing army of chicken folks who are interested in poultry growing and its possibilities on the city lot or other places, where the amount of ground is small and the profits necessary to be made to make the business or venture a success are harder to obtain than where there is more room for the fowls to range over and a greater amount of their living to be picked up. The smaller the poultry quarters the heavier the feed bills and the greater the chances of chicken vices. Hens must be kept busy to grow well. During the winter if their housing has been warm they have been known to do as well as in the spring. Chicks will

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS

It is acknowledged the world over to be the greatest laying and exhibition strain. I have 500 grand yearling hens for sale now at \$2 per head, and hundreds of cockerels and pullets after Oct. 1st.

D. W. Young : Box 1-A : Monroe, New York

Big Bargains in Reliable Breeders

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

**BRIGHT'S BARRED PLY. ROCKS
BROWN LEGHORNS...**

Grove Hill Poultry Yards William Ellery Bright, Proprietor Box 410, Waltham, Massachusetts
A. C. Smith, Superintendent

grow as well indoors when the snow covers the ground as they have done outside when the conditions were not entirely perfect. Right now there is an amount of poultry journal space devoted to no yard plan of caring for layers in small houses and where the feeding is all supplied, both grain and animal matter and green stuffs. Here is something from the pen of L. E. Keyser, in Poultry Husbandry:

"A small flock on free range, with a good house to roost in, has usually been considered ideal conditions. Where a large number of hens were kept these were divided into flocks varying from twenty-five to fifty. In some cases flocks of 100, 500 and even 1,000, were run together, but in the East the smaller numbers were considered the most practical. These were placed in houses scattered over the farm or into a long house divided into numerous pens, each pen having an outside yard. One was termed the colony plan, the other the yard system. The floor space in the house varied from four to eight square feet, and the yard from fifty to 100 square feet per hen. The Cornell Experiment Station advised the removal of division fences, allowing all the hens to run together during the day. The objection to this plan is that the hens do not always seek their own pen at night, and no males can be run with hens so housed to advantage. The advantages are that we save the cost of division fences, the hens have a larger area to roam over and the yards are more easily cultivated and kept clean.

"On many egg farms it was found that the hens did better when confined to the house after the ground became frozen and during inclement weather in fall and spring. Some placed their hens in the house in the late fall and did not let them out again until settled cold weather in the spring and those who followed this plan usually secured a good winter egg yield. Mr. Hayward, of Hancock, N. H., was probably the first to adopt the no-yard plan entirely. He used A-shaped coops 8x8 feet in size, and into each of these coops he placed a dozen pullets in the fall, and they were not let out until they went to

market the following August or September. This was for a long time the largest egg farm in this country, keeping from 7,000 to 8,000 pullets. This method was severely criticized at one time by writers for the poultry press, but as the owner was evidently making money the criticisms were unheeded. Later an egg factory was established in Cincinnati, quite a large number of hens being housed in a three-story hen house and having no outside runs. For a time, at least, this plant was successful, but I do not know whether it is in operation now or not. The Philo system, which is used quite largely by beginners in a small way, has no yards; and an entirely different method, known as the no-yard plan, is quite extensively used. The big Corning egg farm keeps layers in houses without yards.

"If hens can be kept in small yards they certainly can be kept without yards. Small yards soon become bare and offer no advantages except increased exercising space, and all the exercise the hens need can be secured in the house, if the hens are made to scratch for their grain in deep litter. In fact scratching is better exercise than roaming about. Yards that do not afford the hens green feed are of little use."

The Illinois members of the American Poultry Association should wake up now and secure a lot of new members for the Illinois branch. Let us make the Illinois branch by far the largest in the association. This can be done without much effort. Send to S. T. Campbell, Mansfield, Ohio, for application blanks and get busy with your neighbor.

Mr. Frank L. Platt, who has heretofore been associated with the Hall Mammoth Incubator Co., of Utica, N. Y., has been appointed Eastern representative of the Reliable Poultry Journal. Mr. Platt, though a young man, has had a life-long association with the poultry industry and his wide circle of friends among the poultrymen of the country will welcome him into his new position. The Hall Mammoth Incubator represents a distinct departure from the old-line incubator and Mr. Platt's success

in introducing it into new fields has been remarkable. His salesmanship is of the kind that makes permanent customers as well as immediate sales. But the wider field of poultry journalism has called him. He leaves the Hall Mammoth Incubator Company because he feels greater opportunities are to be found in his new position. He succeeds to the position that was held so long by the late Mr. M. S. Gardner.

Judging by reports, Kansas City expects to have the banner show of the country. Better get in line for this show.

Next comes the early poultry shows, followed closely by the more important ones. See list of show dates in this issue.

The trying-out process is about over. That is, the State Fairs have about all taken place. This is where the breeders get a line on what the other fellow has.

RED SILKIES.

At the home of V. M. Couch, Cortland, N. Y., may be found a breed of fowls seldom, if ever, seen before in this country. They resemble the S. C. Rhode Island Reds exactly in every way except the feathers, of which they have none, excepting a few in the wings and tail, all the rest of the plumage being webless and of a silky texture, the same as the real White Silkies, often seen at fairs and poultry shows. They originated from a strain of S. C. Rhode Island Reds bred by Mr. Couch for the past ten or more years. They are excellent layers of large brown eggs. The young pullets are especially attractive, of which there are a number of fine ones.

Seymour—I hear you have evolved a wonderful breed of laying hens?

Ashley—You bet I have! They beat anything I've ever seen. They don't need roosts.

Seymour—Don't need roosts?

Ashley—No, sir; they're laying night and day.

Galesburg Fancy Table-egg Plant

Mrs. Arabella Zink Holloway, Prop.

Dr. J. C. Holloway, Mgr.

82 NORTH HENDERSON STREET,

GALESBURG, ILLINOIS

Standard Line-bred S. C. White Leghorns. Exhibition and Laying Birds. Ribbons and eggs. Foundation, Chicago Winners and the Wyckoff "World's Greatest Laying Strain." They're White, Bright and a Pretty Sight.

Fifty very choice cockerels for sale. Any bird that should prove unsatisfactory on arrival at destination, may be rested 24 hours, returned in good condition express prepaid and we will replace free of charge, or refund the money. We want to give a square deal and please every customer. "Bob Leghorn," shown herewith, is one of the number; but they are now more than one month older.

They sell themselves when seen. Common expression of visitors: "I have seen no White Leghorns that look like these." Prices: \$5.00, \$8.00, \$10.00 and \$25.00. Note: Our pullets, same hatching, began laying when three months and two days old. Hatched May 5, first eggs August 7. Who can beat that for a laying strain? Its in the blood! Do you want that blood?

Buy a cockerel. Do you want a winner for winter shows? Buy a \$25 bird. State how much you want to pay and we will describe the bird. They are healthy, vigorous, energetic and stylish; and have been growing every minute since they left the shells.

Eggs for hatching in season from the same pens we shall use. Price: \$3.00, \$5.00 and \$10.00 per 15. Clear eggs replaced until you get 15 that are fertile, when returned express prepaid. Get your order in early, for the number we shall be able to spare will be very limited. Just as well hatch good ones while you are at it.

Two Great Bargains—We have decided to keep but one breed—White Leghorns. Hence, will sell 15 Barred Rock pullets, March hatched and 20 S. C. Buff Orpington pullets, April hatched, with two Buff Orpington cockerels (unrelated) and 75 young Buff Orpingtons, two and three months. The Rocks are very large and barred to the skin. The Orpingtons are Byers and Green Strains. Many of them out of \$1.00 eggs and first pen Chicago. Some very fine, but all have just a suggestion of pepper in the tails, which can be easily bred out. Prices, Rocks \$2.00 to \$5.00 each. By taking all the Orpingtons, large ones, \$2.00 to \$5.00 each and the young ones, 50 cts. each.

Great opportunity for Orpington foundation. If you are not willing to pay these prices, don't write. They are too good for the money.

Bob Leghorn at 4 months. Watch him grow.

MORE POINTED CRITICISMS.

Now I am going to defend the famous Reds; there's no doubt about it. Dr. Ballard, of Chenoa, Ill., doesn't see the Reds as I see them. He knew when he wrote that article in the July number he would bring down the wrath of us Red breeders. No doubt he thinks the Cochins are it, and it is all right. He can have all the interest I ever had in them and welcome to it. I know the breeders of the Reds have had opposition on every side, but we are coming out with our heads up and with flying colors.

Now, if anyone knows anything about hatching chicks under hens, knows that a feather-footed fowl, be it Brahma, Langshan or Cochins, know that they will crush their little chicks in the nest while hatching.

The Reds are the very best of mothers, and the best hen to set I have ever owned, and they are great foragers, and are absolutely hardy, and are easy to raise. They grow very fast, making good broilers at an early age.

And about the setting act: If you want to you can make an incubator out of them. You can have them hatch the second brood without ever stopping, and you need not be afraid of them leaving their nest.

I have never had the fortune—or misfortune—of having a hen to lay in two weeks after setting three weeks. Dr. Ballard did not inform us as to length of time that Cochin hen set, if at all. I know that anyone can let a hen set three or four days and then give her a flock of little chicks, and in a short time she will be laying; but to set three weeks and then lay in two weeks sounds fishy. And he also says that big layers and big setters do not exist in the same variety. They may not in the Cochins, but it exists in the Reds, for I am an eye witness to the fact and can give you an egg record that would open some breeders' eyes from twelve Red hens if it is needed.

Now I am not very old, but I have been in this hen business for 10, these many years, and I have had my eyes open on some things.

I have raised most all of the varieties of chicks—and Cochins included, too—and I find that the Reds are the only chickens for me.

Now, I want to ask one question of Dr. Ballard: If the Cochin is the only chicken, why do you want to know which is the best general all purpose fowl, Plymouth Rocks, Wyandottes, Rhode Island Reds or Orpingtons?

Well, the Rhode Island Reds, of course.
Mrs. Fred C. Hughes.

The quality of stock on exhibition at the State Fairs this season is reported to be not up to the standard of former years. This is caused, no doubt, by weather conditions last spring.

SOMERSET, PA.

The Somerset Poultry & Pet Stock Association will hold its fourth annual show Nov. 22-25, 1910. Charles Mc-Clave, judge; A. D. Shaffer, secretary.

MENDOTA, ILL.

More Winners are Assured, Better Layers are Raised by Careful Attention in October and November than at any other time. That is because a little neglect now means exposure to cold rains, changeable weather, uncleanly coops, and the consequent trouble and loss that arise from such oversight. Sometimes they cannot be avoided, but generally they can. In any case they can be attended to in time.

Fall complaints are **Chicken Pox** (the breaking out of warty scabs on the head and face); **Colds**—rendered noticeable by watery eyes and nostrils or sneezing; **Roup and Canker** developed from neglected colds and sores—generally in the mouth; **Scaly Leg**, and other similar attacks.

"An ounce of prevention is worth a pound of Cure"; therefore prevent these complaints by thorough cleansing of Poultry houses, the free use of **Disinfectant** and **Lice Spray**; the provision of **Sanitary Food Hoppers and Founts**—in fact get ready for **Winter** now. Get your fowls housed early, see if they are well feathered to withstand the cold weather, and all winter long you will be glad you did it. A few dollars spent now on necessary **Remedies and Preventives** will pay you times over.

MODEL POULTRY SUPPLIES are SUPERIOR

Model Laboratory Products are most effective because they are compounded personally by our **Chief Chemist** whose life time has been spent in the **Laboratory** and in **Poultry Raising**. They are of practical and **Scientific Formulas**.

Let your **Food Holders and Wall Founts** be of good, heavy, galvanized iron, well made; especially when they cost no more than the low-grade, easily-bent kind. Look over the list of goods we manufacture. Every article made in our own **Factory or Laboratory** is guaranteed.

Next season when you buy a **Hatcher** remember that the **Model Incubators and Brooders** are recommended as the best by **Leading Exhibitors, Big Farms and Experiment Stations**. The **Standard Model** is the only **Hardwood Incubator** made—the best constructed and the best appearing machine in the world.

ORPINGTONS

BUFF, BLACK AND PEARL WHITE

means all in the establishment of a reliable flock. My elaborate 30-page, 8x10 catalog is complete and will be mailed for a dime. It tells the story of

THE FAMOUS BYERS' STRAIN ORPINGTONS

C. S. BYERS - ORPINGTON SPECIALIST - HAZELRIGG, INDIANA

YOU are familiar with my phenomenal records for the past twelve years in Orpingtons if you have watched the advancement of this wonderful breed. I won more premiums on Orpingtons at the 1908 and 1909 Chicago shows than any other exhibitor. I have supplied winners for the largest shows in the States and Canada in the past and will continue to do so in the future. There's a reason.

1500 young birds growing. An enviable show record awaits the early purchasers of this show stock, which I will reserve and deliver in the pink of condition if desired. A small deposit on advance orders will be sufficient to insure reservation. The quality of my stock is superior and the same in Buffs, Blacks and Whites. READ THIS AGAIN.

I have the quality of the hour in line bred birds that can be depended upon. That

A LIVING FR

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

TO the average poultry-man that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the *Philo System*

The Philo System Is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, *The Philo System of Poultry Keeping*, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., April 19, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last December. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35¢ a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season. Yours truly, A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$960.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are, Very truly yours, (Mrs.) C. P. Goodrich.

Special Offer Send \$1.00 for one year's subscription to the *POULTRY REVIEW*, a monthly magazine devoted to progressive methods of poultry keeping, and we will include, without charge, a copy of the latest revised edition of the *Philo System Book*.

E. R. PHILO — 14 LAKE S

POULTRY

The Poultry Review

*A Monthly Magazine Devoted to Progressive Methods
of Poultry Keeping*

The POULTRY REVIEW is edited by E. W. Philo, author of the Philo System Book and founder of the Philo National Poultry Institute.

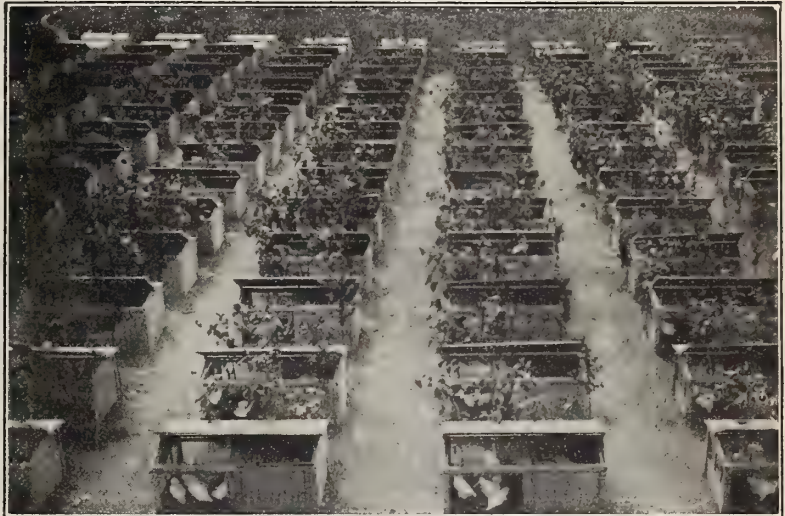

It is edited and printed on a practical poultry farm, where experiments are being conducted and reported in full in the REVIEW. New discoveries and improvements are described and illustrated, and each issue contains a number of letters of experience and suggestion from followers of the Philo System.

Rev. W. W. Cox, our associate editor, is conducting a Philo System Plant, and his "Notes from a Six Hen Plant" in each issue have created considerable interest, and contain much valuable instruction. The first year's work on this plant netted over \$500.

In addition to the best original articles it is possible to obtain, a review of the best articles from over a hundred publications is made—the "cream" of the poultry press arranged for the busy reader.

Another thing that is proving of great value to our subscribers is our Information Department. Our editors are always ready to help subscribers. When any difficult problem arises and you see no way of solving it, write us, and we will give you a prompt personal reply. It is quite probable that we have had a similar experience and can help you. Although no charge is made for this service, it is worth many times the subscription price.

For 1911 the POULTRY REVIEW guarantees the largest circulation of any paper of its kind—over 100,000 copies monthly, reaching the best class or poultrymen in every state and over thirty foreign countries.

TESTIMONIALS

E. R. Philo, Publisher Poultry Review, Elmira, N. Y.

Dear Sir:—Of all the poultry journals I take, I would fail in all rather than in the Review, as I really like your paper the best of them all. Now I do not say this to curry favor, nor for any other purpose, because I really like your paper for the pithy and sound articles. There is no dry reading in it as there is in other poultry journals, such as accounts of poultry shows that do not really concern any one but those who are written about. I do not think that any one in any part of the country cares who wins and who does not. It is all right in a local show, written and published by a local paper. Well, success and great success for the Review, and I hope to receive it regularly in the future.

Very sincerely yours,
R. G. Wetmore.

905 Douglas St., Greensboro, N. C.

A LIVING FROM POULTRY

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

The Philo System Is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, *The Philo System of Poultry Keeping*, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$500.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are,
Very truly yours,
(Mrs.) C. P. Goodrich.

Special Offer Send \$1.00 for one year's subscription to the *POULTRY REVIEW*, a monthly magazine devoted to progressive methods of poultry keeping, and we will include, without charge, a copy of the latest revised edition of the Philo System Book.

TO the average poultryman that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the

Philo System

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., Apr. 19, 1909

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could, the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last November. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 95c a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season. Yours truly,
A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

The Poultry Review

A Monthly Magazine Devoted to Progressive Methods of Poultry Keeping

The *POULTRY REVIEW* is edited by E. W. Philo, author of the Philo System Book and founder of the Philo National Poultry Institute.

It is edited and printed on a practical poultry farm, where experiments are being conducted and reported in full in the *REVIEW*. New discoveries and improvements are described and illustrated, and each issue contains a number of letters of experience and suggestion from followers of the Philo System.

Rev. W. W. Cox, our associate editor, is conducting a Philo System Plant, and his "Notes from a Six Hen Plant" in each issue have created considerable interest, and contain much valuable instruction. The first year's work on this plant netted over \$500.

In addition to the best original articles it is possible to obtain, a review of the best articles from over a hundred publications is made—the "cream" of the poultry press arranged for the busy reader.

Another thing that is proving of great value to our subscribers is our Information Department. Our editors are always ready to help subscribers. When any difficult problem arises and you see no way of solving it, write us, and we will give you a prompt personal reply. It is quite probable that we have had a similar experience and can help you. Although no charge is made for this service, it is worth many times the subscription price.

For 1911 the *POULTRY REVIEW* guarantees the largest circulation of any paper of its kind—over 100,000 copies monthly, reaching the best class of poultrymen in every state and over thirty foreign countries.

TESTIMONIALS

Box 214, Medicine Hat, Alta, Can., April 16, 1910.

E. R. Philo, Publisher *Poultry Review*, Elmira, N. Y.

Dear Sir:—Of all the poultry journals I take, I would fail in all rather than in the *Review*, as I really like your paper the best of them all. Now I do not say this to curry favor, nor for any other purpose, because I really like your paper for the pithy and sound articles. There is no dry reading in it as there is in other poultry journals, such as accounts of poultry shows that do not really concern any one but those who are written about. I do not think that any one in any part of the country cares who wins and who does not. It is all right in a local show, written and published by a local paper. Well, success and great success for the *Review*, and I hope to receive it regularly in the future.

Very sincerely yours,
R. G. Wetmore.

E. R. PHILO

14 LAKE STREET

ELMIRA, NEW YORK

MR. ORR REPLIES TO MR. FENTON.

I READ with interest Mr. Fenton's article, "You Deserters." It was a good article, and I enjoyed it. One part of his letter I wish to write about and ask his opinion. He says "some are reported sore because no specials were awarded at the New York show," or words to that effect. That means me. I have repeatedly said I was not sore, but will have to take that back. I am d—n sore when I view the thing as I now know it for the past three weeks. Mr. Keating has been advertising a silver cup won at the late New York show. I could find no place

prizes? Why didn't the club give me a cup on my two firsts? Sore, of course I'm sore; and Mr. Fenton would be sore at such star-chamber tactics. Even then it would not have been so bad, but the secretary did not inform the rest of us poor mortals who have been plugging away paying our dues. It was the first time I ever won a first. Maybe I'll never have another. Mr. Keating says that some of the firsts were given to the "owners, and not to the quality of the birds." I don't know whether he means Cleveland, Anduss, Tannebaum Farms or Orr. If the old club is going in the business of awarding cups to soothe the ruffled brain of some dis-

family ties, either. Many a brother has fought a brother, even unto death. There are exceptions, and I for one resent the phrase "You Deserters." And did I feel that I was one, I would rather desert a funeral procession and join a circus. I would rather desert than fall asleep at the switch.

Say, Fenton, no one ever knew the old club was alive until I started the ball rolling. Even that staid old Quaker, Mr. Arnold, in the Southern Poultry Review, calls it a few pet names. Mr. Fenton, you are the first man to come out in defense of the old club outside of the secretary, and he had to. I have the names of some of

WHITE PLYMOUTH ROCK.

Greystone Champion and badges he has won and helped to win at Madison Square Garden, New York. Bred and owned by Greystone Poultry Farm, Yonkers, N. Y.

where this cup had been advertised, and wrote Mr. Keating by what authority was he advertising the cup. He informs me that Mr. Charles D. Cleveland made the motion that he (Keating) be awarded the cup for winning the most points at the New York show that was held two weeks before the meeting took place. That is all right for the club to do as it wishes, I presume, but I don't think it fair. I am glad he has the cup, but why is he more entitled to a cup when he did not win a first. Why didn't the club offer Mr. Cleveland a cup on his pen, as many would value first pen above all other

gruntled member two weeks after a show is held, then God help the club. I am not a deserter, Mr. Fenton, nor is anyone else. I have an honorable discharge, and others can show a paid-up enlistment paper to date, while others never joined the ranks. Speaking about secret societies, I would say to Mr. Fenton that many of today have broken away from the parent body and started in for themselves. Those kind of arguments won't hold water. I know that blood is thicker than water, but no one can always trot along with a relative or a club unless things are right, and we don't always stick to

the officers of the old club who have joined the new one. Mr. Cleveland, Mr. Parrish, Mr. Campbell and two of the above have offered a \$5 special each for the Chicago show. They are down, and I want to ask are they "deserters"? Maybe they have forgotten they gave me the authority to put their names on, but they did. Get a hunch on the old club, Fenton. Now, you know that I have been after you to join the new club and you have refused so far. Well, then, wake your fellow breeders up. Some of your older members were hot for the new club was going to do a whole lot, but they could

THE HALL 1911

CATALOG IS READY—NOW!

¶ It is more than an ordinary kind of catalog. It tells of **more** than ordinarily good equipment.

¶ It is written **well** and printed elegantly for poultrymen who want greater **certainty** of results at a **lessened** cost of production.

¶ It honestly tells of the **Hall Mammoth Incubator, Hall Brooder System, Self-Regulating Furnaces, and Colony Brooder**—and illustrates some of the plants on which the Hall Equipment is proving satisfactory beyond competitive comparison.

The New Hall Catalog

BREEDERS OF WHITE PLYMOUTH ROCKS **R. W. LONG POULTRY FARM** 122 Acres devoted to Poultry
THE HALL MAMMOTH INCUBATOR CO., Utica, N. Y. Clint, Texas, 8-12-10.

Gentlemen: We gave the equipment consisting of a Hall Mammoth 6,000 egg incubator and two No. 18 Hall Brooder House heaters, 32 Hovers, which you installed for us last April, a very severe test under the sudden weather changes that prevail here in the Spring, and found that we maintained a uniform heat at all times in the hovers, perfectly controlled, with a minimum of care or labor. The Incubator is so far ahead of lamp-heated machines in the cost of fuel and labor and the convenience of operating that I lack an adjective that will fully express what I desire to state. And to show that we do believe in the Hall equipment we are enlarging our Brooder house and desire you to ship at once by freight:

Thirty Hall Hovers, Complete, Hover Tops, Base Castings, and Galv. Thimbles or Drums.
 Also 1 Lid for No. 18 Heater, that the Damper rod passes through.

Trusting to be favored with a prompt shipment, we are, with best wishes.

Yours most truly, **R. W. LONG POULTRY FARM,**

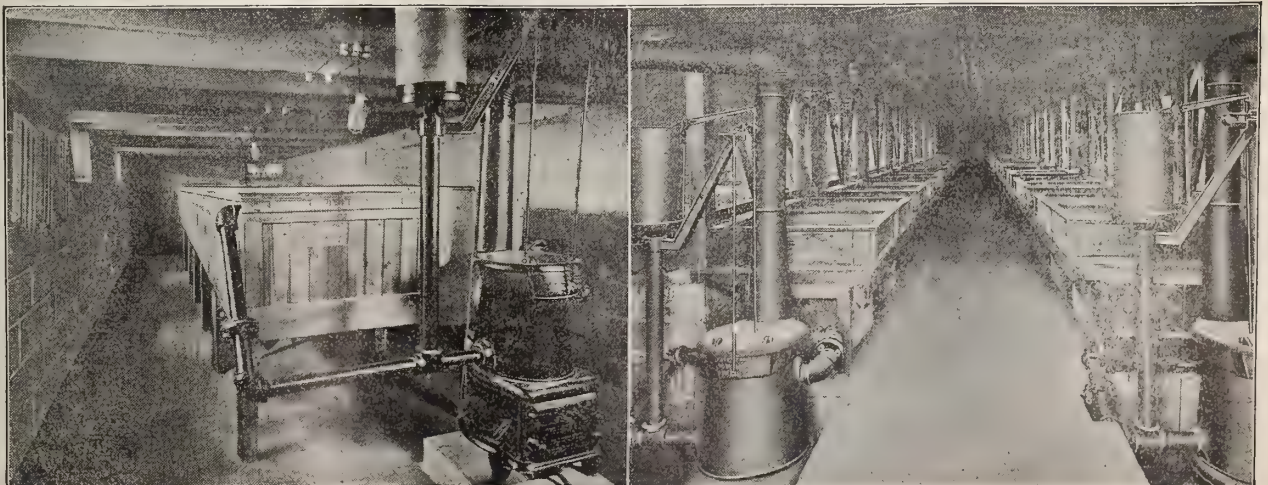

(Signed) Walter B. Franklin, Mgr.

ALSO—a new "Result" Booklet is from the press. It contains 31 letters of **recommendation**—an amazing record of **satisfaction**. We will gladly send it and the **Catalog** to any address upon request.

UTICA, NEW YORK

Buckeye 50-egg Incubators, \$6 to \$8

The Sensation of the Incubator World

On the Market 21 Years. Over 150,00 in Successful Operation

Never before has there been such an incubator success. Returns from all over the country show that wherever Buckeye 50-egg Incubators were sold the sales were greater than those of all other makes combined. Four dealers sold over ten thousand in six months and wanted more. We couldn't make them fast enough. We could have doubled our sales if we had had the capacity to turn them out.

This season we will build 100,000 Buckeye 50-egg Incubators.

We have now the factory equipment to turn out 100,000 Buckeyes and we will work it to its full capacity this season. And we will need every one we make.

There are mighty good reasons why the Buckeye 50-egg Incubator is such a success and these reasons are found right in the machine and in the results it is producing in all parts of the country. Here are some of the Buckeye features that make it appeal so strongly to buyers:

BUCKEYE 50-EGG

Convenient Size

It is no trouble to get fifty fresh fertile eggs together—but did you ever try to fill a 100 or 200 egg incubator with eggs of the same kind? If you have you'll recognize why so many people appreciate the Buckeye—the only small incubator that is as perfect in operation as the large, high-priced ones.

Ease of Operation

The Buckeye is so compact that everything is under your eye—you can see how things are coming on at a glance. It is less trouble than one setting hen, though it hatches more chicks than four hens. It is self-regulating and automatic—so simple it practically runs itself. No experience is required to get satisfactory, profitable results.

No Worries

In running a big incubator there are two great big worries—Ventilation and Moisture Supply. There is no such worry with a Buckeye 50-egg In-

cubator. It ventilates itself automatically—and the moisture supply is just as carefully regulated as the heat supply. All of these points are taken care of by the machine itself.

Best for 21 Years

The Buckeye 50-egg Incubator has been on the market 21 years, and during that time has made a record as the best machine of its size in the world. They are built of the very best material that can be secured and contain every desirable device found in any machine at any price. The workmanship is of the very highest class. Nothing is slighted that will help make the Buckeye perfect.

Attractive in Price

There are thousands of people who want incubators—who want to get some of the big profits that are in the poultry business—but they don't see their way clear to pay the big prices that most manufacturers demand. The Buckeye is just the Incubator these people want at the reasonable price they are willing to pay—\$6 to \$8.

High class seed houses are selling thousands of these Buckeye 50-egg Incubators over their counters and through their catalogues. They are the kind that most people want. There are one hundred people who will buy this compact, easily run, successful, guaranteed machine for every one who will buy a large one. There are thousands of people who are just waiting to be told they can get such a machine—and we want a dealer in every district to handle them. Those who are handling large machines and other makes can add the Buckeye 50-egg Incubator to their line and make a good big profit entirely independent of their regular trade.

The Buckeye Incubator Co.
501 W. Euclid Avenue
Springfield, Ohio

Every Buckeye 50-egg Incubator is Sold with this Absolute Money-Back Guarantee

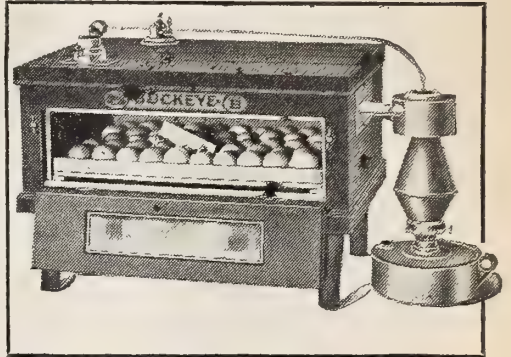

A Healthy Chick From Every Fertile Egg or We'll Return Your Money

That's our guarantee to every buyer of a Buckeye 50-egg Incubator. It will do the work—hatch every hatchable egg—or you can have your money back. That is the safest guarantee that could be made. Safe for you, because if the Buckeye Incubator doesn't live up to every claim we make for it you don't lose a cent. Safe for us, because we know what the Buckeye can do—we know it will never fail to produce a good, healthy chick for every fertile egg you put into it. Thousands are doing this every year and making big profits for their owners.

We know that every one of the 100,000 Buckeye 50-egg Incubators which we will make and sell this season will do its work and do it right. We will not be asked to take one of them back.

We are not making any other size incubator—just the 50-egg machine.

The Buckeye sells for from \$6 to \$8—a very low price. But it is not a cheap machine. The very best material and the finest workmanship go into the Buckeye—it is equipped

with every necessary device that is found in the highest priced machines. Here are a few points of the Buckeye:

INCUBATOR

Hot Water Hatcher

The Buckeye is a hot water hatcher—the system which time and experience have proven to be the best.

Self-Regulating

The regulating device on a Buckeye Incubator will regulate the temperature to a fraction of a degree, and once regulated, it stays regulated for the entire hatch.

Self-Ventilating

The ventilating system of the Buckeye is absolutely automatic. Everything adjusted before it leaves the factory.

Requires No Moisture

The Buckeye system requires no artificial moisture. The necessary moisture is supplied automatically in nature's own way.

Equipment

Every Buckeye Incubator leaves the factory complete—ready to use. With each incubator is included a complete lamp and chimney, a thermometer, a thermometer holder, two egg trays and an egg tester. No extras to buy.

Our Guarantee

We guarantee the Buckeye to hatch every hatchable egg you put into it. If it doesn't you can have your money back. We know what the Buckeye can do and is doing—so we are not afraid to make this strongest kind of guarantee. The buyer of a Buckeye cannot lose.

We believe that the Buckeye 50-egg Incubator is the one that will give you the greatest poultry success. It is just the equipment that ninety-nine out of a hundred people want. We want you to look at one of our machines. Ask your dealer to show it to you. Nearly all the high class poultry supply and seed houses have the Buckeye in stock.

If your dealer doesn't handle it, write to us direct and we will send you our fully illustrated catalogue and our two books, "Making Money the Buckeye Way," and "51 Chicks from 50 Eggs."

We know these books will interest you—write for them to-day.

The Buckeye Incubator Co.
501 W. Euclid Avenue
Springfield, Ohio

not stand the pace, so I believe they must have gone back to their easy club and fallen asleep again. Well, the word "Deserter" does not fit. Guess again.
D. Lincoln Orr.

Orrs Mills, N. Y.

POULTRY ON THE FARM.

NO one feature that naturally belongs to the agricultural pursuits of our country has so thoroughly benefited the farm interests as poultry, if properly cared for. At the same time, nothing is more discouraging and unsatisfactory than poultry

and putting so much money in that hog-house, cattle barn, automobile garage, when nine times out of ten the hen is the one that pays the grocery bill, buys Johnnie's clothes and the gasoline that makes the automobile go. Then why is poultry-raising not profitable?

For these reasons we do not hesitate to urge everyone living in the country on a farm to raise as much poultry as possible, but at the same time not to try to raise more than they can properly care for in the right way, for if they are neglected to a certain extent they will prove a loss which is discouraging.

for bugs, worms, grasshoppers, weed seed, etc., and the grain they pick up around the barn and feed yards would go to waste otherwise—you would never miss it.

The ones that range off to the fields to hunt food make the most healthy birds; they never have a setback in their growth; they never get too fat, and will shell out the eggs that prove great fertility, that hatch strong, thrifty chicks. Why? Because they have not been housed, hopper-fed, stuffed with rich mashes and confined in small runs, possibly no shade at all. That is why farm-raised chickens are profitable both to the buyer, as well as the seller.

I have been asked this question a great many times, Can exhibition stock be raised on the farm without being kept in small quarters and stuffed and fed on all these new-fangled preparations, etc., and will not their feet get dirty and their plumage get soiled? Well, I asked them if they ever got their clothes soiled, and if they ever washed their feet. I often wonder where these people think we raise our show birds. Well, I told the parties to get birds that require no washing of the plumage; as to their feet, they could wash them on the way to the showroom if necessary. The farm-raised fowls take care of their plumage in their dust bath much better than we can; that is, colored birds. They roost in the open air, so they are not crowded for room. They are hardy, seldom sick at all.

Then, again, all the grain that is used for poultry food is raised on the farm, such as wheat, corn and oats, and the chickens have a chance to pick up all the grain they want, and when night comes every fowl goes to roost with a full crop. All during the spring, summer and fall months the chickens are allowed to roost wherever they choose. By the first of December we coax them to the henhouses and begin to feed them, so they may become accustomed to their winter quarters by the time winter sets in. We raise from 500 to 700 chicks each season, with practically no expense at all until winter sets in, when we cull out all chickens that won't make first-class breeders and sell them on the market during holidays at a good profit.

Mrs. Anna M. Lembke.

Griswold, Iowa.

(To be continued.)

We want to call the special attention of our readers to the above bird Prince Manybar the second. It seems to us every Barred Rock breeder should look him over carefully. While he has that full and rather long type in all sections which is now winning in our largest national shows, it is not this that we wish to impress on our readers. But look at his barring, that narrow, evenly-spaced, distinct, snappy barring from head to fluff and tail, that truly remarkably close, yet clear and clean cut, barring all over—that we want you to notice. This, and also the richness of the color itself, that very even shade of color in all sections. Look him over; study him. We will not publish the name of the owner here, but will say that a reduced cut of this male bird may be found in one of the advertisements in this number. Whose ad is it?

neglected either by feeding or housing. It is a well-known fact that there are thousands of hens and hundreds of cows kept in the country at a financial loss on account of careless methods. Filthy houses, and improper food. There are millions of dollars made each year in raising chickens and selling eggs, and many millions more could be made if the farmer would provide better accommodations for his good wife in the poultry line, instead of being so selfish

There is no better place to raise poultry than on the farm. Why? If you keep one variety you can give them free range all over the farm, which means plenty of room to roam about, which means good health to your stock, plenty of shade during warm weather, and where the winter is not too cold and long the fowls will care for themselves two-thirds of the time, and try to not impose upon you for their food, but sail away to green pastures to hunt

Editor American Poultry Journal.

Dear Sir: An egg laid by a common hen and brought into the store here by a farmer is attracting a great deal of attention. The egg is about the size of the largest double-yolk eggs, except it is nearly round. This egg contained a white and yolk, the same as an ordinary egg, but also contained another egg about the size of a Leghorn egg. This inside egg was perfect shape and the shell was hard, but it contained only the white, with no yolk.

Would like to hear from anyone who has seen an egg like this, or from one who can give the cause.

E. P. Orrill.

Emporia, Kan.

Have you secured that one new member for American Poultry Association yet? If not, why not? It's easy. Just try and see.

Are You Going to Build?

One Great Problem Before You Is YOUR ROOF

To settle it right will save you cost of repairs and a new roof—to settle it wrong means dissatisfaction from the start.

You read many extravagant claims; you are frequently confronted with high-sounding guarantees; you have heard of countless brands of roofings, but there's only one way to tell the good from the bad. *Make them show you what they've done.*

We are ready to show you actual buildings in your neighborhood where NEPONSET PAROID Roofing has been on roofs for years. The money saved in repairs more than offsets the difference in price between BIRD NEPONSET Roofings and the cheaper kinds. Back of Bird NEPONSET Products are records of long service and 115 years of experience in one line of business. We originated the ready roofing idea and make different roofings for different classes of buildings.

NEPONSET PAROID Roofing

for your barns, poultry buildings, etc., gives service equal to that of highest grade shingles

Unlike shingles, it resists fire, doesn't blow off or deteriorate. NEPONSET PAROID has been in service for twelve years on United States Government, Railroad, Industrial and Farm Buildings, in all climates. If it meets these severe conditions, it will surely meet yours.

NEPONSET PROSLATE Roofing and Siding, for dwellings and all other buildings where artistic results are desired. It is more attractive than shingles, wears like slate, makes an attractive-looking roof, resists fire, saves money and always gives satisfaction. It may be used on exterior walls in many attractive ways.

For such poultry buildings, brooder houses, sheds and temporary buildings as require a low-cost roofing, you should use NEPONSET RED-ROPE Roofing rather than tarred felts—more satisfactory in every way—it has been the standard low-cost roofing for 25 years.

NEPONSET BLACK WATERPROOF Building Paper, under clapboards, shingles, slate, metal, etc., insulates against exterior heat, cold and dampness. It costs little and cuts the fuel bill one-third every winter.

NEPONSET FLORIAN Sound-Deadening Felt, for floors, partitions, etc., to deaden sound. Six times as efficient as ordinary deadening felt.

These are facts and not claims—write us and we will prove every statement

Consult Our Building Counsel Department

Tell us the nature of the buildings you propose to erect or repair and we'll send you the BIRD NEPONSET Book which treats your special case. There are dealers in BIRD NEPONSET PRODUCTS everywhere. If you don't know the one in your locality, write us and we'll tell you.

BLACK ORPINGTONS.

THERE has been considerable comment in the poultry press regarding the merits and characteristics of Single Comb Black Orpingtons, but not enough information has been published by well informed experienced breeders who have carefully studied the characteristics of this variety. I will give a few pointers that should be of value to amateurs and express my views as to what we should strive to attain in this variety which we value so highly and which is destined, beyond the question of a doubt, to become the most popular of any black variety of domestic fancy fowl in existence.

Let us take up the question of shape: To the amateur and to many breeders shape seems to be a secondary consideration, when in fact it makes the breed. Color makes the variety. It is a well known fact that Black Orpingtons are the original Orpingtons, and that they are, as a rule, the largest, lowest set, cobbiest variety of the Orpington family. But there is a position taken by breeders of some prominence that we are getting too cobby;

keel, short necks, medium length backs with little width, short, low, well spread tails, bodies broad and deep. That's Orpington.

So I would say that the great trouble with breeders of Black Orpingtons generally is a tendency to lose sight of shape and size in the effort to produce color. One of the first things that I learned in connection with Black Orpingtons was that shape was the first essential, the first requisite. Unless the true Orpington shape is maintained, the birds are not in their class. Tie to the distinctive shape type if you would produce standard Single Comb Black Orpingtons and win.

Now a point as to color: I have suggested in the foregoing that it is easier to produce the desired color in the small tightly feathered Rock shaped Blacks than in those approaching the ideal in shape, which is, generally speaking, true. It does not follow, however, that birds ideal in color cannot and are not produced from those approaching the ideal type. It is largely a matter of how the birds have been bred, and of whether or not they are the product of a carefully line bred strain.

tomers unnecessarily, which is largely due to the fact that such customers are unfamiliar with the characteristics of the variety. Make known your dissatisfactions, if any, in a reasonable way, and the breeder will set you right or adjust your complaint in a satisfactory manner.

In conclusion, I will say that while I have bred Buff, White and Black Orpingtons for the past ten years, I am very much taken with the Single Comb Blacks, and I anticipate for them a very bright future; that they are today the crowning products of decades of the best efforts and untiring energy of the ablest and most successful breeders of the poultry world; that they combine a thing of beauty in the fancier's eye and a valuable commercial product on a par with any variety yet placed on the market.

C. S. Byers.

Hazelrigg, Ind.

ANNOUNCEMENT.

The Michigan poultry men have organized what they are pleased to call the Michigan State Poultry Breeders' Association, composed of Michigan's foremost poultry men and fanciers, with the following officers: President, Robert S. Taylor, Port Huron; vice-president, L. F. Jones, Grand Rapids; secretary, J. A. Turner, Lansing; treasurer, Fred M. Growe, Owosso. The directors are: H. H. Coburn, Memphis; E. C. Hungeford, Concord; L. C. Recker, Albion; W. I. Smith, Detroit.

Organized to take up the work of the old state association, and to hold each year one big round-up show, where the best there is in the fancy can compete for high honors and to bring the breeders throughout the state in closer touch with each other. Detroit was selected as the place to hold the first show, and the Light Guard Armory has been secured for that purpose, the dates are January 25 to February 1, 1911.

That the organization will prove to be of great benefit to each and every individual member as well as to the poultry industry in general, is beyond question. With new life and hustle instilled into it there can be little doubt of its success, and with its 300 members scattered throughout the state it is in a position to give a show second to none.

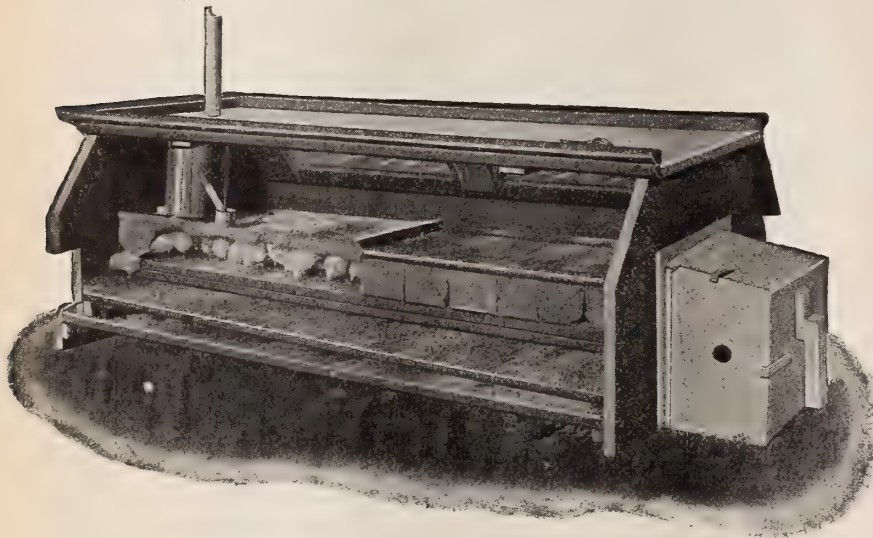

You cannot afford to miss the Detroit show, a big premium list, plenty of silver cups and other trophies and a good time. A week spent there will increase your capacity for friendship, your thinking and bolster your ideals.

TERRE HILL, PA.

A two-day institute and exhibit was held recently at Terre Hill, Pa., under the auspices of the State Department of Agriculture, and one of the principle features was the big display of poultry, nearly all the standard varieties being represented and competition for prizes very keen. As a result of this exhibit an effort is being made to form a permanent poultry association and hold an annual exhibition.

ORANGE, N. J.

The Essex Poultry, Pigeon & Pet Stock Club of Orange, N. J., will hold their third annual show during Thanksgiving week. George Eckel, secretary, East Orange, N. J.

THE CLOSE-TO-NATURE BROODER, COLFAX, IOWA.

The above is an interior view of the Close-to-Nature brooder showing the permanent floor, the adjustable floor, the non-crowding roosting floor and the warm water tank covered with cloth against which the chicks nestle. This is the brooder of the triple principle of warmth by conduction, ventilation by induction, and prevention of piling and crowding and piling by mechanical construction. It is now in its fourth year and is meeting with unusual success. It is an outdoor brooder for use in orchard and field and is eminently a cold weather brooder. It is manufactured at Colfax, Iowa.

too short on shank. In my judgment this is erroneous. I have never seen a good Black Orpington too short in shank or too cobby for practical use as a breeder, but I have seen thousands of them too long in shank, and when they are thus too high up, they are almost invariably too long and narrow in body, neck and tail, and a large per cent of such birds approach very closely the Rock type, which is not what we want. Such birds are by no means typical Orpingtons. I know of breeders, however, who are advocating this type, and I attribute this advocacy to the fact that they have found it easier to produce good color in such birds and to the fact that they have been unfortunate in not being able, financially or otherwise, to procure the genuine Orpington type. There are very few, however, who have been able to procure and maintain the true type which is, in brief, a short, heavy shank, long, low

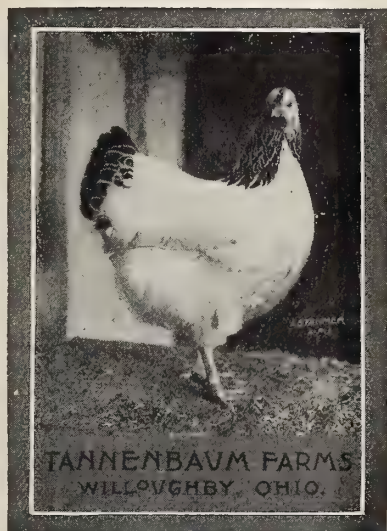

Truly ideal specimens in color and type are seldom found at the average show, as yet, in Black Orpingtons, but they will be found at the large shows, and such birds are thoroughly reliable as breeders of the very best of line breed and properly mated, which is the case with careful, painstaking breeders of experience. It follows, therefore, if we are to attain the best and most highly gratifying results, that in establishing a foundation stock the utmost care should be exercised to procure stock or eggs from experienced breeders of reliable standing that have succeeded in producing stock of the highest quality and can do it again.

To those starting in this variety, let me urge to carefully study the characteristics of the breed, for you will thereby be enabled to value your birds and determine their worth in the breeding yard or show room. Breeders are in many cases censured by their cus-

VICTOR STRAIN

Barred Rocks and Columbian Wyandottes

First Columbian Pullet, Madison Square Garden, 1910

and are fine breeding specimens that will put the black markings in your stock another year. "Show Quality" predominates among our flock of young Columbians; a large number of which were bred from our MADISON SQUARE GARDEN WINNERS and fit the Standard in type and color as near as any bird can. Elegant laced hackles and coverts, wings marked just right and solid black tails. We have the quality you are looking for. Write us today and give us a chance to SHOW YOU OUR VICTOR STRAIN. Remember our birds have won at Madison Square, Cleveland and many other shows. We are here to please you; no inferior birds shipped out at any price.

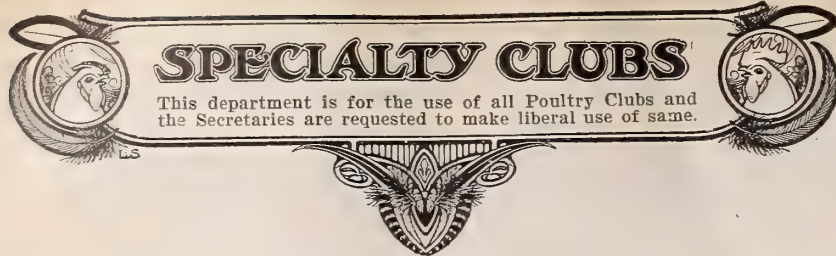

**Special Pens Mated to Supply
the Fall Egg Trade**

WE ARE OFFERING BARGAIN PRICES FOR QUICK SALES in **Barred Rocks**. We will sacrifice 200 pullets and 200 cockerels, both cockerel bred and pullet bred birds. Many of these could win most anywhere, being bred from our Cleveland winners which were the "Sensation" there in an extremely hot class this year. Our birds have the type required by the new Standard and the correct clean cut narrow barring with that bright, snappy, blue color you would like to get. We have more birds coming on later, so will name you extremely low prices for quick sales. Our pullet line is exceptionally fine. Remember our poultryman is a Barred Rock specialist. 100 hens are also included in this sale. They are both cockerel and pullet bred birds we used in our own pens and have quality to please the most fastidious.

In **Columbian Wyandottes** we will sacrifice 50 hens, 100 cockerels and 100 pullets. These hens were in our breeding pens

WILLOUGHBY : : : OHIO

MEETING OF THE NATIONAL WHITE WYANDOTTE CLUB AT ST. LOUIS.

Officers elected for the coming year were: President, M. F. Delano, Vineyard Haven, Mass.; vice president, J. C. Fishel, Hope, Ind.; secretary-treasurer, L. J. Demberger, Stewartsville, Ind.; executive committee, G. H. Rudy, Mattoon, Ill.; Earl Hemenway, South Haven, Mich.; John S. Martin, Port Dover, Canada; C. D. Cleveland, West Orange, N. J.; W. P. Smalley, Shawnee, Okla.

The club is in good condition and has nearly a thousand members. It will offer medals, cups and cash at various shows. It decided to appoint a number of official judges; a list will be published later. All breeders of White Wyandottes are urged to send in their membership at once, which is \$1.00 per year, to L. J. Demberger, secretary-treasurer, Stewartsville, Ind.

THE COLUMBIAN WYANDOTTE BREEDERS' ASSOCIATION.

The Columbian Wyandotte Breeders' Association have called their first meeting to be held during the Chicago show. They are offering \$100 in cash specials. Officers will be elected and constitution and bylaws will be drafted. Philip Koehlinger, Fort Wayne, Ind., is acting secretary and would like to hear from all breeders. He wants to make this one of the largest specialty clubs and we wish him success in his undertaking.

INTERNATIONAL R. C. B. MINORCA CLUB.

The directors of the International Rose Comb Black Minorca Club have decided to accept the offer of the Middle West Fanciers' Association and will hold the next annual meeting of the club at Chicago. The Chicago show will be held December 8-14 and every club member and breeder of Rose Comb Black Minorcas should prepare to send an exhibit to this show. The Mid-West

Association offers a \$35 silver cup for best display of R. C. B. Minorcas besides the regular amount of cash prizes amounting to \$49. Considerable amounts of other cash prizes will be offered by the individual members and the club. There should be at least 200 Rose Comb Black Minorcas at Chicago this year. There is no better show in the United States in which to advertise your stock. For premium list address Theo. Hewes, Indianapolis, Ind. Those who wish to become club members and compete for the club's specials at any shows this season should address

Lloyd G. Mishler, Sec.,
North Manchester, Ind.

AMERICAN WHITE MINORCA CLUB.

An extra and determined effort is being made to assemble the White Minorca breeders—to put new life into the American White Minorca Club—to give impetus to the breed and bring our favorites more prominently before the public and we request that all breeders of this grand variety lend their assistance and co-operation. On account of the pressure of business Mr. Sopper has turned over to me the office of secretary and I informed him that I would accept and serve until such time when we could have a meeting and elect new officers. Believing that a good club would be an advantage and do a great amount of good for White Minorcas, I earnestly solicit and shall consider it a special favor if the White Minorca breeders of this continent will let me hear from them and help put our breed up in the front rank.

C. Augustus Raschke,
Secretary pro tem.

NATIONAL COLUMBIAN WYAN- DOTTE CLUB.

The annual catalogue of the National Columbian Wyandotte Club is now being distributed to all those interested in this variety. This catalogue is well gotten up and contains a lot of information that is of value to the breeders of

this variety. Horace Porter, Ridgefield, Conn., who is president of the club, is devoting a lot of time and doing great work in the interests of the club, and it is up to the breeders to assist him. Every breeder of Columbian Wyandottes should be a member. It helps the variety. Send to the secretary, George F. Eastman, Granby, Mass., for a copy of the catalogue and membership blank. Write today.

H. P. SCHWAB COLUMBIAN ROCK CLUB JUDGE.

H. P. Schwab, of Irondequoit, N. Y., the noted judge and specialty breeder of Plymouth Rocks and member of the American Columbian Plymouth Rock Club, has been duly endorsed by the officers of that organization as their official judge. Mr. Schwab is not only an expert authority but much interested in this variety, and exhibitors and secretaries of poultry associations should make it a point to secure his services whenever Columbian Rocks are to be exhibited, as it will mean increased entries, good judging and fair treatment for all.

E. B. Kaple, M. D., Secretary.
Elbridge, N. Y.

S. C. RED BREEDERS, ATTENTION!

The Illinois state branch of the National S. C. R. I. Red Club will hold its school of instruction on Reds for judges and breeders at 10 a. m., October 5; also annual meeting and election of officers at 2 p. m., October 4, at Springfield, during the State Fair. The meetings will be held in a large tent near the poultry hall. The club will offer special ribbons or badges to members for the best cock, cockerel, hen, pullet and pen.

By all means join the club. Attend these meetings, and compete for the prizes offered.

J. S. Walker, Secretary.
Palestine, Ill.

SILVER WYANDOTTE CLUB ELEC- TION.

The recent election resulted in the choice of the following officers for the Silver Wyandotte Club of America: President, Henry Steinmesch, St. Louis, Mo.; vice-president, John C. Jodrey, Danvers, Mass.; secretary-treasurer, Waldo H. Dunn, Wooster, Ohio. Executive committee: Jacob Miller, Wathena, Kan.; Gabriel Cannon, Spartanburg, S. C.; Chas. J. Brown, St. Johns, Quebec, Can. The club now has a membership of about 200, and is doing a great work.

Day-old Chicks=Custom Hatching

TWO PRACTICAL BRANCHES OF MODERN PROGRESSIVE POULTRY CULTURE THAT ARE INCREASING BY LEAPS AND BOUNDS

TEN YEARS AGO the sale of Day-old Chicks had scarcely been heard of in America. FIVE YEARS AGO "Custom Hatching" was an industry of the future. AT PRESENT the sale of Day-old Chicks each season MOUNTS UP INTO MILLIONS in the United States and Custom Hatching is already a close second in popularity and practical results.

A VERY LARGE MAJORITY of the poultrymen who are selling Day-old Chicks and doing Custom Hatching are using small-sized Incubators of the usual type, but an increasing number—for example, those who own land and can afford the initial investment—are installing what are called "Mammoth Incubators," like the one illustrated herewith—big, 400-egg compartment, hot-water machines heated with coal and having total capacities ranging from 4,000 to 60,000 hen eggs.

CYPHERS MAMMOTH INCUBATORS, built on the same correct lines that have made our small-sized incubators the **STANDARD HATCHERS OF THE WORLD**, are doing *Excellent Work* in the hands of Cyphers Company Customers, as the two sample reports printed below clearly prove.

WORK DOWN EAST.

Fredonia, N. Y., August 6, 1910.

Cyphers Incubator Co., Buffalo, N. Y.

We have just placed an order with you for an additional 8,000-egg capacity Cyphers Mammoth Incubator to be operated in connection with our 6,000-egg machine that you installed for us last spring.

The labor of running a 6,000-egg Cyphers Mammoth is practically nothing. Fifteen minutes per day will take care of the heater, turn the eggs and see that the machine is running in good shape. The regulators have worked to perfection and there is no moisture problem to bother with in the operation of this machine.

Five years ago we started in the poultry business with one small-sized Standard Cyphers Incubator and two brooders. Next season (1910-1911) we expect to ship over 50,000 baby chicks. We feel that our rapid growth and success in the poultry business has been largely due to the Cyphers Company equipment that we have used from the start.

BABCOCK POULTRY FARM,

Frederick W. Babcock, Prop.

White Plymouth Rock and S. C. White Leghorn Baby Chicks.
Also Custom Hatching. Capacity, 75,000 Chicks Annually.

WORK OUT WEST.

Kansas City, Mo., September 3, 1910.

Cyphers Incubator Co., Buffalo, N. Y.

The 10,000-egg Mammoth Cyphers Incubator installed for us in January, 1910, has been a labor-saver, giving us large hatches of strong, healthy chicks that live and thrive. We are using a natural gas burner in your regular heater, and our fuel bill has never been more than \$4.00 per month and has run at times less than \$3.00. Much less room is required for this double-decked Cyphers Mammoth than is required for lamp-heated or other single-deck machines of equal capacity.

We have disposed of 25 lamp-heated machines running in the same cellar, and contemplate putting in one or more Mammoth machines of same capacity to take care of our constantly increasing demand. We believe that our income from custom hatching will alone pay for the machine the first season. For hatching on a large scale give us the Mammoth every time.

Yours truly,

P. C. FISH, Proprietor.

Baby Chicks and Custom Hatching.

REGALS

Again Supreme at the New York State Fair

SYRACUSE, NEW YORK
SEPT. 12-17, 1910

Martin's White Wyandottes again sweep all before them. In a class of 240 birds, the largest class in the show, they won under Judge Drenstedt. Cocks, first, second and fourth; hens, first, third and fourth; cockerels, first, third and fourth; pullets, first, second, third and fifth; pens (old), first, third, fourth and fifth; pens (young), second and fifth. State fair commission special of \$25 cash for best display. This was one of the best classes of White Wyandottes ever shown in the east and never did the Regals more decisively show their superiority. My exhibit of 60 snow-white birds, all showing that splendid Regal type, were the sensation of the show. My five years' record at this show is 26 blue ribbons out of a possible thirty. This will be my only exhibit during the season of 1910-1911 and my customers will have an opportunity of getting some of my choicest birds for the fall and winter shows. Send for catalogue and price list.

John S. Martin, Box 51, Port Dover, Canada

All who are interested are requested to write the secretary for club publications, information, etc. Waldo H. Dunn, Wooster, Ohio. Secretary.

COLUMBIAN WYANDOTTE BREEDERS' ASSOCIATION.

Would like to state through your paper that the first meeting of the Columbian Wyandotte Breeders' Association will be held in Chicago during the coming show there. Specials have been offered, and things look fine. Have some hustling members. Have made application through Secretary Campbell for membership in the American Poultry Association. Some may think this new club was started as a joke, but I never was more in earnest in my life. Send in your name at once to the writer.

D. Lincoln Orr.

Orrs Mills, N. Y.

NOTICE TO HOUDAN BREEDERS.

The American Houdan Club offers the following specials at the Missouri State show, Kansas City, Nov. 29 to Dec. 3, to be competed for by members of the club. Silver cup for best pen, given by Mr. John T. Heizer, president of the American Houdan Club. Five dollars cash for best display. Ribbons for each; best colored male, female, and best shaped male, female. Judge Rigg will place the awards, so bring your birds and find out who is who. Send one dollar for a year's dues to the undersigned.

A. H. Weisberg,
Mo. Vice President American Houdan Club, Nevada, Mo.

NEW CATALOGUE.

The 1910 catalogue of the American Cornish Club is hot from the press. It is full of interesting articles and good cuts of all varieties of the Grand Cornish Fowl. This catalogue will be given free to all applicants enclosing \$1.00 membership fee, and it will be sent free to all members in good standing. The price to interested fanciers is 10c in stamps.

H. C. Hayes, Sec., Eureka, Ills.

NATIONAL COLUMBIAN WYANDOTTE CLUB.

The National Columbian Wyandotte Club will hold its annual meeting in Chicago during the December show. The club offers its members \$50.00 in cash prizes on single entries. The same amount on pens, also the \$25.00 "Buckland Cup" for best shaped Columbian Wyandotte.

The National Single Comb Rhode Island Red Club will hold its next annual meeting and election of officers in connection with the Missouri State Show at Kansas City, November 28, 1910, at 7:30 p. m. The officers to be elected are a president, three vice-presidents, a secretary-treasurer, seven executive committee members, one delegate to A. P. A. convention. The club will also amend its by-laws and transact such other business as may properly come up before the meeting. Also to make arrangements for a large class of Single Comb Reds at the coming National Fair—location soon to be announced. In connection with this meeting the club offers \$75 in cash special prizes to club members only.

Cedar Rapids, Ia. J. H. Valliere.

"ATTRACTIONS FOR THE KANSAS CITY SHOW."

No show perhaps ever held in the world will offer as many attractions as the exhibitors, breeders and visitors will find when they visit the Missouri State Show at Kansas City Nov. 29 to Dec. 3. There will be an exhibit of 150 birds from Belgium and perhaps birds from other foreign countries. The largest premiums paid at any show in America will be offered. More people attend the poultry show in Kansas City than any other city in this country, which makes it a great sales show.

The show will be cooped with Empire coops and it will be judged by some of the most prominent judges of the United States and Canada. Gov. Herbert S. Hadley will be present to deliver an address. S. T. Campbell, secretary of the American Poultry Association, and Franklane L. Sewell of Niles, Mich., the world's greatest poultry artist, will both be present to deliver addresses. The southwest branch of the American Poultry Association will hold a big institute and rally.

The show room is one of the largest in this country and it will be beautifully decorated from bottom to top. A great banquet will be held at which there will be addresses and afterdinner talks by the leading judges and poultrymen of this country. We will have the state, district or national meetings of each of the following clubs: The National S. C. Rhode Island Red Club of America, the National S. C. White Orpington Club, the National Buff Orpington Club, the Western Wyandotte Club of America, the American Buff Plymouth Rock Club, National Pekin Duck Club, the Kansas City Pigeon Club, National White Leghorn Club, the National Black Orpington Club, the American Cornish Club, Columbian Wyandotte Club, Buff Leghorn Club, National R. C. Rhode Island Red Club, Black Langshan Club and several of the other large specialty clubs will either hold their meetings with us or offer their specials at this show. If you do not send a few birds to this great show, you will always regret the fact that your flock was not represented at the best show ever held in the world. Write for a catalogue to T. E. Quisenberry, Columbia, Mo.

WASHINGTON, N. J.

The Washington Poultry, Pigeon & Pet Stock Association organized for the coming season by electing the following officers: President, Charles Nixon; vice president, Joseph B. Cornish; treasurer, A. S. Harle; secretary and superintendent, William H. Cyphers; assistant superintendent, W. L. R. Gardner; assistant secretary, A. L. Russell.

The association will hold their annual show at Washington, N. J., the second week of Jan. 10 to 14. Being a member of the American Poultry Association and holding the show under the rules of that organization will guarantee a square deal for everybody. A strong executive committee has been appointed to take charge of the show, consisting of F. L. Hinds, George W. Dilts, A. L. Russell, H. W. Ackerson, F. H. Castner, Joseph B. Cornish, A. S. Harle, William H. Cyphers, Charles Nixon, and they will have the support

of a large membership, many of them old-timers in the show business, as Washington held their first show in 1897. The Skalla auditorium has been engaged for this exhibition. This is the largest and best lighted hall in this section of the state and will insure plenty of room for the large number of birds which will undoubtedly be entered. Three first-class judges will be engaged to pass on the merits of the birds and the members expect to have a large number of cups and specials. For additional information apply to William H. Cyphers, secretary, Washington, N. J.

ST. LOUIS, MO.

The St. Louis Poultry, Pigeon & Pet Stock Association, Inc., will hold their third annual show, Thanksgiving week, Nov. 21 to 26, 1910, at Peoples auditorium, St. Louis.

This association is but three years old, yet it is one of the best organized in the country.

All its officers are broad-gauged and true fanciers and will see to it that every one will be given a square deal and you have our guarantee that the best birds will win.

Many associations will raise their entrance fee this year to \$1.00, but we have decided that 50 cents entrance fee fully covers the expense of cooage, as we own our own coops.

We do not owe a dollar to any man—every premium will be paid as soon as awarded.

We are planning to make this the best and most satisfactory show ever held in St. Louis.

In addition to the regular cash prizes there will be many specials and all the specialty clubs will offer prizes.

Judges Thomas Riggs, T. M. Cambell, John Hettich and George Ewald have been engaged.

M. M. Anderson, Asst. Sec'y.

FORT WAYNE, IND.

The annual poultry show of Fort Wayne, Ind., will take place December 15-20, 1910. This show will be held in a large, well-lighted hall in the heart of the city. The members of the association are this year filled with enthusiasm and ginger and are making things hum in order to get the best show they ever held here. Hundreds of dollars' worth of specials have already been secured, besides the liberal cash premiums which will be paid to the winners before the show is over.

The winning birds will be picked by comparison, while all birds will be scored. Everything will be in first-class shape. For further information address the secretary, W. H. Didier, Ft. Wayne, Ind.

PATERSON, N. J.

The Paterson (N. J.) Poultry, Pigeon & Pet Stock Association have engaged the Fifth Regiment Armory which contains over 48,000 square feet of floor space in which to hold their sixth annual show Nov. 30 to Dec. 3, 1910. Exhibitors always have had the fairest treatment at this show and have shown their appreciation by coming back each year. J. H. Drevenstadt, F. N. Davey, William Stanton, Charles Nixon and Annesloy M. Anderson, judges; L. Thonnerieux, Secretary, 52 Peel st.

TOPEKA, KAN.

Those in charge of the Topeka show, to be held the first week in January, 1911, believe that no other show has had more definite promises of entries several months in advance. Already the secretary has received in black and white promises of entries sufficient to make a good poultry show.

A poultry institute will be held during show week, which promises to surpass in interest anything of the kind attempted so far in the West. The lectures will be

given by the judges in attendance and others. The judges will also give demonstrations in judging birds.

Topeka is believed to be the first city so far west which has put on a show with a comparison system of judging in force and an entry fee of \$1.

Most of the capital stock of the Topeka Show Association has already been subscribed.

Inquiries for premium lists and other information may be secured by addressing the secretary, E. W. Rankin, Topeka, Kan.

Trinidad Lake Asphalt

is the natural proven waterproofer. Its use in streets and roofs for over thirty years has shown it to be a mighty storm-defier and weather-resister.

Genasco Ready Roofing

is made of Trinidad Lake asphalt. It prevents cracks, breaks, and leaks. You can't afford to run risks. You want the roofing that proves it is proof.

The Kant-leak Kleet insures water-tight seams without cement. Ask for it with Genasco.

Ask your dealer for Genasco. Mineral or smooth surface. Don't go by the looks of roofing; insist on the hemisphere trade-mark. A written guarantee—if you want it. Write for samples and the Good Roof Guide Book.

THE BARBER ASPHALT PAVING COMPANY

Largest producers of asphalt, and largest manufacturers of ready roofing in the world.

PHILADELPHIA

New York San Francisco Chicago

Cross-section, Genasco Smooth-surface Ready Roofing

White Wyandottes

THE KIND YOU WANT—Young stock up to standard weight and pullets laying since July. Also plenty of old stock. Hens \$1 to \$5 each. My stock satisfies the customer. Write now for what you want.

H. L. Logue - Box 68 - Neponset, Illinois

WOODS' S. C. BROWN LEGHORNS

Are the kind that WINS, LAYS and PAYS. More prizes at Missouri State Show, St. Louis, Dec. 1909, than any competitor, including 1st, 2d and 5th cockerel. 5250 birds on exhibition. Show birds and breeders for sale. The finest lot of cockerels I ever raised. : : : Tom H. Woods, Route 4, Fayette, Missouri

H. H. FIKE'S FAMOUS ... White Wyandottes

Have won more first prizes at leading shows than any other strain. Bred-in-line 15 years. My birds this year better than ever. Can furnish show or breeding stock in any quantity. 2000 birds for sale.

H. H. Fike, : Phone 1354 : Box 336, Libertyville, Ill.

R.C. Reds

We have the grandest bunch of early hatched cockerels bred from our Cleveland, Buffalo and Youngstown winners we ever raised. Exhibition males, \$10 up. Breeding cockerels, \$5 up. We have the shape, size and deep red color (see cut) and will guarantee them. A few breeding pullets left. Write for description.

Simmons & Crittenden : Geneva, Ohio

YOUNGSTOWN FANCIERS CLUB.

At a recent meeting of the Mahoning Poultry Association it was decided to disband said association and reorganize on more substantial lines. The result was the forming of the "Youngstown Fanciers' Club," with a charter list of fifty members. Officers were elected, and Dec. 12 to 17, 1910, were the dates selected for our next annual show. The show will be cooped and the judging, by comparison, will be looked after by such well known judges as Mr. J. E. Gault and J. Harry Wolsieffer.

We extend a cordial invitation to all fanciers to be with us on the above dates and help us keep up our reputation of having "The Quality Show of Ohio." Premium lists and all other information desired may be obtained by writing John L. Siminton, No. 42 South Pearl Street, Youngstown, Ohio.

THE BIG BOSTON SHOW.

"Bet your life I shall show as long as I am raising chickens," was the remark of a New York State breeder who made his first entry and visit to the big Boston show last January. What impressed this breeder, no doubt, was the immense size of the floor space of the Mechanics Building where the show is

held, aggregating nearly five acres and all utilized by the big show. Another thing that surprised the new visitor was the crowds that attended and the "something doing all the time" air about the show. The big building has again been leased for the 1911 show January 10 to 14, and the walls will bulge out if all enter who already have signified their intention to do so. No double tiering, no matter what happens to the walls.

W. B. ATHERTON,
Secretary.

WOMELSDORF, PA.

The Womelsdorf, Pa., Poultry, Pigeon and Pet Stock Association will hold its second annual show, November 30, December 1, 2 and 3, 1910. F. H. Davy, of Yonkers, N. Y., a poultryman of reputation, has been engaged to judge the show.

The officers of the association are: M. S. Weidman, president; F. D. Arnold, vice-president; Chas. D. Leinbach, secretary, Ryeland, Pa.; W. A. Ruth, treasurer; J. D. Lynch, superintendent.

The line-up of officers is the same as last year, which made Womelsdorf's first show, in December, 1909, a pronounced success, and the many kind words spoken at that time by both exhibitor and fan-

cier predict entries that will crowd our spacious hall with an exhibition of poultry and pigeons rarely seen.

All inquiries for information should be addressed to the secretary, Ryeland, Pa. Chas. D. Leinbach.

SCOTTTDALE, PA.

The Scottdale Poultry & Pet Stock Association will hold its first annual show Dec. 6-10, 1910. The show will be held under the rules and regulations of the American Poultry Association. All coops will be furnished free of charge. A large list of special prizes will be awarded. Charles T. Cornman, judge. For premium list and other information address W. G. Sherrick, secretary, Everson, Pa.

FRONT ROYAL, VA.

Front Royal, Va., is making arrangements to hold one of the very best exclusive poultry shows ever held in Virginia on Nov. 15-17, 1910. This show will be cooped by a reliable cooping company. W. Theo. Wittman, judge. For premium list and further information address M. C. Richardson, Jr., secretary, Front Royal, Va.

CHARLOTTE, N. C.

The Charlotte Poultry, Pigeon & Pet Stock Association, which is the oldest in the South, will hold its fourteenth annual exhibition Dec. 28-30, 1910. William F. Brace and R. L. Simmons, judges. For premium list and other information address the secretary, C. W. Best, Charlotte, N. C.

CHAMBERSBURG, PA.

The Franklin County Poultry Association consists of eighty-five active chicken raisers and at a recent meeting decided to hold their next annual show Jan. 18-21, 1911. For premium list and other information address the secretary, E. E. Eckel, Chambersburg, Pa.

BUCYRUS, OHIO.

The Bucyrus Poultry & Pet Stock Association will hold its second annual show Dec. 13-17, 1910. Their first show was a hummer, there being over 1,000 birds in competition and every one satisfied. Frank Heck, judge; D. M. Odaffer, secretary.

COLUMBUS, IND.

The American Poultry Breeders' & Fanciers' Association will hold its fourth annual show January 9-14, 1911. F. W. Corey, judge; H. K. Volland, secretary.

ELYRIA, OHIO.

The Elyria (Ohio) Poultry Show will be held January 4-8, 1911. Fully 1,000 birds are expected at this show. Falkner, judge; A. J. Laundon, secretary, Elyria, Ohio.

COLORADO SPRINGS, COLO.

The Pike's Peak Poultry Association will hold its fourteenth annual show Dec. 12-17, 1910. D. T. Heimlich, judge; H. H. Chase, secretary, 1442 N. Corona st., Colorado Springs, Colo.

Let Chas. A. Cyphers Save You 50% On A Standard Buffalo Incubator

IT MEANS dollars in your pocket to investigate the new Buffalo before placing that incubator order. Large repeat orders are coming in from last year's customers, proving that you will save a lot of time and trouble if you get a Buffalo instead of paying twice my price for an incubator not nearly so good. I want every one of my quarter million poultry friend and former customers to write me at once for full information about this money-saving, labor-saving incubator.

High Factory Cost The Vital Principles—heat—ventilation—regulation—are the same in the Buffalo as in my former high-priced models. The heater is of my regular design, and has the added advantage that the thick asbestos insulation is also covered with galvanized iron, instead of cotton cloth, painted. The ventilation is my well known diffusion method that has made hatcheries of my design *The World's Standard*. The regulator is my compound toggle-joint design, with corrugated zinc leaves and flanged steel centers—the only design that has ever made close heat regulation possible. The lamp is my usual style—galvanized iron, seamless bottom bowl, with the addition of a radio-deflector below the burner, preventing overheating. The trays are strong and covered with galvanized wire cloth. The outer case is open-hearth galvanized iron and can never rust. The inner case is "Water-proofed Buffalo Board," and the walls are thick and well-packed. It has double doors, an inner one of glass and an outer paneled door. No better incubator can be made.

How I Save You Half I am able to **Save You Half** on this thoroughly well-built standard incubator only by **Cutting The Selling Expense**. I do not charge you for fancy literature and the salaries of a corps of high-priced officers and branch-managers. I haven't any dead-heads drawing fancy salaries. When you buy a "Buffalo" you deal with me direct and I give you three-fourths of the usual gross profit. When any poultry-raiser compares a standard Buffalo with another model selling at \$5.00 to \$10.00 more, I get the order every time. Again I get the order when he compares a Buffalo with the cheaply made boxes (called incubators) that sell at Buffalo prices.

Who is Chas. A. Cyphers? For the benefit of the beginner who is unfamiliar with poultry matters, these facts are printed. I wrote "Incubation and its Natural Laws" in 1894, the only scientific treatise on artificial incubation ever published. This work at once became the "Standard" in every country where artificial incubation was practiced. I designed and put the "Cyphers" incubator on the market in 1896 and continued to manufacture it, as President and General Manager of the Cyphers Incubator Co., until 1903, when I put out the "Model", which business I sold a year ago, and put the "Buffalo" on the market. Any poultry-man will tell you that the name "Chas. A. Cyphers" on an incubator means **Quality the same as Sterling** on silver.

Note My Prices No. 0 50-60 Egg Size \$ 9.50 No. 2 220-240 Egg Size \$16.00
No. 1 110-120 Egg Size 12.00 No. 3 340-360 Egg Size 20.00

My Guarantee I positively guarantee that the Buffalo will hatch as well as any incubator made, regardless of cost. I guarantee it to be as substantially made, as well as as easily regulated as any incubator costing from \$4.00 to \$10.00 more, egg capacity considered. I guarantee it to be **Fire-Proof** and to last as long as any incubator ever built. **Your money back.** Send me your order today. Say which size you want and enclose the price with your order. My guarantee insures absolute satisfaction and protects you in every way.

Save A Third On Brooders

1911 Buffalo Colony Brooder is the best I ever built. It is roomy, well-lighted and **Automatically regulated**. It is made of pine lumber and its roof is covered with galvanized iron and will last a life-time. 1911 Indoor Brooder for indoor only, is a gem.

Indoor Brooder\$9.00
Colony Brooder\$12.00

If you want more information before ordering, write for my illustrated circular describing Buffalo Incubators and Brooders.

CHAS. A. CYPHERS, President,
Buffalo Incubator Company,
4700 Ellicott Square, Buffalo, N. Y.

Read This Letter

The Crystal Springs Poultry Co., Oil City, Pennsylvania, markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent. of fertile eggs taken off this season—53%. We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it, in the Buffalo you have a world-beater."

Patrick McEvoy, Manager.

ST. JOSEPH, MO.

After a lapse of a couple of years the inter-state show at St. Joseph, Mo., has "come back." Heretofore the one thing that prevented it from being the success it should have been was the lack of a suitable building in which to hold the annual exhibit. But this obstacle has been removed. St. Joseph now has one of the finest auditoriums in the country and it has been secured for the inter-state show January 23-28, 1911. Experts have pronounced it one of the best in the United States for poultry show purposes. The arena, which is large enough to coop several thousand birds comfortably, a building of itself, which is inside the main structure—a double wall house, if you please, with an air space of thirty to fifty feet between walls. This does away with disastrous drafts which are the bane of the showman's life. The building has plenty of skylight and the heating and ventilating systems are unexcelled.

The inter-state is not supported by legislative appropriation, but it has a "rich uncle." The business men of St. Joseph, realizing that a poultry show is one of the best drawing cards of the year, have determined that the inter-state shall be one of the best in the country. It is backed by the Ad Club, the Retail Merchants' Association, the Business Mens' League, the Commercial Club and other organizations which raised \$10,000 the coldest day last winter to bring a baseball team to town. The same spirit is back of the poultry show and this ought to be sufficient guarantee that every one of the association's obligations will be met.

An attractive list of special premiums will be offered when the premium list is printed. The regular premiums will be as liberal as any in the country. The inter-state has always been the big sweepstakes show of the middle west—the place where the win-

Wilmer Atkinson Co., Philadelphia, Penna.

1911 CONTRACTS FOR BABY CHICKS

We will hatch no more chicks this season. We are adding 50,000 capacity to our machines and are now taking contracts for 1911, delivered in lots of 500 and up. State what kinds you want and get our proposition. The Co-Operative Breeding & Hatching Co., Box A, Tiro, Ohio

ners from four states contest for the final honors of the show season. It will be the only big show held toward the end of the season, the Missouri State Show being held in Kansas City at early date. This ought to bring out a large number of youngsters which needed a few finishing touches late in the fall before they were ready for the show room.

The management has never experimented with unseasoned judges. It costs a little more to secure men of national reputation, but it pays in the end. Keep in touch with the secretary, E. L. McDonald, for further information. It will be worth your while.

THE GREAT INTERNATIONAL.

Believing that nothing is too good for the specialty clubs, which by the way, are the main-stays of the fancy, the International is offering five large cash prizes to be divided pro rata with the entry, among the members of the five specialty clubs making the largest exhibits at the 1911 International show, to be held in Buffalo the last week of January.

They will also return 25 per cent of each member's entry money when the total entry from the club exceeds 150 birds.

The stray fanciers will not fail to see that they can make money by joining a specialty club, if they intend to exhibit at the International, which through this generous offer, is paying the membership fee.

Several fanciers have criticised the new method of judging, not caring to have their birds handled by the attendants, so the method has been changed, and the birds will not be taken out of their coops or handled except by the judges, but the ownership of the birds cannot be known by the judge until after the awards are made.

Journal's Row—modified but more beautiful, will be seen again at the 1911 International.

A card addressed International Show, 309 Brisbane Bldg., Buffalo, N. Y., will bring you a premium list Dec. 1.

INDIANAPOLIS, IND.

The eleventh annual show of the Fanciers' Association of Indiana, at Indianapolis, Feb. 6 to 10, 1911. As usual this will be a combination show of poultry, dogs, cats and pigeons. Big cash prizes and silver cups are the drawing cards for the quality show of the West. More sales at long price are made at the Indianapolis show than many of the eastern shows can boast of. Specialty clubs, both state and national, are again making this their round-up show of the year. Ten of the best judges in the United States will place the awards in the different departments and do this in a very short time so that exhibitors have very little time to wait for the decisions of the judges. For prospectus and other information of the best show of the West, write the secretary, C. R. Milhous, Lebanon, Ind.

WICHITA, KAN.

The Kansas State Poultry Association will hold their annual show January 9-14, 1911. Thompson, Johnston and Stoner, judges; Thomas Owen, secretary, Sta. B, Topeka, Kan.

BAY CITY, MICH.

There was recently organized in Bay City, Mich., a poultry association known as the Bay County Poultry Association and they will hold their first annual show during the week commencing January 22, 1911. Wick Hathaway, judge.

RICHMOND, IND.

The Greater Richmond Poultry & Pet Stock Association will hold its annual show Dec. 7, 8, 9, 10, 1910. S. B. Lane, judge; Frank L. Waidele, secretary, 711 S. "A" st., W. R.

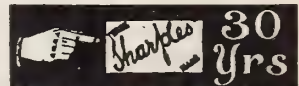

PROOF

That Farmers all over the World are Discarding Common Cream Separators for

SHARPLES DAIRY TUBULARS

We will mail to you, free, large pictures showing the immense number of common cream separators recently exchanged for Sharples Dairy Tubulars. These pictures would cover more than one page of this paper, and are positive proof that farmers all over the world are discarding common machines for Sharples Dairy Tubulars. These pictures show just a short time accumulation of these discarded common machines. Write for these pictures at once.

Sharples Dairy Tubular Cream Separators contain neither disks nor other contraptions, yet produce twice the skimming force, skim faster and skim twice as clean as common machines. Because Dairy Tubulars are so simple, they wash many times easier and wear several times longer than common separators. Tubular sales exceed most, if not all, others combined. Tubulars probably replace more common separators than any one maker of such machines sells. The World's Best. World's biggest separator works. Branch factories in Canada and Germany. Write for Catalogue No. 205

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question—I have some Brown Leghorn pullets which have commenced to lay at three months and twenty-six days old. This seems so young to me that I would like to know the youngest age at which pullets have been reported to lay.

Woneoc, Wis.

J. H. W.

Answer—In rare instances pullets have been known to lay at the age of three and a half months.

Question—(1) What breed of chickens do you consider the best for my climate? (2) Can Light Brahmas, under good care, be raised successfully in this climate? (3) What is the difference in average weight between the Light Brahma and White Leghorn eggs? (4) How can a strain be maintained?

Houma, La.

J. H. B.

Answer—(1) Any of the American varieties, such as Plymouth Rocks, Wyandottes or Rhode Island Reds. (2) We don't think so. (3) Four to six ounces to the dozen. (4) By line breeding.

Question—Am raising 25 White Orpingtons hatched from two settings of eggs last spring. The one lot is now just four months old, while the other is three weeks younger and the older ones weigh four and five pounds apiece, while the younger run from three to four and a half pounds apiece, and all have grown very good, not having lost one or had one sick, but both lots are moulting until their coops are white with feathers. I never knew such young chickens to shed and was somewhat surprised. I feed cracked corn and wheat in a litter at night, giving enough to keep them at work the following

morning, and keep a dry mash before them all the time, composed on the following basis: wheat bran, 25 pounds; wheat middlings, 15 pounds, ground oats, 10 pounds; cornmeal, 10 pounds; glutin, 10 pounds; mealed alfalfa, 5 pounds. About three times a week I give all the sprouted oats they will eat at noon. Would be pleased to know cause, if possible.

G. M. B.

Mishappen, Pa.

Answer—It is no uncommon occurrence for young fowls to molt in the fall, and your system of feed has made your fowls develop very rapidly. As soon as they get through this molt they will begin to lay and will probably lay steadily all winter.

Question—How much water will be needed for 100 hens per year? There are no wells in this section—all cisterns. Which is the best plan for watering chickens so as to save on water and have it clean and wasting none?

C. W.

Montavilla, Ore.

Answer—The quantity of water can only be determined by observation. A Weldon drinking fountain will solve the problem for you.

I notice in your "Questions and Answers" that Mrs. F. M. V. wants to know why it is that nearly all the cockerels they have caponized puff out on the sides with wind.

Now, I am not an authority along these lines, but will suggest a reason for the trouble.

The opening has been made either too far forward or too high up, and either cut or tore the lungs, and as the skin of the chicken heals very rapidly, as the air passes out through the lungs and

into the cavity around the entrails, it finds its way out of the opening between the ribs and out under the skin, causing it to puff out.

If she will notice the breathing of a puffed chicken, I think she will hear a wheezing sound as the air passes out through the torn lung.

I have torn the lung with the spreader as well as cutting with the knife. Would be glad to hear from some expert along these lines.

Willard Stapleton.

Purdy, Mo.

Question—(1) Some of my White Wyandottes have scaly legs. They seem to become scaly when the birds are about one year old; my younger stock is not affected whatever and they both range together. Any remedy that you may suggest for this trouble will be greatly appreciated. (2) How many Wyandotte hens will a coop 16x32 feet accommodate? How many nests should be provided for such a number of hens? (3) I intend to buy some Wyandotte pullets this fall, and would you advise me to buy a cockerel from the same party to mate with these pullets, or should I get a distinct bird? (4) How should a bird with a frosted comb be treated?

G. L. T.

Williamsport, Pa.

Answer—(1) Scaly-leg is caused by a mite which gets under the scales on the leg. Soak the legs in warm, soapy water until the scales become quite soft. Clean them thoroughly by using a brush. After drying the legs apply sulphur or carbolic ointment. A few treatments will effect a cure. (2) About 85; 25 nests. (3) Get a cock bird from the same party. (4) Frequent applications of vaseline.

Question—(1) What is the right proportion of oats, corn and barley to feed laying hens? (2) How many hens will a house 10 x 16, with a scratching shed 6 x 16, accommodate? (3) Is a warm mash in the morning all right? what is a good mash? (4) I have a hen that appears sick but cannot find out what is the matter. She eats all

Section of Pens, showing a few of the Norwich Automatic Exercisers and Feeders in use on the plant of the River Home Poultry Yards, breeders of high-class Light Brahmas and Barred Plymouth Rocks. Box "B," Perrysburg, O.

right, her comb has a healthy color, and she has no lice. She just mopes around. What is the matter?

Belmond, Iowa.

R. A. R.

Answer—(1) Oats, corn and barley is not considered a first-class feed for laying hens. Wheat and oats in equal proportions are better, but where oats, corn and barley are used, mix them as follows: Two parts oats, one part corn and barley. (2) One hundred. (3) Yes. A very good mash is made as follows: Two parts bran, one part wheat middlings, one part cornmeal, one part alfalfa meal or clover meal, one part beef scraps. Mix with boiling water into a crumbly state. (4) Give a dose of Epsom salts, 20 to 30 grains. See our Poultry Doctor Book for full particulars about all diseases of poultry.

Question—Would you please answer through your "Question and Answer column," where I can buy Buff turkey eggs? I do not see them advertised.

New Orleans, La.

M. T.

Answer—Will Buff turkey breeder please take notice and send in their names and address.

Question—(1) How many chickens (White Orpingtons) should be kept in a house 10 x 10 feet with an open run or yard in addition 40 x 10 feet? (2) Would it be a good plan to purchase a cock and several hens and then put the pullets from the union, with the cock, taking a young cock from the union to put with the hens? After establishing the two pens, from that point simply mate up the pullets from one pen with a cock from the other pen and in that way carrying the two pens along from year to year, always

selecting the best birds of both sexes for breeders? (3) Will you suggest a well-balanced ration of grain that can be fed the year around in addition to the necessary amount of green and animal food? (4) Is it better to feed from a hopper or by hand, if by hand about how much to each fowl daily, the chickens being White Orpingtons? (5) In your opinion is a White Orpington a good fowl for laying and for the table?

Sonora, Mex.

C. J. B.

Answer—(1) Seventeen. (2) This method is all right for one or two years, but only experienced breeders can successfully practice line breeding. (3) Wheat, oats and barley, or wheat and oats in equal proportions. (4) This question can only be decided by experience. Both systems are good, but it is difficult to say which is the better. The amount to each fowl can only be determined by experience. A small handful to each fowl three times a day is about the right proportion. (5) Yes.

Question—(1) We have a chicken about five months old, who, after she eats, has a gurgling sound in her throat. What is the cause of it. (2) Are Hen-e-ta bone grits good for chickens? This food is made by the Hen-e-ta Bone Co., Flemington, W. Va.

Passaic, N. J.

H. C.

Answer—(1) This is probably bronchitis caused by a cold. Put a few drops of carbolic acid into a kettle of boiling water, hold the head of the fowl over the kettle and allow her to inhale the steam or vapor. A few treatments will usually effect a cure. See our Poultry Doctor Book about this and other diseases of poultry. (2) Yes.

Question—(1) Will you kindly tell

me how I can construct a burglar alarm so I can tell when any one gets in my poultry house? Poultry house about 600 feet from house? (2) Kindly tell me how to raise milk-fed chickens; can they be raised on milk only? (3) How much above the market price should milk-fed chickens bring? (4) Where should they be marketed to get the best prices?

Strobel, Ohio.

H. M. S.

Answer—(1) This can be done with wires and a dry-cell battery. Have wire connected with each door and window so that when any one of them is opened it will cause the bell to ring in the house. This can be installed at a very small cost, not to exceed \$3. (2) Milk-fed chickens are raised the same as any other, except that their feed is mixed with milk and they are given a certain amount of milk to drink. (3) Three to five cents per pound. (4) This all depends on the condition of the market, and the prices are governed by supply and demand.

Question—(1) I have chickens four months old that stand about with eyes closed, feathers drooped, pale heads; remain thus for about two days and die. (2) Decay seems to have taken place before death; they are not lousy; what would you call the trouble? One cock run with forty hens and the eggs hatched fine and chicks thrived for a time but later on appear to stand still; is that the cause of the trouble? (3) How much dry grain per day will three Toulouse geese require? Which kinds are best and what other food do they require? (4) Will one get satisfactory results by mating two females with one male? (5) How many eggs can one

Box M WHITING, INDIANA

expect from a single fowl? (6) When should goslings hatched in May begin to lay? (7) How much and what kind of grain should be fed to a trio of Bronze turkeys for breeding purposes? (8) How many eggs does a turkey usually lay and how early? (9) If not allowed to sit will they lay more than two layings? (10) What is the average weight for young Bronze turkeys in the fall?

Boston, Ohio.

P. R.

Answer—(1) You do not give condition of intestines. This is necessary before we can give a definite answer. We feel sure, however, that lice is what is causing the trouble. (2) No. (3) Geese do not require much if any grain during the time that grass is obtainable. Corn and wheat are the best grains, and feed just what they will eat up clean in about five minutes. (4) Yes. (5) From 25 to 40. (6) The following spring. (7) Turkeys consume considerable feed, but the exact amount can only be determined by experience. Feed just what they will eat up clean at one time. A little experience will soon teach you the amount necessary. Corn and wheat are the best grains. (8) From 30 to 40. (9) No, not in one season. (10) From 15 to 20 pounds.

Question—(1) At what age does a Cockerel have to be to become a cock? (2) How many Columbian Wyandotte hens to mate with a two-year-old cock? (3) I only feed one regular meal of dry oats, once a day at night with plenty of table scraps and green stuff during the day, and my fowls seem to thrive and do well; would you advise more feed and oftener? (4) How much oats would you advise for such a feed for one cock and ten hens? (5) What causes the feathers to come out of the breast of my Cornish Indian Games? Their breast bone is perfectly bare, almost raw. There is no mites on them.

Selma, Ala.

L. D. M.

Answer—(1) One year. (2) Ten. (3) Would not advise change if your fowls are doing well on present ration. (4) One-half pint to each fowl. (5) At this season of the year fowls molt, or lose their old feathers. New feathers will, no doubt, soon appear on the breasts of your fowls.

Question—(1) Why do my May hatched chickens get droopy and then die, they seem too weak to stand at times and fall over one another? (2) What is a good winter food for hens, also how much to feed to thirty hens twice a day? (3) Is three months unusually a long time for hens to molt? (4) What causes sore and scabby heads? (5) Does scaly leg have injurious effects?

G. L.

Providence, R. I.

Answer—(1) Lice is no doubt the trouble. (2) Wheat, oats and corn. A small handful to each fowl. (3) Yes. (4) Damp, filthy quarters. (5) Yes. See our Poultry Doctor Book for information about this and all other diseases of poultry.

Question—(1) What time of year should White Pekin ducks begin to lay? (2) How many ducks can be kept with one drake and get fertile eggs? (3) How often should ducks be picked? (4) How many White Pekin ducks will make a pound of feathers at one picking?

Ewing, Ill.

M. D. C.

Answer—(1) Last of March or first

of April. (2) Six. (3) As often as the feathers become ripe, which is when the feathers can be pulled out without any blood on them. (4) We are unable to say.

Question—What I wish to know is when a hen or cock carries their tail to one side will it have any effect on the eggs of the hen or not? She is a fine White Orpington. The cock is White Leghorn. Is he effected as a cock or not, for breeding purposes. The hen also.

Vicksburg, Miss.

C. C.

Answer—Any bird that has a crooked tail should not be used for breeding purposes, as the offspring are liable to be affected in the same manner. Only perfect specimens of any variety should be used for breeding purposes.

Question—(1) I have a house 12 x 24 8 foot front 6 foot rear, divided into two pens. Can I keep forty Single Comb White Leghorns in same? (2) I have a good strain from a reliable dealer. Now should I cross with another strain of same variety or send to dealer where I got breed from and get a cock to breed them? (3) Where can I get a book on mating White Leghorns? (4) Do you know of a Single Comb White Leghorn Club in Indiana?

Auburn, Ind.

C. A. P.

Answer—(1) Yes. (2) Get a cock of same strain if possible. (3) Our book, Origin and History of All Breeds of Poultry, tells how to mate the different varieties. (4) No.

Question—(1) Is there anv way to know the difference between a hen and a cock when they are young chicks? (2) May I give the same food to laying hens and to pullets of about three months, these pullets are destined to be laying hens? (3) I have four cocks who are ten weeks old; they are together in a special coop, and they fight all the time, what shall I do? (4) Are the eggs fertilized by a cock of fourteen weeks old good for breeding purpose, if not at what age? (5) At what age does a pullet begin to set? (6) May I leave thirty pullets and two cocks together in the same pen? (7) What is the best food for pullets three months old?

Miss G. F.

Barrington Center, R. I.

Answer—(1) No. (2) Yes. (3) Separate them. (4) No. Six to eight months. (5) Cannot say. (6) You may, but it is poor policy. (7) Wheat and oats.

Question—(1) I have a few pretty good pullets I got this spring from a cockerel I raised out of a sitting of eggs I got of a local breeder of Rhode Island Reds a year ago. He claims to have a good strain of chickens, but I do not know if the eggs were from his best stock or not. The cockerel is good in color and has nice comb, but rather short in length of body and only weighs 7½ pounds. A June hatch bird. I want to know if I can breed him back with his pullets or get another cockerel from another breeder next spring. I want to improve my stock, but I cannot afford to buy a cockerel every year. (2) I have a hen that lays an egg with a flat spot about the size of a quarter in silver and in the center the shell is very soft and thin as paper. (3) Is broken rice good to feed growing

One of the oldest breeders of Barred Rocks in the West. At it over 21 years

Barred Plymouth Rocks

EXCLUSIVELY

I have raised largest and best flock of high class and of quality young stock ever produced on my farm exclusively of my own breeding. My strain is of the richest blood of my sweepstake and champion winners at the Illinois State Show at Springfield, 1910. Exhibition male and female. If you want birds for the fall and winter shows, or breeders that will produce winners, write me your wants at prices right. Remember we have both exhibition and utility stock. We guarantee to please.

S. N. BUSS R. F. D. NO. 1 PANOLA, ILLINOIS

SACRIFICE SALE

Entire breeding stock of Egg-record, Pedigreed S. C. BUFF LEGHORNS. Owing to condition of health I must sell at once my valued breeders and young stock composed of 40 breeders—the culled down cream, some having egg records between 219 and 267, 1st cockerel at Detroit 1910, 1st cock at Grand Rapids 1910, 125 pullets, many laying and 75 choice cockerels, all ribbons, mailing list, etc. I can show any buyer that a business of \$800.00 or \$1000.00 can be done with these birds of my strain next year and purchase price made before spring. Until sold I will continue to sell utility trios at \$3.50 and \$5.00 and cockerels at bargains.

Dr. Loren Heasley Box A Dorr, Michigan

COLUMBIAN WYANDOTTES

Fine lot of well developed chicks ready for the Fall fairs, bred from winners at Boston, Providence, Brockton and Allentown, Pa. A few of this year's breeders left for sale. Prices right. Satisfaction or no sale.

Pine Grove Poultry Farm, William Hunt, Proprietor, No. Middleboro, Mass.

R. AND S. C. REDS

Stock for sale at greatly reduced prices. I have a number of very fine yearling breeders for sale yet, among them are a few of my prize winners. Can also furnish prize winners in young stock for the coming shows. Mention American Poultry Journal.

Wm. H. Klug, Prop., 895 Seyburn Ave., Detroit, Mich.

ORPINGTONS

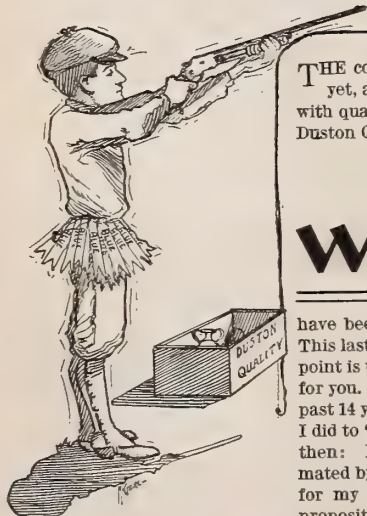

As a result of the season's work we have about

300 S. C. White and Buff Orpington Cockerels

that we must dispose of before Winter, and we are accordingly offering them at very low prices. Cook strain, and are sons and grandsons of Madison Square winners. They have been carefully raised on free range on our 140-acre farm, and are large, healthy, promising. A splendid chance to get fresh blood in your flock from a very heavy laying, celebrated strain. Many of these cockerels will develop into prize winners. Also a few very high class Black Orpington yearling cocks. Send for circular.

Grannis Bros., R. F. D. 12, LaGrangeville, Dutchess County, New York

TAKE NO CHANCES
USE ONLY HEAVY CHARGES

THE coming show season looks like it would be the hottest yet, and unless you are out with a gun loaded to the muzzle with quality you won't win. That is why you must consider Duston Quality. His

White Wyandottes

have been winning continuously since 1896 the World over. This last season stock sold made marvelous winnings. The point is this, you want to hit the blue. I can turn the trick for you. Fitting all high class show birds as I have done for past 14 years. I guess I know a little bit about it. Look what I did to "them" at New York for three consecutive years, and then: Proven breeders and young from them personally mated by me for best results. Say: Just send me 10 cents for my catalogue writing needs and let me make you a proposition.

Arthur G. Duston, Box 1020, So. Framingham, Massachusetts

N. B. Always at the head. Have bred White Wyandottes as a specialist longer than any breeder in the country. Gave the others a start, why not you?

chickens and laying hens; should it be cooked or fed raw? W. C. L.

Joliet, Ills.

Answer—(1) Procure a good cock bird to mate with your pullets. (2) This is caused by a deformity in the shell-forming chamber of the egg passage. This bird is of no value as a breeder. (3) Yes, either cooked or raw, but we prefer the cooked.

Question—The infected birds set around and don't eat and drink little. They become stiff all over the body and whenever they try to walk they fall over. The old chickens live for several weeks after becoming sick while the chicks die in a few days. I cut open one bird and every part of the intestines seemed to be normal. I have lost only two while my neighbors has lost about twenty. P. L.

Piqua, Ohio.

Answer—This is evidently a form of rheumatism, caused by the fowls being confined in poorly ventilated quarters, or by being exposed to damp weather. Begin treatment with a dose of Epsom salts, 20 to 30 grains. In their drinking water give them a tablespoonful of common baking soda to each quart of water.

Question—(1) Would you kindly publish some formula for dry mash poultry feed? (2) When the dry mash system is used, when and how should grain and meat be fed? (3) Give me the name of some book which covers thoroughly this subject of dry mash feeding. C. H.

La Grange, Ill.

Answer—(1) See question of G. M. B. in this issue. (2) Grain should be fed only once a day, at night. Meat three times a week; not more than two ounces to each fowl. (3) See our list of poultry books in this issue.

Question—Why does an incubator, after a few years of use, give poorer hatches than at first? C. W.

Portland, Ore.

Answer—Simply because, unknowingly, you do not give it the same attention you did at first.

Question—I would like some information about Indian Runner ducks: (1) Can I mate a young drake to old ducks? (2) Is the brown and white a Standard color. (3) My ducks averaged 25 eggs in one month. Is this a good average? (4) My ducklings, at three or four weeks of age, became weak in their legs and soon died. What caused this? Inwood, Ia. H. G.

Answer—(1) Yes. (2) Yes. (3) Yes. (4) This is usually caused by allowing the young ducks access to water. Young ducks should not be allowed in the water until they are fully feathered out. Sometimes it is caused by overfeeding.

Question.—Will you kindly tell me in your next issue (October) which breed is considered the best layers, the White Leghorn or the Blue Andalusians? St. Louis, Mo. S. E. P.

Answer.—The White Leghorn.

Question.—Will you kindly tell me how to mix a dry mash? M. L. B. Springfield, Mass.

Answer.—Read question of G. M. B. in this issue, which contains a good formula for a dry mash.

WILLIAMSPORT, PA.

The third annual exhibition of the West Branch Poultry and Kennel Club of Williamsport, Pa., will be held Nov. 30 to Dec. 3, 1910. H. P. Schwab and Theodore Wittman, judges. For premium list and further information address the secretary, James T. Huston, 422 Louisa st., Williamsport, Pa.

NEWTON, ILL.

The Illinois National Poultry Association will hold its third annual show Dec. 26-29, 1910. Charles McClave, judge; Floyd Clark, secretary.

ROOFING GUARANTEES.

When a maker guarantees his roofing, it merely means that he puts his claims for it in writing, and if there is any dispute afterwards, there are thousands of ways in which the maker can evade responsibility if he chooses.

The makers of Congo Roofing, however, have devised an interesting plan which gives the buyer absolute protection. With each roll of roofing is furnished a Surety Bond issued by the National Surety Company of New York, guaranteeing the faithful performance of the guarantee by the manufacturers. This gives to any possible complainant a Court of Appeals to which he can go, over the head of the manufacturer. In fact, this guarantee bond so pledges that if the manufacturers of Congo Roofing should go bankrupt or close out their business, the Surety Company would still continue to guarantee the reliability and satisfaction of Congo Roofing. The guarantee on the three ply is for ten years.

A copy of the Guarantee can be obtained by addressing the United Roofing and Manufacturing Company, Philadelphia, Chicago and San Francisco.

ROOFING ECONOMY.

In the entire industrial world there is probably no better example of true economical management than afforded by our great railroad systems. The very nature of their business makes absolutely necessary the closest attention to detail. Their purchasing is carried out along the most scientific lines and affords no chance for a continual usage of an inferior material. For that reason the individual buyer can always profit by the example of these systems.

In every line it is not always possible, of course, to find out just what the railroads are using. This does not apply, however, to roofing and building papers. For years the great railroad systems of the country have been, perhaps, the largest users of the Neponset Roofings and Neponset Building Papers. Included you will find such as the Harriman Lines, Pennsylvania Lines, New York Central Lines, etc., and in New England, indeed, the three leading railroads use nothing else. Over 75 per cent of the refrigerator cars built in this country are insulated with Neponset Waterproof Paper.

F. W. Bird & Son, of East Walpole, Mass., makers of the Bird Neponset Products, were originators of the ready roofing idea, and have been in the one business for one hundred and fifteen years.

A. J. Laundon, of Elyria, O., has a flock of about 400 White and Barred Rocks. Among these are several winners in Ohio shows last winter. Whenever they were exhibited they took the prizes, winning thirty odd in all. Mr. Laundon is particularly enthusiastic over his stock and says he will "place his birds alongside of anything of their breed in the world and win." They are indeed a handsome lot of fowls and the owner deserves the success he is having, as he is a careful and painstaking breeder of experience. See his ad elsewhere.

Owing to the fact that Judge W. E. Stanfield, proprietor of Brookdale Farm, has several large shows to judge on the Pacific Coast during the early part of the season, a special sale is being advertised on S. C. White Orpingtons, which it would pay any contemplative buyer to investigate. Also a few good Buffs are included. Any of our readers interested, address a card to Brookdale Farm, Hillsdale, Mich., and full information will be sent you at once.

200 Lbs. of PEERLESS POULTRY GRIT

SENT TO YOU
FREIGHT PREPAID
for \$1.95

Do you want to increase your egg crop this Winter when prices are highest? If so, you should commence now to feed Peerless Poultry Grit—the great egg producer. One of the great secrets of poultry health is plenty of good, sharp, insoluble grit. Beware of the so-called grit that is not sharp. You want grit that grinds—Peerless Grit.

The wise poultryman pays particular attention to the quality of the feed and grit for his flock. Experience and profit have taught that the best is always the cheapest in the end. When you order Peerless Poultry Grit you get fresh grit direct from the mine. We mine and crush every day, and ship orders as fast as received. You get grit that is fresh, clean and pure.

PEERLESS POULTRY GRIT

is composed of Quartz and Feldspar—the two hardest and sharpest of rock-forming minerals—insoluble in acid and harder than steel—the ideal minerals for grit. If you expect your fowls to be vigorous and strong, and great egg-producers, and thus money-makers, you must feed properly and supply this grit. Start now and reap the benefits of your wisdom. Your neighbors will wonder at your success.

Send us your order to-day with \$1.95, and we will promptly ship 200 lbs of Peerless Poultry Grit, with all freight charges prepaid, if you live east of Missouri River and North of Ohio River. Freight allowance to places outside of this territory. Remember, we guarantee entire satisfaction.

Write for free sample and booklet, "A Few Condensed Facts Regarding Poultry Grit." You will learn something.

PEERLESS POULTRY GRIT CO.

Edward Chambers - Aurora, Indiana

ROOFINGS THAT NEED NO PAINTING.

Times have changed since the good old days when we used to climb up on our roofs every year or two and put a

larly, since that was the only way to get satisfactory service out of them.

Recently the whole roofing business has been changed by the introduction of roofings which need no paint, of which Amatite Roofing is the most favorably known. These roofings have a surface of crushed

either. Amatite Roofing, for instance, costs considerably less than painted roofings of the same weight.

You can get full information and a free sample from the manufacturers on request. Address Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, Cleveland, Pittsburgh, Cincinnati, Minneapolis, St. Louis, Kansas City, New Orleans, London, Eng.

There is no fowl more beautiful than a "White Plymouth Rock" when in the pink of condition, with their snow-white plumage, bright red combs and face and their rich yellow shanks. Their past records show that as egg-producers they are unsurpassed. In a White Plymouth Rock we have the two most essential points of a chicken combined—beauty and egg production; while as a table fowl their fine flesh and large frame puts them in a class by themselves. They have won more prizes than any other strain of fowls on the globe and today the finest exhibition specimens are bringing from \$100 to \$1,000 each. It is such breeders as C. M. Reynolds, of Fullerton, Neb., that make a success of the poultry business. He knows a choice bird when he sees it and was not afraid to pay the price for his foundation stock. He paid \$50 for the cock bird, \$10 each for the hens, and \$100 for 100 eggs to start his flock, and today has the largest exclusive White Plymouth Rock farm in Nebraska. He gives his whole time and attention to this one breed and knows how to mate them for beauty and egg production, is always glad to give any information concerning his White Plymouth Rocks and his absolute guarantee on everything he ships makes customers safe in sending him their orders for eggs or stock. If he has not got what you order, he will tell you so frankly, and always has the good will of a customer in so doing. Write for his catalog, which is full of information.

J. S. Haupt, Easton, Pa., reports the following winnings on his Orpingtons at the late Pennsylvania State Fair: 1st S. C. Black cock; 1st S. C. Black hen; 1st S. C. White cockerel; 1st S. C. White hen; 1st R. C. Buff Orpington cock; 1st R. C. Buff hen; 1st S. C. Buff cock; 1st S. C. Buff hen. A total of eight first prizes, which shows the quality of his stock. He has 3,000 stock birds for sale of the highest type and quality.

Shady Lawn Poultry Farm, B. F. Kahler, proprietor, Hughesville, Pa., reports a very fine lot of young ready for the early shows, especially in White Holland turkeys, Toulouse geese, Pekin ducks and Muscovy ducks. Also in Buff Rocks and Buff Wyandottes. They are offering some attractive prices this month. Send for free catalog.

S. F. Brown, Seabury, Ont., starts a yearly ad with us this month. He is a breeder of White Plymouth Rocks, and at the late Toronto Exposition he made eight entries and won five prizes, including 1st and 2d cockerel, 3d cock, 2d and 4th pullet.

heavy coat of paint over them to keep them from getting wet. Some farmers used to think that roofings were made to get wet and they neglected the paint, and in a little while needed a new roof. The rest of us spent our money and labor painting our roofings with great regu-

mineral matter, and of course this mineral matter does not need any protection from the weather. Accordingly, a mineral surfaced roofing never requires any paint whatever.

This invention is a clear benefit to the owner and it does not cost him any more,

Kaufmann & Windheim's Rose Comb R. I. Reds

Hold the world's show record by winning more firsts in the last three years than all our competitors combined. Winners for years at Madison Square Garden, Boston and Chicago. 1500 youngsters for sale, from \$2 each up. Show birds furnished for the fall shows. Write for handsome free catalogue.

JOHN O. WILLARD,

Vice-President of the National S. C. Buff Orpington Club for Michigan

LINDEN, MICH.

OHIO STATE FAIR 1910.

What should have been one of the best fairs ever held at Columbus was marred by the street railroad strike and the bad weather. The Ohio Valley Exposition at Cincinnati also undoubtedly drew largely upon the attendance. Old exhibitors say the poultry show was not up to its usual high standard, but at that there was a good show, about seventy-five breeders sending in their feathered specials for premiums. In all about 800 birds were on exhibition.

The superintendent of the poultry department, Mr. Light, treated us with every courtesy and allowed the booth to be set up just outside the north entrance, where the subscription department had plenty of room to work. The new American Poultry Journal booth, built by its subscription agent, Mr. Jenkins, rather startled the other papers, but not being able to connect it up with electricity its full value and beauty was lost.

The Covert Barred Rock Farm, of Willoughby, O., showed some of the handsomest Barred Plymouth Rocks that have been shown at Columbus for years. They won 1st and 3d cock, 2d cockerel and 1st pen.

Dr. S. R. Harrison, of Shelby, O., exhibited some of the very whitest of White Plymouth Rocks. He won 1st cock, 1st cockerel, 1st hen and 2d and 3d pullet.

Mr. Paul B. Kirkton, of New London, O., a new one among the advertising breeders, sent in some fine big Black Orpingtons, and won 2d cock and cockerel and 1st and 2d hen. This is a good beginning.

The Co-operative Hatching & Breeding Company, of Tiro, O., showed a number of beautiful White Orpingtons, and Columbian and White Wyandottes, which took the following premiums: 1st, 2d and 3d cockerel, 2d hen, and 1st, 2d and 3d pullet in the White Orpingtons; 2d and 3d pullet and 3d pen in the Columbian Wyandottes, and 2d and 3d pullet in the White Wyandottes.

The Hartman Stock Farms made entries in fifteen different classes, all of which were of the best. Their winnings were as follows: 2d hen and 3d cockerel and pen in Barred Plymouth Rocks; 1st pen in Buff Plymouth Rocks; 1st cockerel and 1st and 2d pullet in Part-ridge Plymouth Rocks; 3d cockerel in Columbian Wyandottes; 1st cock, cockerel, pen and pullet, 2d hen and pen in White Wyandottes; 1st cock, cockerel, pen and pullet and 2d cockerel and pen in Buff Wyandottes; 2d cockerel, pullet and pen, and 2d hen and pen in Part-ridge Wyandottes; 2d hen and 3d cock in R. C. Rhode Island Reds; 3d cockerel and pullet in S. C. Rhode Island Reds; 1st cockerel and pullet, and 2d pullet in White Langshans; 1st hen and pen, 2d cock, 3d cockerel in Anconas; 2d pen, 3d hen and 3d pen in S. C. White Leghorns; 2d cock, cockerel, pen and pullet in Blue Andalusians; 1st pen, 2d cockerel and pullet, and 3d cockerel in Houdans; 1st cockerel and pullet, 2d

pullet and 3d cockerel in Cornish Indian Games.

Mr. Charles McClave was the largest exhibitor. He made entries in forty-three classes, all of which were among the winners. Mr. McClave is running on

The Tannenbaum Farms, of Willoughby, O., sent down some very handsome Columbian Wyandottes and Barred Rocks, on which the following premiums were granted: 1st and 2d pens, 1st and 2d pullets, 1st cockerel, 2d hen, 2d cock.

BLUE RIBBON BLACK ORPINGTONS

THE OPENING SHOW FOR 1910-1911

The first great show of the present season was held at Indianapolis, September 12 to 16, and among the thousands of birds there, the Black Orpingtons were very prominent, and every ribbon closely contested by prominent breeders. Never before was such quality shown as in this popular variety, and at this show, The Great Indiana State Fair, the recognized greatest Fall show in America, we won 1, 2, 3 Cock, 1, 2, 3, Cockerel; 1, 2 Hen; 1, 2 Pullet; 1, 2, 3 Pen. A clean sweep in hot competition. We have the largest specialty Black Orpington Farm in the World today and have by far the largest assortment of birds to select from. The finished cockerels and pullets shown in September were pronounced by prominent judges and breeders to be the equal of winter show birds and we have better ones coming on all the time. Get your show birds and breeders ordered early and we will deliver them in the pink of condition. The supply in all breeds is limited this year. Send for our new catalog, just out, the most complete Black Orpington catalog ever issued.

they are improving, and all the faults of this show will have been overcome in the next one. The work of the judges was up to their usual high class.

INDIANA STATE FAIR.

The Indiana State Fair, held at Indianapolis, Ind., Sept. 12 to 16, inclusive, was a record breaker in many respects. The weather, after the first day was ideal, being just cool enough to be pleasant, and make everybody feel like having a good time. The various exhibits, particularly the live stock and vehicles, were exceptionally large and fine.

The poultry exhibit was larger than usual, about 1,500 birds being on exhibition. This particular department was somewhat cramped, owing to the small quarters built for it. However, the authorities have promised "to do better next time," and from reports made at the close of the fair Friday night, the poultry house will be enlarged to nearly twice its present capacity. This will accommodate more birds and not have the show room so crowded during the rush days.

C. L. Buschmann, of Indianapolis, showed a splendid lot of Rhode Island Reds, which were admired by all. The exhibit was in charge of Mrs. Buschmann (who is particularly enthusiastic in the matter of fancy stock) and Judge W. C. Pierce. The exhibit took 1, 2 and 3 cock, hen, cockerel and pullet, 1 and 2 pen.

S. A. Nofztger, No. Manchester, Ind., who is the originator of the Partridge Plymouth Rocks, was there with a beautiful line of his favorites, on which he won 1, 2 and 3 cock, 2 and 3 hen, 2 and 3 cockerel, 1 and 2 pullet and 1 pen.

Henry Dippel Co., Indianapolis, Ind., won 1, 2 and 3 cock and hen and 1 and 2 pullet and pen in the White Wyandotte class. Mr. Dippel's display was particularly fine and pleased everybody.

Jno. Wildig, Irvington, Ind., was there in the White Wyandotte and S. C. White Leghorn classes. His exhibit was good, particularly in the latter class. Mr. Wildig is a beginner in the matter of advertising with our readers, but is an old breeder and well known around Indianapolis. He won 3 White Wyandotte pullet and 1 and 2 S. C. White Leghorn cock and cockerel, 3 hen, 2 pullet and 1 pen.

Sheffield Farms, Glendale, Ohio, showed in the Partridge Rock class. Their exhibit was particularly fine and won comment from all interested in poultry. They won 1, 2 and 3 cock, 1 and 3 hen and 1 and 2 cockerel, pullet and pen.

B. M. Stephenson, Salem, Ind., showed Columbia Wyandottes. Mr. Stephenson is a young man who is particularly expert in the judging of poultry. He is new to our readers, but has good stock and is bound to succeed. He won 1 cock, 3 hen and 2 and 3 cockerel in the face of the stiffest kind of competition.

Dr. G. W. Taylor, of Orleans, Ind., won in the Houdan class. His exhibit was good and while he was present he was kept busy answering questions of prospective buyers and admirers of his birds. He won 1 and 3 cock, 1 and 2 hen, 1 and 2 cockerel, 3 pullet and 1 and 3 pen.

Blue Ribbon Farm, of Columbus, Ind., exhibited some fine single comb Black Orpingtons. These black beauties won comment from all fanciers and non-fanciers alike. Among the prize winners they show 1, 2 and 3 cock, 1 and 2 hen, 1, 2 and 3 cockerel, 1 and 2 pullet, 1, 2 and 3 pen.

Edward Chambers, of Aurora, Ind., showed in the Buff Orpington class and won 3 cock.

E. E. Wilson, of Indianapolis, won 1, 2 and 3 Black Minorca hen, 1 and 2 cockerel, 1, 2 and 3 pullet and 1 and 2 pen. His exhibit was good and he was on the grounds nearly all the time, ably assisted by Mrs. Wilson, who is as enthusiastic as is Mr. Wilson himself.

Jackson's Royal Roup and Cold Cure is sold under a guarantee of "no cure no pay." All that we ask is that any one bothered with roup in any form is to notify them and order a package of Royal Roup Cure at the small price of 25c and if it does not cure, they will refund the money. Mr. Jackson has hundreds of the very best testimonials from people who have used his remedy and all he asks is a trial, and as the cost is very small you cannot afford to be without a package of this remedy on hand at all times.

George B. Ferris, Grand Rapids, Mich., the well-known Single Comb White Leghorn breeder, won the following prizes at the late West Michigan State Fair: 1st and 2d cockerel, 1st and 2d cock and 1st pen. He is now prepared to furnish prize winners for the winter shows.

The Only Incubator Correct in Principle

One gallon of oil—one filling of lamp, is enough for a hatch. Lamp in middle; door on top. Best ventilation and most uniform heat. X-Ray incubators save oil, time, work, money. We control heat—others waste it. Different and better than any other. Write for free book.

Land and Industrial Agent, Southern Railway
1349 Pennsylvania Ave., Washington, D.C.

THE OLD SCRUB HEN.

I have listened to the sighing of the
Can't-see-it poultry man,
Who still persists to fuss and muddle
With the pesky barnyard hen.
And I see the wise ones smiling,
Heeding not the jealous words,
As they haul the eggs to market
From their flock of Standard birds.
Hark! the voice of Poultry Journal,
Thundering forth its ponderous might;
All the poultry secrets hidden
She is dragging into light.
And the gathered scrub of ages
She is hurling from our pens—
She is calling to the nations to mate
Better, better hens.

Every day we hear new secrets,
Which fill our hearts with fondest
hope
That it may give us all the chances
To breed a bird of larger scope.
In numbers great we hatch the chickens,
And from without this busy hive
We hope some day to pick the WINNER
Of yearly output (365) three—six—five.
Idlewood, N. J. (Mrs.) J. Bridges.

PENNING THE FLOCK.

It is doubtful if among the many trying situations which confront the poultryman there is one that is fraught with more anxiety and annoyance both to the poultryman and his birds than the penning of his flock after the summer free range. How often have we noticed that the birds coming off the range in an almost perfect condition, after a week in the pen begin to droop and show unmistakable signs of the absence of the field? How discouraging it is to the poultryman after he has selected several of his birds as "sure winners" for the coming shows to see them after a month of confinement dwindle down to a condition that unfits them for anything but yard stock.

A careful study of the situation and exhaustive tests have proven beyond a question of doubt that exercise is as indispensable to poultry as it is to mankind.

Take for example the trained athlete. During his training season he is in the pink of condition and can withstand efforts and exertion which are puzzling to the beholder. Let that same athlete cease his training and his exercise and he immediately drifts back to a condition that strips him of his power.

Our feathery friend is affected in exactly the same manner. On the open range where he is free to exercise every sinew and muscle of his body he is in a perfect condition, and we stand looking on him with eyes of admiration. Cage up the bird that is the pride of your yard, deprive him of exercise excepting that which he can gain in a small pen, and the result is exactly as described with our athletic friend.

If we expect to keep our birds in condition, if we expect them to yield their full production of eggs and maintain the point of excellence which they have reached by their summer outing, we must furnish the means whereby these conditions may be continued.

There has been on the market for over a year a machine which fully supplies these conditions. The machine has been tried out on some of the largest poultry plants in the country and by many of the most noted poultrymen that we have, and the success of the machine is evinced by the thousands that are in use all over this country.

Following our desire to contribute at all times to the betterment of poultry culture, we feel it our duty to state frankly that the machine in question is the Norwich Automatic Exerciser and Feeder, and we can recommend its use in the highest terms to our readers, not alone because it supplies the necessary exercise in the poultry yard, which is but one feature of this machine, but its added merits, such as an immense saving in grain, the almost complete elimination of labor in feeding, its effect on egg production, and numerous other benefits to poultry culture, makes the machine indispensable to the poultry culturist, and it is but a question of time when all engaged in the industry will recognize the merits of this truly wonderful machine and adopt this system of feeding.

Much has been written on the subject of hopper feeding and its benefits are pretty generally accorded to by the poultry trade. As a feeder the machine is perfection, and will be found on nearly all the large and successful plants in the country today.

Eggs and Stock Half Price

Have decided to dispose of some of my this year's breeders at one-half regular price. This is a grand opportunity for you to get started right with the celebrated Wolverine Strain White Plymouth Rocks. Choice young stock ready to ship. Chicago Housewrecking Co., 35th and Iron Sts., Chicago

THE CENTER OF THE EARTH IS A HUGE WORKSHOP.

Nature is a wonderful chemist. Constantly at work down in the bowels of the earth, her seething cauldrons are going day and night.

Intense heat, powerful gases, immense pressure and streams of never ending source supply the energy, while untold quantities of materials are at Nature's command to boil, and crush and grind and mix into the wonderful products she creates for the use of man.

Gold, diamonds, and other beautiful stones and precious metals are all from Nature's laboratory and attest to her artistic skill. Iron, copper, coal, salt and asphalt are among the innumerable products which show the endless variety and practical forethought of man's needs.

Nature works her wonders carefully and well. The formulas are secrets of her own, but even if man could fathom them he would be helpless because of the lack of facilities at his command and at best he can only imitate.

The material is provided by Nature for almost every human requirement. In return for their use she exacts the labor and brains of human beings to take them from her and adapt them to their proper use.

Coal for fuel, stone for houses, rocks for their foundations, and for a covering to the house Nature has wisely provided the wonderful lake of asphalt from which Genasco Ready Roofing is made.

For centuries Nature's wonderful alchemy has been forming this natural asphalt and mutely waiting for the time when man should have need for it and recognize its value.

The Barber Asphalt Paving Co., Philadelphia, were the first among the people of modern times to recognize the immense value of Trinidad Lake asphalt and adapt it to commercial uses.

Genasco Ready Roofing is the product of their experience and skillful use of this natural asphalt and is the best possible roofing for all purposes. It defies storms, heat, cold, and every other weather condition. It is also a perfect waterproof—doesn't leak and will not warp and rot or corrode and crumble, and it will last for years.

Genasco is adapted to every building on the farm, from your residence to the chicken house.

It is easy to apply and saves the expense of experienced roofers, and can be laid by any handy man about the farm.

Valuable information on the subject of roofs is incorporated in The Good Roof Guide Book issued by the Barber Asphalt Paving Co., Philadelphia.

They will send a copy to anyone for the mere asking.

WHITE PLY. ROCKS OF QUALITY.

The yards of Quality White Plymouth Rocks are situated at Ft. Atkinson, Wis., on the banks of Rock River, on the shore of which are many shrubs and trees, which makes it an ideal place on which to raise White Plymouth Rocks. Both old and young stock have access to an abundance of green grass, fresh water and plenty of shade during the hot weather, and it is here that the prize winners are produced. Mr. W. R. Abbott, proprietor of these yards, has been raising White Plymouth Rocks for many years, and now has a strain that for utility and quality is hard to beat. This is shown by their egg and show record. In 1910 he entered four birds at the great Milwaukee show and won four prizes, including first pullet, third cock, fourth cockerel and seventh hen. He has also won many other prizes at smaller shows, including all firsts at Fort Atkinson, Wis., his home town. His last season's matings turned out exceptionally fine and he now reports about 100 selected cockerels and pullets from the above prize winners with which to supply the fall trade. In this issue we present a picture of his first prize Milwaukee pullet, which will give our readers an idea of the quality of his stock. Write him for prices and further particulars.

John O. Willard, Linden, Mich., the well-known Buff Orpington breeder, reports that this season he has one of the largest and best flocks in the United States, and is prepared to fill orders promptly and guarantees satisfaction. Mr. Willard is vice-president of the National Single Comb Buff Orpington club, and has a reputation of producing Buff Orpingtons that win in the strongest competition.

POULTRY DISEASES

And How to Prevent Them

BY J. C. NUCKOLS

Thousands of young chicks die because

poultry-raisers lack the valuable information given in Mr. Nuckols' book on Poultry Diseases and their Prevention. As manufacturers of the celebrated

ESSO Re-Carbonized (Twice-Burnt) CHICKEN CHARCOAL

we have a personal interest in saving these young birds and will be glad to send a copy of this book postpaid on request to every poultry-fancier. There is no "string" attached to this offer—the book is as free as air to you.

You can also have a small sample package of ESSO Re-Carbonized CHARCOAL free for the asking. Or if you prefer a larger package, inclose seven cents in stamps to pay cost of mailing.

The S. Obermayer Company, 641 Evans Street, Cincinnati, O.

Poultry Supply Dealers: You can greatly increase your sales of charcoal. We arrange, wherever possible, to deliver the free book and samples to poultry-raisers through a local dealer, to whom all inquiries are referred. Write for our liberal proposition to dealers.

W. A. Winter, Box 125, Red Bank, New Jersey

\$204,000,000 GOES UP IN SMOKE.

Over a million times during the past ten years we have witnessed the thrilling sight of burning buildings. In the year 1889 this cost the nation \$123,046,833; ten years later the loss amounted to \$153,597,830, while last year \$204,000,000 worth of property was destroyed by fire. This constantly increasing annual fire loss in the United States has induced engineers interested in fire protection to seek with renewed zeal for all practical methods of lessening the danger of ignition and spread of flames. As a result of this, tile, vitrified facings, terra cotta, concrete construction and numerous other fire-resisting materials have been developed for use in all parts of buildings except the roof, while but few important improvements have been made in roofing materials, notwithstanding the fact that authorities claim that from 27 per cent to 50 per cent of the conflagrations are the result of flames being communicated to adjoining buildings by burning sparks and embers falling on an inflammable roof.

Factories, barns, etc., are probably more at the mercy of burning sparks and embers than any other types of buildings, because they are usually covered with so-called ready roofings, and nearly all roofings of this type are made of wool felt, rag stock, paper, coal tar and other highly inflammable materials. There is one roofing of this type known as J-M Asbestos Roofing, which is being largely used on factories and large buildings, which seems to overcome the objections to all others of this type. It is said to be so fireproof that it will withstand the flame of a blow torch for an hour without being injured. This roofing is made by the H. W. Johns-Manville Co., of New York, well known as manufacturers of asbestos products.

From the manufacturers we were able to get the following interesting information regarding the manufacture of this roofing, which is made of asbestos (a stone) and Trinidad Lake asphalt (a mineral).

The asbestos rock when it comes from the mines is, in appearance, much the same as other rock, as will be noted from illustration. When scientifically crushed, this rock produces long, tough fibers, which are woven into cloth for asbestos theater curtains, made into sheets of felt for roofing, and treated in various ways for making hundreds of different fireproofing materials.

In making this roofing, several sheets of this asbestos felt are thoroughly saturated with genuine Trinidad Lake Asphalt, well-known as the most permanent waterproofing material. These sheets are then cemented firmly together with this asphalt, making one homogeneous mass. This, then, constitutes an actual covering of stone, which, because of its all mineral nature, not only offers to a building protection against fire, water, wind and weather, but which also naturally cannot rot, rust, melt, run or crack, and requires no painting to preserve it.

A copy of the very handsomely illustrated catalog, which we received from the manufacturers, will, no doubt, gladly be sent to any of our readers inquiring for it.

Mr. Howard V. Kell, of the Old Orchard Poultry Yards, near Canton, O., has some very fine Buff Wyandottes and R. C. Rhode Island Reds this season. Mr. Kell has long since established himself in the successful breeding of these classes and, as a result, has something good to offer. His winnings in the R. I. Reds include the following: 2d and 3d pullets and 3d cockerel at Mansfield in 1910; 1st cockerel, 2d pullet at Massillon in 1909. In Buff Wyandottes, 1st and 2d pullets at Massillon in 1909. At Hartsville and Zanesville he won 1st, 2d, 3d and 4th on pullets and received highest scoring on pen at Zanesville. He owns the cock in this class that took first prize at Toledo, O.

Owing to the great increase of business in the vicinity of Atlanta, Ga., and Rochester, N. Y., the H. W. Johns-Manville Co. has recently opened a new office in each of these cities. The Atlanta office is located in the Empire building, in charge of W. F. Johns, who has been traveling this territory for the company for a number of years, and the Rochester office is located at 725 Chamber of Commerce, in charge of H. P. Domine, formerly with the Buffalo branch of the company.

TWO KINDS OF CHEAP CREAM Separators

There are two kinds of cheap cream separators.

One is the **seemingly** cheap kind, cheap in first cost, cheap in design, cheap in construction, cheap in efficiency, cheap in durability, and cheap in everything but merit.

The other is the **really** cheap kind, cheapest in proportion to actual capacity, original in design, ideal in construction, perfect in efficiency, lasting for twenty years, and barely beginning where the other kind leaves off.

That's The

DE LAVAL KIND

which compared with other cream separators is simply in a class by itself.

Prairie State Incubator

A High Record Every Time

The Prairie State machines are made according to tried and true principles of incubation. No guesswork, no mere theory. They are constructed of the best materials and built with the one end in view of hatching "livable" chicks. Besides this, they are the most convenient and economical. Easy to handle, safe and certain of results. The most expert and prosperous breeders use and recommend *Prairie State Incubators and Brooders* because they have found them best. Read this letter from one of the leading poultrymen in the country:

"We consider the Prairie State machines so far ahead of any other make we have ever seen or operated that they are in a class by themselves."

PRAIRIE STATE INCUBATOR COMPANY

468 Main Street

Homer City, Pa.

RUSSELL CAVE POULTRY YARDS AND ELMENDORF FARM.

Louis Lee Haggin, owner of Russell Cave Poultry Yards, is a thorough fancier and an expert breeder, having been raised and reared on the Elmendorf Farm, which consists of 7,264 acres and nothing is raised on this farm but thoroughbred stock. Thoroughbred horses have been bred here for forty odd years, and more famous horses have seen the light of day here than any other farm in the world, including the world-renowned "Salvator," still holder of the world's record, 1:35½, whose winnings amounted to \$135,000; also the mare Frenze, known for years as "Queen of the Turf." In standard breed horses, Nancy Hanks was born and trained here. Since the Hart-Augment bill the farm has disposed of over two-thirds of its thoroughbred horses and has gone more extensively into the production of cattle, sheep, swine, and general farming.

Elmendorf Farm Short Horns are noted throughout this country as probably the best herd in the United States. They are the only herd that has heading it two international grand champion bulls. The past year they have gone into the dairy business and have practically completed their dairy. This building has limestone foundations, brick walls and tile roofs. The building contains the stables, and are so constructed as to meet, as nearly as possible, all sanitary requirements, and has a housing capacity of 400 cows. The past twelve months they have imported from the Islands of Jersey 210 cows. Heading this herd is the famous "Sultan of Oxford Lad" (the bull heading Cooper's sale this year). After a careful study of the situation, they have decided to use Kerrys and Dexter Kerrys for baby milk, as they are free from tuberculous. The Dexter Kerrys are only about three feet high. One of the herd was third in the Royal Dairy. The sheep and hogs are of the same quality, as is everything else on Elmendorf Farm, one buck being sold for \$5,000 after winning the grand championship at the International last year. Besides this they raise imported Shetland and Welsh ponies. In the agriculture line they raise tobacco, hemp, corn and various other crops.

This farm has given permission to the State Experimental Station and they are working together in experimenting with crops suited to the climate. This farm is well known abroad and foreign governments send students here every year.

Mr. J. B. Haggin has built a palatial residence, which is surrounded by a park of about a thousand acres, it being a blue grass lawn.

Russell Cove Poultry Yards is a part of Elmendorf Farm and is the home of Louis Lee Haggin, and consists of 1,100 acres. He has taken as his branch the breeding of poultry, standard breed horses and Old English sheep dogs. Mr. Haggin calls his plant Russell Cave Poultry Yard because of a cave near the house called Russell Cave. It derived its name from the original owner, General Russell, who was given 2,000 acres by the government for fighting the Indians in 1792, at which time he built the house which is now Mr. Haggin's home.

There are many historical events connected with Russell Cave. The cave is like many similar smaller ones in Kentucky. The main chamber as you enter is about 200 feet long by 30 feet high in front, inclining towards the back, and 60 feet wide. There are small passages in which you can enter similar chambers. They claim after passing two or three chambers you come to one a little larger, in which there is a waterfall of eight feet. This stream flows out of the cave and is the source of the water supply for Russell Cave Poultry Yards, as well as Elmendorf Farm.

Having all his life been connected with the breeding of thoroughbred stock, Mr. Haggin is well posted in the science of breeding. He has incorporated into his White Orpingtons all of this knowledge and he has succeeded in producing a strong, vigorous, hardy strain of White Orpingtons which are less liable to disease and which breed truer to type and color than the ordinary breeder of less experience. Nothing but the best buildings are permitted here.

The breeding house is 20 by 140 feet, having twelve pens, 10 by 14, constructed to his own plans, which contain many new ideas of his own. It has a conditioning room and office 20 by 20, store room and feed room. The water system

has been thought out with as much care as has the construction of these houses. Chapman trap nests are used and a careful record of the laying of all birds is kept.

In the construction of this house every consideration for the saving of time in cleaning, watering and feeding has been considered. The windows and ventilation are a feature in themselves. Lack of space makes it impossible to go into further details.

Each pen is provided with a run 10 by 60 feet and these runs are in an old apple orchard that has been sown in blue grass for many years.

The brooder house is 60 by 16, heated with a large hot-water heater, being divided into ten pens, having a capacity of 500 chicks at a time, as Mr. Haggin will not crowd. He believes this is one of the reasons for the hardness of his birds. Each pen has an outside run 5 by 40 feet, which is raised one foot above the level of the ground to insure absolute dryness; his chicks have blue grass from the start.

One of the points which is conducive to the health, size and stamina of Mr. Haggin's birds is attributed to the abundance of blue grass which his birds always have here in the very heart of the blue grass country.

It is generally the custom of poultry representatives to elaborate on a few fine specimens, but at Russell Cave this is not necessary because the uniformity

of type is so true and well established that it is not necessary to speak of individuals; when we say winners at Crystal Palace and Madison Square Garden find their home here. We have said enough.

Still we must mention the Crystal Palace and Birmingham winners which were included in a recent importation made by Mr. Haggin. These are probably the best type of White Orpingtons we have ever seen, and to give you an idea of the size of these birds will say that after a long and tedious trip from England this male bird when taken out of the crate was up to standard weight. We predict this bird will be heard from in the show rooms the coming year.

His flock of hens are extremely large and they have the grand type of the blacks that is rarely seen in whites.

We saw many beautiful show specimens among the large flock of young birds, many of which are on range. Mr. Haggin has taken up a few specimens which he is preparing for the fall shows. Every one of these birds are of great promise.

Any one looking for show birds will receive prompt attention and a square deal, besides getting some of the finest specimens in the country.

This farm has gotten out a handsome catalogue, by Louis A. Stahmer. This catalogue, which is on the press, is one of the best catalogues gotten out this year by any poultryman.

Mr. Haggin has arranged to work in conjunction with the state college in experimenting and testing several breeding formulas and many other theories; which Mr. Haggin has promised to give to our readers through the columns of the American Poultry Journal. Visitors are always welcome at Russell Cave Poultry Yards and trains will be met when notified in advance. There are many, many things to interest the visitor, not least of which is the fine quality found in Mr. Haggins' White Orpingtons. You will find Mr. Haggins' ad in each issue of the American Poultry Journal.

C. W. Zimmer.

As recently as 1907 John S. Martin, Port Dover, Canada, made fanciers of his country proud of him by winning with his grand white Wyandotte cock Regal IV., the bronze vase presented by the Japanese Government for the best bird in the Boston Show. Since then the Regals have been adding to their laurels many premier honors at important shows and have been setting a fashion that has been very much admired by the many breeders who value the rounded model for the White Wyandottes. At the last Boston Show, Mr. Martin was awarded the special for best cockerel and four pullets. These birds are illustrated elsewhere in this issue. We are informed that his team of White Wyandottes at Boston this year won more points on cockerels and pullets than did the birds of any other exhibitor.

Make Your Hens Lay

When Eggs Are Worth Most

A FREE BOOK FOR YOU ON MAKING HENS LAY

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

\$18,000 NET PROFIT IN ONE YEAR.

This is approximately what one man did from August 1, 1909, to July 31, 1910, with one of the standard varieties of fowl.

A few years ago the variety referred to above was almost unknown in this country and but very little attention was given to them, either by breeders or the poultry press. Then came a man into the fancy who did things. He selected the variety which, after careful consideration, he thought best adapted to the needs of the people of this country, and set to work to build up a strain that he could stand behind and recommend, a strain that would meet all the requirements for egg production, market fowl and exhibition purposes. He figured that if this could be accomplished he would have an ideal fowl from every viewpoint, and a fowl for which the demand would be unlimited.

By careful selection and correct mating he accomplished his aim and produced specimens of this variety that were wonderful layers, of large size, and fulfilled the standard requirements as exhibition specimens—the three requirements that are so much sought after in all varieties of thoroughbred poultry.

His next step was to introduce his strain to the poultry world, which he did in a very modest and unassuming way the first year, and of course the results were only fair; but the demand was sufficient to consume all his surplus stock.

The second year the merits of his strain became more widely known and the demand was away beyond the sup-

**BUFF WYANDOTTE COCK.**

Sire of first and second Youngstown cockerels, 1910. Solid buff. Score 94½ by McClave. Owned by Fred A. Poertner, Berea, Ohio.

ply. He then became a very heavy advertiser, using large space in all the prominent papers, which resulted in him having to return many hundreds of dollars' worth of orders the third year.

By this time there were hundreds of fanciers all over the country who were breeding and advertising this strain of fowls, and still the demand could not be supplied. Many of the old time breeders took up this variety and imported stock from England, both for exhibition and breeding, and are now reaping the harvest, the seed of which was planted by this man.

The past year the demand on him for stock and eggs was so large that he could fill only 50 per cent of his orders. The balance he was compelled to return, and early in the season announced in his advertising that he had nothing more to sell.

Think of it! Is there any other business where the men engaged in that business get so many orders that they have to pay for space in which to tell the people that they cannot fill any more orders? We don't think there is. And then some people ask: "Is there any money to be made in the poultry business?" The results of this man's efforts should answer this question for all time.

His method of advertising has resulted in his strain and variety being the most talked of in the country today and has caused the fancy poultry business to advance more in the past two years than

In this test the flame of a powerful blow-torch was placed within two inches of J-M Asbestos Roofing. At the end of fifty minutes the roofing was not burned or injured, being only slightly blackened with smoke.

in any four years before, and the end is not yet.

The writer recently visited the home of this breeder and had access to all his books and correspondence and knows whereof he writes, but we don't want to give our readers the impression that they must have this certain variety and strain of fowl to succeed in the poultry business, for we firmly believe that the same results can be secured with other varieties if the same methods are pursued, as other breeders of other varieties have been just as successful, but they had to have the stock with quality for a foundation.

Some two years ago there appeared in these columns an editorial written by the writer of this, in which claim was made that the breeders of thoroughbred poultry were selling their stock and eggs at too low a price; that they could not afford to put their time and money into producing exhibition birds and sell them for five dollars.

The success of the breeder referred to above bears out our claim, for the prices he has secured for his stock and eggs have been far in excess of prices secured in former years by other breeders. In fact, these prices have opened the eyes of poultry breeders all over the country and has resulted in the prices of fancy stock and eggs being greatly increased by fully 50 per cent of the breeders in all sections of the country.

Mr. Ernest Kellerstrass, Kansas City, Mo., is the gentleman we have been referring to, and it is worth any man's time, trouble and expense to visit this great farm and see for himself just how the Crystal White Orpingtons are raised and how he manages his business. He is always willing to give his fellow breeder any information or assistance he can, for he figures that the greater success the other breeders have the greater will be the chicken industry as a whole.

Mr. Kellerstrass is a firm believer in giving every customer full value for his money and that he does this is evidenced by the following letters from a few of his customers to whom we took the liberty of writing and asking just what kind of treatment they had received in their business relations with Mr. Kellerstrass. The letters speak for themselves:

Denton, Tex., Aug. 8, 1910.
American Poultry Journal Publishing Co.,
358 Dearborn St., Chicago.

Gentlemen: Replying to your inquiry of the 4th inst., I will say that my business relations with Mr. Kellerstrass have been very pleasant, the quality of his stock has fully met his representations, and my success with them has far surpassed all expectations. He has always been careful to state accurately the character of the stock offered for sale, and from the time I bought my first setting of eggs from him, in the spring of 1908, he has seemed to take a personal interest in my success in breeding the Crystal White Orpingtons. He has taken especial pains in furnishing valuable information and has sent numerous bulletins bearing on the care of the stock.

In 1908 I ordered a setting of eggs from Mr. Kellerstrass' utility pens, and was so pleased with them that a year later I secured some eggs from his best stock. From last year's raising I sold chickens to the amount of \$45, reserving only eleven of the best hens. From these I have sold eggs to the amount of \$115, have 100 fowls in my home pens, and have established a branch farm with 26 for a beginning.

I have found that the great popularity of these fowls is well warranted. Having had experience with a number of other varieties of standard breeds, I am better able to appreciate these. They mature early and are unsurpassed for table use. Moreover, they combine the laying qualities of the Leghorn, the hardness of the Game, and the size of the Plymouth Rock. Respectfully,

Mrs. W. A. Richards.

Gloucester, Va., Aug. 9, 1910.
Mr. Jas. W. Bell,
American Publishing Co.,
Chicago, Ill.

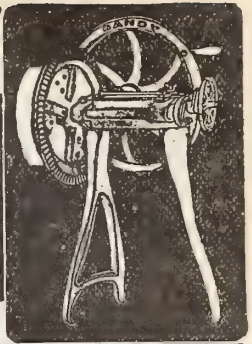

My Dear Sir: In regard to your request that I tell you of the treatment I have received at Mr. Kellerstrass' hands, I might sum it all up, I suppose, in a sentence, and say, "He has treated me white" for he certainly has! The only acquaintance I have with Mr. Kellerstrass is what has grown out of an obscure person, a would-be fancier, writing to the most successful breeder in the world for his cheapest line of goods.

Rock-Bottom!

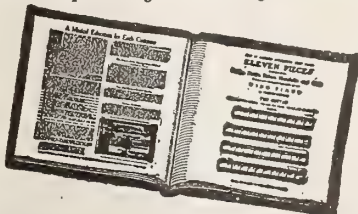

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. **Remember: all freight charges prepaid, no matter whether you keep the piano or not.**

Send for Book of Information FREE!

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

information that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & SON REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

Incubators, brooders, shipping coops, exhibition coops. Send for descriptive circular.

THE OWEN COMPANY

South Street, Allegan, Michigan

I do not consider that I could have expected the interest that I have received at his hands if I had been his most extravagant purchaser. From a twenty-five dollar pen of birds bought of him a year ago I have raised show birds that have carried off forty ribbons at Richmond, Washington and Baltimore shows, and have earned a thousand dollars. I have since bought an own son of Peggy from him, and this season several settings of eggs to improve my stock. He has always treated me most handsomely, and has attended to every detail of his business perfectly. He is a genius in business as well as a prince of poultrymen. He is far ahead in the poultry world as an artistic and successful advertiser as he is in the prices he has earned for his stock.

Yours very truly,
Mrs. L. C. Catlett.

Springfield, Ill., Aug. 5, 1910.
American Poultry Journal,
Chicago, Ill.

In reply to your inquiry of the 4th inst., regarding the breeding of Kellerstrass Crystal White Orpingtons, will state that in April, 1909, I purchased from the Kellerstrass Poultry Farm, at Kansas City, Mo., a pen of these birds, and in January, 1910, another pen, and from these two pens have raised two hundred of the whitest, cleanest, and best chickens I ever saw. One hatch of twenty, in March, are at present almost fully developed, and are certainly hard to beat. Have lost very few of the chickens hatched, and they show their breeding and vitality in the vigorous and continuous growth. As egg layers they are hard to beat. I have some Single Comb Rhode Island Reds which I consider good egg producers, but, as compared with the Orpingtons, not so good. The crystal white color and clean bright appearance attracts attention from every one, and brings out words of wonder and praise, some even charging that the birds have been powdered, they are so white. My dealings with Mr. Kellerstrass have been satisfactory. I purchased no eggs of him. As to this strain of fowls, I cannot say too much in their praise. The prices that have been paid for them are sufficient proof of the charm of their appearance and beauty. Coupled with this is their excellent egg production, and the unsurpassed quality of their meat for table use.

Trusting that above may be a satisfactory reply to your inquiry, and with best wishes, I remain,

Yours truly,
E. P. Bartlett.

Kirkwood, N. Y., Aug. 6, 1910.
Jas. W. Bell,

Editor American Poultry Journal.
Dear Sir: Your letter of inquiry regarding the treatment received with my business by Mr. Ernest Kellerstrass of Kansas City, Mo., would say, I received three settings of Crystal White Orpington eggs of him April 8, 1909. I got twenty-four nice, lively chicks from those eggs and you never saw healthier stock. I consider Mr. Kellerstrass a fine man to deal with, as he takes a personal interest with his customers. He has written me several times, giving me the best of advice and instructions, also telling me that if I couldn't find sale for my eggs he would turn some of his customers over to me; but I have not had to ask Mr. Kellerstrass for any orders, as I have had all the orders I could fill and turned away some. People know I have Kellerstrass White Orpingtons, and lots of them come here to see them. I have no other breed to get mixed with them and I keep them yarded, all nice, healthy stock, because they came from healthy stock, just as Mr. Kellerstrass told me. Mine commenced to lay at six months old and I didn't feed any meat or meat scrap to push them, and fine layers. I never had anything yet that came anywhere near them. To say that I am pleased with Mr. Kellerstrass' stock and with his kind consideration for my welfare is putting it very mildly. Just show me any other breeders that will recommend others to you for stock and eggs as does Mr. Kellerstrass. On the contrary, they advertise to buy of no one only themselves, thereby condemning the stock they are sending out. They tell you to come to them direct and not to go to small breeders.

Now Mr. Kellerstrass doesn't do this; on the contrary, he recommends his customers to any one that has his stock because he knows it is good—it is the best there is. He gives his customers a show. He is fair and square, and will treat

**GET THIS FAMOUS BOOK ON THE
"KALAMAZOO QUALITY"
IDEA.**

Every reader of this paper has probably known for years of the famous "Kalamazoo Idea" of selling high grade stoves and ranges from "Kalamazoo direct to you" on the most liberal plan ever offered by stove manufacturers. The popularity of this plan has caused this company to grow so large that it has been necessary this year to make new additions to their factory, including a new moulding room 60' x 200 feet long, and also to add a new 300-horse-power boiler which more than doubles their present power plant.

Then, too, in order to increase the healthful conditions which have always surrounded the men in the Kalamazoo factories, they have built a two-story lavatory and bathroom for their men, and it is a fact well known to the Commissioner of Labor in Michigan that the expert stove makers employed by the Kalamazoo Stove Company work under the most favorable conditions and produce the most satisfactory work of any men employed by any company making stoves in this country.

We believe that our readers will be interested to know these facts and also to send their names for the new 1910-11 Kalamazoo stove catalogue, which also includes gas stoves, and which shows prices of all kinds of ranges, stoves, heaters, etc., sent direct to the user at wholesale factory prices.

Every Kalamazoo is handsomely finished and blacked and safe delivery is guaranteed, all ready to be set up for use. Freight is prepaid and you have thirty days' free trial to test the Kalamazoo right in your own home and 360 days' approval test backed by \$100,000 bank bond guarantee of satisfaction or money back.

The Kalamazoo Stove Company has over 140,000 satisfied regular customers among farmers and home folks in almost every city in the United States, including people who have a Kalamazoo in over 21,000 towns and cities, so it is very probable that if you wish to ask people near you who own Kalamazoos how they like them that the company can send you the names of many—probably many folks right near you in your own neighborhood.

Kalamazoo stoves, ranges and gas stoves are not sold through dealers or agents, but everybody first sends for their big free catalogue, which costs them 10 cents to mail to you and which contains over 100 pages, fully illustrated, showing you how you can save from five to forty dollars on any stove or range that you buy.

The company will let you pay cash or give credit to responsible buyers, so that if you wish you can make a small payment down and the balance on easy monthly payments.

tory to send a postal card or letter for the Kalamazoo catalogue No. 415. You may say on your letter or postal just thinking of buying, and say whether you are interested in gas stoves. Address

GEO. W. PARK, Box T, LaPark, Pa.

LAYING HENS OR NON-LAYING HENS?

It makes a great deal of difference from the money standpoint to any poultry keeper whether he has laying hens or non-laying hens in his flock. The eggs which any hen will lay is the only way to estimate her worth. If she is a good laying hen then she will more than pay for her feed, but how many hens are there in every flock that are not laying and are not only an expense to the owner but take nearly all the profit from the eggs that are produced by the laying hens.

Keeping Only Laying Hens.

There are over 30,000 poultry keepers in this country who now know from experience that they can keep a flock of only laying hens and that is because they have purchased the Potter System of Selecting Laying and Non-Laying Hens, which tells them how to go into their flock and pick out instantly the hens that are laying from those that are not laying. The Potter System book, entitled "Don't Kill the Laying Hen," contains 100 pages and over 30 illustrations. There is no poultry keeper in the United States or any other place who can afford to be without this book.

Don't Kill or Sell Laying Hens.

This time of year poultry raisers are beginning to sort out their flocks and get rid of the older birds, to make room for the young stock which is coming on. How many times poultry keepers kill or sell just the hens which are in full laying condition and the ones they should keep. But by using the Potter System on your flock, it is an easy matter to pick out the laying hens, the ones you want to keep, and to kill or sell only the non-laying hens, or drones, in your flock. Over 30,000 poultrymen are using the Potter System and are making more profit on their hens every day. The letters below are from a few of those using the Potter System and they tell frankly what they think of it:

"A Great Help to Poultrymen."

Gentlemen: I received the booklets in due time and have studied the "Don't Kill the Laying Hen" very closely and can almost say I am an expert already in testing chickens for laying. I think it is a great help to poultrymen and shall do all I can to recommend it to my neighbors. Yours truly,

Chas. Boldt.

Watertown, Ill.

"Worth Its Weight In Gold."

Dear Sirs: I must say your booklet, "Don't Kill the Laying Hen," is valuable to any poultry keeper. It's worth its weight in gold. Your system is reliable in every way and I am more than pleased with it. I told some of my friends about it and they got the book and are pleased with it. Respectfully yours,

977 Wilcox Ave.

Chicago, Ill.

"Its Value Is Unlimited to the Poultryman."

Dear Sirs: I have derived much benefit from the book entitled, "Don't Kill the Laying Hen." As my object in the poultry business is to build up a heavy laying strain, I could not get along without the knowledge I have received from it. When I received it I had over 700 hens and after picking out the layers I only had 200, and am glad to say I am getting just as many eggs as ever. So much

for the Potter System. As space and time will not permit me to tell all of its good qualities, I can only say its value is unlimited to the poultryman. Yours respectfully,

John E. Kuhn,
R. F. D. No. 3.

State College, Pa.

"Found It Absolutely Correct."

Gentlemen: Two years ago I bought your book, "Don't Kill the Laying Hen." After thoroughly testing your method I found it absolutely correct. I learned how to apply the method in one day. I think I made 500 per cent on the dollar invested. Every one who raises poultry should know your method. I have always regretted killing a laying hen when it was too late, but now the laying hen is safe in my hands.

Yours truly,
R. C. Robinson.

McLeansboro, Ill.

"Would Not Be Without It For Any Amount."

Dear Sirs: I received your book, "Don't Kill the Laying Hen," some time ago. I am very much pleased with it and think it the best book I have ever read. Would not be without it for any amount you might ask for it, and think every person keeping chickens should have a copy.

Yours truly,
Ed Archer,
304 Grand Allee.

Quebec, Canada.

"Worth Hundreds of Dollars."

Dear Sirs: Some two years ago I bought one of your books, "Don't Kill the Laying Hen," and must say that in all my years of poultry raising the idea had never presented itself to me before. It is worth hundreds of dollars to any one doing an extensive poultry business, and proportionately valuable to those keeping only a few hens. I hope to induce a few of my friends to invest a dollar in so good a thing.

Very truly,
Fred G. Sears.

Dalton, Mass.

Healthy Hens.

Few poultry keepers realize the fact that sometimes as many as 10 per cent of the hens in their flock are in an unhealthy condition and could not lay eggs even under the best conditions and the best feeding. The Potter System teaches you how to pick out the unhealthy hens

which are not laying and perhaps never have laid and are just the ones you should get rid of. Defective laying organs is one of the greatest causes of non-laying hens in any flock. Roup and other diseases also put hens out of laying condition, and oftentimes after being sick this way they never lay any more.

The above cut shows the organs of a healthy laying hen and shows how the eggs are formed and they are seen in all stages of development, from the smallest germ to the fully developed egg, ready to lay. Hens in this condition are the kind to keep and are the ones that will be profit-makers in the line of egg production. No poultry keeper in this time and age needs to keep an unprofitable flock of hens. It is simply a matter of using the Potter System and selecting

only those that are healthy and in laying condition. T. F. Potter & Co., Box A, Downers Grove, Ill., have been selling their Potter System book to thousands of poultry keepers all over the country for the past five years, and any poultry keeper who wants to make more money on his flock should not delay a day in sending for their circulars describing this wonderful Potter System book. They also manufacture a complete line of portable poultry houses, brood coops, roosting coops, roosting and nesting fixtures, etc. Their large advertisement will be found in this issue of American Poultry Journal.

NOTICE.

The firm of Stephen Marsh and W. G. Holbrook, known as Standard Plymouth Rock Farms, has been dissolved and a division of the stock has been made. All the New York winners and the best breeding stock has come to me.
(Signed) Stephen Marsh.

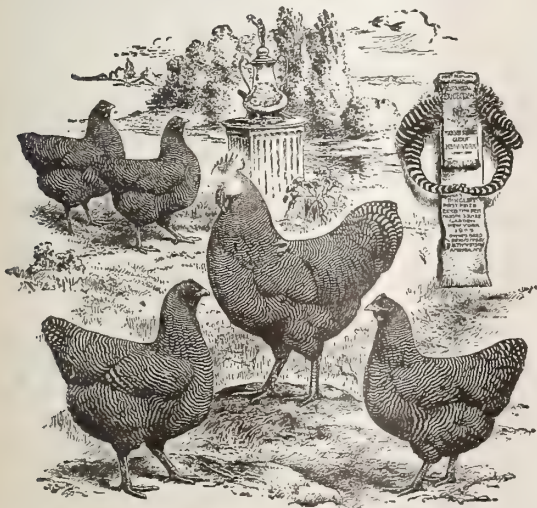

Dr. I. W. Brown, of Cleveland, Ohio, has a nice flock of Rhode Island Reds which he offers for sale in this number. Dr. Brown got his foundation in stock from the famous Lester W. Tompkins strain, and now has what he calls his "own particular strain," and it is a good one, too. The doctor has been several years preparing for his entry into the field of successful poultry breeding, and has steadfastly refused to do any advertising or pushing his stock until he felt absolutely sure of his position. He feels himself now established firmly enough, and anyone desiring fair, square, business-like treatment will do well to correspond with or call upon the genial doctor. His first ad appears elsewhere in this number.

Gage & Houston, Williamsport, Pa., the well-known breeders of Barred Plymouth Rocks and Single Comb Leghorns, report that never in their 12 years' breeding have they produced so great a percentage of first class birds as they have this season, and they are now offering 300 cockerels at prices that will move them quick. They guarantee to deliver money's worth and a little more. Write them today.

W. D. Lipe, Litchfield, Ill., the well-known breeder of R. C. Rhode Island Reds, is offering some exceptional bargains in cockerels this month. He has 150 to dispose of. His stock does not need any recommendation from us.

Fashion's Proudest Birds

ARE "RINGLETS"

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

E. B. Thompson's Barred Plymouth Rocks are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which has made the "Ringlets" America's leading strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the civilized world. The record stands alone and puts all others in eclipse—it is the most remarkable in the annals of poultry shows.

The "Ringlets" are always imitated, but never equaled

I now have on my farm the largest and finest lot of superior exhibition and breeding birds—both male and female—I ever owned; they show that elegant blue color and bright, snappy, narrow "Ringlet" barring, that win under all judges and have made my Barred Rocks the leading silver cup and trophy winners at Madison Square Garden, New York, since 1887—nearly a quarter of a century. These birds will be the winners this fall and winter for the leading shows of America. Will mate breeders to produce winners if desired.

The enormous prestige of my "Ringlets," created by superlative quality, has made them the standard by which all other Barred Plymouth Rocks are judged

New richly illustrated 58-page catalogue mailed upon request; it is full of pictures of New York winners from life. You may have the product of my skill, reaped by 30 years' experience, at reasonable prices. Your wants will have my best and personal attention.

THE SONG OF THE HOUDAN HEN.

O listen to the song
Of the hen that wears a bonnet;
'Tis the Houdan, proud and happy,
About whom I write this sonnet.

This speckled crested biddy,
She goes around so snappy;
If you could see her egg pile
You'd know why she's so happy.

She'd beat that old White Leghorn,
For her eggs are always large—
No measly little egglets
To Mrs. Houdan can you charge.

Talk about white feathers,
Mostly dirty white;
This iridescent Frenchy Lady
Puts them out of sight.

She's coming down the pathway,
Head upright she holds,
Queen of all the Hendom,
Exclusive biddy bold.

Stop and think one moment;
Ah! indeed she has a right to smile!
For she beats them all a mile
With her big, big eggpile.

—E. L. P. T.

The Candee Incubator and Brooder Co., of DeWitt, N. Y., wishes us to inform our readers that they are urging all their customers to place their orders early, as their factory is now running night and day to keep up with present orders. These people have certainly made wonderful strides in the development of their business, but this, of course, is due to the satisfaction their machines are giving their customers, a sample of which is given in the following letter:

YESTERLAID EGG FARMS CO.
Fern Hill in the Ozarks.

Pacific, Mo., Sept. 5, 1910.
Candee Incubator & Brooder Co.,
DeWitt, N. Y.

Gentlemen: Enclosed find our order No. 266 for an eighty-four hover Candee Hot Water Brooding System.

The chicks which were grown to the age when they did not require heat in our Candee System Brooder house this season are so far superior to those handled in our other brooders that we consider it a good business investment to install these additional eighty-four hovers, even if we were not planning to very materially increase the number of chickens raised.

We are greatly pleased with the absolute efficiency of your heaters. The care and regulation of the No. 10 heater on our Candee Brooding System and the No. 6 on our 6,000 egg Candee Incubator is not a chore—it is merely a detail in the very small amount of routine work required to operate our hatching and brooding plant.

You will be interested to learn that we were obliged to turn away a large amount of custom hatching business—there was fully twice as much as we could handle. It is quite probable that we will install another 6,000 egg Candee Incubator next year. Several of the parties for whom we did custom hatching have told us that the chicks we hatched for them were much stronger and grew more rapidly than the ones they hatched with hens.

It was a constant source of surprise to our many visitors during the hatching season to be shown how simply and absolutely such a large machine was regulated.

Thanking you in advance for an early shipment, we are very truly yours,

Yesterlaid Egg Farms Co.,
R. C. Lawry, Mgr.

Does advertising in the American Poultry Journal pay? Read what Mr. Whitney, of Rock River says:

Rock River, O., Aug. 19, 1910.
American Poultry Journal,
Chicago.

Gentlemen: I advertised breeders in the August number of your paper and since it came out I have averaged 5 inquiries per day from all over the United States and several from Canada. This is the best pulling power I ever saw. The sales arising from advertisements in your paper are better than any other poultry paper by 50 per cent.

Yours truly,
H. T. Whitney, Proprietor.
White Feather Poultry Farm, Rock River, Ohio.

The above testimonial was made entirely unsolicited, and speaks volumes for the largest and best. Mr. Whitney intends enlarging his already enormous plant and is now arranging for a larger business than he ever had.

Are You Getting all the Eggs You Would Like From Your Hens?

If not, the trouble is that you are not feeding them properly. Your hens are only machines and without food could not lay an egg. Accordingly it is the food they get that determines the number of eggs and it is scarcely an exaggeration that

THE PARK & POLLARD CO.

DRY-MASH

MAKES THEM
LAY OR BUST

Why? Because it is not a food cheaply prepared for the mere purpose of money making but the result of years of study and experimentation. It keeps the birds in the best of health and is in a class by itself as an egg producer. Naturally when eggs bring high prices they are hard to get and only the best food can be expected to produce them. Consequently it will pay you to start using this Dry-Mash immediately.

Order Some From Your Dealer

If he does not have it ask him to order some for you. Tell him we guarantee absolute satisfaction or money refunded, so there is no risk. If he will not do this, send us his name and we'll quote you prices direct.

At any rate, write today for our new illustrated book entitled "Poultry Truths." Worth \$1.00 but absolutely free.

Lost Feathers

Feathers on the ground and dropping from sleepy, droopy, half-sick hens—that's moulting time, when egg production usually ceases.

Mr. Poultryman, its now up to you to restore the weakened hens to normal vigor and put them in proper trim for a large egg yield through the coming winter. Give them each morning

DR. HESS Poultry PAN-A-CE-A

in the warm mess. It vitalizes and "tones" the drooping bodies, aids digestion and carries off the clogging poisons that weaken and debilitate the hen. Thus it shortens the moulting season and hastens the return of productivity. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M. D., D.V.S.). It makes hens lay, market fowls fat, chicks grow fast and also wards off all poultry diseases. Endorsed by leading poultrymen and sold on a written guarantee.

Costs a penny a day for 30 fowls.

1½ lbs., 25c., mail or express, 40c.; 5 lbs., 60c.; 12 lbs., \$1.25; 25 lb. pail, \$2.50.

Send 2c. for Dr. Hess 48-page Poultry Book, free.

Make Your Poultry Pay

Feed your poultry hot cooked food during the cold winter months—it makes hens lay. Hot cooked food always goes further and it has been proved by experts to be five times more nourishing. Save your money by cooking your poultry food with the practically economical

Farmers' Favorite Feed Cooker and Boiler

Valuable for any number of uses—such as cooking all kinds of poultry and stock feed, rendering lard or tallow, cooking scraple, sugar making, canning, sterilizing milk cans and boiling spraying mixtures. Heats shop or cellar. Costs little, wea-s-long. Write for special sale list.

Lewis Mfg. Co., Box N, Cortland, N. Y.

"Counting Chickens Before they are Hatched" at the I. C. S. Experimental Farms

The Kind of Poultry Raising That Pays

You may know something about poultry-raising, but knowing "something" and thoroughly understanding the profitable science of it are different. You cannot learn poultry-raising from a book. You can learn it, however, from personal instructions by experts who have devoted their lives to successful poultry raising.

This is the kind of instruction given by the International Correspondence Schools, which turns failure into success and ordinary success into a money-making victory.

Every phase of practical poultry raising is completely covered in the I. C. S. Course. For example:

How to select most profitable breeds; feeding; marketing eggs and poultry for profit; natural and artificial brooding; natural and artificial incubation; laying hens; combination plant; poultry appliances; enemies of poultry; poultry houses and management; turkeys; water fowls, squabs, etc.

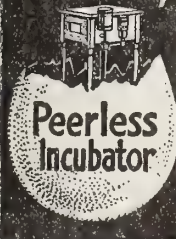

To make this course of instruction most practical and complete, the I. C. S. is associated with the largest and most successful poultry farm in the world—Ranocas Poultry Farms—where experiments of every kind are made for the benefit of those taking the I. C. S. Course.

The I. C. S. Poultry Course answers every question—prevents loss—saves time and money—pays for itself many times. For full particulars, write at once. The season is here. Now is the time to begin.

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

PLYMOUTH ROCKS.

WHITE ROCKS, FISHEL DIRECT. Old and young stock for sale. B. C. Thompson, Elmira, N. Y. 10-3

LET ME BOOK your order for White Plymouth Rock Cockerels, "Fishe's Strain Direct," at \$1.82, \$3 each. These are "dandies." Order early and avoid disappointment, for I returned 100 orders this spring. \$2 buys a Mammoth Pekin Drake or Duck. I aim to satisfy. Grace Eby, R. R. 4, Osborn, Ohio. 10-1

BARRED PLYMOUTH ROCKS. Start with vigorous breeding stock and exhibition birds and good layers are sure to follow. My flocks of winter hatched cockerels and pullets are splendid specimens of poultry vigor. Excellent shipping facilities. Satisfaction guaranteed. Prices quoted on request. B. F. Hunter, Paris, Tennessee. 10-3

WHITE PLYMOUTH ROCKS. The kind that lay. Fine young stock for sale. Write for prices. W. F. Cole, Topeka, Ind. 10-3

CLOSING OUT White Rocks—exhibition and utility. Ellis, Belle Center, Ohio. 10-1

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.
358 DEARBORN STREET :: CHICAGO, ILLINOIS

**ON BARRED PLYMOUTH ROCKS AT
New York Shows**

The Last 21 Years have been won by Birds we Bred
and Raised than has been won by any other
Exhibitor on ANY stock.

1st PRIZES ON COCKERELS More by 20 per cent.

1st PRIZES ON MALES More by 11 per cent.

Than any exhibitor has won on ANY STOCK.

☞ All of the Silver Cups competed for have been won by us,
three times out of five.

☞ Four 1st, four 2d, three 3d Prizes besides other awards
have been won by us at a single Madison Square Garden Show.

☞ THREE TIMES have Males of our breeding won FOUR
OF THE FIVE PRIZES offered in the class, including firsts.

24 of our "LEE BELLE" Line of Females have been First
Winners at New York Show alone.

First Prize in each of the two Largest Shows and the CHAM-
PIONSHIP PRIZE in what was considered the STRONGEST
FEMALE COMPETITION OF THE YEAR, is a recent "LEE
BELLE" record by BIRDS WE BRED, RAISED and SOLD.
We have permission to state this, also the other records
referred to.

SPECIAL

We are selling the finest lot of breeding and exhibition birds
we ever offered for sale, both young and old stock bred from
these same lines at New York and Boston First Prize Win-
ners. We also make a specialty of furnishing Carefully Mated
Trios and Pens for breeding. Exhibition Cockerels and Exhi-
bition Pullets—birds that can be DEPENDED upon for first
class results.

☞ FREE—Illustrated Printed Matter telling of Winnings
at Kansas City, Chicago, New York, etc.

SHEPPARD'S FAMOUS ANCONAS
THE WORLD'S BEST

Champions at the world's greatest shows, including London, Eng., N. Y. City and Cleve-
land. In 1907-8 they won all the 1st and 2d prizes at Madison Square Garden in the
largest Ancona class in the history of the big show. Have since won three times as many
1st and 2d prizes as all the other breeders together. In the great 1910 International
show, in the largest and strongest class in the history of the world, my birds again distin-
guished themselves by winning three times as many first prizes and silver cups, and four
times as many special club ribbons as all others combined.

: SPECIAL SALE .

of a large lot of handsome cockerels from my Madison Square winners, at reduced prices.

OF

Pigeons and Bantams

By F. W. DeLancey

One hundred pages, handsomely illustrated. The best ever published on the subject, because it goes into details; illustrates and describes all the leading varieties.

It Tells You---

How to mate---How, when and what to feed---How to tell males from females---System of feeding---Training the racing Homer---Disease---Building and construction of houses---History and origin of the different varieties. The most complete pigeon book published.

Bantams

It not only describes and illustrates the leading varieties, but tells you all about the mating, care and keeping. Articles by America's foremost breeders and best authorities. No Bantam or Pigeon breeder can afford to be without this valuable guide.

Price 50c or with a year's subscription to The Poultry Item, the largest and best eastern poultry journal, 75c

Here's Just One, More Like It
Cornwall, N. Y., July 18, 1910.

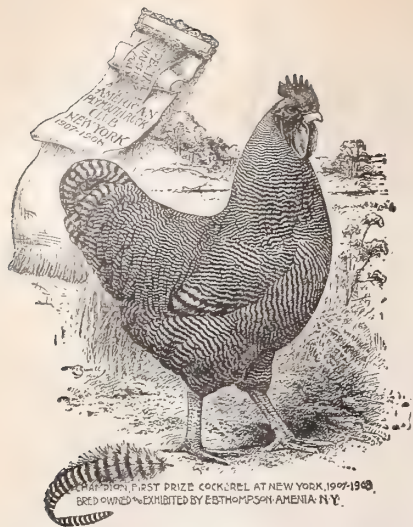

D. Lincoln Orr, Esq., Orr's Mills, N. Y.

Dear Sir:—In reply to your letter of inquiry regarding my opinion of your new digestible mash, I would say that we have kept this food before the birds in our laying houses constantly since its introduction. We consider it the greatest egg producing food that we have ever used. To those desiring quantities of market eggs we would say—use Orr's Digestible Mash. Yours truly,

PALMER R. BOWDISH,
Breeder of Columbian Wyandottes, Single Comb Buff Orpingtons and Single Comb White Leghorns.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

BUFF WYANDOTTES THE KIND THAT WIN

At Chicago, 1909, in one of the strongest classes of Buff Wyandottes ever shown in the West, my birds won 1st, 2d cock, 2d, 3d hen, 4th, 5th ekl., 2d pullet and 3d pen, besides several specials.

Special Sale For This Month

Four one- and two-year-old hens, mated to a yearling cock, for \$10. Trios \$8. Just one-half their real value. Write for price list of other bargains. Please mention American Poultry Journal.

Simon Beuth : : : : Box B, German Valley, Illinois

The "Norwich" Automatic Exerciser & Feeder

Is recognized by the leading poultrymen of the United States as the best, simplest and most practical Automatic Feeder and Exerciser on the market. It is GUARANTEED to be absolutely RAT, SPARROW and WEATHER proof. The same machine will feed four-weeks'-old chicks, growing stock and breeders or layers. Saves its cost in feed and labor six times a year. Increases egg production, hastens growth, prevents disease, stops loss and makes poultry keeping pleasant and profitable. Very simple in construction and operation; will not get out of repair and will last a life time. Send for our booklet explaining our 30-day free trial offer. We will also mail our Barred Rock or Light Brahma catalogue for 10c in silver or stamps. State which breed you want. But the Feeder booklet is free. Ask for it. Address River Home Poultry Yards, Box B, Perrysburg, Ohio

Breeders and Exhibitors of Barred Plymouth Rocks and Single Comb White Leghorns

If you want winners for the fall or winter shows, single birds, pairs, trios, pens or any number, why not send to us? We won the majority of Blue Ribbons at Orange County Fair, New York; all the Blue Ribbons in both classes at Troy, New York, 1909; more Blue Ribbons and Specials than all our competitors combined, in both classes at Ill.-State Fair, Memphis, Tennessee, 1909, first prize pen Single Comb White Leghorns, and many other places. Cup presented by the president of the National Single Comb White Leghorn Club for scoring the greatest number of points at Madison Square Garden, December, 1909, and January, 1910, and at Boston, Massachusetts, January, 1910, we won every Blue Ribbon in Single Comb White Leghorns and every Special, including the American Poultry Association Medal for the best male of all the Mediterranean class and in Barred Rocks, won many places and the Special for the best shaped female. If we can do all the above, why not send to us to help you out? Send for literature and particulars as we consider giving information a pleasure without charge. We have breeders, show birds, eggs for hatching and day-old chicks for sale in season.

J. H. Hallock, Prop. : Box 2, Hartwood, Sullivan County, N. Y.

REDS

Free catalog, with photographs, descriptions and prices on 3,000 R. I. Red cks. and pullets, bred from the world's best stock, the finest that has ever appeared at N. Y., Boston, Chicago, Detroit, etc. Also 1- and 2-yr.-old exhibition and utility birds; both combs. Every bird guaranteed to please. : : :
Edwin R. Cornish (Formerly Edwardsburg) 1426 E. Pontiac St., Ann Arbor, Mich.

Koehlinger's Columbian Wyandottes

The best winter layers, and I challenge the world to produce a more beautiful bird. Now is your chance to secure show birds or selected breeders. Write me your wants. Satisfaction guaranteed.

to ship; from the noted

Red Raven Strain

Can furnish exhibition birds for the early winter shows. Secure some of the Red Raven Strain and win the blue ribbons at your show. We guarantee satisfaction or your money back.

J. G. Budde & Co., Oak Park, Ill.

Cheviot Farms

ORPINGTONS

We have some of the grandest young stock in BUFF the whole world affords. We have size, type, color. You can get all three no where else. You can get birds from the grandest imported stock in the world, and also from the Buffs that defeated every other strong stud of Buffs in America, winning Stanfield's Challenge Trophy for best Buffs judged at Madison Square, National Club Meet at Cleveland, Chicago, etc. If you want a cockerel to give type and size to your flock, as well as color, we have him.

WHITE: Our champion cockerel of England threw some grand chicks—immense bone, fine type and color—nothing like this stock in America.

BLACK: So many are now coming to us for top-notch show stock that we will have to refuse all orders for superlative females. A few pure Empress cks. for sale, and any quantity of Nabob blood, at moderate prices. No more females for sale at over \$25 each; plenty at \$5 to \$25 per bird in either sex. We must save all remaining superlative females in Black for our immense egg trade.

ORPINGTON MAGAZINE: Do not fail to send a quarter for the Orpington Quarterly; it is all cream. No breeder can afford to be without this epitome of the best knowledge of today on this great breed. Or send 50c and add any 50c poultry magazine in addition to the Orpington Magazine.

Milton W. Brown - The Cheviot Farms - Cincinnati, Ohio

BUFF AND WHITE ORPINGTONS

The Oldest Specialty Breeders in the U. S.

Our show record on Buffs at Madison Square Garden, N. Y., is unequalled---winning silver cup for best display, showing only nine birds and having seven points more than our nearest competitor. In same show also won handsome silver cup for best cockerel. Our winnings at Chicago, where we won more firsts than all competitors, cannot be equalled. **Can there be any question where you should order your stock and eggs?** Send for free mating list. We are quoting special prices to close out some grand breeding stock at this time. We breed for quality, health, vigor and egg production. Write your wants.

J. M. Williams & Co., Box B, North Adams, Michigan

F. R. Clark :: Bloomington, Ill.
Sunnybrae Kennels

Successful Egg Farming

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
100 Hodgkins Block, Syracuse, N. Y.

World's Foremost White Wyandottes

have won the highest honors at N. Y., Boston and all the prominent shows in U. S. and Canada, including the Alaska Yukon Exposition. Send for circular and see who has been breeding the best winners for many years. All stock returned at my expense, if not satisfactory.

Lock Box 88, HUDSON, MASS.

"RINGLET" BARRED PLY. ROCKS

In their purity and positively the very best. Our birds made another clean sweep at the Wis. State Show, 1910. Our prices are right and we positively guarantee to please you or refund your money cheerfully. Our 32-page catalog, containing show record and scores of strong unsolicited testimonials from our customers, will convince you of the truthfulness of every claim we make. Sincerely yours,

KING BROTHERS

OSHKOSH, WISCONSIN

700-MARCH HATCHED-700

Ready to exhibit. From the 2000 we raised we have culled down to 700.

PURE "RINGLETS"

We are bound to satisfy. Such culling means nothing but quality left. They are farm raised, so we can furnish cockerels for \$5.00, \$7.50 and \$10.00, that would cost you two and three times as much elsewhere. Some fine hens and pullets to spare also.

G. A. BARNETT

R. F. D. 1, CLINTON, ILLINOIS

Double Profits

IN THE
POULTRY BUSINESS

MADE possible by following the directions given by Clarence Ward, son of C. J. Ward, the founder of the oldest, largest and best poultry paper in America—the American Poultry Journal. Mr. Ward was brought up in the poultry business and has made a practical study of it from A to Z. He gives to the poultrymen of this country the benefit of his experience in his new book—

Successful Poultry Culture

which contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of saving three-fourths the feed bill, and many other valuable pointers which will save you many times the price of the book.

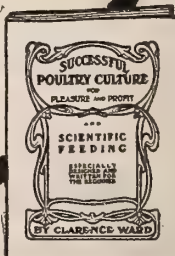

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin-Money for Women; Boys and Poultry Culture; Poultry on the Farm, How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model Poultry Houses; Profits in Poultry Culture; Scientific Feeding.

A 128-Page Book For Only 50c

We have contracted for a large number of these books at a price which enables us to offer this lot at half price. The regular price of this great book is \$1. We have cut the price to 50c. Send 50c in money order, coin or stamps and get a copy at once. It will pay for itself in a few days, no matter if you raise 50 or 5000 fowls. Address

The Range With A Reputation

A Perfect Baker Economical In Fuel

That's what every housewife seeks in a range—one that is absolutely dependable, every day, year in, year out.

Built on honor, of the best materials, the Great Majestic outwears three ordinary ranges. It is the only range made entirely of charcoal and malleable iron. Malleable iron can't break—charcoal iron won't rust like Steel.

The seams of the Majestic are riveted (not put together with bolts and stove putty)—they always remain air tight, neither heat, nor cold affects them. The Majestic is lined throughout with pure asbestos, 1/2 inch thick, held in place by an iron grating—you can see it—and it stays there always. Air tight joints and pure asbestos lining assure an even, dependable baking heat, saving one-half the fuel.

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

The reservoir is all copper and heats like a tea kettle, through a copper pocket, stamped from one piece of copper, setting against left hand lining of fire box. It boils 15 gallons of water in a very few minutes and by turning a lever the frame and reservoir moves away from the fire. This feature is patented and is used only in the Majestic.

It is the best range at any price—a range with a reputation and it should be in your kitchen. It is for sale by the best dealers in nearly every county in 40 states. If you don't know who sells them in your vicinity, write us and we will send you our book, "Range Comparison." Everyone thinking of buying a range should first read this booklet.

Majestic Manufacturing Co.
Dept. 18 St. Louis, Mo.

It Should Be
In Your Kitchen

IT WILL MAKE MONEY FOR YOU

There is no Guess-work about Candee Incu-Brooder Results

It is a business machine giving the highest average percentage of chicks and operated at the lowest possible cost.

Because

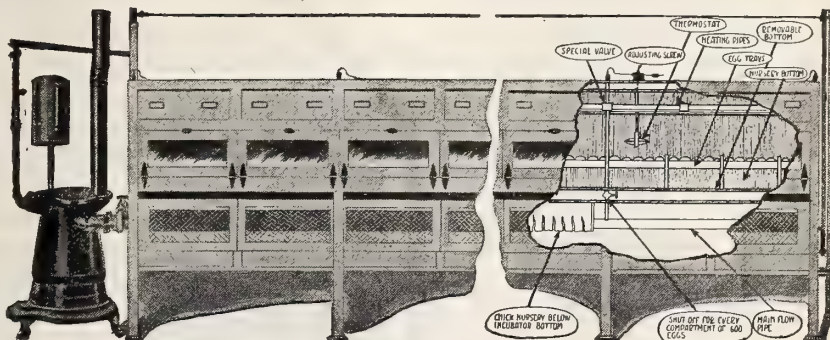

You heat only compartments in actual use. Exclusive Candee feature.

You have the most perfect and yet the simplest heat regulation. Separate thermostat for each compartment, controlling the heat without moving the sanitary trays up or down. Exclusive Candee feature.

Besides

You have a simple heat control of the main flow, without using a float. Exclusive Candee feature.

You have a sectional machine that can be added to as your business increases.

The Incu-Brooder Capacity Ranges from 2,400 to 20,000 Eggs

You have the most economical and durable heater and a machine made of the best materials, accurately fitted and quickly erected.

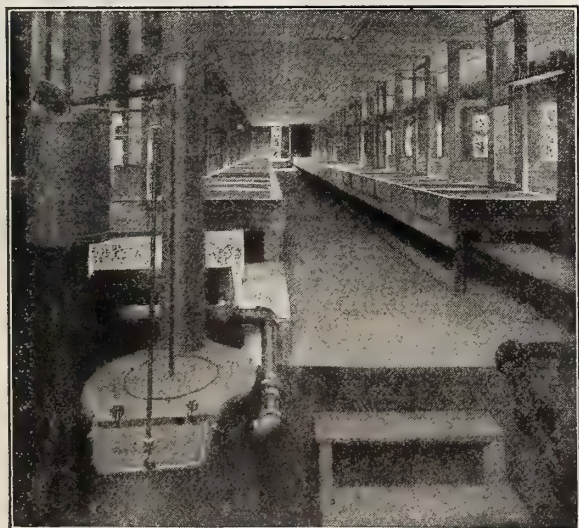

And Then

You can fill your machine to capacity in Custom Hatching.

You can have a steady income and you will find that each season the business offered you will be greater than your capacity.

You can be a leader in the Baby Chick trade with its large profits.

You can handle your own work without cost

Interior of Candee Brooder House

Candee Hot Water Brooding Systems

Cheapest to Install—
First cost is lower than equal capacity of oil heaters.

Lowest Running Cost—
Amount of coal used costs much less than oil for equal capacity.

Healthiest heat—No danger from fumes or fire. Simply a natural heat, producing the healthiest chicks.

Tending and Cleaning—Requires but a minute night and morning. Every part instantly accessible for cleaning.

Candee Outfits Stand Every Test and prove their superiority in steady use. They are noted for their reliability and their continual service. They are simple and do not get out of order. Because of this and their remarkably low cost of operation they give the best results and that is what counts.

We Have a Catalogue Ready to Mail You

Simply send us your name and address and you will receive it by return mail. It fully describes the Candee outfits, gives actual results, comparative costs and all the facts that every discriminating buyer should have.

T. Cadwallader, Box 1912, Salem, O.

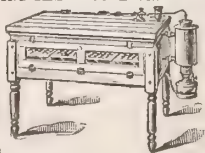

SHOEMAKER'S POULTRY BOOK**AND ALMANAC.**

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS—showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs

for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

ALL ABOUT "GLOBE"**INCUBATORS & BROODERS**

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICK-EN-DO, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

**WHITE ORPINGTONS**

Kellerstrass and Owen Farms Strain. I have 75 cockerels and pullets of that fine cobby type, so much desired in this breed. They were hatched early and are of fine size and will make somebody step lively at the coming shows. My prices are reasonable and I guarantee satisfaction. Write me your wants quick, as they won't last long at the price I am asking for them.

Factory Prices Cash or Credit**"A Kalamazoo Direct to You"**

TRADE MARK REGISTERED

—“And Gas Stoves Too”**A Word to Independent Buyers—**

The secret of getting the most for your money—in all stoves and ranges, including gas stoves and ranges—is in buying **direct from the factory** that puts high standard into materials, expert labor and heat and fuel-saving original designs—cutting out all dealers' and middlemen's profits.

That's why **Kalamazoo** save you from \$5 to \$40 on price for stoves and ranges of equal quality sold by dealers. We don't sell to dealers—only direct to the users. All Kalamazoos sent ready to use and handsomely blacked and finished. We are proud to refer you to as many as you wish of over 140,000 satisfied owners of Kalamazoos in over 21,000 towns—probably including many of your own neighbors, or near you. Every one bought Kalamazoos direct from us, safe delivery guaranteed.

**FREIGHT PREPAID**

— ON 30 DAYS' FREE TRIAL

— ON 360 DAYS' APPROVAL TEST

We even give credit now—same as your dealers would—to responsible persons—small payment first and then monthly payments after your free trial, if satisfied. Or your payment back and we take our Kalamazoo back and pay freight both ways. You'd be nothing out at all.

Send Name—Free Book Explains All

Spend a cent for a postal and send your name for our Big Free 100 page Kalamazoo Illustrated Book with wholesale factory prices, explaining all, with our \$100,000 bank bond guarantee of satisfaction or money back.

Judge first of values—then order—you be the one to say, if you don't want to keep the Kalamazoo we'll send you.

S. A. Noftzger, Box A, North Manchester, Ind.
ORIGINATOR OF PARTRIDGE PLYMOUTH ROCKS

**"I Made
\$18,178.53**

NET PROFIT

**In One Year, Selling
Chickens & Eggs"**

**I Tell
You
How**

I made \$3,600.00 in one season from 30 hens, on a lot 24x40, by feeding the scraps from my table three times a day. I'll give you the names of those who paid me over \$2,000 for the eggs alone from these fowls—you can refer to them.

I'll tell you how I make my chickens weigh 2 1-2 pounds at 8 weeks of age.

I tell how I prepared my chickens for the show room, so that I won over 90 per cent of all the blue ribbons offered during 1907 and 1908. This has never been published before.

How I raise ninety-eight chickens out of a hundred that I hatch—how I feed my chickens for egg production—how I keep them healthy and free from disease—how I tell the layer from the poor layer—how I break up my broody hens without injuring them. I tell you how to pack eggs to keep them fresh—how I mate my chickens for breeding and fertility—how I run my incubators and supply moisture—how I raised my famous \$10,000.00 hen, "Peggy"—how I bred my big egg-laying strain. I tell you all about broiler plants, egg plants, etc.

I tell you about everything that is necessary to success in the poultry business.

It also gives you my opinion and experience that I have had with advertising solicitors of poultry journals.

It also gives you my opinion and experience that I have had with poultry judges in the show room, and why, in my opinion, the little fellow don't get what he thinks he ought to have in the show room. I tell it just as I have seen it and experienced it. There are several pages in this book taken from my records, and from my cash book and ledger. There are no secrets—I tell it all.

See what others say on opposite page.

I took a flock of 1,638 chickens and made them net me a profit of \$11.09 per bird in 12 months' time.

My farm and books are open for inspection to any State Poultry Experimental Station. If your station doesn't find the above statements true, I'll donate \$1,000.00 in cash to your institute.

**My New Poultry Book Tells
How I Did It.**

It covers all branches—it tells everything necessary to success with poultry. It tells you what I have done—how I started.

Try my way and you can raise them by the thousands

It shows you a picture of the first hen house I built, 6x6 feet in size. It contains over 50 full-page pictures of buildings and views taken on my farm. It was written from actual experience

Send \$1.00—and a Copy of the Latest Revised Edition of the Book Will be Sent You by Return Mail.

8143 WESTPORT ROAD
KANSAS CITY, MISSOURI

NOTE—Ask the editor of this Poultry Journal or any "licensed" poultry judge as to my reputation as a breeder.

“KELLERSTRASS WAY”

The Kellerstrass Farm,
Kansas City, Mo.

I received your book sent me Saturday a. m. It would have been worth to me \$500.00 if I had had it last spring. "Good Book," common sense learned by hard-earned experience. Worth \$1,000.00 to me. Kespt.,

L. R. HAYWARD.

Clinton, Ia.

Kellerstrass Farm,
Kansas City, Mo.

The book, "The Kellerstrass Way of Raising Poultry," received, and will say it is the most sensible and practical book on poultry that I have ever read, and I would not part with it for ten times its price if I could not get another one. Very truly yours,

H. C. HEINSEN.

Albany, N. Y.

Ernest Kellerstrass.

Dear Sir:—I received your book. Comparatively speaking, it is WORTH MORE MONEY.

Very truly yours,

GEO. W. CAMPBELL.

The American White Orpington Club,
Richmond, Va.

Dear Mr. Kellerstrass:

Received the book O. K., and it certainly is brim full of meat; you have the other fellows beat a mile for real down chicken information, and I have all of the books, as well as some practical experience in the 15 years I have been breeding.

Fraternally,
F. S. BULLINGTON.

Hurst Pierrepont,
Garrison-on-Hudson, N. Y.

Mr. Kellerstrass

I have read your book with deep interest, and want the satisfaction and pleasure of telling you how much I admire your wonderful enterprise, your unbounded success and your most beautiful and peerless poultry. I have the greatest wish to visit your farm, and as I am honored with a permit, I hope some day to avail myself of the privilege.

It must be a great satisfaction and joy to you to have been able to do all you have done, and to have given inspiration to very many people.

It is not probable that it would be possible for anyone to excel you. You have no doubt brought poultry raising up to the goal of excellence, but if in the future there should happen to be others capable of following your great example, you will have reason to rejoice that you were the first to give them such an inspiration. What greater good can we do in the world than to be an example so perfect in whatever way that others may desire and succeed in following. What most people need is inspiration. Many talents lie dormant. The desire has not been roused to put forth interested efforts.

When one such as you and Luther Burbank come to the fore it has the effect of stirring desire and ambition. Blessed are such individuals; they have accomplished a great work, and posterity will not forget them.

Sincerely yours,

M. BECKWITH.

Winchester, Kans.

Dear Sir:—Received the book all O. K. this a. m. and find same very interesting and full of GOOD SOUND LOGIC.

Yours truly,

CHAS. FORSYTHE.

Mr. E. Kellerstrass,
Kansas City, Mo.

Buffalo, N. Y.

Dear Sir:—Received your book all right. Am well pleased with book; best dollar's worth I have ever received.

Yours truly,

CHAS. P. GOETZ.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Adah, Pa.

Dear Friend:—The book at hand. I got so much interested in the book that I couldn't lay it down. It is the best book that I ever opened on poultry talk. I think every person that has a bird on his lot or farm should have one of these books. I was surprised when I read where you opened those chicks and found lath nails and tacks in their craws. I never heard of such a thing; it stands to reason that would kill them.

H. M. GROVER.

Irrington, N. J.

Ernest Kellerstrass:

Dear Sir:—Received your poultry book; it is worth many times the price, and should be in the hands of everyone handling chickens, as it contains information that would take many years to learn.

Yours very truly,

JOHN SELFELDER.

Kellerstrass Farm,
Ernest Kellerstrass, Prop.,
Kansas City, Mo.

Elyria, Ohio.

Dear Sir:—I was very much interested in your book, as I believe that it gets closer to nature than any other book that I have seen, and am much interested in your Crystal White Orpingtons.

Yours very truly,

H. H. CLOUGH.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Augusta, Ga.

Dear Sir:—Yours of a recent date to hand. Also your book of "Kellerstrass Way of Raising Poultry," which I appreciate very much. I must say I think more of it than all the other books I have ever received.

Thanking you again for the book you sent me, and assuring you that I am and will from now on follow your way and no other,

Yours truly,

G. K. JOHNSON.

Hot Springs, Ark.

Mr. Ernest Kellerstrass.

Dear Sir:—Please excuse my apparent slothfulness. I have not had a chance to write to you since I received the book. I would not take three times the cost of it for it. It is all good common sense, and no man could have known it without experience, and it takes time to find out such. I am a thousand times obliged to you. I feel as if you had given it to me. I am not a breeder of any particular breed. I just raise a few for home use, but I like to make them pay. I am an admirer of the work and hope in the near future to go in it for a business.

Thanking you again, I am,

Respectfully yours,

R. S. TONEY.

Grey Bull, Wyo.

Received book all right. It suits me fine. Is worth its money in any man's country. Yours as ever,

J. T. ROBINSON.

Oklahoma City, Okla.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Your late poultry book received, and I have received very much valuable information therefrom. I believe I can now begin the poultry business intelligently and successfully.

Very respectfully,

T. W. SHACKELFORD.

Jennings, Kans.

Ernest Kellerstrass.

Dear Sir:—Enclosed please find \$1.00 for your book, "My New Poultry Book." Your ad. was sent me by one who has your book and thinks it is a grand book.

MRS. C. H. DANLEY.

Calgary, Alta, Can.

To Kellerstrass Poultry Farm,
Kansas City, Mo.

Dear Sir:—Received your book O. K., for which I thank you for the quick reply, and having read it through, may say that in my estimation the book is worth its weight in gold to anyone who has or takes interest in poultry.

Yours truly,

B. DICKINSON.

Victoria, B. C.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Received your poultry book and enjoyed reading it. I like that kind of language you talk. Your book cheers me up, and I have decided now to go into the poultry business.

Yours truly,

WM. COLLEN.

Asbury, Mo.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I like the book fine, and would not part with some of the information for many times the price of book.

Very truly yours,

C. J. RHOADS.

Birmingham, Ala.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Sir:—Have just received your book—found it very interesting. Am sure it will be of much help to me. Don't see how I could do without it.

Yours truly,

J. W. GILLESPIE.

Brandon, Manitoba.

Mr. Ernest Kellerstrass.

Dear Sir:—I received your book, and think it far ahead of all others. Everything so plain and to the point.

I remain,

S. E. WOODLEY.

Chicago, Ill.

Mr. Ernest Kellerstrass.

Dear Sir:—I have your late book on your way of raising poultry, and have been reading it. Am very much taken with your way—am proud of my book.

W. PICKENS.

New York City.

Ernest Kellerstrass,
Westport Station,
Kansas City, Mo.

Dear Sir:—Please find enclosed check for \$2.00 for two copies of your "New Book on Poultry." I received a copy of this book from you some weeks ago, but it was so admired by a friend that I gave it to him, and now want one for my own use.

Very truly yours,

THEODORE CRANE.

**The Famous PEERLESS INCUBATORS & BROODERS**

More than 30,000 in actual use. Every one of them hatching and raising a larger percentage, with less attention and less expense than any other made. No other machine has so many improvements—so many money savers—so many labor savers as the Peerless. Here are a few of the special features:

Automatic ventilation and moisture; cold-rolled copper tank; heat distributing bars; tandem, double-compound thermostat regulator; automatic lamp; acme trip burner with combined damper and flame regulator—this is the safest burner made. It saves half the time, labor and cost of operation.

My Lampless Brooder—the greatest brooder success of the age. No lamp, no tank, no expense to operate. Raises a larger percentage of healthy, vigorous chicks than any other brooder on the market.

Either Knock-Down or Ready For Operation

I manufacture a complete line of Incubator and Brooder Supplies and fixtures; everything to repair or remodel your old machine or build new ones. I will also make to order anything special you may want in my line.

Send for my combined catalog and book of plans. It is free. It contains more than 100 photographic illustrations, showing step by step how Peerless Incubators and Brooders are constructed and how easily you can build them yourself. Whether you build an incubator or buy one ready made, you will save money by buying from me. Send for my free book today and learn all about the "House of Quality."

H. M. Sheer Company,

Box A5, Quincy, Ill.

**CHAPMAN'S PICKING FRAME**

Revolutionizes the plucking of poultry. Saves half the labor. Keeps everything perfectly sanitary. It is adjustable for all sizes. Allows the use of both hands in plucking. The bird can be revolved in either direction. In fact, it is the greatest little invention that has been placed before the poultry fraternity for ages. Send for catalogue describing this invention.

Chapman's Improved Trap Nest and Chapman's Sanitary Poultry Fountain. Picking Frame \$2. Turkey Attachment \$1. extra. Three Trap Nest \$3. Glass Fountain \$1. Agents Wanted.

THE CHAPMAN CO.,
176 FEDERAL ST., BOSTON, MASS.

NEW breeds come and go, but a variety that has continuously grown in public favor for twenty years is surely worthy of your consideration. Not only one man has made a snug little fortune out of this variety of fowls, but hundreds of them; therefore it is surely folly to cast aside a variety of fowls that has "made good" to "try" something that has no redeeming feature. Before you buy your poultry consider well

BEAUTIFUL

PROFITABLE

**U. R. FISHEL'S
WHITE PLYMOUTH ROCKS**
"THE BEST IN THE WORLD"

STUDY carefully the above lines and then try some of the birds, and you will say as do thousands of others: "The half has not been told" of this money-making breed. The U. R. Fishel White Rocks have won the leading prizes the world over for the past fifteen years. Our birds are all farm reared, strong and vigorous; just the kind you want as exhibiton birds, selected breeders or utility fowls.

We have over ten thousand birds to select from this season, therefore are in position to give you a better selection than the breeder with but a hundred or two.

Imagine you own a pen of pure white birds, with rich yellow legs, bright red combs and head; stylish, attractive, vigorous fowls. Could you own anything more beautiful or profitable? Those are the U. R. Fishel White Rocks.

Send two dimes for 56-page catalogue; it will interest you.

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago, Ill.

RIVER HOME POULTRY YARDS

BOX B, PERRYSBURG, OHIO

MOST of the readers of this journal know that we are high-class poultry breeders and have been engaged in the business for years, and that we have one of the largest and most modern poultry plants in the country and are extensive breeders of high-class, purebred

Light Brahmas AND Barred Ply. Rocks

We have published two of the handsomest poultry catalogs that have ever been put out. One of them tells about our Light Brahmas, and contains beautiful unretouched photographs of our Light Brahmas, and the other catalog is equally as beautiful and contains photographs of our Barred Plymouth Rocks, and tells all about them. The catalogs cost us 40c each when we order thousands at a time. Send 10c today, telling us which variety you want, and we will mail you a catalog telling all about our N. Y., Chicago, Toledo, Detroit and Indianapolis winners.

We want now to tell you on this page about the

Norwich Automatic Exerciser and Feeder

We found by experience in our own yards that the Norwich Automatic Exerciser and Feeder is the greatest invention in poultrydom. We finally installed over fifty of them in our own yards, and have used them for about two years. They have saved us their cost in feed at least four times every year, and the saving in labor amounts to even more than the saving in feed. We had no intention when we purchased the Exercisers and Feeders of taking the agency for their sale, but the merits of the Exerciser and Feeder are so great that we simply felt compelled to tell other poultry breeders about them just as a matter of duty. So many people saw our Exercisers and Feeders and wanted to buy them right at our yards that we finally were forced to ask for the agency in order to supply the demand, and the demand has now become so great that we are buying the Exercisers and Feeders in carload lots and are shipping them out as fast as we can get them from the factory.

The Norwich Automatic Exerciser and Feeder is practical and simple. The price of grain will be higher this fall, and this Exerciser and Feeder will cut your bill one-fourth by preventing all waste. Yards, whether large or small, equipped with it are entirely free from sparrows and rats, because there is no feed laying around to attract or feed them. It saves time and labor. Fill the hopper once or twice a week and your birds will do the rest. They will take better care of themselves than you can. You can adjust it for birds six

weeks' old and over so that they can get just enough and no more. They cannot gorge themselves, and yet will never go hungry.

The Exercisers and Feeders are made in four sizes, and are equally valuable and useful on the city lot and to the largest breeder. Every chicken in the United States should get its feed from one of these machines.

GUARANTEE

Every Norwich Automatic Exerciser and Feeder is sold under the following positive guarantee:

- 1st: It will pay for itself in the saving of grain in ninety days at the present price of grain.
- 2d: It is absolutely RAT and BIRD proof.
- 3d: It is absolutely RAIN and DAMP proof, and the enormous loss of grain from feed becoming damp by lying on the ground will be eliminated.
- 4th: Every kernel of grain put in the hopper will go into your flock, and not a grain will be lost from any cause.
- 5th: The labor of feeding, except filling the hopper when empty, will be eliminated. On large plants one boy can do the feeding for 1000 pens.
- 6th: The exercise given by the action of the machine is just sufficient to keep the flock in perfect condition. Too much exercise is equally as bad as too little. Our machine strikes the happy medium.
- 7th: The machine will increase the growth of young stock more than any other method of feeding, and will increase the egg production twenty per cent.

The machine is light and easily moved outdoors in summer and indoors in winter. It is manufactured entirely of metal and is not affected by weather conditions. It is inexpensive.

We are the exclusive general agents and distributors for the Norwich Automatic Exerciser and Feeder in the following states:

ARKANSAS	MISSOURI
ILLINOIS	NEBRASKA
INDIANA	NO. DAKOTA
IOWA	OHIO
KANSAS	OKLAHOMA
KENTUCKY	SO. DAKOTA
LOUISIANA	TENNESSEE
MICHIGAN	TEXAS
MINNESOTA	W. VIRGINIA
MISSISSIPPI	WISCONSIN

If you live in any of the above states write to us for our free booklet telling about the Norwich Automatic Exerciser and Feeder, and explaining our free 30-day trial offer.

If you do not live in any of the above states, write to the Norwich Automatic Feeder Co., Norwich, Connecticut.

Remember, if you are interested in Light Brahmas or Barred Plymouth Rocks, send 10c in silver or stamps for our handsome catalog, telling us which variety you want, but in any event send today for our free booklet telling all about the Norwich Automatic Exerciser and Feeder and our FREE 30-DAY TRIAL OFFER.

COUPON

Fill out this coupon and mail it today. Draw a line through the name of the breed you do not want, or draw lines through both Light Brahma and Barred Plymouth Rock if you only want the Norwich Automatic Exerciser and Feeder booklet.

River Home Poultry Yards,
Box B, Perrysburg, Ohio.

Please mail me your Light Brahma catalogue, for which I enclose 10c.

Also send me your free Norwich Automatic Exerciser and Feeder booklet telling about the thirty days' free trial offer.

VICTOR STRAIN

Barred Rocks and Columbian Wyandottes

First Columbian Pullet, Madison Square Garden, 1910

and are fine breeding specimens that will put the black markings in your stock another year. "Show Quality" predominates among our flock of young Columbians; a large number of which were bred from our MADISON SQUARE GARDEN WINNERS and fit the Standard in type and color as near as any bird can. Elegant laced hackels and coverts, wings marked just right and solid black tails. We have the quality you are looking for. Write us today and give us a chance to SHOW YOU OUR VICTOR STRAIN. Remember our birds have won at Madison Square, Cleveland and many other shows. We are here to please you; no inferior birds shipped out at any price.

**Special Pens Mated to Supply
the Fall Egg Trade**

WE ARE OFFERING BARGAIN PRICES FOR QUICK SALES in **Barred Rocks**. We will sacrifice 200 pullets and 200 cockerels, both cockerel bred and pullet bred birds. Many of these could win most anywhere, being bred from our Cleveland winners which were the "Sensation" there in an extremely hot class this year. Our birds have the type required by the new Standard and the correct clean cut narrow barring with that bright, snappy, blue color you would like to get. We have more birds coming on later, so will name you extremely low prices for quick sales. Our pullet line is exceptionally fine. Remember our poultryman is a Barred Rock specialist. 100 hens are also included in this sale. They are both cockerel and pullet bred birds we used in our own pens and have quality to please the most fastidious.

In **Columbian Wyandottes** we will sacrifice 50 hens, 100 cockerels and 100 pullets. These hens were in our breeding pens

ROBERT F. CLARK
87 Milk Street : : Boston, Mass.

LAYING HENS

Are the only ones that pay for their keeping. The eggs they lay are what pay for their feed, your work and perhaps a little profit besides. But why not get bigger profits by keeping a flock of "ALL LAYING HENS." In many flocks less than half the hens are laying. The non-layers, the drones and barren hens take all the profit from the good layers. But there is a way and an easy and sure way whereby every poultry keeper can get rid of all the non-layers, drones and diseased hens, and that is by using

THE POTTER SYSTEM OF SELECTING LAYING AND NON-LAYING HENS AND EGG PRODUCTION

By using our system any poultry keeper can go into his flock and in a few minutes can pick out the layers from the non-layers. Dollars may be saved in a year in feed alone and you do not run the risk of losing your best layers when you want to kill or sell some hens. Keep only your best, healthy laying hens and breed from them only. That's the way to build up a heavy "all the year round" egg laying strain of hens. Isn't this worth doing? We can prove to you that any poultry keeper not using the POTTER SYSTEM is losing dollars—perhaps hundreds—every year.

OVER 30,000 POULTRY KEEPERS

Now use the POTTER SYSTEM on their flocks and are thus able to keep only laying hens and make bigger profits. Read the letters to the right, then decide for yourself about not knowing the POTTER SYSTEM. No poultry raiser can afford to keep hens and be without our wonderful POTTER SYSTEM BOOK which gives information on the subject of egg production never published before. Every person having our book has a gold mine on this subject and a sure means of making larger PROFITS from his poultry.

"DON'T KILL THE LAYING HEN"

Is the title of our Potter System book and this warning has helped thousands of poultry keepers to start on the right road to successful and profitable poultry raising by keeping only the hens that lay the eggs. Right now is the time to use the Potter System, when you want to get rid of your surplus stock. But DON'T KILL OR SELL ANY hens until you have sorted out the layers from the loafers, the healthy hens from the diseased hens, keeping only the best laying hens. Our Potter System book contains over 100 pages and 30 illustrations on the subject of laying and non-laying hens and egg production.

POTTERIZE YOUR FLOCK

By using the POTTER SYSTEM. Join the ranks of thousands of poultry keepers who are more successful and satisfied because they do use it. We repeat again that no poultry keeper can afford to be without our POTTER SYSTEM book. Potterize your flock and get in line to make more money on it this winter by using the Potter System. Fill out the coupon in right hand corner and mail to us and you will get our large catalogs and circulars telling all about our goods and how you can get our Potter System book FREE.

DON'T BUILD

That new hen-house or think of fixing up the old one until you have gotten our large catalogues telling all about Potter Poultry House Fixtures and POTTER Portable Poultry Houses and the complete line of other poultry goods which we manufacture and handle. Our catalog on fixtures and supplies contains 100 pages and over 100 illustrations. Our catalogue on portable poultry houses, pigeon lofts, brood and roosting coops, etc., contains 20 pages and 20 illustrations. They are the most complete catalogs ever issued.

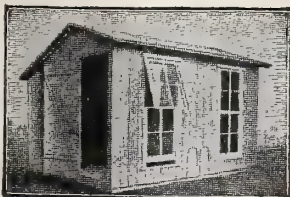

A \$5.00 HENNERY OUTFIT

Potter Portable Hennerly Outfits are made in 3 styles and 12 sizes, and are made to fit any house, whatever size or arrangement. The cut shows a No. 16, style "A" outfit, complete with 5-foot two-perch roost and drop-board and four-box elevated nesting system. Just right for 18 hens. Occupies space 32 inches wide, 60 inches long. Price \$5.00. Buy and try one; if not satisfied your money will be refunded. Potter fixtures have been on the market nearly ten years. Thousands of poultry keepers use them.

A \$40.00 HOUSE

We make PORTABLE houses and coops in 20 different styles and sizes. Our large catalog shows all. The house shown here is a No. 5, 8x10 feet, style "A". The most popular house we make. It is equipped with an 8-foot two-perch, style "A" Potter outfit complete (same as outfit shown above only 3 feet longer.) Painted two coats; complete with windows, hardware, roofing paper, etc. A fine house for 30 hens. Price \$40. This house is made right, the price is right and you have our guarantee of satisfaction or money refunded. If you want to know more about Potter goods before ordering, send for our catalogs and circulars. These cost us hundreds of dollars for printing, but we send them to interested and progressive poultry keepers for 4 cents to cover postage. Potter Poultry Products are for particular poultry people and if you are at all particular you will write us today.

30-Day Special Offer

Until November 1st only, will accept orders for this size house and ship, freight prepaid, into following states: Illinois, Indiana, Ohio, Michigan, Wisconsin, Iowa, Minnesota, Pennsylvania, New York, New Jersey, Rhode Island, Massachusetts, Connecticut.

T. F. POTTER & CO., BOX A1, DOWNERS GROVE, ILL.

WHAT OTHERS SAY READ THESE LETTERS

"Worth Ten Times What You Ask for It"

Dear Sirs:—Some time ago I sent for your book, "Don't Kill the Laying Hen." I studied it through pretty thoroughly and as I had a number of hens to dispose of, tried the plan in your book, and can say that it worked to a tick. I killed several hens for table use and did not make a mistake on one. It is worth ten times what you ask for it and is so plain that anybody can understand it. Yours very truly—W. J. English, R. F. D. No. 2, Chenango Falls, N. Y.

"Worth Five Dollars"

Dear Sirs:—I just received your letter stating that you have a new book on your system of selecting the laying hen. I have one of the old booklets and if the new book is as good as the old one it is all right. I have found everything as represented in the old booklet. It has been worth \$5 to me. I will send later for your new book. Yours truly—John H. Burkart, 1208 W. Lawrence St., North Topeka, Kansas.

"Would Not Part With It For Many Times What It Cost"

Dear Sirs:—I have received your book regarding the laying hen and am pleased to say it has done a great deal for me. I would not part with it for many times what it cost if another could not be had. Yours respectfully—John Van Schoar, 3095 W. 100th St., Cleveland, Ohio.

"All It Is Claimed to Be and More"

Dear Sirs:—I received your booklet, "Don't Kill the Laying Hen," and must say it is all it is claimed to be and more. I now want you to send me your booklet on "Profitable Poultry Raising," remittance for which you will find enclosed. Yours for success—Geo. J. Griffie, 614 Boas St., Harrisburg, Pennsylvania.

"Made One Hundred and Ninety Dollars"

Dear Sirs:—Your circulars at hand. The best thing I can do is to get the new book, "Don't Kill the Laying Hen." Your method has made me \$190 and is still making more, and only a few chickens; from 70 down to 44 now. Yours truly—G. W. Normac, Renfrow, Oklahoma.

"\$5 Worth of Satisfaction"

Dear Sirs:—I received your book and tried Test No. 1, and it was all right the first time. I have had \$5 worth of satisfaction out of the book already. Your system is O. K. Yours truly—Wm. Thummoor, 412 Hoffman Ave., Oil City, Pennsylvania.

"Worth More Than You Ask For It"

Gentlemen:—Enclosed find remittance for your booklet on "Profitable Poultry Raising." If it is as good as your book, "Don't Kill the Laying Hen," it certainly is worth a great deal more than you ask for it. Yours truly—The Sunnyside Poultry Farm, Rutland, Vermont.

"Would Not Take \$50 For It"

Dear Sirs:—Your booklet entitled, "Don't Kill the Laying Hen," is a great help to the poultryman. Makes dollars where you made cents. I wouldn't take \$50 for my booklet. Yours truly—Clarence K. Honeyman, Proprietor, Spring Creek Poultry Farm, Troy, Ohio.

T. F. POTTER & CO., Box A1, Downers Grove, Illinois.

Gentlemen:—I am interested in your Potter System book, also Portable Poultry Houses and Hennerly Fixtures. Send me at once catalogs and circulars describing your goods. I enclose 4c in stamps to cover postage.

Our New**Poultry Book****ORIGIN AND HISTORY OF
ALL BREEDS OF POULTRY**

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life.

Something Never Before Attempted by any Publisher

This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

HOW TO MATE

This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur.

DON'T PEN YOUR BIRDS WITHOUT The Norwich Automatic Exerciser & Feeder

Our machine will add to the benefits derived from the summer free range, and keep your birds in condition for the coming show season.

It is endorsed by the largest poultrymen in the country as the only **Perfect Automatic Feeding Device ever offered** and will positively effect a saving of over 20% in your feed account, increase egg production, eliminate the **labor and care of feeding**, while the average weight of the flock is materially increased **and every bird fit for market.**

THE NORWICH AUTOMATIC EXERCISER & FEEDER has been "tried out" for over a year on the largest plants in the industry, and on the results.

We **GUARANTEE** the purchaser absolute satisfaction in every respect, or money and expenses refunded after a 30 days' trial. It therefore costs you nothing to prove our claims, and we want you to try our machine.

The latest advocate among our list of big poultrymen is **Mr. U. R. Fishel**, who puts his stamp of approval only on such articles as he knows are perfect, and just as represented. Full descriptive printed matter for the asking.

NORWICH AUTOMATIC FEEDER CO.

20 WATER STREET

NORWICH, CONNECTICUT

THE SECRET OF WINTER EGGS

Don't force your hens by feeding patent or prepared foods. These often lead to serious injuries.

Feed them on fresh meat scraps, green bone and substitutes for the green stuff of the summer, and above all, give them plenty of fresh water of the right temperature.

Cold water in summer acts as a tonic, whereas warm water at that season makes them listless and lazy.

Warm water in winter stimulates the fowls and acts as an invigorator, consequently it keeps them up and doing. Result—More eggs.

Weldon's Fireless Poultry Fountain and Hopper Feeder

has made it possible to keep warm water before your fowls during the cold winter months for 36 hours without the use

of a fire. It is built like a fireless cooker and works like a "Thermos" bottle. 64% of an egg is water. Your hens can't lay if they cannot supply the necessary moisture for the eggs. Coax them to drink by keeping warm water before them at all times during the winter in one of our fountains. **The egg yield will double and triple.** Get a copy of our **Free Book** giving the experience of successful poultrymen with this invention, by addressing

ANDREWS WIRE AND IRON WORKS, SUB. STA. C, ROCKFORD, ILLINOIS

OWEN FARMS

INTRODUCTION.

I have been thinking hard six weeks in preparation for the writing of this advertisement. I have had before me the fact that Owen Farms down here on Martha's Vineyard has over 5,000 of the best fancy poultry they have ever raised in all of their previous years of experience. They have a large lot of male birds in all of their varieties that have been carried over that are moulting out into grand form, and a corresponding number of females which have been used in their pens which have produced their eggs for hatching that are either now, or soon to be, at the very top point of their fitness to contest for the blue ribbons at any or all shows in America. I have had in mind the untold number of winnings we have made for our customers in the past and the certainty of our ability to make winnings for them in the shows of this year. I have been so filled with enthusiasm and so absolutely confident of results that I have been almost at a loss to know what to say and how to say it to carry that firm, deep conviction to the reader of this advertisement that I so earnestly desire. I have concluded that direct, positive statements of facts or beliefs must mean more to the buyer than anything else and, consequently, I have decided to place before you the statements which follow. So far as I know, Owen Farms has never yet made a statement that has not been absolutely true and that you can completely rely upon what follows I do assure you.

OUR PRICES.

Never are our prices high. We see to that. Any bird is worth but \$1.00 to go to the market and all amount charged above that is represented by quality. Whatever the price given by Owen Farms, or whatever the price paid by our customer, we absolutely see to it each and every time that the money's worth of quality is represented in the bird sold. We do not intend and we will not allow, if we can help it, anyone to give more quality for a fixed price than we will.

ON APPROVAL.

All birds sent from Owen Farms at a price of \$10.00 or more are sent subject to approval, and this means that you are under no obligation whatever to Owen Farms until after you have received, handled, judged and decided that the birds sent you are of the full value you have paid for them and are what you require. If such birds are returned to us we pay the return express charges. We only insist that proper rest shall always be given the bird, according to the distance he has traveled, before returning. This is liberal.

GUARANTEED WINNERS.

We make a proposition to anyone desiring it—a proposition in which we guarantee the winning of any show in America in any class of the breeds which we handle. You name the show and the date. We set the price. Our proposition is a clear one, founded first upon this absolute requirement, that if you accept the birds on arrival and show them, they are your birds and cannot afterward be returned. If, however, on arrival you do not feel satisfied with them, you may return without showing, under our usual conditions, and money is refunded with absolute promptness. Special application by mail should be made for our GUARANTEED WINNER proposition.

FITTING.

Everyone knows that a bird well fitted stands a much better chance of winning. I have said before in our advertising that if there is anyone who can fit birds for the show room better than Owens Farms we want to meet him. All birds that are sold for the show we undertake to fit in as perfect condition as we know how and in every way that this can be made to insure your certainty of winning we leave no last thing undone. Truly, your interest in the win is not more than ours.

ORDER EARLY.

Several times during the last three weeks we have been obliged to telegraph that we could not fill orders that have been sent us for white birds to be fitted for the show room. The reason was because ample time had not been given us to select, wash, fit and train the bird and then ship him from this point to the customer in time to reach a certain specified show. Dear friends, it takes time to do this work well, and Owen Farms cannot and will not slight this portion of their work. You must give us time to do our best. One-quarter deposit with the order and the balance paid ten days before shipping is always satisfactory and insures our very best service.

OUR FACILITIES.

One whole page written on this one subject would not commence to tell you of the advantages Owen Farms has in

selecting stock ready for the particular day the show is going to be held. Birds raised every month in the year, from January to July, are maturing and getting at their best each week as it comes. We therefore know that we can fill your requirements better than most farms, if not better than any. Our wash room and fitting room is capable of preparing fifty white birds each and every day in the week. All who have seen it marvel at its convenience and the perfection of detail there employed.

THE WIZARD.

Our visitors constantly ask, "How do you manage to get the right bird for the right place? You sell for all shows, varying in size from the smallest to the greatest, and at all prices. How do you manage to get the right bird at the right price for a given show?" The answer is, "Our Mr. Delano is a wizard. His judgment of value is almost infallible. His knowledge of exactly the class we may expect at any show is very rarely at fault." We have on Owen Farms some other little wizards, but all confess that our manager, Mr. Delano, is the boss wizard.

HONEST ADVICE.

I would rather that Owen Farms have the best reputation of any farm in the world for giving honest advice to its customers than any other one point I can name. Early in the history of Owen Farms the proprietor tried to buy a male bird of Harry Graves, of Higganum, Conn. He did not want to sell the bird. I said, "Mr. Graves, if you were going to sell that bird to me, what would you charge for it?" He said, "Mr. Owen, I would charge you \$75.00." I replied, "Will you sell that bird to me for \$150.00?" He said, "No, I will not. I would not take \$150.00 of your money for what I had said I would sell, if I were going to sell, for \$75.00." I put Harry Graves down as an honest man and paid him \$1,500.00 for fifteen birds the following year. I took that lesson to heart and, I say to you with an absolute conviction of heart that in any advice I give a customer I will never influence him to spend one dollar for a bird more than I think his trade demands and his show requires. If I think his show which he wishes to win can be won for \$25.00 I would rather refuse to sell him at all than to influence him in any way to pay one dollar more. Owen Farms will give its customers advice at any and all times, and wherever they do it you can absolutely depend on its being honest.

INDIVIDUAL RESPONSIBILITY.

The proprietor of Owen Farms has conducted a business in which his employees numbered 800 and had branch offices for doing business in every capital of Europe, India, Africa and Australia. If anyone ever learned the necessity for individual responsibility he did. At Owen Farms you will find as perfect a condition of individual responsibility as in any business you ever investigated. Our White Rock man is a White Rock man, and the best. Our Barred Rock man is a Barred Rock man, and the best. Our White Wyandotte man is a White Wyandotte man, and the best. Our Orpington man is an Orpington man, and the best; and so our Reds are under the individual responsibility and management and care of the best man that can be secured. Each one of these individuals has no responsibility and no care of any other flock than his own, and as far as his duties are concerned, there might not be any other poultry on Owen Farms than those birds for which he is responsible.

SPECIALISTS.

If there is a great deal of advantage in specialists in the various breeds, we have that right here at Owen Farms. Each flock is considered by itself as carefully and as intelligently as the very best man acquainted with that breed can possibly develop it. Practically every chick on our farm is raised with hens and each chick is pedigreed so that we know the pen from which it is raised, and year after year the blood lines are followed and the type, the head, the body lines, the comb, the eye and each and every feature of the bird is considered and improved.

EGGS FOR HATCHING

During this past year we have had remarkable success reported from our customers from all over the country. Our eggs for hatching have reached our customers in excellent condition, have been very fertile and have hatched well, and we are daily receiving reports on the young stock raised from them which are as gratifying to us as they are apparently pleasing to our customers. We shipped eggs from January 1st constantly every month until the 20th of August. This year we anticipate even better results and a longer season. In some varieties we were behind our orders

OWEN FARMS

for much of the season, and the delays which were occasioned our customers we regretted fully as much as they did. We shall prepare more largely and hope that the delays the coming season will be almost wholly avoided. However, the question of whether you get your eggs at the time you wish must necessarily be somewhat a matter which you can control. Order your eggs early, for shipment at a particular time, and if it is within the power of a well organized and well conducted business, Owen Farms will do its very best not to disappoint you.

SOUTHERN TRADE

In all of our varieties we are arranging this year to meet the demand, which has been very great and which hitherto we have not been quite equal to, namely, the early demand for eggs from the Southern states. We are settling our pens at the present time and propose to be in a position to furnish eggs for hatching at least a month earlier than ever before, and probably six weeks. To all of our customers and friends in the South we say, "Come to us as early as you can. Give us as much notice as is possible and we will do our very best for you in any of our varieties."

VISITORS.

We thank our many friends from all parts of the country for the trouble and expense they have been to in visiting Owen Farms this summer. We have had ten times more visitors than ever before, and many are the days that Mr. Delano and the writer have marked down in their book as red letter days which have been made so by the visits of prominent poultrymen from everywhere. We welcome you and it is only through such visits that it will ever positively be known how great a fancy poultry farm there is located here in this somewhat out-of-the-way place. We do believe, and we state it from every conviction and every visit we have ever made on any other farm anywhere, that we have more here to show our visiting friends than can be seen on any one farm anywhere; not a few good birds but hundreds of the grandest birds to be seen, and facilities and methods of preparation that are worth a visit to know and examine. Come one, come all. We will heartily welcome you.

POULTRY INVESTMENT.

Everybody in the world is looking for a good investment and really what makes a good investment is constantly a question of thought, and particularly a question for each individual to decide. On that we all agree. Now, I say that never is it possible in any other breeding proposition to get the result from an investment that you can in poultry. Let me illustrate. A customer buys a trio of White Rocks, for example, from Owen Farms for \$50.00. He has spent \$2.00, about, for the market value of the birds and \$48.00 for his investment in quality, or at a rate of \$16.00 for each bird. Now, if he gets his money's worth in quality, so that the trio will produce for him birds of equal quality, let us see where he ought to be at the end of, say, two years. The first year from such a trio he can raise sixty birds, with fair success, each partaking of that quality. Then if he selects from that sixty, say, twelve of the very best specimens and the best breeders, from that twelve he can easily raise during the next year 420. He will thus have had 480 birds representing the quality of his first investment, and thus if he figures to divide the cost for the quality at the end of the second year, it will stand him exactly 10 cents each. This returns him an actual 1,600%. This is no fairy tale. It is a statement of exactly what may be expected, and I urge you in making your investment in poultry to limit the number to a very small number and to increase the quality, for your return is simply unparalleled in almost any line of business.

FOREIGN TRADE.

The proprietor of Owen Farms was situated in London doing business there for eight years. He did business all over the world and has had a large acquaintance with foreign conditions and foreign trade, and we make many shipments abroad. We know how to coop the birds so as to get the very best results in landing birds in good health and condition. We furnish the proper food for them during the voyage. We are willing to do anything and everything that is required, sending all foreign shipments f. o. b. at New York. You are at liberty to order through your shipping house at New York and we will do the rest.

BUFF ORPINGTONS.

Do you find the Buff Orpington easy to breed to the ideal color? Do you find dark in tail and wing? Do you find unevenness of color? Are you bothered with white in wing or tail and in undercolor? Are your Buff Orpingtons solid

buff at the base of hackle? Do they have good size and type? Are their heads good? If you answer all these questions emphatically "Yes," you do not need Owen Farms to help you in your breeding or winning. If, however, you are bothered in any of these particulars, Owen Farms can help you. Their strain, as we have told you often, is from the best strain in England. There is no doubt about that. I dare assert it without any exception, we have a flock that is more generally representing all of these qualities in individual birds than anyone else. We have consistently and all the time been winning the very first honors and never were we as strong as we are today. Our trade in Buffs last year was extremely large. It promises to be far larger this year. We will give each and every one complete satisfaction, price considered. It seems almost trite for me to say it, but wherever you find Buff Orpingtons running true to color, with good type, good heads, and especially, good undercolor and freedom from the objectionable features, you will find, if you get at the true history, Owen Farms blood at the foundation of it. Remember, the buff is the buff color of the show room and dark and reddish color in male or female is practically unknown on Owen Farms. What do you want? When do you want it? Answer these questions squarely to Owen Farms, and as fully as you can, is all we ask.

WHITE ORPINGTONS.

We have a special catalogue on White Orpingtons alone. Why? Because we have found the popularity of the White something unprecedented in the history of any breed of poultry. There are hundreds upon hundreds applying through the week for our White Orpington information and we decided to get out this special catalogue for this purpose. We believe that we have secured the best foundation flock in the world. We believe that we have the best individual birds in the United States. We demonstrated at New York in our showing there last year, winning as we did over the Kellerstrass Farm with eight birds against their thirty-four first cock and second cock, first hen and second hen, first cockerel and fifth cockerel, that we would have to take off our hat to no one in this particular variety. We did not show at Baltimore last year. A mistaken idea has arisen that we did. Hitherto we have been unable to advertise our White Orpingtons with any degree of satisfaction to ourselves because we could not fill our orders. The demand has been far greater than the supply heretofore. This autumn and winter, however, and for eggs for hatching in the spring we expect to be able to cope with the enormous demand that is sure to come.

We do want you to clearly understand and differentiate between our flock of White Orpingtons and any other. If we are putting this too strongly it will hurt us. We have no fear of that, however, and there is no step that Owen Farms would not go to in demonstrating that the White Orpingtons from our farm are quite the best in this country. Our prices on them are right and fair. Individual birds of certain winning quality and merit in White Orpingtons are no more than birds of equal merit in other classes. The individual merits of different birds in this variety, just as in all other varieties, vary considerably from the most expensive to the utility birds. We promise you, however, that you will get the quality you ought to get for the money each and every time. Write us early concerning them. Place your egg orders as early as you possibly can and we will do each and every thing within our power to make your expenditure with us successful and profitable.

P. S.—Is the White Orpington white? I feel that I cannot let this advertisement go to press without expressing myself fully, according to the best of my knowledge in regard to this subject. I say that the White Orpington female is white, extremely in undercolor and down to the skin, with pearly white quills. She remains white and is thoroughly satisfactory in every particular from the highest standpoint known in America in regard to white birds. The male birds of the White Orpington never have been white in surface color, although they are extremely white in undercolor. Mark well what I say! They are white in new feather, but when the feathers mature and the male bird is one year old or as a cock bird his new feathers have become eight to twelve months old they show to a greater or less extent creaminess, or as it is often called, brassiness. I have known the White Orpington for twelve years well. I have never yet seen a male—and I state it positively, and those I have seen amounted to thousands—that in his adult plumage did not show some color.

I am willing to give \$500, one-half of which shall go to the owner of the bird and the other half go to any charity which the owner of the bird may name, for the first White

Continued on Next Page

OWEN FARMS

Orpington male bird that shall be put into the hands of a committee of three people and remain in their hands three months, providing that the male bird at the time of being placed in such committee's hands is in feather and has been in feather eight months, if such bird does not show any brassiness or creaminess before the end of the third month following the placing of the bird in the hands of the committee. One other condition, namely, that at the end of the three months if the committee decides that bird to be white according to the American standard without creaminess or color that upon payment of the \$500 the bird shall become the property of Owen Farms.

I make this further statement that Owen Farms birds are as white in the male line as any male birds among the White Orpingtons of the world. More we cannot state.

BLACK ORPINGTONS.

Cockerels that weigh nine pounds, pullets that are seven to seven and one-half pounds at this date (October 8) with color that is as near perfect as you could wish, with size, type, heads, eyes and quality from one end of the flock to the other. We are prepared now to fill your orders to your complete satisfaction as we have never been before. Birds much earlier, much more mature, almost an entire absence of purple in every bird, many entirely free from it! First, second and third cockerels at Boston and first, second, third and fourth pullets at the same show last year demonstrated the quality of our birds raised in that year. For anywhere you wish to place them Owen Farms will supply them. The Black Orpington is becoming more popular year by year. It is exceedingly popular in England and is bound to grow more in popularity in this country. Every breeder of Orpingtons will find it to his advantage, as we do, to have all three of the leading varieties. We especially desire the trade of those who wish foundation stock. Arrange to get it so that you can win with it and then breed from it, and your investment will be a grand one.

WHITE ROCKS.

Owen Farms does not claim to have all of the best White Rocks in the United States. There is one flock, namely, that of the Greystone Farm, presided over by Mr. Davey, that has contested with Owen Farms for the highest honors at Madison Square, New York, year after year. The honors have been very evenly divided between the two. The marked difference between the two flocks is not in quality, but in the fact that we have at Owen Farms many, many times more birds of the remarkable quality that both farms possess and are able, we believe, to sell and dispose of more high quality birds, capable of winning in the very fastest company, than any one else. I cannot see how anyone with an unprejudiced mind, investigating fairly and squarely the merits of the White Rock situation, can come to any other conclusion than it is at one of these two farms that he must go to get the best.

One dealer claims he has "The best in the world." Has he? Five years in succession we have shown in New York in Madison Square, the first and hardest show to win in America, and where if it ever could be established that one had the best in the world that show would be the place to prove it. Never have we been met there by the claimant. Owen Farms has said in its advertising that it would probably not show this year. Gladly, however, would they change their plans and show White Rocks in New York to contest against any one, and thrice gladly would they show at New York this coming show season if the one claiming the "best in the world" would publicly or privately engage to take a string there for competition. Frankly, if we deserve your trade we hope to get it and it is for you to decide.

Winners we can and will sell you. Breeding birds that will produce every ideal that the White Rocks possess we have in quantity and offer them to you cheerfully.

BARRED ROCKS.

Last year in Barred Rocks we did a business which amounted to twice as much as the largest year's business ever amounted to for Gardner & Dunning, from whom we got our large foundation flock. We anticipate a far larger return the coming year and have prepared accordingly. Bred very carefully, our young birds in the cockerel and pullet matings have come on showing better promise than ever before. New York quality is among them and we feel as positive as we ever felt of anything in the world that were we to show at New York this year we would get more than our fair share of results. All of these birds practically are

at your disposal. We will sell for any show guaranteed to win. We will always send subject to your satisfaction and approval. We will mate trios and pens for you and we can predict with certainty the results that you will have. We are convinced of how very important it is in Barred Rock breeding to be careful of your breeding lines. We would recommend to you a small mating and a small trial of our best breeding possibilities. Keep it distinct. Be patient and in one or two years it will pay you a thousandfold. Barred Rocks are not easy. Only those who are persistent, painstaking and love the accomplishment of a difficult thing persist and make a good success at Barred Rock breeding. I find, however, that every one who does love the breeding of Barred Rocks in full accord that they would rather breed a Barred Rock cockerel or pullet equal to the very difficult task of winning at the very best show than to accomplish almost any other known thing in the poultry world. We can help you do so or furnish you the birds that will do it.

WHITE WYANDOTTES.

Strong statements concerning our White Dottes are always in order. They have grand type, excellent heads, running the best for a flock in nearly ideal combs, and are as white as white birds ever grow. At Boston last year we won the collection with 55 points. This was a larger win than ever made by any exhibitor at the Boston show. The largest number of points ever won before was 37, and that was won by Owen Farms four years ago. Our young birds are nothing short of marvelous in quality. They are well grown, maturing rapidly; are excellent layers, and from among them we can give you the winner that you desire. Our trade in them is exceedingly large and growing by leaps and bounds. We urge you to make arrangements for your White Wyandottes for showing early. It is a great advantage. We have picked out the winner at New York two months before the show. We could do it this year. I find it almost impossible to give you an adequate idea of our White Wyandottes by a word picture. I feel so strongly that you ought to see them to appreciate them. I also feel strongly that all who have seen them in the shows where we have exhibited, at New York, Chicago and Boston, feel exactly as we do about them. It does seem, however, that you could take our word for the quality in placing your order, particularly as we give you such a straightforward statement concerning your obligation being nothing to Owen Farms unless the birds that reach you are satisfactory. Tell us the show you want to win. Write us the price you expect to charge for eggs for hatching. Give us any and all information that will help us and we will help you.

SINGLE COMB RHODE ISLAND REDS.

ROSE COMB RHODE ISLAND REDS.

You all know what an avalanche is. It is something pretty big. From our advertisement, which appeared on the first of September, we have been literally buried beneath an avalanche of "Red" letters. That we have made no mistake in adding the R. I. Red to the business of Owen Farms has already been demonstrated. Our orders have been very large and the birds we have shipped out have been very successful. We have been very patient in the development of this Red business at Owen Farms. We have waited until we believed we had the flock from which we could do for our customers what we are sure we are able to do and have a knowledge of what we have done for our many customers in our other varieties. We can give you the same conscientious service and satisfaction, the same good birds of the very highest standing and at fair prices. At Brockton last week, where Mr. Delano and the writer went over very carefully the class of R. I. Reds, we decided—and our judgment was confirmed by every one interested—that it was one of the best shows of R. I. Reds ever made and individuals were very remarkable in the quality and depth of color, fine undercolor and in general type. It only confirmed our previous opinion of the general quality of the flock we acquired from Mr. George Tracey of Kinderhook, N. Y., which flock we received at Owen Farms in its entirety. They are, we believe, as good a flock for general quality as has ever been bred and this is true of both single and rose comb variety. We ask your correspondence. We will tell you what we have, what we can do and the price we ask for it and if there is any bird in the world that requires to be purchased on approval, with full privilege of return and the refunding of the money, we should say it was the R. I. Red, both single and rose comb.

Owen Farms

BUFF WYANDOTTES

WE WON ALL FIVE FIRST PRIZES AT BOSTON, 1909, AND AGAIN IN 1910

BOSTON, 1909

Cocks, 1, 2, 3, 5; Hens, 1, 3, 4; Ckls., 1, 2;
Pullets, 1, 2, 3, 4; Pens, 1, 2.

Are Great Winter Egg Producers Utility and Beauty Combined

BOSTON, 1910

Cocks, 1, 2, 6; Hens, 1, 2, 4, 6; Ckls., 1, 4, 6;
Pullets, 1, 2, 3, 4; Pens, 1, 2, 3.

Twenty years of line breeding has developed the winter laying qualities of our strain equal to any and surpassing most all other breeds; naturally this variety are exceedingly good winter layers, and by careful selection year after year we have greatly developed this natural tendency until now we get plenty of winter eggs, while our neighbor's hens "ought to lay."

Quality is a Feature Prominent in Our Strain

There is no expression in our language that conveys the same meaning as the word "stung" when applied to your feelings after paying good prices without receiving equivalent value in return. The possibility of "delivering the goods" depends, not upon good intentions, but upon actual production, and in order to produce good birds it is absolutely necessary to have first-class stock and the experience and judgment to mate and develop them, gained only by actual experience.

We've Raised One Thousand Chickens this Year

Among the males that headed our mating this year are the following that have proven their superiority by their winnings in such competition that carries with it "conviction beyond prejudice." 1909 Boston winners as follows: 1st prize cock; 1st and 2d prize ckls.; 1st and 2d prize pen ckls. 1910 Boston winners as follows: 1st and 2d prize cocks; 1st, 4th and 6th prize ckls.; 1st, 2d and 3d prize pen ckls.; 1st prize pen fowls cock. We have never before raised as many good birds as this year. We can furnish you sons and daughters of the above prize winners mated as you desire, or we will mate them for you in line with our experience and judgment. It don't cost us any more to raise "our kind" than it would if they were the "other kind," and it's a mistake to think that we charge any more for them. Discriminating buyers realize the importance of individuality backed up with high-class ancestry. Those who don't realize this fact have a very costly experience in front of them.

Chicago Winnings

At the last great show, December 7-12, 1909, in the largest entry and the strongest competition ever shown at Chicago: 1st, 2d, 3d cock; 1st, 2d, 3d hen; 1st, 2d, 3d pullet; 2d, 3d, 4th, 5th cockerel; 1st pen. Exhibition birds of the highest quality will be ready for the fall and early winter shows. My stock in customers' hands won firsts in most of the leading shows last winter and will do it again.

Do You Want the Winners in Your Show?

If so, get in touch with me and state your wants. Beautiful trios, pens and single birds in either breeding or exhibition stock, sired by my Chicago winners, now ready. I can please you and will ship on approval. What more could you ask?

My matings were right this year as usual, and I have thousands of young stock better than ever before. To save time in ordering exhibition birds, either state the amount you would care to spend for same, and I can describe what I can furnish for the price, or you can describe what you want and I will tell you what I can furnish them for.

Inclose 10c in stamps or coin for the finest S. C. W. Leghorn catalogue published. Every inquiry or order has my personal, prompt and careful attention. Prices low considering quality.

HOW TO GET BIG POULTRY PROFITS

Edgar Briggs, the most successful poultry expert in America, tells how to make the greatest success with poultry in his book, "Profits in Poultry Keeping Solved."

The new fourth edition covers every branch of poultry keeping and contains the many priceless secrets which you must know in order to get the largest profits from poultry. It also tells how to make the best poultry food for from 10c to 15c per bushel. Briggs' System calls for less equipment, labor and expenses than other plans and by it one can readily care for 2000 layers and 3000 chicks. Three editions of this book rapidly sold for \$5 per copy. Price of new fourth edition including one year's subscription to Poultry Success, only \$1. If you have but limited space, you should get our new book, just published, "The Smith Method of Poultry Keeping," which gives the best, most comprehensive and practical system we know of for keeping many fowls on a small lot. It cuts down the work and care required to the minimum, and does not require elaborate equipment. It is also well adapted for large plants. By this system others are making \$2,500 per year on a space 40x60 feet. Why not you? Price \$1.00 including one year's subscription to Poultry Success.

Our Great Special Limited Time Offers:—For \$1 we will send you your choice of either book, and include Poultry Success, the leading poultry magazine, for one year. For \$1.75 we will send you both books and Poultry Success for one year. For \$2.25 we will send you both books and Poultry Success for three years. For \$3.15 we will send you Poultry Success for three years. Regular price 50c per year. Leading and best poultry journal published. 21st year; 64 to 164 pages; best writers; beautifully illustrated; sample copy free. Send for free booklet containing many of the Briggs Secrets and other information.

The A. D. Hosterman Co. :: Springfield, Ohio

BIE'S BARRED PLYMOUTH ROCKS

At four large shows, i. e., Kenosha, Chicago, Milwaukee and Waukesha, during the past season, we won 8 firsts, 4 seconds, 7 thirds, 6 fourths, silver cup and several other specials and at Milwaukee, besides winning 1, 2, 4, 6, 7, 9 and 10 on pullets, we won the grand specials for best display in the American class. Our prize winners, their sires and dams were all in our breeding yards from which we have raised the grandest lot of young birds, that we ever raised. Therefore we are prepared to furnish grand show specimens in either young or old birds. Write your wants I guarantee satisfaction or return money.

Little Red Hen Poultry Tonic

Cures White Diarrhea, Roup, Cholera and Chicken-Pox

LOANSBORO, IND., 8-30-'10

WAYNE POULTRY TONIC CO.

GENTLEMEN:—The Little Red Hen Poultry Tonic has put all my chickens in good healthy condition and I think it is wonderful as I had some hens that could not hold their heads up. Now they are in a healthy condition and I did not lose a hen after I got your tonic. I lost ten or more before. I will not be without it. Yours truly,

Wm. J. Herndfield, 318 Market St.

SEND FOR FREE BOOKLET

SOULONPUE, LA., 9-13-'10

WAYNE POULTRY TONIC CO.

GENTLEMEN:—Please find enclosed \$1.00 for one quart of Little Red Hen Poultry Tonic. Besides being a sure cure for Roup, Cholera and White Diarrhea, we find Little Red Hen Poultry Tonic will cure Chicken-pox. We have always contended Chicken-pox to be a constitutional disease caused by a disease germ. We experimented on three fowls three different times, placing them in confinement with feed constantly before them and water with about three tablespoonsful of Little Red Hen Poultry Tonic to the quart. Yours truly, Jno. E. Berrott

Wayne Poultry Tonic Co. 213 Shoaff Building, Fort Wayne, Ind.

A NEW POULTRY HOUSE

Adapted to any System of Poultry Culture

I have invented a new poultry house. It is made in 7 parts, and can be taken apart and put together again in 10 minutes. It can be changed in 2 seconds from a perfectly tight house, adapt to the coldest winter night, to an open scratching shed, or to an open runway, open to every breeze that blows. Size 4 ft. x 6 ft. Can be built of first class materials for from \$3.50 to \$5.50.

I will send a complete house as described above for \$20.00, or I will send complete building plans and permit to build 1 house for \$2.00 Additional permits \$1.00 each.

I. H. Putnam, Patentee 901 W. Water St., Elmira, New York

Wheeler's S. C. W. Leghorns

Winners at Boston, Buffalo, Baltimore, etc. 50 grand breeders and show birds for sale. Young stock of the highest quality now ready to ship. Birds fit to win at any show. Prices a matter of correspondence. Write me your wants and get my descriptive circular.

G. L. Wheeler & Son : Box 14 : Penn Van, New York

Kaufmann & Windheim's Rose Comb RHODE ISLAND REDS

"AN AMERICAN BREED FOR THE AMERICAN PEOPLE THAT MAKES THE AMERICAN DOLLAR."

Hundreds of high-class cockerels for sale, from \$2.00 up, that are bred from our famous winners at New York and Boston. Many are bred from our two great cock birds Bill Taft and Yantacaw. These two 1st prize Madison Square Garden birds have a reputation the country over, as being the best Rose Comb R. I. Red males ever produced. Now is your time to buy winners or breeders and at prices that are right. Our Reds are known from ocean to ocean as The Great Color Strain. When you want color, come to the breeders that have the goods.

KAUFMANN & WINDHEIM NUTLEY, N. J.
:: THE LARGEST EXHIBITORS OF REDS IN THE WORLD ::

Covert's Barred Rocks

Celebrated Highland Strain

Winners at Cleveland, Buffalo and Chicago. Won more shape and color specials than all their competitors. At Ohio State Fair, 1910, 1st and 2d cock, 2d cockerel and 1st pen; (no females shown in open class). At West Virginia State Fair, won every first and two seconds.

Special Sixty-day Cockerel Sale

Do you know that \$5 will buy one? Bred from my celebrated winning line. Just the thing to put vigor and quality into your flock. Both chl. and pullet bred. **Narrow, sharp barring a specialty.** Remember that I have spared neither time nor money in bringing these birds to their present high standard.

SHOW BIRDS

My Exhibition Pullets are marvels of color, type and barring, with good length of back and low carried tail, conforming to the new Standard.

My Exhibition Cockerels have the finest, cleanest barring I ever produced, and are developing into birds that will win in hottest competition. Prices very reasonable considering quality.

Exhibition Cocks; Exhibition Hens. Prices right; send for catalogue. Remember, I mate and fit all my own winning birds and will do the same for you. Please mention American Poultry Journal when writing.

D. M. Covert : Willoughby, Ohio

You May Now Own Lewis Wright's Great "New Book of Poultry" for.. **50c** DOWN \$1 a Month

For only 50c down we will ship the newest revised edition of this great poultry book to A. P. J. readers. We have never before offered Lewis Wright's book on such easy terms. We know you will want it, but if you don't you may return to us and we will refund your money. You take absolutely no risk.

Each of the 600 wide double-column pages contains profit-making information—simply INVALUABLE to the practical poultryman. Lewis Wright is perhaps the best known of all successful poultry experts, and the results of a lifetime's study and experience are crowded into this big, handsome volume.

WHAT EXCUSE HAS ANY POULTRYMAN NOW FOR NOT OWNING HIS COPY OF

Wright's "New Book of Poultry"

The one pre-eminent virtue of Mr. Wright's book is acknowledged to be its intense THOROUGHNESS. EVERY breed you will find is exhaustively treated—EVERY question that has ever harassed a poultryman is answered and settled in the most practical and economical way—EVERY detail of the poultry business is discussed with authority. Examine the work in your home, on our Special Offer, and judge for yourself how valuable are the chapters on: Poultry Houses and Runs; The Science of Feeding; Practical Management and Feeding of Fowls; The Egg and Sitting Hen; Incubators; Rearing and Care of Chickens; Poultry for the Table; Poultry Farming; Exhibition Poultry and Utility; Pedigree or Line Breeding; Practical Breeding and Rearing of Prize Poultry; Exhibiting; Shows—Judging—Trimming—Technical Terms; Poultry Diseases and Vices—Vermin; etc., etc.

Poultry Spells Profit to Every Owner of This Great Work

This work tells how to convert egg failures into egg successes; how to systematize at all stages; and all about the management of the industry right down to the marketing point. Conditions in all great poultry centers and countries are discussed, and the best practical business methods of each explained. From beginning to end the book keeps the PAYING POINT strictly in view; all facts, figures and explanations are based upon ACTUAL EXPERIENCE.

One Encyclopaedic Volume of 600 Large Pages Thoroughly Indexed

Beautifully Printed and Illustrated and Strongly Bound

Forty-five full-page plates in color and black-and-white embellish the pages of this splendid work; all by J. W. Ludlow; and there are innumerable pictures scattered throughout the text. The work is finely printed in a large, clear, readable type and bound in stout, extra durable cloth binding with lettering in gold; gilt edges on three sides. Size of volume, 9¼x11x2. Weight, seven pounds. Without doubt the finest poultry book ever published.

The Best and Most Practical Poultry Book in the World

has been the verdict of experts everywhere, and we believe a thorough examination at our expense of this entirely new and rewritten edition of the book will convince you that this statement is no exaggeration. It is impossible in this limited space to set forth the innumerable details in which this book excels all others. An examination alone can do this. That is why we urge you to take advantage of our

Special Offer to Readers of American Poultry Journal

Let us send you this great work ON APPROVAL. We want you to examine it thoroughly before deciding. We want you to judge for yourself its great, practical, money-making value TO YOU. The price is only \$8.50. Just send us 50c with the coupon opposite and you will receive the book, carriage prepaid. If after five days you don't want it, simply notify us and hold subject to our order. We will then refund your money. If you keep it pay us the balance \$1 a month until settled in full.

BICKERDIKE'S WHITE ROCKS

ARE STILL WINNING

"Everybody likes a yellow-legged chicken"

AT the Missouri State Fair, Sedalia, October 1910—the state that is doing more to promote the poultry industry than any other state in the Union—in keen competition with birds from many states, covering a territory of more than 1,000 miles in extent, and from some of the best breeders of the country, our birds won:

1st hen; 1st pul.; 1st pen; 2d hen; 2d pul.; 2d pen; 3d pul.; 3d pen; 3d cock; 3d ckl.; special for best display of Rocks, all varieties competing

Our exhibit of the **Bickerdike Pedigreed White Rocks** was the attraction of the show. This, with our former winnings at America's leading shows, proves our claims of **quality**.

If you want show birds that win, selected breeders or utility stock, we can supply them . Circulars mailed free on request

HENRY D. RILEY, BOX B, STRAFFORD, CHESTER CO., PA.

READERS OF AMERICAN POULTRY JOURNAL: If you want to succeed with poultry as the Curtiss brothers have succeeded, subscribe now for Farm Journal, and get with it the new

Curtiss Poultry Book

which tells how Roy Curtiss, a New York farmer's boy, starting with a few neglected hens, has built up at NIAGARA FARM the LARGEST POULTRY PLANT IN THE WORLD, with sales of

Over \$100,000 a Year

Roy agreed that if his father (a grain merchant and farmer) would furnish the feed, he (Roy) would take all care of the flock and supply eggs and chickens for the farm table, and all that were left over were to belong to him. In two years Roy was using so much feed that his father had to cry quits, but the boy kept right on. He would start from home at 2 o'clock a. m. for Niagara Falls, 13 miles away, with poultry and eggs to sell. His brother joined him, and the business grew and grew. They took the farm and paid off the mortgage. They built and added to their plant, learning slowly how to avoid losses and make the greatest profits.

But they had no guidance, and had to learn by their own mistakes. If THEY had had such a guide as the CURTISS POULTRY BOOK, it would have saved them thousands of dollars and years of lost time.

This capital book was written right at Niagara Farm by the veteran poultryman, MICHAEL K. BOYER. Mr. Boyer had the Curtiss brothers right at his elbow with their records and data. He says he never saw a general poultry plant so well managed at every point. No "putting on style," no fancy buildings, no ornaments, but straight, solid BUSINESS. Everything is planned for months ahead. Every day shipments go off, every day money comes in. You could hardly believe how little they lose. Their percentage of fertile eggs, of live, strong chickens hatched, of day-old chicks shipped without loss to Kansas or Florida is really wonderful.

This book gives all their methods of managing incubators, handling eggs, feeding chickens and ducks, killing, dressing, packing and marketing, their formulas for mixing feed at different ages, etc. And all these have been tested and improved by years of experience, resulting in what is believed to be THE MOST PROFITABLE GENERAL POULTRY PLANT IN THE WORLD. Whether you raise chickens, ducks, or eggs, whether you keep forty fowls or forty thousand, you will find here help that you can get in no other way. Have you use for such a book? Then read the offer below. The

FARM JOURNAL

(thirty-four years old) has over 750,000 subscribers—MORE THAN ANY OTHER FARM PAPER PUBLISHED. It is of great value to everybody, in town or country, who GROWS THINGS—fruit, vegetables, poultry, eggs, milk, butter, honey, etc., as well as grain and stock. It is a great favorite with mothers, housekeepers, boys and girls. "Cream, not skim-milk" is its motto. It is clean, brief, bright, "boiled down," intensely practical. It tells in a few words, and always just at the right time, how to do things. It is now running a very interesting series, "BACK TO THE SOIL," the stories of city people who have succeeded in making a home in the country. If you care about the country, or plants, or pets, or children, or anything that grows, then, no matter how many other papers you get, you and your family ought to have the FARM JOURNAL.

WHITE WYANDOTTES
BARRED ROCKS

1st Boston chl., 1909, and one of his mates.

1st Pen Wyandotte, 1st cock, 1st and 2nd Cockerel Barred Rocks N. Y. State Fair, 1910. This is the first year we have shown our Barred Rocks. We only sent up three birds in Rocks and secured two first and one second, such a win speaks for itself. We have a few cockerels for sale from the same matings as our winners, and if you are in need of a first class bird for show or utility purposes let us know and we can suit you in whatever you want. In Wyandottes we have still about a thousand cockerels and pullets just as good birds as were in our pen at the N. Y. State Fair last month. Cockerels \$3.00 to \$5.00; Pullets \$2.50 to \$5.00 for breeders both in Wyandottes and Rocks. If you wish show birds let us know about what you wish to spend and we can tell you if we can fill your wants. We also can send you a photograph of any bird that you may wish to purchase of our better birds to give you an idea of what you are getting, also photographs of our breeding cockerels and pullets taken from different birds in our flock.

WHITE ORPINGTONS

Superb Type---Superior Quality

To be found in my yards can
be seen in this cut

My birds are absolutely white, of that deep bodied type low down on legs, up to weight and I know I can please you.

My birds won at New York and many other shows last year, have won in all 15 firsts, 15 seconds and 4 thirds. Many Silver Medals and A. P. A. Diplomas. They are unexcelled as layers and if you want "Show Specimens" I can supply you. I also have a fine lot of high class breeding birds and can sell you a magnificent cockerel to head your pen, or mated trios and pens at reasonable prices.

Great Stamina and Vigor are to be found in my birds, not usually found in White Orpingtons. I attribute this to strong foundation breeding stock, our pure air and Blue Grass range.

100 Acres in Russell Cave Poultry Yards and 7000 Acres in Elmendorf Farm. Express Prepaid on all Orders, either stock or eggs. Every bird absolutely guaranteed just as represented or your money back without any questions. If you want fair treatment, send me your order.

TOO LATE!

CONKEY'S ROUP REMEDY!

That's what you'll be saying some of these days if you put it off too long and lose part or all of your flock in an epidemic of ROUP. When you see chickens moping, sneezing, coughing, watering at the eyes, heads swollen and fighting for breath, LOOK OUT! These are sure symptoms of the deadly Roup. One sick bird will infect the whole flock! Don't wait—keep Conkey's Roup Remedy always on hand!

"CONKEY'S" DOES THE WORK

Conkey's Roup Remedy comes in powder form. Put a thimbleful in a gallon of water and the fowls will drink it eagerly. A 50-cent box makes 25 gallons of medicine.

We will pay 50 cents for the empty box if it fails to satisfy you, but it will not fail!

OUR REMEDIES NOT "CURE-ALLS"

WE MAKE ONE REMEDY FOR EACH DISEASE

Conkey's Poultry Remedies are endorsed by thousands of successful poultry raisers. One remedy for each disease. Every remedy guaranteed. Don't put faith in "shotgun" remedies. Every disease has a different cause and demands a special remedy.

Conkey's Poultry Remedies are standard preparations with a world-wide reputation. On sale everywhere. Price, Conkey's Roup Remedies, 50 cents and \$1.00 postpaid.

CONKEY'S POULTRY BOOK FREE

IT'S THE RECOGNIZED AUTHORITY

Over two million copies in daily use. Answers 125 vitally important questions. Tells all about Housing, Feeding, Egg Production, Breeding, etc. Tells How to Know and How to Cure all manner of Poultry Diseases.

Send name of your poultry supply dealer and 4c in stamps for this great 50-cent poultry book NOW. Follow its plain teachings and double your poultry profit. Send at once.

THE BEST LAYING STRAIN BY TEST

Prize Winners at Illinois State Fair, 1910—In one of the largest shows ever held there, Judge A. F. Kummer of Butler, Pa., the Leghorn judge, pronounced our winning cockerel as one of the best he had ever seen. Our exhibition was admired by all. Prize winning hens scoring 95½. We have for sale a large number of April and May hatched cockerels which will make fine show birds for the coming shows. Young stock all raised on free range on clover and blue grass pasture. Fancy and utility stock, eggs by settings from prize winning pens and eggs by hundreds from utility pens and day-old chicks for sale in season. All inquiries receive our most careful attention without delay. Satisfaction guaranteed. Write for prices.

WHITE LEGHORN POULTRY FARM, BERGSTRESSER & FISHER, PROPS., PEKIN, ILLINOIS

THE MOST PROFITABLE BREED

You breed poultry for pleasure or profit. Strong claims are being made for some breeds, but there are no requirements that the Black Langshans cannot fill as all around layers, winter or summer table fowls, the show room or hatchers and breeders. 28 years' experience with the most of the popular varieties has shown me that the Black Langshan has no superior. Their quality and appearance of flesh as well as weight proves them the only substitute for the scarce and high priced Turkey, while they are the easiest and hardiest fowl to raise. Bred pure for centuries with no taint of foreign blood places them in a class by themselves. As for quality for three years in succession have won all firsts on males at Chicago but one, and has furnished first prize males for New York, Buffalo, Scranton, Springfield, Ill., and smaller shows everywhere. At the Ill. State Fair last month we won 1st and 2d cock, 1st and 2d chl., 1st and 3d hen and 1st pen. Every one of the above winners were bred at Hewes' Farm. We buy no stock to sell. Eighteen acres free range and our entire and personal attention. We have paid and received the highest prices ever known in the U. S. All stock on approval or price refunded.

R. A. HEWES : CRETE, ILLINOIS

JOIN BLACK LANGSHAN CLUB AND BUY LANGSHANS WHETHER YOU BUY OF ME OR NOT

DO YOU KNOW THE PRESENT DEMAND FOR

Fishel's White Wyandottes?

12 Months of Making History—We want you to know of the wonderful progress FISHEL'S Wyandottes have made the last 12 months, of the substantial growth of their popularity, how they have enormously improved in exhibiting quality, appearance and utility requirements.

The Record Is Proof—The best proof is what FISHEL'S WYANDOTTES have done, know they have done, because we have kept trace. We'll gladly set this evidence before you. Back of their winning record—That has proven their superiority—There's a reason.

Quality and Quantity Combined—FISHEL'S Wyandottes have utility qualities as well as exhibition qualities.

White Wyandottes by the thousands that can win the coveted prizes, they appeal to intelligent prosperous breeders, breeders with a reputation, who rely on FISHEL'S WORLD'S BEST White Wyandottes as a foundation strain.

Standing Counts—Fishel's Wyandottes have built for themselves a name and reputation that deserves your careful thought and consideration, their established reputation as winners wherever shown is one of influence and one which you can turn to tremendous advantage. We will gladly prove both quality and quantity. The more searching your examination the better we will like it.

Let Us Tell You the Facts and Give You Additional Proof—We have plenty and can convincingly prove why you should buy FISHEL'S WHITE WYANDOTTES. Send us a dime to cover cost of mailing and we will send you our new catalogue, it will be worth dollars to you.

CHAMPION SUNSWICK STRAIN

— OF BLUE BLOODED —

Buff, Black and White Orpingtons

Winners of Gold Specials, A. P. A. Diplomas, Silver Cups, Sweepstakes Prizes, Specials for Shape and Color, Etc., Etc. Over 350 prizes in four years at such shows as Madison Square Garden, Boston, Cleveland, Hagerstown, Allentown and Baltimore.

Our Buff Orpingtons

"I am trying to tell you what I have won at Allentown, Penna., 1910, the Clinton Fuller Challenge Cup for the best Black Orpington in the show. My name is Black Sultan. I live at the Sunswick Poultry Farm, South Plainfield, N. J., and my owner has a lot more like me."

have won at all of the above shows during the past 4 years and have **quality** bred into them, but this year they are better than ever and are truly Buff wonders of the Orpington breeder's art. Our "Champion Golden King," a "Blue Blooded Buff," was bred at "Sunswick" and only exhibited in 1908-9. He won the following: 1st prize and \$50 silver cup Allentown 1908; at Madison Sq., 1st prize in open class, 2 silver cups, 1st prize for best shapemale. First and shape special, Boston, '09, and first at Cleveland, 1909. We have 800 grand young Buffs containing these blood lines, many sired by Champion Golden King, and can supply you **show birds** and high class breeders having this blood bred into them for several generations.

We won the Clinton Fuller Challenge Cup on our Black Orpington cock, "Sultan," for the best Black Orpington in the show. See the cut with cup beside him. This is the type we breed in Blacks. We have won in all classes at all the largest

shows in the country and can supply you with winners in Blacks as well as in our other varieties.

Our "Champion Madison"

Sire of the great hen, "Our Lady of the Snows," and many of our young birds, has won 1st prize and silver cup at New York, '07; 1st at Boston, '08; 1st and special New York, '08-9; 1st and 2 specials Boston, '09, and 1st prize Cleveland, '09. Isn't this the kind of stock you are looking for? Isn't "Our Lady of the Snows" a beauty? Isn't she the best that you have ever seen? Well, we have other hens related to her and some of her sons and daughters for sale. Let us start you with a fine pen or trio of our Blue Blooded Buff, Black or White Orpingtons. Start right and stay right. Our prices are reasonable and we guarantee to please you. Write us today.

Buff and Blue Orpington Ducks

These ducks have repeatedly beaten the Indian Runner as layers. We have the only flock of Blues in the country. Start with them now and get in on the ground floor.

Strong, vigorous, of wonderful show and breeding quality. Get ready for the shows now. Write me. Birds guaranteed to win.

PRINCE MANYBAR II

W. D. Holterman, Fancier, Box A, Fort Wayne, Indiana

GOLDEN WYANDOTTES

Choice breeders and fancy exhibition birds from my Boston and New York blue ribbon winners. The result of 15 years' experience in mating to produce the best. Write for prices of what you want now to

Loren H. Brown, Lock Box 16, Lunenburg, Mass.

Columbian Plymouth Rocks

"Royal" Strain—No females, of exhibition quality, for sale this season. First Madison Square cock 1910 for sale. Cockerels from \$5 to \$25.

Green & Kaple, Specialty Breeders
Lock Box 400 Elbridge, New York

WHITE ORPINGTONS

Several young and a few old birds for sale at reasonable prices. 1st pen Indianapolis 1910. Satisfaction absolutely guaranteed. Thus all stock shipped on approval.

Oliver C. Edwards, Mace, Indiana

REDS

S. C. RHODE ISLAND REDS

At the great Tri-State Fair held in Fort Wayne, I won 1st cock; 1st pullet; 1st, 2d, 3d and 4th hen in hot competition. Get my strain of winners for the coming shows. Write now for prices on stock.

H. F. Kennerk, R. F. D. No. 7, Fort Wayne, Ind.

INDIAN RUNNER DUCKS

A few more nice Indian Runner Ducks for sale in lots of four ducks and one drake or more at \$2.00 each. Come early and avoid the rush. Mention A. P. J.

Harmon Bradshaw, Lebanon, Indiana

WHITE AND BLACK ORPINGTONS

200 fine of the low-down stay-white kind for sale very reasonable, fit to win in any company. My Whites are white to the skin. A fine line of both Black and Buff of No. 1 quality at low figure.

E. R. Bradley : Hillsdale, Michigan

ORPINGTONS

S. C. Buff, Black and White

LT. BRAHMAS

Winners at Boston, Worcester, Providence and Brocton Fair. Breeders and show birds at reasonable prices. : Mention A. P. J.

SUNSET FARMS
Darling & McNear, Props., Box 15, Natick, Massachusetts

YOU CAN EARN

*A Pair of Thor-
oughbred Fowls*

Your choice of almost any variety. All selections will be made from choice, pure bred, fully matured stock by taking a few subscriptions to Poultry Post, one of the best 25c poultry journals published. Everyone interested in poultry will subscribe. We also offer dozens of other valuable premiums or cash commissions. Write us for particulars.

Poultry Post, Box 6, Goshen, Indiana

CHAMBERS' S. C. BUFF ORPINGTONS

They are prize winners wherever shown. Eggs balance of season at half price, \$2 per 15. Please mention American Poultry Journal when writing.

Edward Chambers - Aurora, Indiana

Gaymonds' White Wyandottes

Special Cockerel Sale—50 choice March and April hatched cockerels of good bone and size at \$2, \$3 and \$5 each. Write me for particulars. The vigor and general quality of these will please you. Mention A. P. J.

Ira N. Gaymonds - Marcy, New York

"Evergold" Buff Wyandottes

won best display at the biggest and best show of Buff Wyandottes ever held—Annual Club Show, Cleveland 1910. Our business is to furnish winners. Do you want to win? Address Gerald Williams, originator of the Evergolds

Feather Fine Farm - Wellington, Ohio

MILLVILLE POULTRY FARM

S. C. WHITE LEGHORNS

are the kind you need. They are bred right and in the hands of our customers have proven real money-makers. Come to us for Leghorns. Baby chicks and egg orders booked now for future delivery. Write us. Catalogue free.

Millville Poultry Farm Co. M. J. Haitz, Manager Box 1002, Millville, New Jersey

BARRED ROCKS

I breed Rocks that have that bright, snappy color and even barring that is so hard to get. I can supply you with exhibition birds or breeders to improve your flock. Both cockerel and pullet line. Eggs from choice matings.

Geo. W. Bachman, North Baltimore, Ohio

Eggs and Stock Half Price

Have decided to dispose of some of my this year's breeders at one-half regular price. This is a grand opportunity for you to get started right with the celebrated Wolverine Strain White Plymouth Rocks. Choice young stock ready to ship. My handsome illustrated mating list for four cents to cover cost of mailing. Mention American Poultry Journal.

Lyman H. Hill, Station 1, Jackson, Mich.

BIG MONEY IN RHODE ISLAND REDS

No breed excels the Reds for laying, beauty, general purpose or show room. No strain of Reds excel

Buschmann's Non-Fading R. C. R. I. Reds

Our show record in eight different states for the past seven years stands unequalled.

Our last great triumphs were in 1909—10 at Cincinnati, Ohio, Indiana State Fair, Illinois State Fair, Chicago, Kansas City and Fanciers' Association Show, Indianapolis. Four different cock birds took four first prizes at four of these shows.

Our sales list and show record will be sent if interested.

DON'T KILL The LAYING HEN

NO, don't kill your layers, for they are payers. And if you knew the **POTTER SYSTEM** you not only could pick out the laying hens, and thus avoid killing them, but you could also pick out the non-layers and drones and save your feed money. How many times have you taken a hen to the block and then after killing and dressing her found to be in full laying condition? Real money in her (in eggs) and you didn't know it. If you know the Potter System you will never purposely kill another hen, and this alone means the saving of many dollars in a short time.

NEW BOOK ON THE POTTER SYSTEM

**Of Selecting Laying and Non-Laying Hens,
and Egg Production**

Contains 100 Pages and 30 Illustrations

When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets, it contains, cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others; therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "Secret" family, and stop killing the laying hen, thereby greatly increasing your poultry profit.

The price of this great book is only \$1 and it will save you hundreds of dollars. It has done this for others and will do it for you. In order to provide every poultryman with a copy of this great book we will give you this book, a copy of **PROFITABLE POULTRY RAISING**, (treating on the subject of scientific and systematic poultry feeding for rapid growth and development and large egg production), and a full year's subscription to the oldest, largest and best poultry paper in America, all for \$1.25.

Wayne Wentworth—The Born Poultry Fancier

Written Expressly For American Poultry Journal by Frank C. Williams

"Mamma, see chickie laugh! Mamma, mamma, see chickie laugh!"

A moment before a sturdy little figure clad in a gingham pinafore, spotlessly clean, stood perfectly erect with chubby hands clasped behind him, his blue eyes following every movement of a very small yellow chick. Suddenly he made a quick move and, swooping down upon the helpless chick, held it tightly by the neck—so tightly that in gasping for breath its tiny bill was forced open, which in his childish imagination made "chickie laugh."

Dancing in glee, he ran toward the house.

At the cry a quiet little woman ran through the open door. Seeing Wayne with the chick in his hand, she attempted to loosen the hold of the baby fingers; but before she succeeded it was too late—the chick had breathed its last, and was limp and lifeless when she succeeded in releasing it.

"Oh Wayne," she cried, with tears in her eyes, "what will papa say? This is the third little chickie you have killed today. How would you like it, Wayne, if some great big man should come in this yard and hold you by your neck until you could not breathe? Now poor chickie will never run again or grow up to be a big hen, like Biddy."

The child's eyes now grew wide with emotion, as he regarded the inanimate chick. Then with a wild burst of weeping he hid his face in his mother's apron while he wailed:

"Wayne didn't mean to hurt chickie, mamma. Wayne just like to see chickie laugh. Won't ever do it again. Wayne loves chickies better'n anything. Want chickie to run again, mamma."

Mrs. Wentworth picked up the sobbing child and carried him into the house. Seating herself in the little rocker in the cool sitting room, she explained to him the weakness of such small creatures. To punish him, she forbade him going near the chickens during that day, confining him to the front yard alone.

Poor Wayne wept anew on hearing this decision and finally cried himself to sleep on the old-fashioned sofa, while his mother went back to work.

The opening scene in our story shows a neat farm house, surrounded by all the appurtenances of a small farm. In the front yard grew an abundance of old-fashioned flowers. Hollyhocks stood tall and stately by the picket fence, sweet Williams and mignonette in friendly proximity, while marigolds and four-o'clocks nodded lazily in a more secluded corner.

At the further end of the lot was the barn and implement sheds, and built closer to the house was a row of little chicken coops, around which the mother hens clucked in matronly solicitude, while broods of chicks ran industriously here and there seeking food, yet pausing frequently for short rests under their mother's wing.

After dinner Wayne's mother dressed him in a clean little suit of blue and, cautioning him again not to go near the chickens, she sent him into the garden while she sat down to sew. The heat of the day and the dull drone of the bees in the flowers lulled her to sleep, and she knew nothing more until aroused by a great commotion outside in the road.

She ran out onto the little porch just as a neighbor came through the gate with a small, blue-clad figure in his arms. Such a quiet little figure it was—no sound nor motion. The mother heart almost stopped beating and she leaned dizzily against the porch post. Knowing that she would be needed, she pulled herself together with a mighty effort and, taking her boy from Mr. Brown's arms, carried him into the house, while he ran to notify the father, at work in his little store close by. Then he jumped on his horse and rode for the nearest doctor, who lived about a mile away.

Mr. Wentworth could hardly breathe when he reached the side of his only child, but he paused long enough to kiss the pale cheek of his wife and whisper an encouraging word. Then they disrobed the small figure, so sadly battered and bruised. The doctor soon arrived; hatless and coatless he had ridden Mr. Brown's horse back to the Wentworth home. Very tenderly he felt for broken bones, and found that most of the injury was about the child's head.

It was impossible to restore Wayne to consciousness, and by nightfall he was raving in delirium. Mr. Brown related to the parents and doctor how the accident had occurred. A spirited colt belonging to Mr. Wentworth, not fully broken, was tied to a tree in an adjoining pasture, and little Wayne had wandered over to it, calling it by name in his childish voice. Mr. Brown, seeing the danger, shouted to him to stop, but the child, laughing in glee, started to run and did not stop until he was near enough to catch at the flowing tail of the horse. A quick snort, a flash of heels, and poor little Wayne's body was hurled against a tree as if shot from a cannon. The only thing that saved his life was the fact that the colt was not shod.

All that night and the next day and the next night Wayne moaned in delirium and the burden of his cry was "Chickies!" "Please let me go see chickies, mamma!" was his cry. "Wayne won't hurt chickies any more—Wayne loves chickies!"

With aching heart and tearful eyes the poor mother tended her boy—bathing the hot head, holding the restless, fevered hands, and trying to tell him that he might see his beloved "chickies" soon. But, finally, the delirium changed to a deathly stillness. The doctor gave forth his verdict that unless an operation was performed within twenty-four hours, Wayne would die. A piece of bone was pressing the brain, and if that could be removed and the child was strong enough to go through the operation, he would live.

So a specialist on brain diseases was summoned from Chicago to the small Indiana town where Wayne lay sick. The operation was performed on a bright, warm, summer morning, and that afternoon the doctor took the mother's hand and said, "Mrs. Wentworth, your child will live."

The autumn advanced and the winter snow was falling before Wayne was able to go out in the yard and look at the chickens, now grown from little fluff balls of down to large, pompous fowls. But the love for the feathered tribe was just as strong as ever in his childish heart, and he danced in glee when his father told him he could have chickens of his own to raise, feed and sell when grown, if he wished to do so.

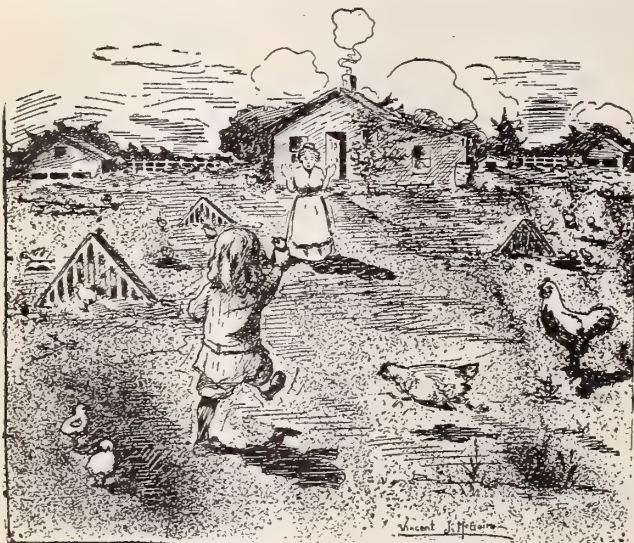

"All one kind, papa?" cried Wayne. "All one kind and color? I don't like to see one white and one black one."

"And what kind shall it be, Wayne?" asked his father. "Don't care, papa; any kind at all."

"Well, we will look over a copy of the American Poultry Journal, my boy, and maybe we can make our selection, and find out where to send for the best chickens and get the best prices. I will bring home a copy of the Journal tomorrow and look it over. Two weeks from tomorrow is your birthday, Wayne, and maybe we can arrange to have a pair of bantams here by then; and—if it is not too cold—you will gain strength rapidly by being out of doors, so you may help me to build a coop for them."

So the Journal was brought home and duly inspected, and although Wayne could not read very much, he was greatly interested in the pictures of fowls and their coops and houses. Mr. Wentworth sent for a pair of bantams, making arrangements to have them arrive on Wayne's birthday. In the meantime both were busy building a neat and sanitary little coop for their reception. Wayne carried nails and tools and small boards, and by his active outdoor life gradually recovered his round, red cheeks and bright eyes.

When the small chickens arrived Wayne was speechless with delight. With his hands clasped in the old familiar attitude he gazed on the bright feathered little creatures as they strutted proudly around in their new home, and whispered almost inaudibly, "My own pretty chickies!—and both alike," and, "Papa, just listen to them talking to each other; don't they want Wayne to feed them? When will they lay eggs? When will they hatch little chicks?"

"Mamma, Mamma, See Chickie Laugh."

These and numerous other questions Mr. Wentworth was compelled to answer, as Wayne wanted to know all particulars about his pets.

He spent all that day with his father. In the evening he brought the American Poultry Journal into the sitting room and, perching himself upon his father's knee, demanded "Tories of chickies." Mr. Wentworth read to him until his voice grew hoarse, and when Mrs. Wentworth came in after a visit to a neighbor's, she found father and son fast asleep with the A. P. J. crushed between them.

Mr. Wentworth kept a close eye on Wayne that winter, teaching the child how to feed the chickens and helping him to keep their coop sanitary. One day he brought home a half-dozen chickens of a mixed breed. Presenting them to Wayne, he waited with a smile, expecting another outburst of delight. Instead, however, Wayne regarded the mongrel flock with stern disapproval; refused to house them with his bantams and made such a terrible fuss that Mr. Wentworth finally disposed of the chickens. Adding a little more money to what he had already paid, he increased Wayne's family of bantams. Then there was rejoicing, indeed.

As the spring came on Wayne about lived with his poultry. He had entered the country school and felt very much like a man. To any one who asked him what he intended doing when he was a man, the answer was always the same, "Raise chickens of the finest kind."

Just about this time Mr. Wentworth failed in business. There was a financial scare all over the country, which affected rich and poor alike. The little store, which had always proved its ability to provide amply for the wants of

the small family, became a burden on his hands and he had to sell at a loss. He finally decided to move to a larger city and there work by the day. Something had to be done without loss of time, so he held an auction sale of all his possessions, and it is hard to say which wept the most bitter tears—Mrs. Wentworth, when her household goods went under the hammer, or Wayne, when his beautiful bantams were loaded into a wagon and taken away.

It was a sad little family that finally moved to Chicago and established itself in two scantily furnished rooms. How different from their comfortable little cottage, with its airy rooms, pretty garden and home comforts! Here, instead of being awakened by the crowing of the cock, they were aroused by the roll of wagon wheels, the blowing of factory whistles and the general turmoil of city life. It was hardest of all for Wayne. He would sit for hours with his face pressed against the window-pane, looking into the street, but apparently seeing nothing. His mother would put her arms around him and say: "What is my boy thinking of?" and always, with quivering lips the answer would be: "Thinking of my chickens, mamma. Do you think I can ever have any more pretty chickies?" And the mother would comfort him as best she could.

Mr. Wentworth had been fortunate in finding work in an express office, and life began to assume a somewhat brighter hue. Christmas was drawing very near, but was not made the subject of much comment, as both Mr. and Mrs. Wentworth knew how much they would miss the big home-fed rooster which had generally graced their table, in company with all the vegetables necessary, also home-grown. But they decided to decorate their two rooms with a little holly, fix as nice a dinner as they could afford, and buy a few inexpensive presents for Wayne.

"Ask Wayne what he wants Santa to bring him," said Mr. Wentworth to his wife, with a smile.

"You know the answer, I think," she replied. "Sometimes I wish there was no such a thing as a chicken. That child is simply grieving himself sick over the loss of his bantams."

"I wonder if we could get him some make-believes?" suggested Wayne's father. "I saw some decoy ducks in a window today and it set me to thinking that I could get the child some toy chickens. I hope we can do something to make his Christmas enjoyable. As you say, he grieves a great deal, and it seems to me he is growing too old for his years."

"You might see what you can find," said Mrs. Wentworth. "If you could get some toy chickens and a little fine lumber I would allow him to make coops in the kitchen, and it would give him something to do besides gazing out of the window at nothing." The next evening Mr. Wentworth brought home a package, which was taken to a neighbor's flat until Wayne was asleep. Then it was brought into the little kitchen and the contents placed on the floor.

Mrs. Wentworth tried to smile, but her eyes were dim as they rested upon ten bright yellow wooden hens and a large pompous rooster.

"These are sure to please Wayne," she said, "and I see you catered to his fancy and got them all the same color."

"Yes," answered her husband. "They are a very good imitation of buff leghorns. Won't Wayne's eyes bulge when he sees them, even if they are nothing but wood and painted! Now, tomorrow I will get some light planed lumber, small nails and a hammer and, although it will be frightfully noisy for you, we will allow our young poultry fancier to amuse himself if he can."

"I helped Mrs. Miller decorate her Christmas tree this morning," said Mrs. Wentworth, "and there was a very large branch cut off to make it fit in the window, so I brought it home. I think if we tie it firmly to the back of this chair and group the chickens on the chair around it, it will look quite imposing. I made some candy, too, and Mrs. Miller gave me almost a pound of fancy crackers and cakes. I think, dear, we will be just a little extravagant and buy a few candles. He is all we have, you know, and his Christmas seems so pitifully small."

"I know it does, Wife," answered her husband, "but it is the best we can do, and if you feel so badly about what you term his 'small Christmas,' how do you think I feel when I can do so little for him and nothing at all for you? I tell you it makes me feel pretty blue."

"Ah, yes! but we have each other—and that is a great sufficiency," Mrs. Wentworth said, throwing her arms around his neck. "It is different with us grown folks. And now we must throw off this attack of the blues; so you run along and buy the candles and we'll make the best of what we have and be thankful we are all together."

(To be continued.)

WHO'S WHO IN HENDOM

I guess that I'll make a quiet afternoon of it today. I have filled me full of good food. That is to say, that I have eaten heartily and yet not to excess. This morning I cleaned twenty brood coops, filled in a brooder house floor with fresh earth, cut a couple cords of kindling, and then shelled a three-bushel basket of prunes. You bet I had an appetite and showed it. The neighbors in the meantime had brought in a couple of squabs, braced and waddling in their own gravy, these flanked by a few slices of well-fried catfish, and the whole garnished with a layer of carrots and then a couple of quarts of cream sauce. Take this, and a few olives to put the edge onto the appetite, a side dish of assorted rutabagas smothered in garlic, half of a bottle of Dustyne and one and a half peach cobbles to top out the stack and keep the rain out, and you are ready to call all the world by its front name and slap small men on the back till their teeth crack.

During the meal I had a good laugh. And unlike David Grayson, whose wife was so pious that her one look soured milk, I did not have to go out behind the barn to vent my mirth. I just read G. M. C.'s account of the A. P. A. meeting and compared it with the St. Louey papers. Comic supplement vaudeville! The members of the family who know I am plump nutty on the chicken question dropped their implements of warfare on that dinner and stared me into submission. After I compared all the matter before me I decided that some one got spanked down there on that hot August day.

This month's matter is going to be pretty well scrambled, as far as Who's Who is concerned. I am going to give the judges their's and shall also tell of some of the vicissitudes of running for office on an A. P. A. ballot. Will probably give some advice to the secretaries and may get well spanked for my pains.

We all know Reese Hicks is going in for the A. P. A. presidency. He has about earned it and thinks that if he can make the race successfully that he will then be in position to throw a spell of quietus over some of the noisy ones who occupy front seats. Hicks' one motto is: Don't get noisy—pull out the soft pedal. He is just as conservative as LaFollette, his satire strikes home like the Walt Mason brand of philosophy, and this is the conversation that probably took place between his wife and himself after he decided to go in and get something from the A. P. A. bean pot.

Reese has walked home after a hard day's work in the office. In Topeka all the hard-working men walk home. I have been there and I know. This is not saying that I ever worked hard there. Far be that from me. Reese has walked home, as I said. He has arrived. He left the office at five of an early summer's day, and his homeward path has been fraught with mental ease. The birds are singing their last evening carols, the dying honk of Rankin's stink wagon has faded into an ethereal nothingness, the sun in all its occidental splendor has dropped its talons astraddle Denver and will soon be lost beyond the haze of another day of toil. Hicks notices all these things. McGrew once told him that if he was ever to soar in flights of oratorical splendor he must imagine himself alone on a seat where he could cast his eyes upon the jaded world and mentally revel in the beauties that once were hers. Great idea. So Hicks has been thinking to himself. Some of you may think this strange. The world has been good to him. He appreciates it, but the goodies he has been handed by her, he assumes to himself, he has put forth energies to attain, so now he decides it is time again to put a mit into the grab bag of chance, hence he broaches it to his wife:

"What!" she exclaims, "you going to run for another office?"

"Good guess," replies that not too committal Hicks.

"You are thin enough now without any more running;

U. R. Fishel, Hope, Indiana

L 5

and remember, what politics did for you in Tennessee," she warns him.

"Well, this is and isn't politics."

"What sort of a game is it? Won't you get lambasted in all the papers and won't folks tell lies about you and all that sort of thing?"

"Yes, I suppose folks will lie about me, but that don't hurt. If it did I would not holler about it. I owe my life to the American Poultry Association and should not shirk a duty that its affairs thrust upon me."

And then Hicks turns away to the window and looks out through the mist that gathers in his eyes as he recalls the trust placed in him by this great associated

body, whatever that is. He remembers that he is in the hands of his friends and what they will he doeth. He recalls the weighty problems he has been called upon to handle for the A. P. A. and feels that they will again turn over to him the brunt of the affairs to best sift and adjust as he may, taking his decisions as a matter of course and leaving all to him.

And feeling thusly he retires into his library and there goes ahead with his speech of acceptance, not heeding the call to dinner or feeling aught of the pangs of hunger. Outside the orioles are teaching the fledglings how to do the Glenn Curtiss act, the twinkling of the neighbor's lawn mower is lost upon Hicks' ears, and the whole atmosphere seems to Hicks to be charged with hefty problems of the poultry fraternity, all of which our hero must incorporate into his speech, inasmuch as they press down upon the heart strings of this public-spirited and benevolent citizen of the Rooster Republic.

Yes, Hicks takes things as they come. He also takes them seriously, withall the face he puts on seemeth full of the frolic of mirth. But he has announced himself, and we shall see what we shall see, and in the meantime voters will go ahead pledging themselves to substantiate his cause and policies at the polls. One thing is certain, we will have a real live president of the A. P. A. if we elect him, albeit we might have to cage him at times.

Here comes Henry Steinmesch! He is running for president, too. We are glad of it, as he will help to keep the political pot boiling. There is nothing one can say about Henry that will dampen his ardor. He is an old-timer when it comes to running for office, and he was dried out years ago, then case-hardened to prevent any more dampness entering his mental anatomy. Mean words that other folks say about him run off his back like water off a tile roof. The duck's back isn't in it with a tile roof. I do not like the term duck's back anyway, as it sounds too poultryfied. Let us eschew technical terms, and like the land-lubber at sea or the sail on land, pretend to be something we are not. It is quite the style to be something else than what you are.

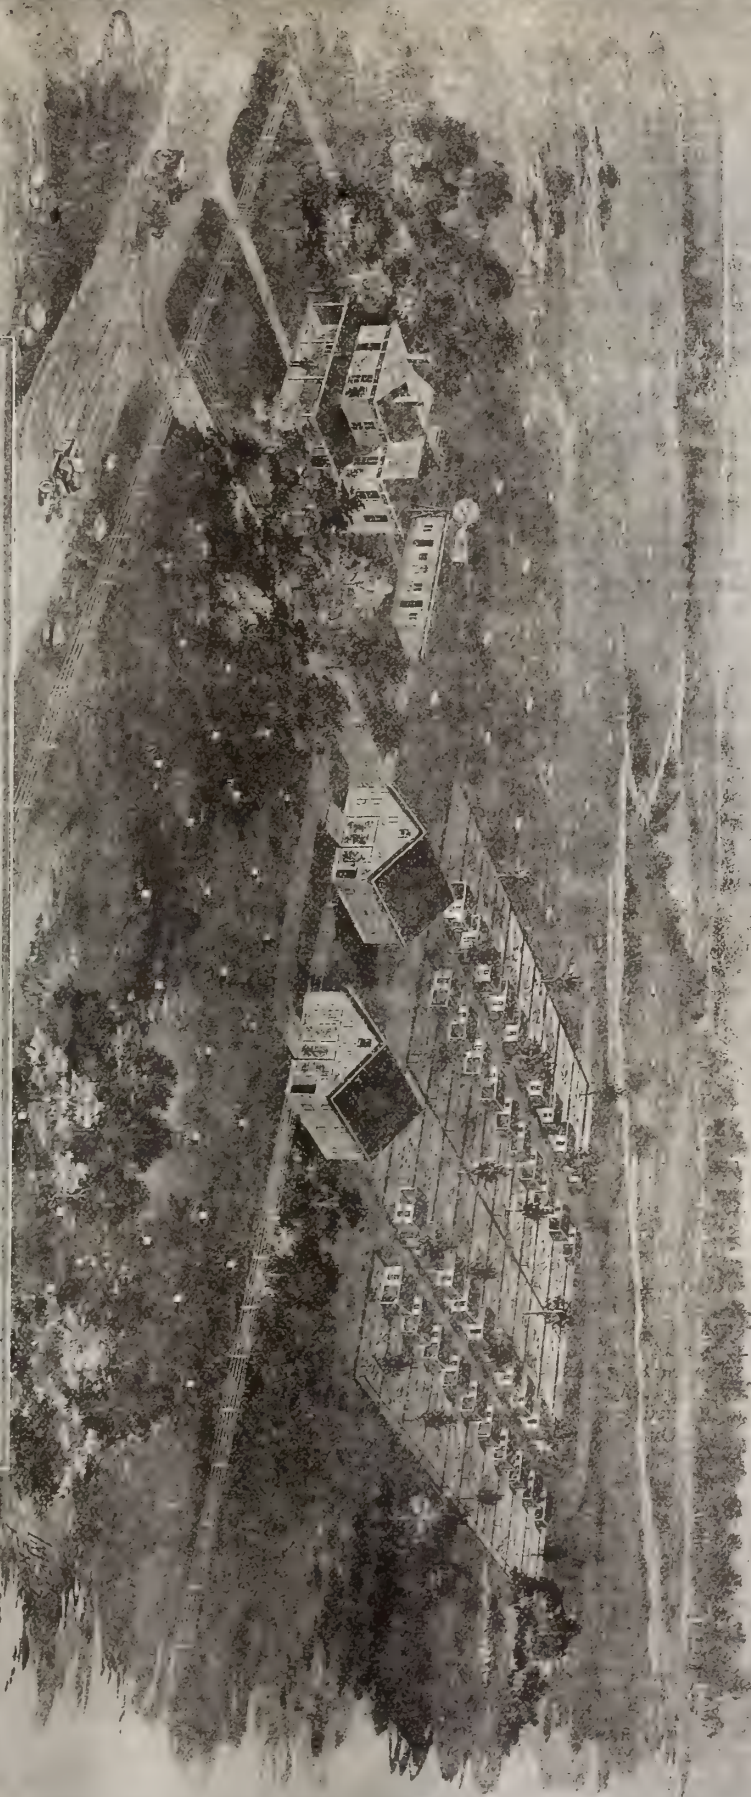

But let us get back to Steinmesch and our canned clothes pin.

It was Henry who gave us the straight steer about certain men we have carelessly put into office. Ask Billy Russell! He gets a line on a man and forever he knows him. Never have Henry camp on your trail. It means the rope's end. Whatever there is going on in the A. P. A. political way, Henry knows. He has a source of first-hand information. It just naturally seeps into his gray matter and he files it away for reference after correctly card indexing it. The rest of us would have to maintain a whole retinue of henchmen and an information bureau corps to get the matter that just falls into Henry's lap, so to speak.

For instance: Henry got enough good information while the A. P. A. boys were down there camping with him—though sweltering with him might be a better term—to give him a generally good line on any of the delegations present, hence, said line will be used to string a few votes upon.

Henry does not talk much. He listens perfectly. When he hears something worth listening to he keeps both ears open, but if he happens to get into a dead bunch, watch him beat it for a livelier point. Then he is some entertainer. He was the chief spoke of the entertainment wheel that cared for the boys at St. Louey and they will not forget it. Human

First prize cock, Chicago, 1909.

nature is pretty much alike, in the words of Swineburn, immortal poet. We all like to do favors for favors received. That is, we do if we are normal. If we are abnormal it makes no difference what we do.

Henry has barely started his campaign. Wait till he opens things up. He can crack a few skulls or, what is better, make them think they are cracked, when he tries. He knows the world is full of fools, and that the Lord certainly loved us or He would not have made so many. When he goes out for office he goes after the big men for their support first. He well knows that the rest of us will trail behind.

Another of the candidates for the office of president is our old-time and mutual friend, Tom McGrew. Tom was served up on the spit once in this column and we desist from saying anything more about him. He is a doughty little warrior and his shoulders are broad, hence he can stand anything we say about him. He has a lot of friends in and out of A. P. A. offices, and has been holding office so long that it is a wonder he is not made a dictator or something just to save the expense of putting his name on the printed ballots every year. Tom might make a good race. One can never tell how fast his pair of pedal extremities, though short, will carry him. He might win in a walk. It's a cinch that he will not run far nor lose sleep over the race.

There's Henry V. Crawford, mayor of Mont Claire, N. J., who is also making the race for the presidency. He may not be making great efforts of his own accord, but his being somewhat in the hands of friends shows that he is more or less of a candidate. You cannot have any fun with this man. He is as sober as a judge, never jokes or says aught that would cause a mental jollification. He is earnestly at work trying to better the showing rules of associations and tries out his new ideas every year at New York, which show he has run so successfully for some moons. We have come to value him as one of the wise heads of the A. P. A. and know that he would make a sane president.

Purvis is another of these who are going to run. His first name is Miller and, contrary to the usual opinion, he was not called Milly when a small scion of the house of Purvis.

Purvis writes books, poultry books and articles for the poultry press. He has a literary way about him that permeates all his writings, and though he does not come out and say it he really thinks that he would make as good a president as any incumbent we have had.

That's nice of him.

All you have to do to stir this man up is to say something he does not understand or that will give him a chance to opionate against you. After he once camps on a fellow's trail it is all off with the trailee. He is merciless in his pursuit and calls whiskers, lamberquins (pronounced lamberkins) and says and does other things that marque him as a genius. His last write-up of the A. P. A. meeting is as good as a tonic for the liver. He descended to vile, American slang for the first time we ever read him. His classic references to Thusydidies, Euripides, Marcus Aurelius, Abdu El Yezdi, Botticelli, Locke, Jack London and Noah's Ark mark him as a man of letters. We pick these names at the public libe. shelves, feeling sure we are not wrong, though we know that we are not right.

For recreation Purvis crosses, Peafowls with Armadillos, Silver 'Dottes, with Pootras, and then inbreeds the results. He has a mania for statistics and longs to be known as the human receptacle for all this sort of knowledge. He gloats over the fact that all amendments were thrown out the window except his at St. Louey. He advises success in the chicken business by telling you to subscribe to all the best poultry papers and then burn them as they arrive, except his. Forsooth, he is the Human Exception. Nothing he can accept except acceptances formerly excepted will he accept. I have always liked him for this. It causes one to know just where he stands. It gives voters implicit faith in voting as they think best, never minding the exceptions he accepts. Let us all go to the polls and pool for him.

* * *

"Charles D. Cleveland comes before us this evening with the sublime assurance that of all of us he best knows what is in his own mind. I am pleased to make him acquainted with you."

Loud and long applause.

This applause followed the introduction of that famous poultry speechmaker, who manufactures harmony and geniality after the battles in the A. P. A. arena. There is

First prize pullet, Chicago, 1909.

an art in making you feel that you have no troubles. Mr. Cleveland is an attorney, or, better, he is a lawyer. He knows the law so that he can keep folks out of its toils. I like that idea. It shows great perspicacity, perustration, conspicuity, comprehension.

Cleveland will take care of himself. He is one of that

kind. I never heard of him being in the hands of his friends. That's a really good point in his candidacy. The reason the A. P. A. has tottered along for so many years is because we have had no more Clevelands in it.

A man says to a Hebrew:

"Pumpkinville is a nice little town, eh? What? A fine village, huh? There ain't a Jew in it."

"Sure!" acquiesces the Hebrew. "That's why its a village."

That's the point: We need more Clevelands. We have been a village long enough. Nice, little, cozy, and snuggled up tight! Sounds good and all that, but let us have more Clevelands and more breadth between the eyes.

DEFORMED BREAST BONES

**Many Theories Advanced as to the Cause—The Use of Them as Breeders—
Farm Raised Stock Seldom Have Crooked Breast Bones—The
Best Method to Prevent Deformed Breast Bones in Fowls**

Written for American Poultry Journal by Jos. Shakespeare, Warley, England

IT HARDLY matters under what conditions fowls are reared and kept, or what the breed of fowls may be, some of them are liable to have deformed breast bones. In some cases the deformity will only be in the form of a small indentation, whilst in others the cartilage will be badly twisted. Though a crooked-breasted fowl may pass unnoticed in the exhibition pen, it fails to please the eye of a good carver, as it interferes with the proper removal of the daintiest portion of the bird.

Game fowls, and especially Indians, being, as they are, but scantily feathered on the breast, show the deformity more than any other breed, and no doubt on that account such a deformity accounts for disqualification on the exhibition bench, and rightly so, since game fowls are among the best breeds of table birds.

Concerning the cause of deformed breast bones there are many theories prevalent among poultry keepers. Some contend that badly-shaped perches account for the mischief, whilst others attribute the cause to the chickens perching before the cartilage is matured and hardened. These perch theories are extremely old and numerous. I heard of them a quarter of a century ago, and whilst admitting that badly-shaped perches and early roosting may have something to do with breast deformity, I failed, after carrying out the advice of the theorists, to prevent the occurrence of breast indentation among the young stock. When game fowls were

bred for fighting purposes as far back as 1800, I learn that crooked breasts were a cause of trouble to breeders, and were discussed from the badly-shaped perch point of view, and many "cockers" insisted on having their roosting houses provided with round perches covered with woollen cloth or other soft material. These perches were just thick enough for the birds to grip comfortably. The advice of these old-time game breeders is even put into practice today in some poultry yards, and particularly in yards where turkeys are reared, deformed breasts being very objectionable in that class of poultry.

Some writers have contended that fowls with deformed breasts should not be used in the breeding pen, and the comical part of the business is that the same writers attribute the deformities to ill-shaped perches, or to the premature roosting of the young fowls. This is a piece of nonsensical theory. One may as well contend that the chickens bred from a dubbed game cock will be deprived of their combs without the aid of scissors, or that the progeny of a fowl whose eye was injured at an early age will be born blind. I am of the opinion, and my opinion is based upon thirty years' experience among poultry—that erratic feeding and improper foodstuffs are at the root of the mischief. We all know to what a size many exhibition birds must be grown if they are to hold their own on the show bench, and it is among this class of fowls more than among all others that breast bone deformities are met with. Birds hatched out early in the year, and which are intended for the early shows are grown as quickly as possible in the given time. Such foods are used and in such quantities as will get them to premature maturity long before mature age is reached. Flesh forming rather than frame building foods are fed to the youngsters, with the result that the cartilage becomes too soft to properly carry the amount of flesh put upon it, and it matters not whether the birds squat or roost, that part of their frames coming into contact with the floor or the perch becomes, by the pressure of their bodies, twisted out of normal shape. If the ill-shaped perch is alone responsible for breast bone deformities, why are such deformities so often met with among Brahmas and Cochins, breeds which, to preserve foot feather, are not allowed to roost from the time they leave the shell till they reach maturity? These breeds must be subjected mostly to a soft food diet, so that abundance of feathers may be obtained and size insured, but the feeding of so much soft food has a detrimental effect upon the frame, inasmuch as it promotes a soft rather than a firm development of that member. Leg weakness is met with more among the heavier breeds of fowls than among the more active kinds, and this is owing to the fact that the former class of birds are naturally flesh producers, whilst the latter are of a sinewy and muscular nature and are capable of warding off superfluous flesh by great activity.

Fowls running at large around farm homesteads seldom

Breeding houses and large grass runs at Old Homestead Farms, J. H. McDanell, Prop., Warsaw, Ky., breeder of Golden and Columbian Wyandottes.

contract crooked breast bones, although they roost at a very early age, and when they do take to perching they prefer to sleep on low tree branches, barrow handles, wheel spokes, iron bars, or anything approaching what up-to-date poultry keepers would term discomfort. Such birds are, as often as not, left to their own resources. They have to forage for the greater part of the food they consume, and as such food is generally composed of grasses, insects and grains, the birds enjoy a semi-wild existence, grow gradually, and develop a well-balanced body. Birds living entirely in a wild state rarely, if ever, contract crooked breast bones; in fact, so far I have not come across a case. It must not be imagined from the foregoing remarks that young fowls may safely be allowed to roost on any kind of perch, indeed, domestication has rendered it unsafe to allow many breeds of fowls to roost at all before full development is reached. We should certainly give our birds a properly shaped perch to roost upon, but if they are predisposed, through our error in feeding, to contract crooked breasts, no perch, however well shaped, will avert the trouble.

The occurrence of crooked breasts is more to be deplored in utility fowls than in exhibition stock, since little excuse can be entertained for the raisers of the former. Fashion in exhibition circles compels breeders of show fowls to raise their stock in such a manner as to lead to deformities of the cartilage. Breeders of utility birds should so manage their growing stock as to insure strong, sturdy frames. It often happens that young pullets are forced by the use of concentrated foods to lay long before full physical development is reached, with the result that what should go to the building up of perfect frame and flesh is expended in the pro-

First prize Buff Wyandotte cock Toledo, 1910. Owned by H. V. Kell, Canton, Ohio.

duction of eggs. Such pullets being undeveloped and consequently gristly in frame are naturally likely to contract breast bone deformities, since, with the production of eggs, physical development to a great extent ceases. The best way to insure big, robust and perfectly framed birds, is to let them mature slowly by feeding them mainly on grain, commencing with dry chick feed and following with wheat when the youngsters are three weeks old, and relying on this grain till the birds are three months old, when good, plump oats should be introduced and fed alternately with the wheat. The only soft food the birds should have is a little mash first thing in the morning to quickly satisfy them after their night fast. Bran should form a prominent part of the mash, as it is a good bone former. During the earlier stages of development the youngsters should be induced to exercise as much as possible. Give them earthworms and other insects, or failing these, a little lean meat occasionally. Once a week add a sprinkling of bone meal to the morning mash, and a pinch of iron sulphate to the drinking water.

When the birds are showing signs of losing their chicken feathers and donning their first adult plumage, it may be taken for granted that their frames are developed sufficiently to be padded with flesh, and more soft food and animal matter in the form of cut green bone may be given. At this stage oats in a whole and ground state should form the major part of the diet. So fed, the birds will steer clear of crooked breasts, mature into big framed adults, and prove the best of breeders.

The White Orpingtons are certainly having their inning, and the demand is steadily increasing.

THE CONNECTICUT POULTRY ASSOCIATION

The Holding of the Annual Field Meeting—Profitable Poultry Keeping—Fattening Fowls for Market—Feeding for Eggs in Winter—White Diarrhoea.

HE Connecticut Poultry Association has made good! If the organization sticks right to its text, and continues to be conducted as recently, for the benefit of the poultrymen of the state, it will prove a power for good to the whole poultry industry. Thus far it has shown the way, and we have hopes that it will continue to lead the procession.

The meetings of the Association are always well attended. For the last two years the big time has been at the two-day field meeting held at the Connecticut Agricultural College, Storrs, Conn., immediately after the close of the summer school of that institution. It would be difficult to find a better place for a field meeting. The college buildings are ample to care for a good crowd regardless of weather conditions, the dining hall can easily furnish meals for a large number, and the dormitories are of sufficient capacity to accommodate those who desire to spend the night at Storrs. Transportation facilities are not all they should be, but once at the college the expenses are very low, meals costing but 25 cents, and no charge being made for rooms.

Tuesday and Wednesday, August 2 and 3, were the dates selected for the 1910 meeting. In spite of a fearful thunder storm which swept over the state Tuesday morning, between 200 and 300 of the regulars were gathered at the college when the exercises were opened. The crowd changed somewhat during the meeting, as some people were compelled to go home early, while others could not come until late. There were poultrymen from all over the eastern United States, and a happier crowd was never seen. Everybody "talked shop," and all seemed happy and well repaid for making the effort to attend the meeting.

When the Association was called to order President Beach, of the college, made a most pleasing address of welcome. To this President Rogers, of the Association, replied briefly, and then Prof. Stoneburn was called to the platform for a few remarks relative to the work of the college and experiment station.

Mr. F. W. C. Almy, of Rhode Island, followed with a most interesting talk on "Profitable Poultry Keeping." Extracts from his address follow:

"I have been asked to come up here and tell you how in Rhode Island we manage to make a living in the poultry business, how we make an annual profit of \$1.00 per bird, how many hens one man can care for under our system.

"In business one item to be considered is keeping expenses as low as possible without failing to give the stock the necessary care and attention. We get pretty near to the bottom of the scale. It costs us about 50 cents per bird to house our stock, a house costing \$25.00 accommodates 50 birds. This is getting it down about as low as can be done under New England conditions.

"Of course, the climate of the little Compton district is with us. The weather is such that the birds are out of doors practically all seasons of the year. It is seldom that we have them confined more than two weeks during the entire winter.

"It has been said that the secret of profitable egg production is in hatching the birds early, keeping them growing and making them lay early. As a result of my experience I can say that that covers the ground.

"Most of my hatching is done with hens. I set from 50 to 60 hens at one time and usually an incubator also. At the first test I replace infertile eggs under the hens with fertile eggs from the incubator, and fill the machine again. This gives each hen a good number of fertile eggs and they usually bring off a good hatch. If I could arrange it just as I like, I would have all chicks come off the first of April, but when hatching with hens this cannot be done, so I get my earliest ones out the first of March.

"The chicks are cared for by the hens, each hen being given 20 to 25 in a small coop.

"For feed I use the commercial chick feed, giving nothing else for the first week. After that they are fed a variety and are given the run of a field of several acres in extent.

"I set my chicken coops in two rows rather close together, with water dishes and feed troughs for mash and dry grain

between the rows. This saves much work, and the chickens soon learn where to come for their meals.

"Surplus males are sold for broilers as rapidly as they reach the desired weight.

"If one wishes to build up a good egg trade it is desirable to have a steady egg yield throughout the year. I endeavor to have a supply of eggs at all seasons, and never try to force the birds at any particular season.

"In the fall I plan to sell off all my two-year-old birds as they stop laying, selling a good-sized bunch every week, and replacing them with early developed birds. I keep all my yearlings, as they prove to be good egg producers as a rule. My birds are all housed on the colony plan, each house being about 8 feet by 12 feet in size, made of unmatched hemlock boards. The floor is sand filled in several inches above the ground level.

"My method of feeding is simple. Once each day I drive around to the house and put mash in one end of the trough and a mixture of corn, oats, wheat and barley in the other part. I feed cooked mash. I usually give the birds feed enough to last all day, so that I do not have to go near the house again except to pick up eggs or to do other work of this character. In this way the expense for labor is reduced. With the assistance of one boy I can do all the work of caring for 2,000 birds.

"From my experience I can say that there is a profit to be made from the poultry business. For a number of years it has been my only business.

"I cannot tell just what it costs me to feed my hens. I keep my grain in bins, and from these bins feed my birds, three or four horses, and five or six cows. But I do know that my profit from year to year averages better than \$1.00 per hen. During July of this year I had 1,500 hens, and for

buy a lot of chicks that have been reared in small yards, and we immediately turn these out on range until they have acquired some of the necessary vitality. We select chickens that are about half grown, and weighing from two to four pounds, and we find that such stock makes the greatest increase in weight. This increase varies, but I have made chicks double in weight in three weeks. I will admit that this is exceptional.

"Profits on various lots of chicks vary. I remember buying one lot of 100 birds for \$30.00, and after seventeen days selling them for \$100.00. Considering the comparatively small amount of feed and time required to finish this stock, this made a very satisfactory profit.

"The feed should be of a creamy consistency, feed twice daily with the feeding at equal intervals. We use a mixture of equal parts corn, oats and barley. It is necessary that the grain be ground exceedingly fine, and we experience our greatest difficulty in getting the material fine enough. To mix the feed we prefer to use buttermilk, the next best thing being skim-milk. In case we cannot get milk we use water, using a small quantity of meat meal to increase the protein. We feed the birds entirely on the machine and do not use troughs, as is customary at some fattening establishments.

"Birds fattened in this way are much better than those fattened by any other process. Of course, all 'finished stock' must be dressed before marketing, in order that the dealer may see the grade of the goods."

At the close of a lengthy discussion which followed Mr. Skinner's talk, the crowd moved over to the poultry plant to inspect the buildings and stock, and also get a line on the experimental work. Apparently the most interesting and important experiment now under way is the investigation of White Diarrhoea of chicks, which was begun last

Field meeting Connecticut Poultry Association, Storrs, Conn, 1910.

my eggs sold at market prices received \$500. The total amount of grain fed to all stock, poultry, cows and horses cost less than \$300, and this shows a profit of over \$200 for the month, not including the growth of the chickens.

"Grain is a great deal higher than when I went into the business, but the advance in the price of eggs has been more than enough to make up this difference. When I first started to sell eggs, the average price for the year was 22 cents, but they have steadily advanced, and last year my average was 35 cents."

Mr. Fred B. Skinner, of Greene, N. Y., took the platform at the conclusion of Mr. Almy's interesting and helpful talk. This gentleman has long made a specialty of high-grade market poultry, for which he finds a ready sale at astonishing prices in the New York markets. He finishes practically all of his market stock by the use of the cramming machine, and as a result of his wide experience he declares, without hesitation, that this is the best method of producing the highest grade stock. Mr. Skinner had a cramming machine, various food stuffs, and a lot of birds on the platform, and during his address he demonstrated the mixing of the feeds, the operation of the machine, and fed quite a number of birds. The audience followed this demonstration with the greatest interest.

In part Mr. Skinner spoke as follows:

"Our best markets require a good quality of flesh on market chickens, and we have demonstrated it to our satisfaction that the use of the fattening machine is necessary. We buy many of our chicks from the farmers, and for machine fattening use those weighing anywhere from 1¾ to 5 pounds. Birds grown on free range are best, possessing more stamina, and being able to undergo forced feeding. Sometimes we

year. This experiment is being conducted by Dr. L. F. Rettger, of Yale University, and Professor Stoneburn, of the experiment station, and very satisfactory progress seems to have been made. The crowd was greatly interested in the comprehensive exhibit made by these gentlemen, showing chicks in various stages of infection, post-mortem appearances, etc.

At 7:30 in the evening the Association was called to order, Mr. L. H. Baldwin, of Toronto, Vice President of the American Poultry Association, being the principal speaker. Mr. Baldwin's reputation as a forceful and interesting talker brought out a good crowd, and every seat in the college chapel was filled when he began to talk on "Some Aspects of Artificial Incubation." After classifying incubators according to the methods of heating and ventilating used, Mr. Baldwin said: "There are three things, to my mind, that we, as practical men, have to consider. These factors are heat, humidity and ventilation. There is a great deal depending on two of these factors, perhaps not so much on the question of heat as of ventilation and humidity. . . . I think that the first twenty-four hours of incubation is a decidedly important part of the incubation period. If you are going to get well-developed, vigorous chicks, they must be good specimens in their embryonic stage, and if the embryos are weak, you may expect weak chicks.

"After reading about open bottom incubators, I came to the conclusion that we should have more fresh air in the incubators. I purchased some open bottom machines, and introduced a system of ventilation in my incubator room. I have always looked upon carbon dioxide as a poison. It is no more a poison than oxygen. You cannot live without it. The theory that White Diarrhoea was due to poor ventilation

was as complete as we could wish it, but after introducing these open bottom machines and the additional ventilation, I had the worst epidemic of White Diarrhoea among my chicks in all my experience.

"I personally think that if chicks are in a healthy, vigorous condition they will not be so ready to get White Diarrhoea. This disease, like all other diseases, takes hold of the less vigorous chicks. A flock of chicks that comes from the incubator in a weakened condition and lacking in

Officers Connecticut Poultry Association and speakers at field meeting, 1910.

vigor is ready to contract any disease. I think if you can only get vigorous chicks, you will be able to raise them. You frequently notice that chicks running with hens will get chilled and wet, and you pick them up apparently dead. Place this same chick in a warm place and it will come out chirping and seemingly as well as ever. The chicks developed under natural conditions can withstand the knocks of life, and it is the profitable chick."

For over an hour Mr. Baldwin held his audience, discussing his various experiments and experiences, giving practical hints and solid advice. From the applause given him it is evident that Mr. Baldwin will be welcome in Connecticut whenever he can visit the state.

The rest of the evening was devoted to what proved to be one of the most pleasing features of the entire program, a musicale which had been arranged by Mrs. Stoneburn, and for an hour and a half the audience enjoyed a treat.

Wednesday morning Mr. F. S. Gammack, of West Hartford, and "Honest Dan" Lambert gave a demonstration of dry picking at the poultry plant. Promptly at 9:30 the morning session was called to order, and the first speaker, Mr. H. W. Jackson, of the Pennsylvania State College, discussed "Feeding for Winter Egg Production."

"After all the matter of winter feeding is simple. One of the things that make the securing of winter eggs a difficult matter, is that we try to get them where they cannot be gotten. We have fallen into the way of thinking that feeding could be so arranged that we could get eggs under any conditions. There is no feed that will make hens lay. Hens are not machines. Get the idea in your own mind that

Poultry Class 1910 Summer School, Connecticut Agricultural College, Storrs, Conn.

you are not dealing with machines, but with mothers. Hens lay when they want to, and the essential thing to do is to get the hens to want to lay. Health, vigor and vitality are of paramount importance.

"First select hens that are of good laying strains, and then house them properly. Hens must be comfortable if you are going to get eggs from them.

"When it comes to feed, there are two methods—simple and complex. Last winter our hens at State College were confined from December until March, and they could not get out of the house without wading in snow, or going on the ice, and these things certainly affect the egg yield of your flock.

"The simple method feeding is not likely to be successful when the hens are confined to the house. They need to be supplied many things to make up for what they are missing in being confined. When hens are confined in their houses the simple method will not supply exercise and poor appetite results. The only reason why we introduce any measure of complexity is in order to give the hens exercise.

"Dry mash may be kept before the hens all of the time, and they will not eat too much of it. It gives the weaker ones a chance to get what they need when otherwise they might not be able to do so. It saves labor. Feeding for eggs in the winter time must be largely a matter of convenience. In the winter I think the dry mash naturally saves much labor, but I would not depend on the dry mash. There is another consideration about feeding wet mash. Help

An early hatched White Plymouth Rock cockerel that shows great quality Bred and owned by H. W. Halbach, Box A, Waterford, Wisconsin.

cannot always be depended upon to handle wet mash properly, but the dry mash can be fed by help.

"It is necessary that the hens should have some animal food. They cannot get along on all vegetable food. The most common animal food is beef scrap."

The program was concluded with an address on "The Breeding and Care of Exhibition Poultry," by Judge W. H. Card. The judge told many things that ought to be done, and how to do many things that ought not to be done when getting birds ready for the show room. His talk was replete with epigrams and funny yarns, though this did not prevent him from giving much practical information and sound advice.

Everyone considered the meeting a huge success, and the poultrymen of the state are already looking forward to the big field meeting of 1911.

Keep accurate records! Such records will show smaller but actual profits, and will point the way to greater profits. If everyone did this we would hear less of the elusive "paper profits" of the poultry business and more of the actual profits, which are indeed great.—Poultry Item.

PRIZE ARTICLE

DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Fred E. Lewis, Hartford, Conn., and the second prize to C. A. Umosselle, Hammononton, N. J.

THE BACK-YARD FLOCK VS. THE HIGH COST OF LIVING.

IN the writer's opinion the tendency and desire of a great majority of suffering humanity is to adopt some means of counteracting the evil effects resulting from the unnaturally strenuous conditions imposed upon us by the present standard of living.

Due to the increased competition in all lines of business, the demands and restrictions upon labor are becoming more severe, while the cost of living is acknowledged to be increasing from year to year out of all proportion to the increase in wages.

It will thus be seen that we are burning the candle at both ends—undermining our constitutions for the same or slightly advanced wages while endeavoring to obtain a living that is constantly costing more.

In other words, we are losing more vitality and saving less money.

Perhaps the argument that the capitalists might put up would be that due to the fact that the average length of life is less now than formerly, a person doesn't have to save so much to prepare for old age.

However, be that as it may, the facts remain as heretofore stated, and it behooves all of us to eliminate as much as possible any condition that tends to restrain our freedom and successful pursuit of happiness.

Those whose tastes and inclinations are of a rural turn

have the advantage over those who prefer the glamor of city life, and their chances of ultimately reaching the goal of true happiness are much greater, for the closer we get to nature the nearer we come to ideal conditions.

Now, of course, it isn't possible for all of us to satisfy our wishes in full, but we can at least carry out our desires to a certain extent, and to those who are rurally inclined but, due to circumstances, cannot take up rural vocations as a business, the back-yard poultry plant offers one of the most healthful and remunerative investments that it is possible to find.

It would be surprising to a great many people to know how small an investment is required to not only make a saving in household expenditures, but a good substantial profit as well.

The writer has made \$2.40 a year per hen, this result being determined by carefully keeping a comprehensive set of records showing all receipts and expenditures properly classified.

And speaking of records, I wish to say right here that it is absolutely essential that a careful account be kept with every department of the business in order that we may determine where we are making our gains and more particularly our losses, for in case of loss if we do not know the cause we cannot apply a remedy. And I honestly believe that 50 per cent of the failures in the poultry business today are due to lack of system and consequent ignorance of actual conditions.

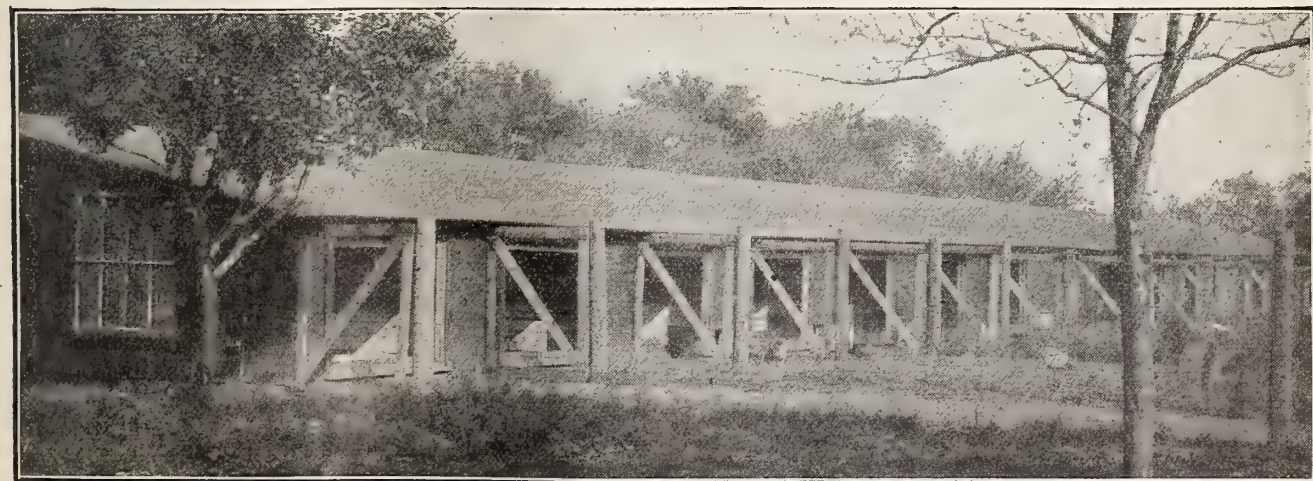

To show how closely the writer follows out his preachings, will say that he not only knows what his profits or losses are for the year, but also knows what they are for each and every month; yes, and can even give the cost per egg and every pound of meat raised.

Perhaps some will say that so much detail is unnecessary, but the writer contends that the more you know about your business the less liable you are to failure and the bigger business you can handle.

It is true that the writer's flock only numbers fifteen, but what can be done with fifteen can be done with fifteen hundred; providing, of course, you employ the same careful methods and use the same careful supervision.

The poultry business to be run successfully should be operated on the unit system, so if your flock numbers several hundred, by dividing it into units of say fifty birds, you can keep a more accurate record and know just which units are paying and which ones are not. Your actions can then be governed by knowledge and not guesswork.

In closing I wish to say that I consider the back-yard flock a partial offset, at least, to the high cost of living, and

View on the new home of Goshen Poultry Yards, Goshen, Ind., showing main breeding house, 160 feet long.

I strongly advise anyone to try it and I feel assured, from personal experience, that they will be convinced of its practicability both from an economic and recreative point of view.

Fred E. Lewis.

Hartford, Conn.

EARLY LAYING AND HOW IT IS DONE.

UCH has been said and written in regard to the desirability of getting the pullets to lay early. It is not always clear whether early in the season or early in the life of the pullets is meant. In order to get pullets that will be mature enough to lay early in the fall, say in September and October, it is necessary to hatch them so early that they will be from five to seven months old by that time, according to breed and strain. The larger the breed the more slowly the birds mature, yet breeding for early maturity year after year is supposed to modify the matter to some degree. The Asiatic breeds require from eight to ten months, as a rule, to arrive at a laying age; the American breeds from six to eight months, and the Mediterrareans from four to six months. Occasionally a few precocious pullets will begin to lay at a very early age, but give no

encouraged by feeding and early housing. Attempts to force early laying by feeding a highly stimulating ration may be justified in some cases when early eggs are the only objects in view, but long continued productiveness is not likely to make good breeders.

Many trap-nesters have learned that the individual pullets that produce the most eggs throughout the winter months also laid the best the following summer, and did not, as a rule, lay their first egg at an abnormally early age for the breed. When the continuous work of the individual bird is not known and recorded, the fact that the earliest laying individuals are not the ones that lay all winter, when such happens to be the case, is lost sight of. It is said that the flock matured early and laid all winter. When the individual standing of the birds is on record it is often discovered that the all-winter layers are not the ones that began to lay first. In order to become a good winter and summer layer, and in order to become fit for future use in the breeding pen, a bird must develop a strong body of good size throughout, including the internal organs. That takes time. Too many precocious but undersized and poorly developed specimens are maintained and used for breeders in the attempt to produce an "early maturing strain. It is possible to so feed and care for growing pullets that they will develop so well in bodily structure before beginning to lay that their first eggs will be practically full size. Such birds are, I believe, more likely to lay profitably for two or more years than are those that lay too early. One must study his

White Crested Black Polish. Some 1908 Chicago winners. Bred and owned by W. H. Snook, Polo, Ill.

justification for the claim that one has an early maturing strain. It is always unwise to hastily judge of hens in general by the superficially observed behavior of a few of our own. When our own experiences and observations coincide with those of many other poultry raisers, we have something that gives a reasonable ground upon which to base definite conclusions. It is often claimed that the earliest laying pullets will make the best layers, and the earliest crowing cockerels the best breeding males. The term "earliest" alone considered, means nothing in particular. How old is the "earliest" layer or the "earliest" crower? In my experience and in that of many others the earliest laying pullets and earliest crowing cockerels have matured so fast sexually that their bodily growth has been checked. Such pullets did not prove to be good layers and such cockerels never developed sufficiently to warrant their use in the breeding pens, but in other cases the pullets that began to lay earliest were well developed and made good layers. They were "earliest" not because they were precocious, but because the others did not begin to lay when they should, but were backward in sexual development. Early laying can be

own breed and see for himself what he must do to get early laying strain. I have had S. C. White Leghorns to lay when they were only four months old and kept that pace all winter. I would not write this if it was not my own experience, and it means just what I say. S. C. White Leghorns and White Orpingtons for mine, and no other breed is kept on my farm.

C. A. Umoselle.

Hammonton, N. J.

Begin now to plan on taking some of your birds to the show or shows this season. Exhibiting is what will give you a line on the quality of your stock.

High class stock is not very plentiful this season, and those who are fortunate to have some to spare can get their own price.

An egg contains 64% of water, therefore, fowls should be furnished a plentiful supply of fresh, pure water at all times.

IT SEEMS TO BE TRUE

N every hand our suburbanites are taking advantage of modern improvements for making their work productive. They are not satisfied to continue using tools and methods of a former generation, as they have learned that it does not pay. They are surrounding themselves with up-to-date conveniences in the home and out of doors. The telephone and daily mail are not a luxury, but a necessity, and the use of them pays.

The one branch of farming that has been longest neglected is poultry, for the reason it has not been considered worth while to give it any special attention. It has been considered as a side issue, not amounting to enough to command any real interest and attention.

The first people to see the newer opportunities were those who lived in the small towns where there was spare land that could be utilized. They began experimenting with incubators and brooders and built expensive housing plants. Many of them ran to fancy stock for exhibition purposes, and although some lost money through their lack of experience, yet they served as pioneers and put the whole business of poultry keeping prominently before the public.

In every community of our broad land you will find first one person taking up poultry breeding as a business, and others rapidly following through the success and enthusiasm of the keeper or some of the former helpers starting out for themselves. What is the result? Competition! which is the life of trade. The more advertisements we see in the poultry and general periodicals the better for all. For instance, our advertising makes business good for others, as their advertising does for us, spreading the idea among the people. So many people are afraid of competition and want to locate in localities where they have no competitor. This is absurd. When a dozen or more poultrymen are in the same town, each will do more business than if they were alone, because all are advertising poultry much more than one would alone.

A good example along this line is shown by the growers of the famous "South Shore Soft Roasters" in Massachusetts. The same can be said of Petaluma, Cal., where there is a big colony of poultry raisers who are making money and have given their city a world-wide reputation for good poultry. Each helps another by advertising to the outside world and exchanging ideas in daily intercourse. If one breeder lacks knowledge, his neighbor helps him along, so in communities where there are many poultrymen all make more money than if they were scattered. The markets take care of themselves—in fact, the marketmen and the buyers of pure-bred stock find it their worth while to personally visit towns where there are many poultrymen and make a contract for shipments. The man or woman who is afraid of the markets for breeding stock dressed poultry and eggs and thinks it wise to get off in a section of the earth by him or herself so as to "control" things, has that narrow intellect which will fail at any task.

There is one thing that amateurs do not understand, and even breeders of considerable experience fall into the same error, and that is trying to build up by tearing down others. Young men with money and the brightest prospects in the world start out to get business by throwing mud. There's nobody in creation so small and mean as a breeder who sees trade or show prizes snatched from him and who is temperamentally ugly. He will lash himself into a fury in his talk or his printed matter until the stranger interested and receptive is at first amazed and finally disgusted. Not a single success built up on that kind of advertising ever happened.

In looking over the poultry journals we see "heap big" lot of advertising—and, by the way, eggs and poultry were never higher, never commanded better prices and never in so great a demand as now. Standard-bred poultry is at a premium everywhere and each year sees the rapid increase in the number of thoroughbreds kept, and this branch of the business alone carries to limits beyond belief. What's the cause of all this? Advertising on top of advertising. It simply cannot be helped. By giving publicity to a business more are enticed to enter, which gives still more advertising, etc. Never was a riper time to start in "keeping chickens," because a big revival is at hand in all branches of the poultry business, which has become one of the largest industries of the United States.

Is not the increase of population and business outstripping the increase in the production of poultry? As our headline

says, "It seems to be true." Is there anyone who hasn't observed that the more there are raised the more there are sold, and the more there are sold the more there are eaten, and the more there are sold to eat the more money is going to the producers, and the more money the raisers have the more they produce, and more people go into it? For instance, take the squab business and look back ten years. Traffic of no volume, squabs poor and dark, weighing six to eight pounds to the dozen. Now there is an enormous volume of traffic in squabs, first-class squabs, from common pigeons, practically gone out of the market, and the price steadily going up till now they sell for \$6 a dozen and even higher.

It is simply the old story of the farmer who raised more corn to feed more pigs, to raise more money to buy more land, to raise more corn to feed more pigs, etc. There is no stopping place outside of a national calamity, and the danger of that is so remote that you and I will not hesitate to go into business to the full extent of our capital. Again I say, "It seems to be true."

C. B. Snavely.

Lititz, Pa.

DOES POULTRY PAY?

NOT many months ago this query was addressed to my better-half, the conditions as given him being a small family in a village, owning a flock of thirty hens, all the feed being purchased in small quantities, the questioner closing her remarks with the words, "Can it pay?"

"Most assuredly it can," was the reply, the man who thus expressed his opinion being an enthusiast along this line.

Do you know enthusiasm is as intimately related to success in poultry work as in any other business?

What is enthusiasm? You would know had you heard an enthusiast booming his specialty—fruit culture—last winter. He had come all the way from California and was bubbling over with praise for his hobby. He described the pleasant features connected with the work, while the tedious, irksome part he did not mention.

My spouse and I can testify of our success with a flock of seventy the past year, forty of the number being pullets, the remainder yearlings. During the coldest weather, when the hens of our neighbors were on strike, our chickens were shelling out eggs at the average of thirty a day.

My formula for feeding is simple. In the morning I throw small grain in a deep litter, from six to eight inches in depth. This gives the birds exercise. Muscular action is needed for keeping the fowls warm and healthy.

At 1:30 I give my flock a generous meal of sprouted oats.

Between 4 and 4:30 a warm mash is given, which is composed of wheat bran, chops, table scraps and green cut bone. Frequently I add a pot of cooked vegetables such as potatoes, turnips or beets. I also stir in the mash charcoal, oyster shell and grit.

For those who do not know how to sprout oats, I shall explain. Take a peck of oats (that is the quantity I use for a flock of 200) and cover with luke-warm water. Let the oats remain in the water twelve hours, after which time empty them in a box two feet by two and a half and six inches high, laying a wet sack on them. Every day stir the oats around thoroughly with the hand, and with a sprinkling can sprinkle the sack until it is good and wet. I keep the oats in the cellar while they are sprouting. In seven days the oats are sprouted ready for feeding. I have seven boxes—a box for each day in the week.

At our county fairs poultry has become one of the leading exhibits. Poultry shows also are a great factor in arousing interest by bringing fine stock before the public.

Who can say at the present time what advancement poultry will make in the next decade? We are at the threshold of a great poultry epoch. It is no uncommon occurrence for a single male or female fowl to bring a price of \$100 or more. Truly, the whole country is awakening to the need of pure-bred stock. A large number of farmers are installing pure breeds in place of the mongrels of former years. Let the good work grow.

Mrs. W. H. Gantz.

Shrewsbury, Pa.

Keep the male birds separate from the females until the breeding season if you want well fertilized eggs.

There is plenty of money in poultry but no one can get it all out in one season.

Faith in the Business

We believe that a man might work his head off, in the ordinary parlance of every-day phrases, and yet without perfect faith in what he was doing he would be unable to succeed in the fullest sense of the word. The amount of success that one attains seems to depend upon the faith and labor that is put back of it, to bring the ideas to life. A hard working man generally has faith, especially a poultryman who wants to win. Faith seems to incite a certain quality of imagination that leads the poultryman on till he actually realizes the dreams that his earnestness have awakened in him. It is necessary to be more or less of a dreamer to attain great things, else how could we hope for light to point out the big tasks ahead?

The working poultryman goes ahead with his hands, head and heart, dreaming about things he should attain, and the constant working and longing for them brings the dreams true in the not greatly distant future. He plans things that he is going to do, sometimes as far ahead as five to ten years. It is such planning that wins out in the end. He has faith in the poultry business when he plans ahead that far. And say, friend, there are a lot of us who have this faith. We know that the business is not overdone and will not be if the rate of population does not fall off. We are a nation of poultry keepers. Every back yard in the land has its hens, and it is but a campaign of education that most is needed to get these good people with their "just chickens" to change their methods and install a better fowl that for the same amount of feed and care will increase the revenue about a hundred per cent.

As time goes on these United States will see a million more small farmers who will well till ten to twenty acres, rather than hundreds. Intensive farming will be the rule. It will build up the land. In some of the southern sections, where the land has been cropped

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

incessantly to corn and cotton, poultry manure is worth from ten to seventeen dollars per ton as fertilizer. What, indeed, would this land do if it were given over to poultrymen for a term of ten years! It would actually increase in cropping value four to ten hundred per cent.

Yes, we have faith in the future and lots of it. The business is actually in its infancy in America. When we can boast fattening establishments, hatching stations and laying farms as numerous as the Old World, then we will be getting somewhere in the practical lines of poultry work, and when we have shows every winter in every county of all the states, then there will be new fields to conquer in the fancy end of the game.

Prices of Stock

Much has been said regarding the best methods of raising and disposing of fancy poultry, but only a little has been said that would have a tendency toward getting a better price for it. And the result is that most poultry raisers are reluctant in the matter of advertising their stock. If the price of a good display advertisement seems high, the breeder will either do no advertising or do very little better—take out a classified ad. Then, when the returns from this kind of publicity do not bring results, "the paper is no good." The root of the whole evil is that the breeder hasn't got the prices for his birds that he is honestly entitled to.

Figured from a basis of flesh, blood, feathers and bones, no chicken ever was worth more than the regular market value, and, judging from the prices placed by some breeders upon really valuable stock, it would seem that they used the method above noted to get at a price. They never stop to figure up just what any particular one of their flock has cost them to raise. They don't seem to grasp the fact that they paid

probably \$2 for the egg he came from. They do not realize that when paying \$30 for fifteen eggs and only hatch, say, three good birds, that those birds cost them just \$10 apiece. And, last of all, they seem to know nothing whatever about the price that supply and demand make. For the sake of illustration: Ten years ago an automobile from a certain foreign house cost a man in this country \$15,000. Today you can get a better machine for one-half the money from the same concern. What makes the difference? Ten years ago there was more demand for that particular machine than could be supplied. Also, competition was not so keen, and it cost more to manufacture a machine then than now. The price ten years ago was an honest price. Why? Because of the conditions above noted, and also because the manufacturer had to prepare himself for competitive prices to come. If he had quoted a lower price to begin with, competition would have driven him and everybody else to the wall.

Now, it is a good deal the same in the poultry business. A certain large advertiser in poultry papers began by advertising a good standard strain of stock, and put his prices up in the air so high that it made some of the older breeders sit up and gasp. And some of them are not over it yet. Others say, "——— has been a Godsend to the poultry business." Was the actual material structure of his birds worth what he asked? Of course not. Was his price a really honest one? Most assuredly. Supply and demand is what got that breeder his price. If there had been a stronger competition in his particular line, he never could have gotten such big prices. Now, what is the consequence in his case? He has fortified himself with a good business, a business that yields large returns, and, best of all, he has taken care that when a really fierce competitive season arrives he can still get a fine price for his stock. Another thing—the stock he sold when he first started would not

command that high price today. It has improved and keeps up with the prices and times. Nothing short of the hardest, stiffest kind of competition can affect him.

Some breeder will now ask, "What shall I do with the culls?" Sell them for whatever you can. If the high grade stock is sold at a figure based upon actual cost plus the regular supply and demand percentage, you have already taken care of the culls. For example, you pay \$30 for a setting of fifteen eggs and get only three fine birds; those fine birds have cost you \$10 each because it is the finer, higher grade stock you are after. Remember, you are in the poultry raising game for its returns, if you are in it right, and the culls are not what you are after. You can afford to sell them cheaper because you have taken them into account in the pricing of the higher grade stock. Keep your prices up. You are entitled to do so. Keep nothing but the best, and you will be able to get the best prices at all times.

Getting It Out

A good many fanciers tell to acquaintances and friends that they cannot sell all the stock they have to spare. They sometimes act discouraged when sales are not coming their way. Poultrymen who are trying to sell their stock locally generally have a hard task set before them. This has been our experience. When a fancier in a small town or village gets to sending stock away from home, then the local buyers begin to come his way. They want to buy of men who do big things. The world does like to do business with a successful man. No getting around the fact.

Reach out for a fair share of the trade. Make an effort to get it, and then keep going after it till it comes your way. Let enough folks know you are in the business, and you can sell all the spare stock you have. Do some advertising, get out a little four or eight-page circular for a starter, or a nice small catalogue, if you have the stock for sale to warrant it, and then keep your mind made up on the point that gets your advertising into the hands of the folks who are in the market for what you are offering.

Local show winnings are a good incentive for buyers to deal with you. If you have the courage to go out into bigger company, then make up your mind that sooner or later trade from other states is going to seep into your morning mail. Get folks talking about you. Advertise. Visit and take your birds to all the small shows about you. Be a live one. Getting out of the business something on the investment you made depends on yourself. Have a model plant and keep it in model style. This is one of the ways of getting advertising, for everyone who visits will be well impressed, and then in turn they pass on the good word.

Illinois State Fair

The poultry show held in connection with the Illinois State Fair was one of the largest and best ever held in this state. There were 4,100 birds on exhibition, and the judges make the statement that the class of stock exhibited has never been excelled in America. This speaks volumes for the work done by the superintendent, O. L. McCord, of Danville, Ill., and it is certain that no one could have handled the immense crowds that thronged the poultry building the entire week with less friction and more universal satisfaction than he did. It has been Mr. McCord's ambition to coop the finest show ever held at Springfield, and it is our opinion that he has realized his ambition, for this was not only a large show, but one of the most attractive exhibits of poultry ever put before the public. The poultrymen of Illinois should give a vote of thanks to Mr. McCord for his efforts in their behalf. Knowing that our readers are very much interested in this show, we have decided to print the full list of awards, which will be found elsewhere in this issue.

Standard Hatchery Creditors

Claims have been received by Horlean James to total \$450, but an investigation by so small a proportion of the creditors would not be justified. It seems probable that those who present proof of claim before November 14 may receive part of their money.

Big Incubators

They have come to stay. They are labor savers, fuel savers and meet the demands of the men who are doing big things in a poultry way. The care of many small incubators in a big incubator cellar makes a mighty lot of work, but the installation of one big machine does the trick of handling eggs by the thousands, and saves time and expense. It was but a few years ago that we heard the oft asked question, "Will incubators really hatch chicks?" with a note of plaintive unconfidence in the voice of the questioner. Today the query is, "Where can I see one of the big machines in operation?"

It will be but a matter of a few seasons now till these big machines for custom hatching will be located in about every corner of a poultry district and state. What an easy matter to take the eggs early in the spring to the machine which is operated by an expert, under the proper conditions, and have our earliest birds turned out for us by those better skilled than ourselves! What a boon for the turkey raiser who wants early poults—what a fine thing for the fancier who must perforce have a few hundred early ones to select his fair winners from!

The saving of labor on a big market poultry farm will amount to hundreds of dollars yearly when big machines take the place of fifty to a hundred oil-heated machines! The big machine is the coming incubator. In fact, it has arrived and is doing its work, and that perfectly. Custom hatching is opening up a great field for the man who puts all his time into poultry work, and his business is sure to grow if he cares for it.

Just a Word About the Chicago Show

December 8-14, 1910, is the date selected for the second exhibition of the great mid-west poultry and pet stock show. The Coliseum building, one of the greatest show rooms in America, is the permanent home of this association. The Empire coops will be used in all departments—poultry, turkey and pigeon.

The new style turkey cages, built especially for this exhibition, will be used for the first time in Chicago. They

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS

It is acknowledged the world over to be the greatest laying and exhibition strain. I have 500 grand yearling hens for sale now at \$2 per head, and hundreds of cockerels and pullets after Oct. 1st.

D. W. Young : Box 1-A : Monroe, New York

Big Bargains in Reliable Breeders

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

Grove Hill Poultry Yards

William Ellery Bright, Proprietor
A. C. Smith, Superintendent

Box 410, Waltham, Massachusetts

are 40 inches high and have solid tops, an improvement that all turkey breeders will appreciate. The American Bronze Turkey Club will meet in Chicago, and these cages have been built by the Empire people from plans submitted by this club.

There are many new features added this year that will attract the visiting public, among which is

The Celebrated Belgium Exhibit

of 132 birds, representing the popular breeds of that country. This will be their first appearance in the United States.

The following specialty clubs will meet in Chicago and hold their annual elections: American Light Brahma Club, American Buff Orpington Club, American Rose Comb Black Minorca Club, American Buff Rock Club, American Buff Leghorn Club, American Bronze Turkey Club, National Columbian Wyandotte Club, and, last but not least, the Columbian Wyandotte Breeders' Association of America.

The association offers \$45 in cash on all breeds of chickens, turkeys and water fowls, standard and non-standard, and liberal cash prizes on pigeons and pet stock. Every premium is guaranteed in full before the close of the show. The ten headliners in the judging department have been selected, and every class will be passed on by America's best known experts.

Premium lists are now ready.

Entries in all departments close November 22, 1910.

We lead, others follow.

Notes of the Month

Billy Russell says that he has a greater number of shows to judge this coming winter than at any time since he has been wearing the duster. This is proof that there are getting to be more shows annually and that Billy is one of the good ones of the profesh.

I saw nothing in Robinson's remarks about Lambrequins!

Line Orr is getting his free advertising now and is incidentally calling out the dead ones. By the way: Line is saying some things in his department of the Reliable that seem to be rather heretical—heretical to accepted standards that we have been accustomed to in that quarter.

Ernest Kellerstrass is certainly doing a world of good for the bettering of fancy poultry conditions. He is making more and more fanciers see that they have not charged an honest price for a good bird. Stand up, fellows, and get what a bird is worth or keep him in your flock.

Bob Essex is making a winner out of the Model. And I guess we are all glad to see him doing it.

Hewes' Farm, breeders of Black Langshans, sold a pen of young and one of old stock this season to a Mr. Ferry, of New York, for two hundred dollars. This is but the result of this farm's policy of breeding the best on earth when it comes to Black Langshans. Five birds were also sent to Mr. Geo. Urban, Jr., one of the wheel horses of the Buffalo show, at a hundred and forty dollars. At the Illinois State Fair Mr. Hewes sold a trio of birds at a hundred dollars. This is one of the sales made from exhibiting. The winnings of this farm

at this fair were very large this fall. This is but a sample of what a fancier may do if he sticks to one variety till he has mastered it.

That Women's Auxiliary of the American Poultry Association looks good to me. It will be a great thing when in full running order.

The Old Guard in a number of things seems to have lost its grip. This is well and good. Folks who do things, rather than Old Guards and dubheads, ought to have the running of affairs.

Dr. Graham's line of Orpingtons, with Whitney in the saddle, went to the prize trough and drank their fill at last Minnesota fair. This farm is coming.

I guess that Mr. Nofztger is in clover now, huh? Admission to the standard will send the Partridge Rocks further and faster. Get into the wagon.

S. T. Divinia writes that he is going to market one of the biggest apple crops in all his years of orcharding. Chickens and fruit are his one great cry. Four or five thousand barrels of apples to put on the high market ought to make him smile all winter.

The old cry of short poultry crop has been started again by Tom Riggs. One can never tell when Tom is going to turn alarmist.

W. P. Rankin, at one time a much abused martyr, is quite poetic in his tastes. He is broad-minded for all that. Recently he changed the name of his paper to American Poultryman, which takes in everything that wears feathers. Rankin is democratic in his speech and dress and thought. I know nothing about his politics. He knows a lot about the banking business, but says to him-

THE FAMOUS BYERS' STRAIN ORPINGTONS

C. S. BYERS - ORPINGTON SPECIALIST - HAZELRIGG, INDIANA

YOU are familiar with my phenomenal records for the past twelve years in Orpingtons if you have watched the advancement of this wonderful breed. I won more premiums on Orpingtons at the 1908 and 1909 Chicago shows than any other exhibitor. I have supplied winners for the largest shows in the States and Canada in the past and will continue to do so in the future. There's a reason.

1500 young birds growing. An enviable show record awaits the early purchasers of this show stock, which I will reserve and deliver in the pink of condition if desired. A small deposit on advance orders will be sufficient to insure reservation. The quality of my stock is superior and the same in Buifs, Blacks and Whites. READ THIS AGAIN.

I have the quality of the hour in line bred birds that can be depended upon. That

MODEL INCUBATOR CO.

Manufacturers of the world-famous Model Incubators and Brooders will hereafter take the name of its President and General Manager, and be known as

ROBERT ESSEX INCUBATOR CO.

The enviable reputation of Model Incubators, which has been gained by continuous records of big hatches, winning for them the name "The World's Best Hatchers," will be advanced by numerous improvements which the wide experience of Mr. Essex has enabled him to embody in the 1911 models. With these important down-to-date improvements our 1911 machines will be known as the "Essex-Models." In order that readers may be more thoroughly acquainted with Mr. Essex, we reprint extracts from some of the editorials which were published at the time he assumed control of the Model Incubator Company last March.

From Poultry Monthly, Syracuse, N. Y.

"The Model Incubator is now in the hands of one of the best pilots in America. The purchasing public can feel sure of the most courteous and honest treatment at all times."

—D. M. Green, Editor.

From Poultry Keeper, Quincy, Ill.

"Absolute reliability can be placed on Mr. Essex and his promises to not only maintain the high standard, but to work along progressive lines. We know of no one who is better qualified for his work."—F. Piggott, Editor.

From Inland Poultry Journal, Indianapolis, Ind.

"Mr. Essex knows the incubator business in all its most minute details. He has a line of goods that are well introduced, and they have given good satisfaction to thousands of customers."—Theo. Hewes, Editor.

From American Poultry Journal, Chicago, Ill.

"Mr. Essex is well qualified. His motto is 'Be on the square, and make no promise you cannot keep.' His thousands of friends know that he has lived up to this in the past, and will continue to do so in the future."—Jas. W. Bell, Editor.

From Poultry Herald, St. Paul, Minn.

"Assuredly the Model Incubator Company has fallen into good hands. If a sincere desire to serve the interests of customers and a remarkable knowledge of incubators and brooders and poultry keeping generally will place that Company in the very front rank, there is no doubt it will take that position."—H. A. Nourse, Editor.

From Commercial Poultry, Marseilles, Ill.

"Mr. Essex is thoroughly posted on the building of Incubators and Brooders. He has a splendid machine—one that has become popular with poultrymen the country over."

—J. F. Schureman, Editor.

From Poultry, Peotone, Ill.

"Robert H. Essex has always made good in every work he has undertaken. His reputation for making only promises which he can fulfill will follow him."—Miller Purvis, Editor.

From Reliable Poultry Journal, Quincy, Ill.

"Mr. Essex has devoted practically all his time to the study of poultry problems, and to practical everyday work in the industry. Few men have enjoyed equal opportunities. He is certain to stand for what is genuine and worth while in the poultry business."—Grant M. Curtis, Editor.

From Canadian Poultry Review, Toronto, Canada.

"His lengthy experience added to the practical knowledge of poultry-raising should make for success. Mr. Essex' knowledge of chickens is not theoretical, and we may look for a better Model than ever before."—H. B. Donovan, Editor.

From Poultry Husbandry, Waterville, N. Y.

"The experience gained by Mr. Essex' intercourse with the farming community made him so conversant with their requirements that when he turned his attention to the incubator business he knew exactly what they wanted."—W. S. Hawkins, Editor.

Let Us Tell You of the Improvements

we have made in the Model Incubators and Brooders. Beginning with the Brooders—the improvements are extraordinary. They are costing us more to make, but their added utility makes them far more valuable than before. They possess a galvanized iron lamp box and heater which is entirely outside the brooder; and they have the most convenient and economical chick hover that has ever been offered for sale. Our Portable Hover is the most complete and satisfactory heater for brooders and brooding houses that can be imagined. It only need be seen to be appreciated as a valuable addition to the equipment of brooders, brooding houses, or colony houses. Our Outdoor Brooders are all of advanced styles, but it is in our Combination Indoor and Outdoor Brooder that the greatest change has been made. There is no other like it. When you see it you'll buy.

It is hardly necessary to tell you of our Standard Model Incubators and our Middle-Price Machines. They are well known as the Leaders in their classes, and with their 1911 improvements they will be even more popular than before. The "Standard" is made in six sizes and the "Middle-Price" in four. They range in price from \$9 to \$43. They are all Incubators of Quality.

You Will Want Our Big Free Catalogue

Write for it today. In it Mr. Essex will tell how some people make money and are successful in the Poultry Business where with equal chances others lose. Besides, you need it in your business. You will save money by getting it, for it will illustrate and describe the Most Superior Poultry Equipment that has ever been placed on the market. Address.

Henry Kruckeberg, of—I was going
to say California, but shall change it to
Pacific coast—is an esthetician. He is
literary in more ways than one. He
likes fine books and printing, for this
is his line, and gets to all the big coast
shows that his time will permit him to
visit. One cannot make reference to a
scholarly passage in any of the classics
but what Hank knows all about it him-
self. He is one of the folks who ballast
the fancy on the coast.

* * *

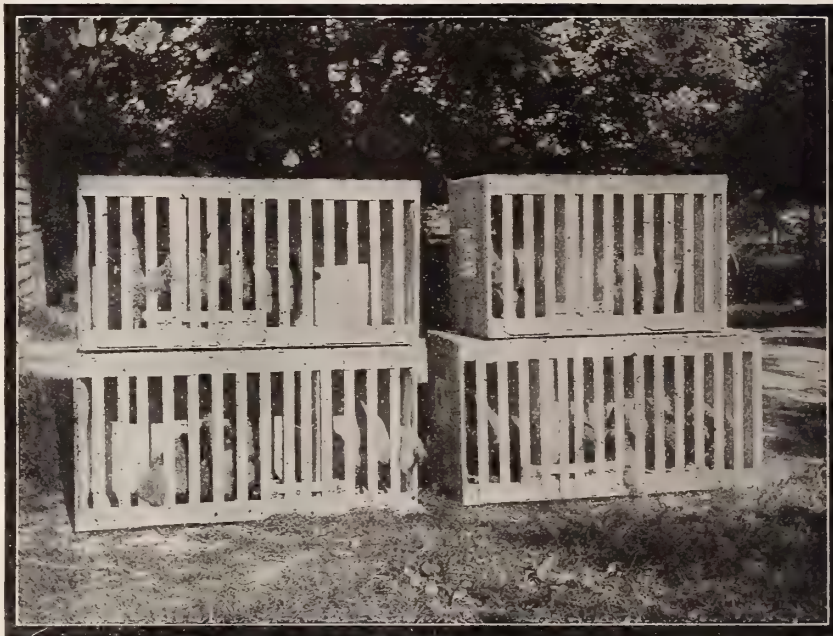

Wm. Barry Owen, proprietor of Owen
Farms, would have made a winner out
of any line of outdoor pursuits he could
have taken up when he cast his lot for
more and better Orps. He is a man
who plans ahead, who knows the value
of advertising, loves his work and likes
to be outdoors. Polished, a lover of
nature, live stock and gardening, he

The first two days of registration in
the College of Agriculture of the Uni-
versity of Illinois show an increase of
students of over a hundred, compared
with that of any previous year. Lab-
oratories are running over, and in-
structors are entirely at sea to take
care of the situation. This experience
is identical with that of Cornell last
year. It all indicates that something
distinctive must be done all along the
line to take care of people desiring in-
struction in agriculture.

Mr. C. L. Buschmann, having re-
ceived a very substantial vote for the
nomination of president of the Rhode
Island Red Club of America, now feels
it his duty to his supporters to allow
his name to be voted upon for the
nomination of vice-president.

Mr. Buschmann has been a fancier
nearly all his life, starting at twelve
years of age with a large loft of pig-
eons, among which were many prize
winners. Besides these he has had rab-

A SHIPMENT OF "RINGLETS" TO JAPAN.

The above picture is a photograph of a shipment of 19 "Ringlet" Barred Plymouth
Rocks to Japan this season from E. B. Thompson, Amenia, N. Y. The birds were pur-
chased and selected by a direct representative of the Japanese government who made
a special visit to Mr. Thompson's farm for the purpose. The birds were of a very
superior quality and will be a great addition to fancy poultry in Japan and a credit
to their breeder. Mr. Thompson's "Ringlets" have a world wide reputation and he
makes frequent shipments to foreign lands.

keeps to the forefront in all that occu-
pies his mind. Owen Farms are his
special delight, and everything must be
right up to the mark to merit his ap-
proval. The poultry fancy has room for
more men like him.

* * *

U. R. Fishel's great pointer dog,
Fishel's Frank, has achieved the high-
est point it is possible for a bird dog
to attain. Frank is one of the greatest
bird finders, shooting dogs and best
known stud pointer in America. Mr.
Fishel is never so happy as when look-
ing over some of his finest and most
promising puppies sired by this great
pointer. Fishelton is the Mecca of
bird dog lovers.

Dr. Thomas Dietrick, Washington, N.
J., has been honored by that high class
outdoor magazine, Suburban Life, by a
request for an illustrated article, "Why
I breed Orpingtons."

bits, guinea-pigs, bird dogs and five
varieties of fancy poultry.

Twenty-three years ago he started at
the bottom round of the ladder with
Lewis Meier & Co., and by persever-
ance and attention to his business he
rose to vice-president and general man-
ager of the firm, which is one of the
largest manufacturers of workmen's
clothing in the country. He is also
vice-president and treasurer of Com-
mercial Life Insurance Company and
vice-president of the Fanciers' Asso-
ciation of Indiana, and is identified
with many other business interests of
Indianapolis. The time not required at
the factory is put in in inspecting and
working with his birds.

The same business push that made
this great factory is being applied to
the management of his large poultry
plant.

The Rhode Island Red Club needs
just such a man as its president.

THE NEW YORK STATE FAIR.

Larger, Greater and Better—The Record Made with Number of Entries—General High Quality—The Gathering of Prominent Poultrymen from Several States and Canada—Superintendent Gilbert the Happy Man.

All records have again gone to smash. The display of poultry at the 1910 New York State Fair surpassed in numbers and general quality all former entries and set a mark that time only will prove if the limit has been reached. We think the limit is not yet, for if we consider the value of a win at this fair along with the amount of the cash prizes and the great and increasing number of interested poultrymen, then we can well sit back and wonder what time has in store.

To Superintendent W. E. Gilbert all credit is due. "Billy" is a hustler, as well as an affable gentleman; he is a fancier through and through, and has won the confidence of the poultrymen. The great success of this department at the fair is a personal success, and when we fully consider conditions, we can well say, the limit is not yet.

Very close to 7,000 birds were shown this year, the building was filled as never before, and proved to be about half the size it should be. Mr. Gilbert assured us that a new and larger building was assured for next year. We hope this will prove true, so that all classes can be single cooped and will not have to be tiered three and four high. Poultry is an accepted feature at this and most all fairs; the people want to see the chickens, and it is up to the state to supply ample cooping and space.

The display of fancy and rare water fowl was the equal of any we have seen. The large tank, with its hundred varieties of web-footed birds, created much and favorable comment, as did also the wild and game birds cooped and large display pens. Several cages of fine poultry were also shown for display only, and we feasted our eyes long and steadily and then some on a pen of Barred Rocks shown by Mr. Gilbert. They were just about as nifty as we could wish for. Mr. Gilbert is one of our old-time breeders, and has shown many fine birds, but the quality of this pen surpassed all others, and shows that the superintendent is up and doing all the time. We found that Dreve had a well-beaten path between this pen and Jack Martin's champion Wyandotte hen; you could always find him at one or the other. And I was near.

Barred Rocks were a short class compared to what we usually find here; the large strings from Owen farms and those of Jonas Hayner were missing. The first cock, first hen, and all the winning cockerels and pullets were good birds, the young very promising. In white rocks, several rare birds were shown. The exhibit of D. E. Gray shown in the best of condition; this line is well known and is an old winner. In Buff Rocks the display this year equalled that of any class ever shown here; large in numbers, it was particularly strong in quality. All the winners and several unplaced birds deserve special mention. Type and even color were features. The first cockerel was a gem; his shape, with wonderful color, was marvelous; second and third close up. Columbian Rocks were also a good entry, the young showing what

"THE POULTRY BUSINESS IN A NUTSHELL"

Describes Our New Book Entitled

Ten Chapters on Poultry

Each a Complete Book in Itself, Covering Fully the Following Subjects:

- I.—How to do Your Own Scoring. Schadt's Simplified Score Card.
- II.—How Poultry Profits can Yield \$1,000.00 on a City Lot.
- III.—Fireless Brooders Fully Explained. Why Better Than Mother Hens.
- IV.—A Study of the Day-old Chick Business. Is it Profitable?
- V.—Explicit Directions on the Preparation of Fowls for the Show Room.
- VI.—Secret of Developing Chicks so They Attain Wonderful Size.
- VII.—Secret of Developing Chicks so They Lay at Eighteen Weeks.
- VIII.—Reducing Chick Mortality to a Minimum. Information Worth Dollars.
- IX.—Why Chicks Die in the Shell on the Eighteenth Day. Very Valuable.
- X.—How, When and Where to Advertise to be a Successful Poultryman.

Either one of the above ten chapters are worth the price of the entire book. You can not begin to realize the information given and the hundreds of dollars it will save you. No matter what branch of the poultry business you follow, you simply can not get along successfully without it. We are going to sell this book in connection with POULTRY POST one of the best poultry journals published. It carries ten distinct departments covering fully all subjects pertaining to poultry, whether for the fancier or the market poultryman. It is clean, bright, boiled down, intensely practical and each issue is chock-full of valuable and interesting news.

Reaches you promptly by the first of each month and should be on your list. A sample copy free. For 50c we will send you Ten Chapters on Poultry and Poultry Post two years. Your money refunded if the book is not entirely satisfactory and the book is returned within 48 hours after you receive it.

Simply write your name and address in the coupon and mail it to us with 50c silver, stamps, money order or personal check. Do it now or you may forget.

improvements can be made in a year's breeding. First cock a grand winner. First and second cockerels a close pair, with but little choice between them.

White Wyandottes, the banner class of the show, with 249 entries. This was a battle royal, and it was one of the Royal subjects that won the largest share of the prizes. For some years

for best display. While all winners in classes of this kind are exceptional quality birds, the first hen is probably one of the best ever shown; her condition could not be improved—she simply had everything. First young pen was won by Onlaya Farm, Morristown, N. J. It was a good win on well shown birds. Silver Wyandottes were well

Wyandottes were a choice class. The first cockerel, a special favorite. Partridge Wyandottes good in number and grand in quality. Silver paneled Wyandottes, a large class of good birds. Type and color improving.

Dominiques, a strong class with splendid winners.

Rhode Island Reds, extra heavy en

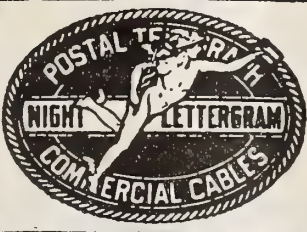

John S. Martin, of Port Dover, Ont., has been coming here and winning with his well-known "Regals," but he has never before met such competition, nor has he ever shown such a grand string of birds as he did this year. His list of winnings are: First, second and fourth cock, first third and fourth hen, first, third and fourth cockerel, first, second, third and fifth pullet, first, third, fourth and fifth pens, with \$25

shown; the winners were grand. Mr. LeRoy W. Seigfried, of Waterloo, N. Y., made a record with five first prizes. Golden and Columbians were also fair sized classes with many fine birds. Buff Wyandottes were a feature, with 100 birds making hot going. Clean color with type placed. This class represented birds from several states. Andrew Riddell, W. A. Smith and Armbrust Bros. carried off the blues. Black

tries and quality far above the average In S. C. first cock a beauty. Type excellent and color all that could be desired. First cockerel particularly good. There were nearly as many Rose Combs shown, and here also the quality was choice. Heads are improving, and the color about all we could wish for.

One of the best displays of Dark Brahmas we have seen for some time was shown here. The exhibit of Light

ALWAYS OPEN HOPPER
BONE CUTTER

Let me send you my free book, "The Golden Egg." Read it. Note what others have done, and then figure out how much you can make by having your hens lay all winter and from 150 to 250 eggs per hen a year—all at about one-half your present feeding cost.

If you have 10 or more hens, write for my help to make them profitable.

Here are a few more of the good things you will get:

How to get the finest egg-making food right in your own home town for almost nothing—how to start lazy hens laying—how to get eggs for early setting

—how to get fertile eggs—

—how to raise chickens for

March market—how

to shorten the moulting

period—how to

feed fresh cut bone

—how to multiply

your poultry

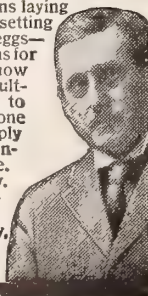

income by five.

Write to-day.

HUMPHREY

White St. Factory,

Joliet, Ill.

Brahmas was very light in deed and fact, probably excepting the cock class.

Good classes of Leghorns were shown, the S. C. White, Buff and Brown leading. In Whites Mr. H. E. Humphrey made a well deserved clean sweep in all the single classes. Buffs were an extra quality. Sound color, good size, typical and extra head points were attractive features. First cock a noble fellow. First pen old and first pen young grandly mated and of best quality. The first cockerel and first pullet also exceptional birds.

many others competent to win at most any show.

Bantams were a whole show in themselves, with something over 1,200 shown. The Seabrights, R. C. Blacks and Cochins were the largest classes. Game Bantams were close up in numbers, particularly the Pilis. The general grade ran high, and these little beauties had their thousands of admirers.

Turkeys, geese, ducks, etc., were also there, completing a dandy display.

H. P. Schwab.

Winner of first prize at Allentown, Pa., Sept., 1910, 218 Orpingtons competing.

Minorcas another large and strong class, and for this time of the year shown in good condition. The winners were just a little better than usual.

Polish and Hamburgs in their several varieties were represented, in most classes competition very strong. Andalusians, Houdans, Spanish Dorkings, etc., had their representatives here in good specimens.

Orpingtons in all three colors, white, black and buff, were quality classes, making a beautiful display. Several birds in each class should have special mention, as it was as good a class all through as we have ever seen in the fall. Outside the winners, there were

The Western Wisconsin Poultry Association will hold its annual show at La Crosse, Wis., December 7-12, 1910. This show receives state aid, and is backed by the business men of the city. E. H. Hoffman, judge. For premium list and other information, address Joseph H. Poehling, Sec., La Crosse, Wis.

The Vineland Poultry and Pet Stock Association will hold its annual show December 1-3, 1910. The show will be cooped with new Empire coops, and very attractive prizes will be offered. For full information and catalogue, write G. E. Smith, secretary, Vineland, N. J.

The Hall Mammoth Incubator Co.,
Gentlemen: Utica, N. Y.

We are just about closing our first season of brooding chicks with your Hall Mammoth Brooder System, and wish to congratulate you upon the degree of completeness and perfection you have attained in your system of brooding. Not a single misrepresentation has been made to us, either by you or by your representatives. In fact we might say the results have exceeded our expectations. With your system of brooding, even a novice, with a little judgment, should rear at least 90 per cent. of chicks hatched.

Next season we shall add to our equipment a Hall Mammoth Incubator and some Colony Brooders, which we feel will give us a complete plant, that will produce results, limited only by the capacity of the same.

Very truly yours,

SPRING WATER POULTRY FARM.

Four Points of Excellence are emphasized by these letters:

SECURITY, COMPLETENESS, PERFECTION, RESULTS

The 1911 Catalogue is ready—So is the new booklet "RESULTS."

THE HALL MAMMOTH INCUBATOR CO., UTICA, N. Y.

A LIVING FR

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

The Philo System Is Unlike All Other Ways of Keeping Poultry and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, **The Philo System of Poultry Keeping**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Three months' old pullets at the School Farm

TO the average poultry-man that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the

Philo System

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., April 19, 1909.

Mr. E. R. Philo, Elmira, N. Y.
Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last December. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35¢ a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season.
Yours truly,
A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

Mr. E. R. Philo, Elmira, N. Y.
Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$960.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are,
Very truly yours,
(Mrs.) C. P. Goodrich.

Special Offer Send \$1.00 for one year's subscription to the **POULTRY REVIEW**, a monthly magazine devoted to progressive methods of poultry keeping, and we will include, without charge, a copy of the latest revised edition of the Philo System Book.

E. R. PHILO — 14 LAKE S

M POULTRY

The Poultry Review

*A Monthly Magazine Devoted to Progressive Methods
of Poultry Keeping*

The POULTRY REVIEW is edited by E. W. Philo, author of the Philo System Book and founder of the Philo National Poultry Institute.

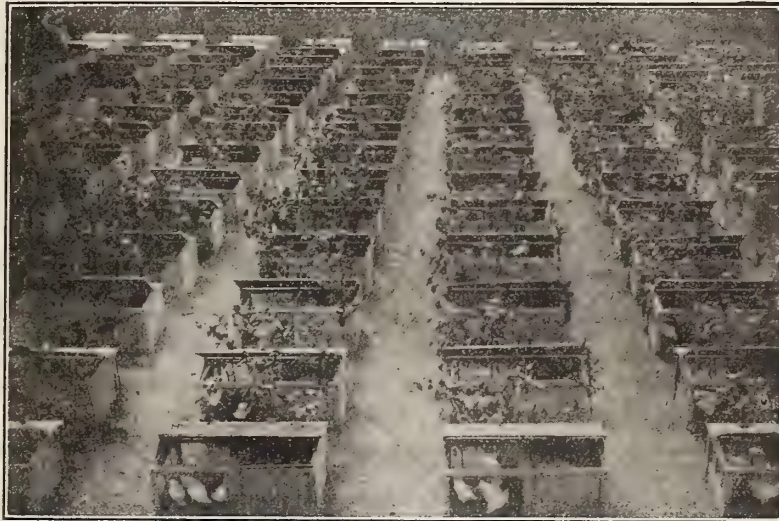

It is edited and printed on a practical poultry farm, where experiments are being conducted and reported in full in the REVIEW. New discoveries and improvements are described and illustrated, and each issue contains a number of letters of experience and suggestion from followers of the Philo System.

Rev. W. W. Cox, our associate editor, is conducting a Philo System Plant, and his "Notes from a Six Hen Plant" in each issue have created considerable interest, and contain much valuable instruction. The first year's work on this plant netted over \$500.

In addition to the best original articles it is possible to obtain, a review of the best articles from over a hundred publications is made—the "cream" of the poultry press arranged for the busy reader.

Another thing that is proving of great value to our subscribers is our Information Department. Our editors are always ready to help subscribers. When any difficult problem arises and you see no way of solving it, write us, and we will give you a prompt personal reply. It is quite probable that we have had a similar experience and can help you. Although no charge is made for this service, it is worth many times the subscription price.

For 1911 the POULTRY REVIEW guarantees the largest circulation of any paper of its kind—over 100,000 copies monthly, reaching the best class or poultrymen in every state and over thirty foreign countries.

TESTIMONIALS

E. R. Philo, Publisher Poultry Review, Elmira, N. Y.

Dear Sir:—Of all the poultry journals I take, I would fail in all rather than in the Review, as I really like your paper the best of them all. Now I do not say this to curry favor, nor for any other purpose, because I really like your paper for the pithy and sound articles. There is no dry reading in it as there is in other poultry journals, such as accounts of poultry shows that do not really concern any one but those who are written about. I do not think that any one in any part of the country cares who wins and who does not. It is all right in a local show, written and published by a local paper. Well, success and great success for the Review, and I hope to receive it regularly in the future.

Very sincerely yours,
R. G. Wetmore.

905 Douglas St., Greensboro, N. C.
Feb. 12, 1910.

Mr. E. R. Philo, Publisher,
Elmira, N. Y.

Dear Sir:—The Review came in its new dress today; quite an improvement in looks, and I am much pleased with it, as it tells you what you wish to know in a few words.
Yours for success,
Milton Norman.

E. R. PHILO — 14 LAKE STREET — ELMIRA, NEW YORK

Dealers Make Big Money

Mr. Dealer, you can sell 10 Buckeye Incubators for every one you sell of all other makes combined. Why? Because the size is right—50 eggs; the price is right—\$6, \$7 and \$8; and our guarantee is genuine—money back after 40 days' trial, for any reason, without question.

The Buckeye 50-egg Incubator is a great seller, because it is one of the very best incubators on the market. It contains every desirable device found on any incubator at any price. It is complete in every respect—tested and ready for immediate work when it leaves our factory. We want every good dealer in the country to handle the Buckeye, because we know it is the very machine the majority of their customers are looking for. Take on the Buckeye 50-egg Incubator as a side-line if you like—don't let it interfere with the sales of any other machine you handle—you'll soon find that the Buckeye is the biggest seller you ever had.

BUCKEYE 50-egg

Convenient Size

Only those who run the very large poultry farms require a bigger incubator than the Buckeye. Even those who can get together more than 50 eggs of a kind, at one time, would have bigger success with two or three Buckeyes than with one big machine. It is so much easier to control than a big machine.

Ease of Operation

The Buckeye is so compact and so complete that it has none of the difficulties of the big, complicated machines. Every part is right under your eye—you can follow each step in the operation with ease. It requires no previous incubator experience—just read over the printed instructions and you are as sure of success as an experienced poultryman.

Automatic Ventilation

The Buckeye Incubator ventilates itself—you don't need to bother about it at all—the air in the egg chamber is constantly being renewed so that the chicks get all the oxygen they require for their proper development.

Self-regulating

You never have to touch the regulator of the Buckeye Incubator once it has been set for a hatch. The thermostat and regulator keep the temperature at exactly the correct degree.

Complete Equipment

Every Buckeye Incubator is complete and ready to operate when you buy it. Complete lamp and chimney, thermometer and holder, two egg trays and an egg tester. No extras to buy. Every device that is necessary to make it the best hatcher in the world goes with the machine when it is sold.

The Low Price

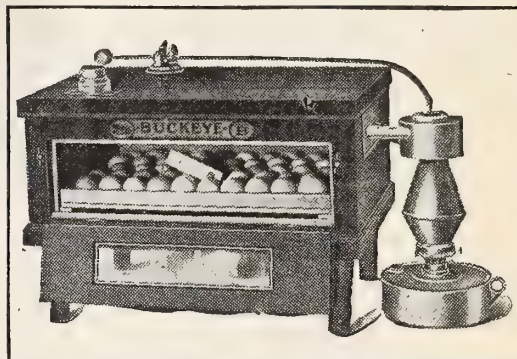

The price of the Buckeye 50-egg Incubator is from \$6 to \$8. That is a very low price when compared with the usual price of incubators and is made possible only through buying materials and manufacturing in large quantities. Only the very best material and the highest class workmanship are good enough for the Buckeye.

We want dealers everywhere to write for our special proposition and discounts. Let us show you what other dealers are doing with the Buckeye and what we do to help them sell more. It will cost you only a postage stamp to get all the facts—and it is certainly to your interest to know them. Write to-day.

The Buckeye Incubator Co.
501 W. Euclid Ave., Springfield, Ohio

Selling Buckeye Incubators

We've been making the Buckeye 50-egg Incubator for 21 years—each season we sell more of them—this season we will sell 100,000—all will be sold through dealers, and every one will be guaranteed. Last season four dealers alone sold ten thousand. How many will you sell this season?

The Buckeye 50-egg Incubator is certainly the sensation of the incubator world. It has beaten all records for sales. Wherever it was on sale last season it outsold all other makes. It is reasonable that it should. It is just the size most people want. It sells at a very reasonable price—\$6, \$7 and \$8. And it is sold with an absolute guarantee that it will hatch every hatchable egg or the purchase price is immediately refunded without question. The Buckeye has been sold under that guarantee for twenty-one years and we haven't been asked to take back one in a thousand. The Buckeye makes good. Every dealer in the country should write us for our special proposition. Let us tell you what other dealers have done with the Buckeye—and what we can help you do. Write to-day.

INCUBATOR \$6 to \$8

Built to Last

The Buckeye 50-egg Incubator is a staunchly built machine. Nothing but the very best material is used in its construction. The case is made of specially selected poplar, every piece of which is thoroughly seasoned before being used. The Buckeye will last for years and do its work perfectly all the time. There is no danger of its warping, splitting or cracking—it is staunch and solid and stays so.

Highest Class Workmanship

There is nothing slipshod about the building of the Buckeye. We employ only experienced workmen—most of them have been with us for years and know that every detail of their work will be thoroughly inspected, and that the slightest flaw in construction or material will throw an incubator out. Every machine we sell must be perfect enough to stand our full guarantee.

A Money Maker

The Buckeye has proven itself a wonderful money-maker. People who never handled a machine before have made a good steady income out of it. We know you can do the same.

Poultry Profits

There is good, big money to be made in poultry by those who go at it right. It doesn't mean going into it heavily, on a large scale. We know hundreds of people who are making a comfortable, steady income out of one Buckeye 50-egg Incubator. You see, you can't lose, because the Buckeye is guaranteed; it will hatch every hatchable egg you put into it, or you can have your money back.

40 Days Trial

You can have a Buckeye 50-egg Incubator in operation in your own home for forty days and still get your money back if you are not satisfied with it. Why don't you make this trial.

100,000 Buckeyes

The Buckeye 50-egg Incubator has proven such a success—so many people had heard about them and wanted one at once—that we couldn't supply the demand last season. But we are ready this season—we are building 100,000 Buckeyes.

If you are not a dealer—if you are a poultry raiser, or want to start raising poultry for money—write to us for our Catalogue. We will also send you, absolutely free, our two valuable books, "Making Money the Buckeye Way" and "51 Chicks From 50 Eggs." You'll profit by reading these books. Write for them to-day.

The Buckeye Incubator Co.

501 W. Euclid Ave., Springfield, Ohio

CHICK CHATS

by H. P. Schwab

This department is open to all readers and advertisers in the eastern territory and all are invited to send in all poultry news items that come to their attention. Address H. P. Schwab, eastern representative, Irondequoit, N. Y.

The fall shows are over, the crop has been extra large, and entries in the poultry departments have been larger than usual. Better quality has been the feature.

The list of prizes has also been improved, a general raise being noted. Poultry is rapidly coming to its own. The value of thoroughbreds is now considered on the farm, as well as in the fanciers' yards. Every little helps to make the future look brighter.

In our December issue we hope to continue our articles on "Possibilities of the Poultry Industry." We have been gathering items for this by visiting several money-making plants. The success of others will to some extent play its part in what is to follow.

No one can doubt but that there is money in the poultry business. The real question is, "how" to get it. We can tell you how others have gotten it, and if our readers will but consider this, with use of common sense and a knowledge of their special conditions, then they may also succeed.

The winter show season is upon us again. By the middle of this month it will be in full swing. Each year sees an earlier beginning and later ending. The mid-week shows are also meeting with the favor they deserve. To open a show on Thursday, judge Friday and Saturday and have all birds returned the following Thursday is a taking feature that is sure to become more popular.

Williamsport, Pa., is one of the first large eastern shows. They have held several shows there that were models from every point of view. The list of regular and special prizes is a feature, and every exhibitor is assured of due

consideration and perfect satisfaction. Send for list; the dates are November 28 to December 3. Address James T. Huston, Sec.

Mr. C. H. Welles, Stratford, Conn., has been after the blue fish of the Sound. Before going he wrote: "I have been busy all season hatching and raising chicks, and now have about 1,000 that are without doubt superior in quality to any I have ever had. Business has been grand, and the 'Fluffy-Ruffles' line is better and more popular than ever."

This season we have been booked to judge at three western shows—Belvidere, Ill., week of December 19; Jackson, Mich., January 1 and 2, and La Fayette, Ind., January 27 and 28. We hope to meet all our old friends at these shows and to make new ones. Please remember these shows and dates.

La Fayette, Ind., has kindly changed the dates for its show from the first week in January to January 27-31, to insure my presence. The birds will be judged Friday and Saturday, and all will be returned home before the close of the following week, avoiding a Sunday lay-over. Don't forget the change in dates, and write Rev. Thos. F. Everhart, Sec., R. R. No. 3, for further particulars.

By the time this issue reaches our readers we expect to be again on a trip east and south. We intend to call on as many breeders as is possible, but if there are some who in particular wish a call, please write me at home and state your wishes, and if at all possible, will see you.

So far we have arranged to make the following shows: Williamsport, Pa., November 28-December 3; Guelph, Ont.,

December 5-10 (the Canadian winter fair); Philadelphia, Pa., December 12-17; Belvidere, Ill., December 19-24; M. S. Garden, New York, December 26-31; Jackson, Mich., January 1-2; Baltimore, Md., January 3-7; Boston, Mass., January 10-14; Utica, N. Y., January 17-18; Canandaigua, N. Y., January 19; Buffalo, N. Y., January 23-26; La Fayette, Ind., January 27-28; Auburn, N. Y., January 30-February 4, with some others to hear from.

Look for the Owen Farm's announcement. There will be a new one very soon of special interest to many. More success to you, Wm. Barry Owen.

Lest you forget: The Auburn, N. Y., show dates are January 30 to February 4, 1911. Mr. Alban Linnenback, Sec., No. 85 Perrine street. This show promises to exceed the Auburn A. P. A. show of three years ago. Be sure you get a list.

Wonder what John S. Martin will sell his first prize New York State Fair hen for. No one who saw her, no matter what his fancy is, did not but wish to own her. Her value is the limit, be that what it may.

The Ontario Poultry Association will hold its second annual exhibit at Canandaigua, N. Y., January 17-21, 1911. Dr. C. J. Andruss, president; Dr. L. D. Southerland, secretary. The success of their first attempt is the assurance of a larger and better show in the coming ones. Remember the dates.

The Trans-Mississippi Poultry Show, which has held so many interesting and educational exhibits at Omaha during the past five or six years, will hold its exhibition in the mammoth new convention hall in the city of Council Bluffs, Iowa, just across on the east banks of the Missouri river, less than a mile from the building where the show has formerly been held in Omaha, December 11-17, 1910. This year they have the well-known favorite, "Billy" Russell, M. C. Ellison, Russell F. Palmer, Thos. H. Southard and Col. Victor Hobbs. A winning under judges like these means that your birds honestly were the best. Their premium list is now ready, and is sent free to all who send for it.—Anton Lundstrom.

CRUSADER III—A BOSTON WINNER

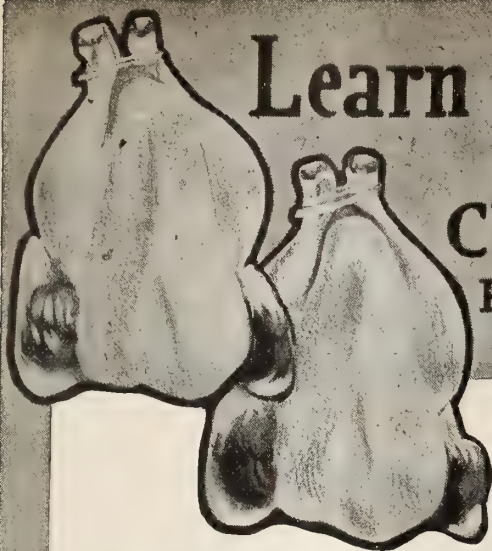

MARTIN'S REGALS AT THE NEW YORK STATE FAIR

Judge Drevendstedt's report in "Stock Keeper": "Wyandottes were a whole show alone. We certainly had our hands full judging these classes, especially the Whites, which numbered 240 specimens 31 breeding pens. It was about the best and largest class of White Wyandottes we ever saw or handled at a fall show. Quality was in evidence from end to end, very few inferior specimens being penned. Johnny Martin swooped down from Canada with a good string and took all the blue ribbons except one. The Canadian sprang one bright scintillating star in the first prize hen, a bird of great size, beautiful head points, and perfect outlines in each and every section. Not a trace of coarseness or Cochins looseness of feather was noticeable. The plumage was pure white, legs and

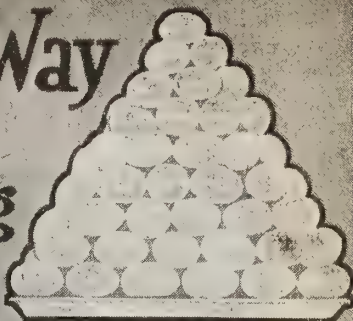

beak yellow. In true Wyandotte type and pure color this hen is a model. The old cock showed class but were not in good feather. First Cockerel a beauty in shape and color with fine head and comb. Pullets excellent, notably first and second, which rivalled first hen in size and type." Mr. M. K. Boyer, veteran breeder and judge in "Poultry Advocate": "We doubt if we ever saw a collection of better White Wyandottes. The specimens shown were large, as white as snow and just the kind that will bring good results." What further testimony is necessary to prove the preeminence of the Regal Strain? 1,500 Cocks, Hens, Cockerels and Pullets for sale. Free. Send for illustrated Booklet giving prices and description of stock.

Learn The Cyphers Way of Intensive Chicken-Farming For Bigger Profits

THE first thing to do is to write for *your* copy of our big, handsome 204-page book on "Profitable Poultry Raising"—just off the press. Send the "I-am-Interested" slip below. Or a postal. But do it today.

This book tells about intensive poultry raising.

Intensive *farming*, as you know, means getting the biggest, finest crops per acre—the best yields per foot of ground under cultivation.

Intensive *poultry raising* is the *same thing*—applied to the *chicken business*.

It means getting the best results—always—from the eggs and time and pains you invest—the

Biggest Percentages of Live, Sturdy, Fluffy Chicks

—from every machine—*every setting*. Intensive poultry raising vitally concerns *you*, whether you are an old-timer or a beginner.

It means making every effort count the utmost—no waste. It means having *the right equipment*.

And That Means—The Cyphers Incubator

Nobody denies the Cyphers leadership based on fifteen years of proved success for itself—and its users.

But, knowing this, some people will still try to experiment with the cheaply-built kinds—to "learn the business" with makeshift machines.

Remember, eggs and time and opportunity are too precious to waste in fooling—in guesswork. Chicken-raising is a *business*—to be gone about in a business-like way.

The best incubator is not too good for you.

Here is an incubator that is

Free From All Hatching Troubles

The Cyphers has absolutely no heat or moisture worries—no ventilation or regulation uncertainties.

It doesn't need to be coaxed—or sat up with.

The Standard Cyphers is a hot-air machine—because that is the *best* method. No leaky tanks to spoil your hatches. It has a Patented Diffusive Principle—the only perfect, dependable plan of even heat-

distribution. Found in no other incubator.

It is the World's Standard Hatcher. Used by more Government Experiment Stations, more large poultry plants, more leading fanciers, than all others put together.

Fire-Proof and Insurable

Cyphers Incubators and Brooders were the *first* to conform to the "Rules and Regulations" of the National Board of Fire Underwriters—the *first* to receive the official Fire Insurance Inspection Labels. Every Cyphers machine bears this label—your protection.

Results and service considered, Standard Cyphers are the *most economical* Incubators and Brooders made.

The Cyphers Incubator is fully and positively guaranteed. Test it for 90 days. Your money back if you are dissatisfied after fair trial.

A Billion Dollar Industry

Prices commanded for poultry and eggs are at *top notch*.

There is more money today in the poultry business than ever before. Its growth has been *amazing*.

In 1911 it will easily reach one billion dollars in national wealth.

Why not have *your* full share of these rich profits? There is success for you in the Cyphers way.

Write At Once For Handsome Free Book

"Profitable Poultry Raising" contains 204 pages of valuable helps, hints and experiences. It pictures and describes Cyphers Incubators and Brooders—from popular sizes up to the Mammoth 50,000-Egg Machines for big poultry plant equipment; tells about our newly patented Electrical Incubators and the 100 valuable poultry specialties which we manufacture and sell.

Fill out, clip and mail us the "I-am-Interested" slip below—or, send your request on a postal.

**THE GREAT HAGERSTOWN FAIR
HAS JUST CLOSED ITS FIFTY-
FIFTH ANNUAL EXHIBITION
—7,000 BIRDS ON EXHI-
BITION.**

The poultry department is, of course, the one leading feature of the Hagers-

town Fair, and at their fifty-fifth annual exhibit they dedicated their handsome new poultry building, which cost about \$17,000. It is by far the largest and finest building of its kind in the country today owned by any fair association used

for the purpose of poultry exhibitions. The Hagerstown Fair Association and the breeders interested in the production of fancy poultry throughout the country can well be proud of what this association has done for the poultry industry.

Much credit is due the individual breeders who have been attending the

department of their fair in the years past and gone. It was through their zealous efforts in encouraging breeders to come out and exhibit at Hagerstown, thus building up the largest exhibition of fancy poultry in the country today.

One of the crowning features of the Hagerstown Fair was the annual banquet held on Wednesday evening at the Hotel Hamilton. Preceding the banquet was the parade of some 400 poultrymen, headed by a brass band. Immediately following this were a number of carriages containing the fair officials, the poultry judges and the ladies. Each of the poultrymen was provided with a white cap, which was worn during the parade. After a short march through the streets of the city they returned to the hotel and repaired to the banquet room.

Mr. H. E. Baker made a short address of welcome, inviting the poultrymen to partake of the following menu:

MENU.

Consomme, Clear
Fried Oysters
Salted Peanuts
Celery Olives
Cold Slaw
Finger Rolls Maryland Biscuits
Sherry
Fillet de Bouef, a la Petit Pois
Fried Spring Chicken, Maryland Style
Saratoga Chips
Tomato Salad, Mayonnaise Dressing
Hamilton Punch
Neapolitan Ice Cream
Assorted Fancy Cake
Oranges Peaches Pears Apples
Grapes Bananas
Coffee Mints
Cigars

Having satisfied the inner man, J. McPherson Scott, president of the Fair Association and mayor of Hagerstown, addressed the breeders present. Among some of the things he said were: "The eagle, our national bird, impresses us with its martial aspect, but as I looked around the show room today it came to my mind that the chanticleere and his mate had the American eagle 'beaten to a frazzle.' I suggest that we replace the eagle with the American rooster." These remarks were received with great applause.

The following were also called upon, who made a few remarks suitable to the occasion: George Ewald, U. R. Fishel, S. T. Campbell, H. H. Warner, Charles Carmen, Dave Nichols, George Brown, J. H. Drevenstrett, C. H. Shaler and Frank DeLancey, who spoke on the sub-

TINLEY PARK, ILLINOIS

ject, "The Old Guard," in a very touching manner. A very enjoyable time was had by all, as you can readily imagine when we state that it was 12:45 when the gathering broke up.

The quality of the birds shown at the Hagerstown Fair is the equal of any of the large winter shows, and a prize won here is equally as important. In many of the prominent classes birds which were nearly the equal of those securing the ribbons had to be left out of the money, as there were not enough prizes to go round. We understand a number of birds changed hands at Hagerstown at some very long prices.

Probably the most remarkable winning made at Hagerstown was that of U. R. Fishel, of Hope, Ind., on his White Plymouth Rocks. Mr. Fishel made a clean sweep by winning every first prize in the class. Not only that, but special for the best display, special for the best cock and special for the best pullet in the Rock class, all varieties of Rocks competing. His winnings in detail were: First and second cock, first and fifth hen, first and third cockerel, first pullet, first and second pen. Mr. Fishel's exhibit showed the Fishel type throughout and attracted much admiration and comment from the breeders present, who know and appreciate the good points in a White Rock.

The Buff Rock class was very large and the quality was good throughout. In this class Mr. Calvin Hicks, Rockville, Md., won first hen and fourth pullet. Mr. Hicks also exhibited in the Buff Wyandotte class, where he won first pullet, third cockerel, third hen, winning five places on eight entries.

Dr. J. A. Arbuckle, Elkins, W. Va.,

had some fine partridge Wyandottes on exhibition and won his full share in this class.

Richland Farms, Frederick, Md., exhibited White Rocks, White Leghorns and Buff Orpingtons, winning their share of the premiums in the several classes.

Rockland Farm, Benson, Md., had four entries in the White Rock class, and succeeded in capturing three prizes, which speaks well for the quality of White Rocks bred by Mr. Lee, of Rockland Farm.

C. A. Matsinger, Baltimore, Md., exhibited some fine partridge Plymouth Rocks, which were among the winners.

Mountain State Poultry Yards, Elkins, W. Va., Mrs. S. E. Tiffany, proprietor, S. E. Tiffany, manager, exhibited a fine string of Columbian Wyandottes, winning first, second and third cockerel, first and fifth hen, first and second pullet, first and second pen, making a remarkable winning in a good class of Columbians, and their first prize cockerel is worthy of special mention. He was of the genuine Wyandotte type, having fine black markings.

Onlya Farms, Morristown, N. J., were exhibitors in the White Wyandotte class, winning third, fourth and fifth cockerel, first and fifth pullet, first and third pen. No old birds shown. This farm has been winning at Trenton, Allentown and other fairs this fall. They are certainly breeding Wyandottes that can go out and win in good company.

Pine Rose Poultry Yards, R. K. Knisley, breeder of fine S. C. Buff, Black and White Orpingtons. Won first S. C. Black Orpington cock and third hen. In Buffs, third cock and third pullet. At the recent fair held at York, Pa., Mr. Knisley

won ten firsts and second prizes, and special medal for best cock in show. This was won by the same bird who won first at Hagerstown. This bird is a remarkably true Orpington type, and although in poor feather at this show he still showed the good quality which he possesses, and was deservedly placed at the head of his class.

Ridge View Poultry Farm, A. G. Clark, owner, had a string of birds on exhibition at Hagerstown, in charge of F. C. Wood, manager. In R. C. Reds on five entries they succeeded in capturing four of the coveted prizes. In R. C. White Orpington on one entry they won first hen. In Polish Bantams they won first hen and second cock. Partridge Cochins Bantams, fifth cock, third hen. R. C. Black Bantams, fourth hen.

J. Ed. Richardson, Jr., Arlington, Md., exhibited some fine R. C. Reds and his birds were among the winners, being very fine specimens of that popular variety.

Charles McClave, New London, Ohio, had a string of birds at Hagerstown and succeeded in capturing a goodly share of the prizes. In the S. C. Brown Leghorn class he exhibited a cockerel which was a very fine specimen, but somehow his good points escaped the judge's eye, and he was only placed second, whereas everyone who knew a Leghorn said he should have worn the blue.

Metuchen Poultry Farm, W. A. Smith, proprietor, Metuchen, N. J., exhibited some high-class specimens in S. and R. C. Black and S. C. White Minorcas. In R. C. Blacks he won first pullet, second cock, third cockerel, first pen. In S. C. Blacks he won second and third cock, third and fifth cockerel, fourth pullet. In S. C. White he won first cock, fourth and fifth

White Rocks—White Wyandottes

Sweep the Decks at two of the South's greatest shows. Final winners of the handsome Purina Punch Bowl and the Corno Mills Cup for best pen of White Rocks and White Wyandottes. *Thirty Ribbons* on 30 birds. A Little Poultry and a Living

Is the title of a booklet we will mail free. It was written by the author of the Philo System book, who makes everyone of his hens pay him a profit of \$50 to \$100 each

Cycle Brooder Hatcher, a complete all metal, fire-proof hatching and brooding plant for only \$8.00.

The All-Metal, 50-egg Cycle Hatcher only \$6.00, complete.

Our New Discoveries Make Poultry Keeping Easy and Profits Sure

Our machines were used exclusively in the original Philo System plant, where over 1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls, raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four metal mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time, with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steadily as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chicken like the mother hen.

TESTIMONIALS

The Cycle Hatcher Co.,
Elmira, N. Y.

Sirs: I have used your incubators, both the Cycle Hatcher and the Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders.

Very truly yours,
Rev. E. B. Templer,
Valley Falls, N. Y.

The Cycle Hatcher Co.,
Elmira, N. Y.

Sirs: No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$960 running our hatchery plant, consisting of 56 Cycle Hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are

cockerel, third pullet, first pen. Mr. Smith's Minorcas have a national reputation, having won at many of the largest shows in the country.

Miss O. E. Remsen, Annapolis, Md., showed a fine string of S. C. Black Minorcas, winning first and third cock, first and fifth hen, second cockerel, first and fifth pullet, first pen, and special for best display.

It certainly is an Orpington year, and the breeders of this popular breed were out in force at Hagerstown.

The exhibit of the White Orpington Farms, of Hoboken, Pa., attracted consid-

at once to decorate his coop in a very artistic manner, and his exhibit attracted general attention.

The sensation of the show was the White Orpington hen, "Our Lady of the Snows," owned by Sunswick Farm, South Palmyra, N. J. She won not only first in her class, but a bronze medal for the best hen in the show and a silver cup for the best Orpington in the show. She also won the Grand Sweepstakes Silver cup for the best bird in the show, all varieties and classes competing, thus repeating her record made at Allentown. Judges and breeders, one and all, agreed

and blacks. Their winnings in detail were: Whites—First and fourth hen, second cockerel, second pullet. Blacks—Second and fourth cock, fourth and fifth hen, third cockerel, fifth pullet. Buffs—First and fourth cock, second hen, first and fifth cockerel. Mr. John Arnott was in charge of the Sunswick birds and made many friends during the show.

There was considerable delay in cooping the birds, due, perhaps, to the new building and large number of entries. This should not be allowed to happen another year.

We wish the Hagerstown Association

BIRD'S-EYE VIEW OF COLONY HOUSES ON THE MIDLOTHIAN FARMS, TINLEY PARK, ILL.

erable attention, especially as they won first, second and third cockerel, first and third pullet, first pen. They had no entries in either cock or hen classes and when this is considered and one realizes that they won every first for which they competed it is truly a remarkable winning, particularly in such company as was to be found in the White Orpington class at this show.

Mr. W. B. Glotfelty, owner of the Champion White Orpington Farm, is a very enthusiastic breeder and proceeded

she was simply perfection. Her coop was handsomely decorated, being lined with pale blue silk, while wide blue satin ribbon was draped and tied in bows over the front, which was further set off by four large bunches of pink roses. All this was topped by a sign written in gold letters, which stated that "She was worth more than her weight in gold." She seemed to appreciate her importance and took the many admiring glances like a true lady, as her name implies.

Sunswick also exhibited some fine buffs

continued success and hope to again meet all of our friends at Hagerstown.

C. W. Zimmer.

The third annual exhibition of the Chautauqua County Poultry Association will be held December 13-17, 1910. The judges are W. C. Denny and George H. Burgott. Premium list will be ready November 25, and will be mailed to anyone writing the secretary, A. J. Hammerstrom, 627 English street, Jamestown, N. Y.

WHITE ORPINGTONS

Hagerstown Winners We won every first we competed for, 1st, 2d and 3d cockerel; 1st and 3d pullet; 1st pen. No cocks or hens shown. This remarkable winning at a show of 7,000 birds like Hagerstown stamps our birds as real champions. We now own "Champion of England," the great sensational cockerel that won first and grand challenge trophy of England of \$250 cash prize for best bird in the show; also own the sensational pullets of Crystal Palace, 1910. Only the best good enough for us. 100 grand cockerels, show and breeding birds at special low prices. Trios and pens mated by us for best results. We will please you. Write us today.

Big Hatches Spell Large Profits

In order to pull off a successful hatch you must know all the details of incubation. Everybody can run an incubator, but few can operate one to the degree of accuracy necessary to obtain a 90 per cent hatch. Realizing this fact and knowing that at the present time there is no book published which gives the beginner all the information necessary to enable him to pull off such a hatch, we have published a new book.

"How to Operate Incubators and Brooders Successfully"

This book contains 84 pages of solid reading matter; it tells you how to operate all standard makes of incubators successfully, how to select your eggs, how to care for your little chicks after they are hatched; in short, it tells you everything you ought to know in order to pull off a successful hatch. Although the information contained in this book is worth a fortune to the beginner, we have fixed the price at 50 cents per copy. Send your order today to

THREE LEADERS

IN THE POULTRY WORLD

**American Poultry Journal
American Poultry Advocate
Poultry Keeper**

AMERICAN POULTRY JOURNAL

is the oldest poultry paper published, having been established in 1874, and published continuously since that date. It is the largest poultry paper published, containing from 64 to 188 pages. It is the only poultry paper published that has colored illustrations of fowls on the front cover each month. It teaches the absolutely sure way of success with poultry. To thousands and thousands of poultry raisers the American Poultry Journal is the first and best poultry magazine. Published by the American Poultry Journal Pub. Co., Chicago, Ill. Subscription price, 50c.

POULTRY KEEPER

claims to be the leading practical poultry publication, and it merits its right to this claim on account of its actual worth. For thirty years Poultry Keeper has devoted its efforts to helping the beginner, the farmer and the experienced poultryman. Its special aim is to present each month matter that is timely to the season. Each issue contains advice of help to the progressive poultryman that is worth the full subscription price. The real business of the poultry industry is taught in its columns. Published by the Poultry Keeper Pub. Co., Quincy, Ill. Price, 50c.

AMERICAN POULTRY ADVOCATE

is devoted to the interests of both fanciers and practical poultrymen. It is authoritative and helpful in all branches of poultry work, from the hatching and rearing of chicks to the maturing of fowls for showroom and market. It is the second oldest poultry publication in the United States and stands second to none in its value to poultry raisers. It is helpful to the beginner as well as to the expert. The newest and best in poultry literature is found between its covers each month. Published by Clarence C. DePuy, Syracuse, N. Y. Price, 50c.

ALL THREE FOR \$1.00

Never before have we been able to offer so strong a combination of the best in poultry magazines. The offer is good for renewals as well as for new subscriptions. If your subscription to American Poultry Journal has not yet expired, you may take advantage of this offer by having it extended for a year from date of expiration. Remit by money-order, check or stamps, whichever is convenient. Address all orders to

Journal Pub. Co.
Chicago : Illinois**

THE POULTRY EXHIBIT AT THE ILLINOIS STATE FAIR.

The great Illinois State Fair has come and gone. It is with great pleasure we look back upon the magnificent poultry exhibit of this year. Illinois certainly has done herself proud, not only in the number of entries, but also in the high quality of the birds exhibited. Last year's exhibit was excellent, and the efficient manner in which it was handled by Mr. McCord, the superintendent, who was in charge again this year, brought out the increased number of entries which taxed their poultry building to its utmost capacity. All the railings on the side of the hall had to be removed to make room for additional coops, and then it was necessary to put two birds in a cage in some cases. Something like 4,000 birds were on exhibition.

What impressed the visitor the most was the exceptionally high grade and condition of the birds shown, which approached very nearly to that of a regular winter show.

Especial mention must be made of the number of White Orpingtons on exhibition, over 150 birds competing. Black Orpingtons were in a class all by themselves, and the winners showed best type we have seen for years.

Illinois is always a hotbed of Barred Rock fanciers, and the number and quality of birds shown this year once more verified the statement. An excellent and large class of White Rocks took up a whole aisle of the show, and the females were absolutely the best we have ever seen at a state fair. The piece de resistance were easily the White Wyandottes. Here quality reigned supreme. We cannot help but mention the excellent condition and fine type of all birds exhibited.

Geo. H. Rudy, of Mattoon, had a string of birds on exhibition that were undoubtedly the best of the show. His first prize cockerel was a wonder, and if he keeps in shape like he was when we saw him he will certainly duplicate "Old Perfection's" record, Rudy's famous old bird, which recently died. Hartman Stock Farm's first hen was a wonder in shape and size, and well deserved her first prize.

White Leghorns were out in good number, and the quality and type of the birds shown by the White Leghorn Poultry Yards, of Pekin, Ill., is worthy of mention.

Our old friend, Mr. Chase, of Hillsboro, was on deck again with his Black Minorcas and Rose Comb Brown Leghorns, and as usual copped his share of the prizes.

Rhode Island Reds, Rose and Single Comb, brought out the hottest class ever shown at the state fair, and as far as quality and type goes, were easily the best shown to date.

Buschmann & Pierce's exhibit was the attraction of the show, and, owing to Mr. Pierce's recent injury at Nashville, Tenn., when he broke his leg, the burden of the work fell upon Mrs. Buschmann, and the efficient manner in which she handled her birds, as well as the handsomely decorated coops, speaks volumes in praise of her.

While we cannot mention all the different varieties, we publish herein a list of the entire winnings. Information which we have received from various persons that know during the fair is that a new poultry building will probably be erected during the course

of the coming year, as the building now in use will certainly not hold the birds next year.

A "ladies' institute" was held in the tent outside the poultry building and lectures on different poultry subjects were given to the lady visitors.

The Illinois State Branch of the American Poultry Association also held a meeting, and about fifteen new members were secured. Addresses by Fred Kimmey, Hale, Phillips, Rev. Green and others were given, and it was voted that the medals and diplomas of the American Poultry Association should be competed for at the Illinois State Show, to be held in Springfield.

By the way, the state show this year promises to eclipse all former efforts, and the many cash prizes that will be offered should bring out a banner exhibit.

F. C. Hare, Quincy, Ill., was appointed state organizer for the American Poultry Association.

LIST OF AWARDS.

Barred Plymouth Rock.—J. J. Klein, Macon, Ill., 1st cock, 2d hen, 1st pen, 2d cockerel. F. Gage Cutler, Carthage, Ill., 2d cock. Henry Stuber, San Jose, Ill., 3d cock. Edward Brown, Mendota, Ill., 1st hen. Riggan & Johnston, Petersburg, Ill., 3d hen. B. O. Ball, Cambridge, Ill., 3d cockerel. Charles C. Hutton, Litchfield, Ill., 1st cockerel. Fred Longnecker, Cayuga, Ill., 1st pullet, 3d pullet. J. A. Leland, Springfield, Ill., 2d pullet. M. M. Smith, Barnett, Ill., 2d pen. Practical Poultry Farm, Charleston, Ill., 3d pen.

White Plymouth Rock.—John Henry Lynch, Edwardsville, Ill., 1st cock, 3d pen. F. Gage Cutler, Carthage, Ill., 2d and 3d cock, 2d hen, 3d cockerel, 2d and 3d pullet, 1st pen. W. W. Graham, Bradford, Ill., 1st hen. A. B. Constant, Williamsville, Ill., 3d hen, 1st cockerel, 2d pen. W. E. Jones, Williamsville, Ill., 2d cockerel, 1st pullet.

Buff Plymouth Rock.—R. W. Ward, Normal, Ill., 1st cock. E. A. Myers, Mt. Sterling, Ill., 2d cock, 2d hen, 1st cockerel, 2d pen. Sherman A. Havens, Shelbyville, Ind., 3d cock. Hartman Stock Farm Co., Columbus, Ohio, 1st hen. C. E. Stevens, Danville, Ill., 3d hen, 1st pullet, 1st and 3d pen. L. O. Bloomberg, Cambridge, Ill., 2d cockerel, 2d pullet. Thos. F. Chamberlain, Brighton, Ill., 3d cockerel. F. Gage Cutler, Carthage, Ill., 3d pullet.

Partridge Plymouth Rock.—Charles P. Clemens, Oakland City, Ind., 1st, 2d and 3d cock, 1st, 2d and 3d hen, 1st, 2d and 3d cockerel, 1st and 3d pullet, 1st, 2d and 3d pen.

Silver Wyandotte.—John Ostle, Collinsville, Ill., 1st and 2d cock, 3d cockerel, 1st pen. August W. Schroeder, Chestnut, Ill., 3d cock, 1st, 2d and 3d hen, 1st cockerel, 1st and 2d pullet. Ed. C. Dewhart, Mendota, Ill., 2d cockerel. Practical Poultry Farm, Charleston, Ill., 3d pullet.

Golden Wyandotte.—J. S. Pennington, Plainfield, Ill., 1st and 2d cock, 1st and 2d hen, 1st and 2d cockerel, 1st, 2d and 3d pullet, 1st pen. Smiley & Burnside, Milligan, Ind., 3d cock, 3d hen, 3d cockerel, 2d and 3d pen.

White Wyandotte.—George H. Ruddy, Mattoon, Ill., 1st, 2d and 3d cock, 2d and 3d hen, 1st and 2d cockerel, 1st and 3d pullet, 1st and 3d pen. Hartman Stock Farm Co., Columbus, Ohio, 1st hen, 3d cockerel, 2d pen. Mrs. Arthur Seymour, Murrayville, Ill., 2d pullet.

Buff Wyandotte.—Hartman Stock Farm Co., Columbus, Ohio, 1st and 2d cock, 1st hen, 2d and 3d cockerel, 2d pullet, 2d and 3d pen. Mahaney Bros., Winterrowd, Ill., 3d cock. Vance & Gietl, Springfield, Ill., 2d hen. F. F. Todd & Sons, Peoria, Ill., 3d hen, 1st cockerel, 1st and 3d pullet, 1st pen.

Silver Penciled Wyandotte.—Lambert P. Fleck, Springfield, Ill., 1st, 2d and 3d cock, 1st hen, 1st cockerel, 1st, 2d and 3d pullet. Smiley & Burnside, Milligan, Ind., 2d cock, 2d hen. Mahaney Bros., Winterrowd, 3d hen.

Columbian Wyandotte.—Calvin Ott, Prophetstown, Ill., 1st cock, 1st and 2d

THE SUPREME TEST -A REAL INDUSTRY

THE SUPREME TEST OF A MAMMOTH INCUBATOR or of any other important piece of mechanism costing several hundred dollars is not the actual work it does. *The Real Test Is:* Having bought some particular make or type and "tried it out" in practical use, would you buy another just like it?

That is the supreme test! Many, very many of us invest in some article, small or large, then decide to get along with it, to "make the best of it;" but if we were given the chance to try again we would decide differently—would buy something else.

Putting money into a Mammoth Incubator is not like buying one, two or half a dozen small-sized, portable incubators. Making

Moriches, Long Island, N. Y. October 1, 1910, Mr. Cox placed an order with us to duplicate this machine by installing another 22-compartment Cyphers Mammoth in the same cellar—see illustration.

In the Fall of 1909, E. O. Wilcox, next door neighbor to A. J. Hallock, ordered of us a 40-compartment Cyphers Mammoth. September 12, 1910, he ordered a second machine, this one consisting of 24 compartments.

Last winter F. W. Babcock, proprietor of the Babcock Custom Hatching and Day-old Chick Farm, Fredonia, N. Y., bought of us a 6,000 hen-egg Cyphers Mammoth. After testing it an entire season, extending well into the summer, he gave us an order, August 15, 1910, to enlarge this machine to a capacity of 14,000 eggs.

INCUBATOR CELLAR OF A. J. HALLOCK.

INCUBATOR CELLAR OF F. W. BABCOCK.

INCUBATOR CELLAR OF T. V. COX.

INCUBATOR CELLAR OF E. O. WILCOX.

a mistake in the small machine you decide to buy should not prove serious. You can correct such a mistake at comparatively small loss. But if the same mistake is made in deciding on the Mammoth Incubator you are to install, the loss in time, labor, eggs and profits will be severe and discouraging.

Cyphers Mammoth Incubators were placed on sale late in 1907—after we had tested them several years ourselves. That winter we sold a 96-compartment machine (35,250 duck egg or 48,000 hen egg capacity) to A. J. Hallock, proprietor of Atlantic Duck Farm, Speonk, Long Island, N. Y. After testing this big incubator two years, Mr. Hallock, in the Fall of 1909, bought a second Cyphers Mammoth of us made up of 30 compartments.

In the Fall of 1907 we sold a 22-compartment Cyphers Mammoth to T. V. Cox, proprietor of Forge River Farm, Center

Certain It Is that experienced and successful men like these would not place "repeat orders" for so important an article as a Mammoth Incubator holding thousands of valuable eggs at one filling, unless they were well pleased with its work—unless they were convinced that they were right in the first place—That they had bought the best article of the kind on the market.

Herewith are photographic views of the incubator houses or cellars of Messrs. Hallock, Babcock, Cox and Wilcox—buildings which show plainly that chicken raising and duck growing, by the use of Cyphers Mammoth Incubators holding 4,000 to 60,000 eggs at one filling, has now become a real industry—a regular business involving no more financial risk than the average commercial investment or mercantile pursuit.

SPECIAL CIRCULAR: Cyphers Mammoth Incubators, 1911-Pattern, are shipped knock-down at low freight rates with photographs and blue-prints that will enable the purchaser to set up his own machine. Any man who is handy with tools can do the work. If interested, write for our special 20-page circular (just printed) giving prices and full particulars. Address factory and home offices, or nearest branch house.

Mottled Ancona.—H. L. Reat, Charleston, Ill., 1st cock, 3d cockerel. Hartman Stock Farm, Columbus, Ohio, 2d cock, 1st

REASONS WHY MY FEEDER SAVES YOU MONEY

- 1st, Because it feeds, exercises and keeps your chickens healthy;
- 2nd, Because it increases the egg yield with less feed bill;
- 3rd, Because it saves time, labor, feed and scratching material;
- 4th, Because it feeds chicks, keeps them growing and healthy;
- 5th, Because it keeps hens from getting too fat, hence more eggs;
- 6th, Because it feeds all kinds of grain without being regulated;
- 7th, Because it keeps sparrows, rats and mice from getting your profits;
- 8th, Because it can be used either inside or outdoors, being rain proof.

GILBERT BROS. & WAKLEY, of Knoxville, Pa., write us:

The self-feeders which we bought of you are all that you claim them to be. Their practicability far exceeded our expectations, and we hope to use more of them later on.

MR. J. C. CLIPP, of Saltillo, Ind., wrote:

On March 15th, 1910, in part as follows: "I can see now that they are an improvement over the _____ feeder. My fowls have quit picking the feed from the _____, due to sore beaks. I enclose you letter from Mr. Brown, and trust you will be able to close with him. I have written him and advised him that the 'Conner feeder' was superior to anything on the market, at least that was my honest opinion, and which is my honest conviction today."

3-GREAT RECORDS-3

Indiana State Fair, Sept. 1910—Tennessee State Fair, Sept. 1910—Illinois State Fair, Oct. 1910

Our winnings were made in the three largest Fall Shows ever held in the United States, over 900 RHODE ISLAND REDS IN COMPETITION. We have again demonstrated that our birds are Superior to all others, by their consistent winnings.

Buschmann's Rose Comb Rhode Island Reds—Non-Fading Strain

Ind. State Fair, 1910.	Tenn. State Fair, 1910.	Ill. State Fair, 1910.
1, 2, 3 Cock	1, 2, 3, 4, 5 Cock	1, 2 Cock
1, 2, 3 Hen	1, 2, 3, 4, 5 Hen	1, 2, 3 Hen
1, 2, 3 Cockerel	1, 2, 3, 4, 5 Cockerel	1, 2 Cockerel
1, 2, 3 Pullet	1, 2, 3, 4, 5 Pullet	1, 2, 3 Pullet
1, 2 Pen	1, 2, 3, 4 Pen	1, 2, 3 Pen
Zike, Judge.	Southard, Judge.	Hale, Judge.

At the Tennessee State Fair, the South's largest Show, we won \$50.00 in Gold and \$50.00 Silver Cup for Best and Largest display of one breed, also Silver Cup for ten best pullets one breed, all breeds competing.

This, with our past records at America's largest shows, is convincing evidence that our Reds have no equal.

BIG MONEY IN RHODE ISLAND REDS.

If you want to make money in poultry, our fall sales list, which is free, will tell you how to do it.

WE HAVE OVER 2,500 COCKS, COCKERELS, HENS, PULLETS TO SELL.

Have you seen the Origin and History of Rhode Island Reds, also how to mate, judge and breed them? If not, send 20 cents in stamps to us and ours will be forwarded you.

C. L. BUSCHMANN : 4937 North Meridian Street, INDIANAPOLIS, INDIANA

OVERHEARD AT THE STATE FAIR.

Theo. Hewes, to his students: "Gentlemen, tell me which is the gander?"

Rev. Green says: "Once upon a time I bought a pen of Orpingtons for \$20, and for a long time after I had heard from my wife about the extravagance of spending \$20 for chickens. When I won first pen on my Orpingtons, and some one offered me \$250 for same, I asked her if I should sell them. She said, 'No; don't you do it.'"

The venders of hamburgers again did a thriving business; but, tell me honestly, how much of that state fair coffee did you lick up?

"Big lunches, little money—make them big while the boss is gone." "A whole hog for a nickel." These and other familiar cries, as well as odors, greeted the visitor the minute he entered the grounds.

Judging from the enormous quantity of hamburgers and wieners consumed, quite a few bow-wows must have departed for unknown regions.

THE ALLENTOWN FAIR.

About 4,500 entries, 3,500 head of poultry and 1,000 pigeons were on exhibition and many entries were refused for lack of space and coops. A large building is very much needed, as some of the chickens had to be triple decked and the pigeons were tiered up five coops

high. However, the room was nicely decorated, and everybody seemed well pleased and satisfied. The display of silver cups which was given at Allentown exceeded in grandeur that of any we ever saw given by any one show before, many of them being very large and massive and very valuable.

Mr. Wittman, the secretary, certainly knows how to run a show, and gets out the entries even at one dollar per head, which assures you that nothing but the very highest quality was to be found at the Allentown show, and a prize won here is equal to that of any of our winter exhibitions. The largest class in the show was White Orpingtons. The sensational bird was the White Orpington hen owned by the Sunswick Poultry Farm, So. Plainfield, N. J., "Lady of the Snows." This hen is one of the most perfect White Orpingtons that we have ever seen, being ideal Orpington type in every section and absolutely white in every section. She won not only first as hen and gold special for the best White Orpington hen, but also the gold special for the best hen in the show, all varieties competing. The winning of these prizes proves that the judgment of others coincides with ours, and she is really a wonderful hen.

The Grand Challenge Cup, offered on Black Orpingtons, was won by Sunswick Poultry Farm by their Black Orpington cock. This being the second time they have won this cup, it now remains their property.

The Sunswick Poultry Farm were also successful in winning a large share of the prizes in the three varieties of Or-

pingtons that they breed, namely: S. C. Buff, Black and White Orpingtons.

Russell Cave Poultry Yards, Lewis Lee Haggin, owner, Lexington, Ky., exhibited a very fine pen of White Orpingtons which attracted general admiration of the public and were deservedly winners of first pen.

Wm. Cook & Sons, Scotch Plains, N. J., were also prominent winners in the Orpington class, and carried off the handsome silver cup offered for Buff Orpingtons, which they have won for the second time, and now remains their property.

Wm. A. Smith, Metuchen, N. J., showed a few of the Minorcas, which won their share of the prizes, as usual. Mr. Smith informs us that he has a very large flock of young birds, which are maturing in fine shape.

A. J. Fell, Westpoint, Pa., showed a very fine string of White Wyandottes and captured a large share of the prizes.

Onlya Farm, Morristown, N. J., also showed White Wyandottes, also winning in this class.

John A. Miller, Nazareth, Pa., exhibited dark Cornish fowls, winning first and second cock, first and second hen, and fourth pullet. Also won the Fenstermacher cup for the best Cornish in the show. This cup now remains Mr. Miller's property, having been won in both 1909 and 1910. This was a very handsome cup, being valued at \$75.

Secretary S. T. Campbell was on hand securing new members for A. P. A., and the last report was that forty-six new members had been added to the list.

Orchard Poultry Farm

The largest farm in the East breeding all varieties of Poultry, Ducks, Geese, Bantams and pigeons. We won more first and second prizes than any other farm in America during 1910. A grand lot of show birds and breeders for sale now. All birds shipped on approval. Our Motto quality not quantity. See Allentown and Hagerstown show awards, more first and second prizes than any other exhibitor.

LINE AND PEDIGREE BREEDING.

THERE seems to be quite a misunderstanding of the terms "line-breeding" and "in-breeding," many believing them to be one and the same thing. In the true meaning of the terms, however, they differ greatly. "Line-breeding" is the breeding in line of a certain family or strain of fowls, with or without the introduction of new blood, but always involving "in-breeding." In-breeding is the breeding together of birds related to each other, but may or may not be "line-breeding."

No breeder has ever accomplished much by continually introducing new blood, buying male birds every year or two to mate with his females. In this way both sexes are of different blood and therefore have different qualities and characteristics. Now as the most prized qualities of our thoroughbred fowls have only been produced in a very few years, compared with the bad or natural characteristics which belong to the fowl in its wild state, there is a decided tendency among fowls to revert back to the natural state when there is a crossing of breeds. The same is true in a less degree when crossing two strains of the same breed. In this crossing of strains the male and the female each have an equal influence upon the progeny. Provided that one is as pre-potent as the other. But in the case of crossing a line-bred male that is a pre-potent breeder with females of indifferent breeding the progeny may be nearly identical to the male, but they will be worthless for breeding. Without "in-breeding" very little good can be gotten from a fine male or female, as its progeny will be only one-half its blood, and its progeny's progeny will be one-fourth its blood, etc. In this way the good qualities of an individual are bred out of a strain.

In the case of "in-breeding," however, when the breeder obtains an extra fine specimen either by purchase or as the result of his own matings, he mates her to an unrelated or distantly related male bird strong in the sections wherein she is weak, and above all a bird of great vitality. From the resulting progeny we select a cockerel of perfect health and vigor, possessing, as far as possible, the good qualities of both ancestors, but above all strong in the points wherein the female is weak (as otherwise we would be concentrating and perpetuating the bad as well as the good qualities of the female) and mate him back to his dam. The resulting progeny will possess three-fourths the blood of the original female, who if again mated to one of her cockerels of three-fourths blood will produce progeny seven-eighths her blood.

If the original female was a pre-potent breeder and these matings were properly made, the progeny of the third mating (seven-eighths her blood) will be very pre-potent breeders of her good qualities, stronger breeders than herself and will also be quite an improvement upon her, her bad qualities having been eliminated to quite an extent by the selection of the cockerels. Of course, there are some birds of the best of breeding that are not pre-potent breeders or that do not, however mated, transmit their good qualities upon their progeny. One of the secrets, then, in breeding lies in finding the pre-potent breeders. This is one of the many things the Maine Experiment Station failed to consider when con-

J-M
ASBESTOS ROOFING
FIRE PROOF

MADE of indestructible Asbestos (Rock) Fibre and Trinidad Lake Asphalt, the great weather-proofer, J-M Asbestos Ready roofing is literally a *pliable stone*. Fire, acids, gases, chemical fumes, heat or cold have no effect upon it. It is therefore practically indestructible.

And because of its stone nature, J-M Asbestos Roofing never needs painting or graveling. Its first cost is its only cost.

Asbestos being a non-conductor of heat and cold, this roofing keeps a building warm in winter and cool in summer, and is adapted for any building, anywhere.

Most hardware and lumber dealers sell J-M Asbestos Roofing. If your dealer doesn't keep it, write our nearest branch for Samples and Booklet E26.

ducting its experiment for increasing egg production by selection. They selected for breeders 200 egg hens and sons of 200 egg hens. They should have selected the producers of 200 egg hens, or hens whose pullets were better layers than themselves. They would then have built up a phenomenal laying strain.

Unless great care is taken in the selection of breeders the health and vitality of a strain may be quickly ruined by "in-breeding." If care is taken, however, in the selection of breeders, selecting birds of the best possible vigor and never mating together birds having the same weakness, the vigor of a strain may be increased for a time at least.

Constitutional vigor can only be discerned by an experienced eye. Many think that the best laying hens and the most active cockerels are the strongest birds in the flock. They may be the weakest. Of course, very weak hens will not produce many eggs. However, a hen constitutionally the weakest bird in the flock may be strong enough to be an excellent egg producer for a short time. The best way to discern constitutional vigor is by the form of the birds.

A vigorous bird has a large, broad skull, a short, stout beak, thick, well-arched neck, a long and broad back, breast well filled and wings carried up close to the body. The legs should be thick and not dwarfed as to length, and wide apart at the knee joints. Rich red eyes and red pigment showing down the sides of the legs is also a sign of vigor. However, the long-continued "in-breeding" of fowls in the same climate and under the same conditions will, it seems,

weaken their constitutions in time. For example, the Seabright Bantam is a very poor layer, and its eggs are mostly infertile in England, where it has been bred for hundreds of years. But when imported to this country it proves a good producer of fertile eggs in large numbers for a bantam. Much the same results in increased vigor can be obtained by sending a few chicks away to a distant climate to be reared and sent home when needed as by introducing new blood.

When new blood is thought necessary I would advise the purchase of a mated pair of birds, bred for the same purpose as your own flock. Add to this mating several of your own best females that will mate well with the male. By buying a female mated with the male you get a better ideal quality of the strain to start with and you can tell more about the male's breeding than where he is mated only to unrelated females. If the progeny of this mating proves satisfactory in every way you may then select some of the best birds of the progeny of the females of your own strain (which will be modified to one-half of new blood and one-half the blood of your own strain) and use them to introduce new blood into the whole flock. In this way you have a chance to learn what the new blood is like before introducing it into your own flock, and it is modified by the blood of your own strain so as to not tear down any of the work that you have accomplished on your own strain.

There is no doubt but what fowls or animals of any kind may be continuously in-bred without any decrease in constitutional vigor if it is rightly practiced, as it is the natural method.

The wild birds continuously in-breed, choosing mates of the closest relation, but the vigor of the species is kept up by migration and the law of "the survival of the fittest." The weaklings of the wild birds are being constantly destroyed by man, animals and birds of prey and by battles among males of the same species. They also live in the open air upon a great variety of food, for which they are compelled to work and balance their own rations.

Of course, "line breeding" cannot be properly practiced without the birds are pedigreed, which will involve either the use of the trap nests or the practice of pair mating. The eggs of each hen must be set separate and the resulting chicks toe-marked by punching holes in the webs of the feet with a poultry marker made for the purpose. A complete record should be kept of the breeding of all the birds and the results of each mating. The use of sealed bands numbered consecutively for marking mature fowls is to be recommended, as in this way there are no two fowls of the same number and the bands are an easy method of identification.

Charles A. Simmonds.

Camp Point, Ill.

Philip Koehlinger, 1414 East Grant avenue, Fort Wayne, Ind., writes that he has a flock of Columbian Wyandotte which are maturing fast and that he can supply some good stock, some that he feels sure will give his customers satisfaction. Better write to him; he will give you a square deal.

George B. Ferris, Grand Rapids, Mich., made the following winnings at the late Michigan State Fair, at Detroit: 1st and 2d cock, 1st hen; 1st and 2d cockerel; 1st and 2d pullet, 1st pen. This winning proves that Mr. Ferris breeds S. C. White Leghorns of quality.

MR. EASTMAN REPLIES TO MR. ORR.

Editor American Poultry Journal.

Dear Sir: May I ask a little space for a few comments on Mr. D. Lincoln Orr's reply to Mr. Fenton in last month's issue of your journal? Mr. Orr is sore, he says, because no National Columbian Wyandotte Club specials were awarded at the New York show. He is sore because Mr. Keating, who did not win any firsts at that show, was voted a silver cup at the annual meeting of the club at Boston, while he, Mr. Orr, won two firsts and was not awarded any cup.

Mr. Orr has no kick coming because there were no club specials offered at the New York show last winter. I sent him notice, as I did to every club member, that "club ribbons would be sent to the state vice-president (Mr. Van Alstyne, for New York state), one set for every two members," and that they were to be offered at such shows as the majority of the members wished. That he failed to get the club ribbons offered at Madison Square Garden was as much his own fault as any one's, and was not the fault of the club management.

He has no kick coming because Mr. Keating was voted the display cup, for the reason that he, Mr. Orr, was at the club meeting at Madison Square Garden, December, 1908, when the club voted that hereafter all club display prizes should be awarded on points. As Mr. Keating won more points than any other exhibitor of Columbian Wyandottes, he was entitled to the display prize, and Mr. Orr, to be consistent, should be glad that the \$122 in the club's treasury was reduced by the pur-

chase of the cup, as he found great fault with the "management" for having so large an amount in the treasury. Mr. Orr is a man with too large a brain himself to think for an instant that it was to "soothe" any one that the club voted a cup to the winner of the "display" at the country's leading show. That argument is simply childish. There is an old saying that "the hit bird flutters." "You deserters" did hit Mr. Orr, and hit him hard. No wonder he objects to the phrase; but he must put the coat on, for it fits. I say it fits for the reason that if Mr. Orr had expended one-tenth of the time and money in trying to help his favorite variety through the club of which he was a member that he has expended in trying to tear the old club down, he would have had no occasion to try and start a new organization, and he would have earned the respect of all Columbian Wyandotte breeders.

Mr. Orr surely has no small opinion of himself. He says: "Say, Fenton, no one ever knew the old club was alive until I started the ball rolling." Mr. Editor, did you ever read anything richer than that? I might say that the old club, without one word or one cent from Mr. Orr, in some way, or in some manner, managed to get out entries so that Columbian Wyandottes were the largest class at Boston, Providence, R. I., and Portland, Me., and that at Boston all but six birds were owned by club members. He says, "No one ever knew the old club was alive until I started the ball rolling." He says so, and of course it must be so.

Mr. Orr, in his quest for members for his new association, has said that some of the officers of the old club were with

him, and now he names them as Mr. Cleveland, Mr. Parrish and Mr. Campbell. I doubt very much if either of these gentlemen will thank him for using their names. Mr. Cleveland was the one of the executive committee last year who worked the hardest of any for the club, and in our club catalogue he received due credit for it. If any one will read "Can We Do It?" by Mr. Parrish, in the same catalogue, I think he will find it hard to believe that he has deliberately deserted the club that has honored him. I, for one, will not. As for Mr. Campbell, I think the poultry breeders of this country have a higher opinion of him than that, and until I know to the contrary I shall give him credit for better things.

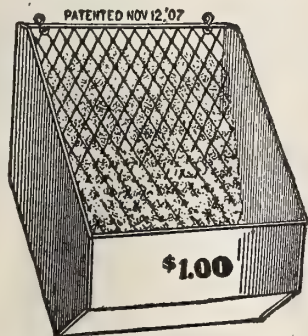

Mr. Orr says he has been after Mr. Fenton to join his association, but he would not. So has he been after me, not once, but several times. What does he want of me in his association? He has kicked the management of the old club, said it was dead, etc., and made that his excuse for starting a new one, yet he is after the executive head of the club he is trying to tear down. Does he want to kill his own association before it is born? What does he want, anyway? Does he know what he wants himself?

Very truly yours,

George F. Eastman, Sec'y,
National Columbian Wyandotte Club.
Granby, Mass.

The big sixteenth annual exhibition of the Western Poultry Fanciers' Association (Inc.) will be held at Cedar Rapids, Ia., December 26 to 31. The judges are to be W. S. Russell and U. J. Shanklin.—E. D. Monilaw, Sec'y, Cedar Rapids, Ia.

IMPORTANT ANNOUNCEMENT

The Hopper That Made Dry Feeding A Success.

Made in four sizes—Prices as follows:

Large Dry Feed, \$1.00; (shown in illustration); 17 in. high, 8 in. deep, 13 in. wide. Holds one-half bushel.

Beef Scrap, Grit, etc., 90c; 17 in. high, 8 in. deep, 7 in. wide. Holds one peck.

Small Chicken Size, \$1.00; 15 in. long, 8 in. high, 4½ in. deep. Holds one-half peck.

Large Chicken Size, \$1.90; 29 in. long, 8 in. high, 4½ in. deep. Holds one peck.

Send for Free Booklet on dry feeding, with many favorable reports from leading successful poultrymen.

HOPPERS ARE FOR SALE AT RETAIL AT OUR BRANCH HOUSES; ALSO AT FACTORY, BUFFALO, N. Y.

CYPHERS INCUBATOR COMPANY

316-334 Court Street, Buffalo, N. Y.
340-344 North Clark Street, Chicago, Ill.

12-14 Canal Street, Boston, Mass.

BUSINESS AND GOOD WILL OF THE BOSTON DRY FOOD HOPPER COMPANY TAKEN OVER BY THE CYPHERS INCUBATOR COMPANY

To The Public: It gives me pleasure to announce to the public that on October 1st, 1910, the entire business of the Boston Dry Food Hopper Company, together with all rights to manufacture and sell this article in the United States, was sold and transferred to the Cyphers Incubator Company, who will conduct the manufacture and sale of this Hopper in the future along the lines already established.

CYPHERS INCUBATOR COMPANY is so well known to the public as manufacturers of standard and up-to-date Incubators, Brooders and Poultry Supplies that no introduction is necessary.

The sale of the Boston Hopper will be continued through the medium of local dealers and all prospective buyers of this article who are unable to purchase the Boston Dry Food Hopper from their local dealers are hereby requested to send the Cyphers Incubator Company (at its nearest branch house) the address of the local dealer who would, perhaps, be interested in handling this article.

Respectfully,

Boston, Mass., October 3, 1910.

BOSTON DRY FOOD HOPPER CO.

F. W. RUGGLES, Manager.

To The Trade: We shall continue to distribute the Boston Dry Food Hoppers through the medium of local merchants. Prospective buyers, who are not able to obtain Boston Hoppers from their local dealers should write us for the address of the nearest merchant handling these Hoppers—sending us at the same time the names of local dealers who do not now carry these goods in stock. Please address our nearest place of business.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—(1) What is the Maine Experimental College ration for laying hens as mentioned in the article on "Feeding for Egg Production" in the A. P. J. for September? (2) What is the best kind of fowl for raising for broilers? T. M. C.

Meaford, Ont.

Answer.—(1) Write to the State Agricultural College, Orono, Me., for feed bulletin. (2) Any of the American varieties, such as Rocks, Wyandottes and Reds.

Question.—(1) If a White Leghorn cockerel be crossed with a black Minorca hen what will be the color? (2) How did the White Minorcas originate? Madison, Tenn. A. J.

Answer.—(1) Black and white. (2) The origin of White Minorcas is in dispute. Some claim that they are a "sport" of the Blacks, while others maintain that they were produced by a cross of White Leghorn and White Game.

Question.—For the first time, this year my chickens have been troubled with the little "stick fast" fleas. Combs, gills, or wattles, and faces of chickens of all sizes and ages are literally covered with those fleas. There are hundreds of them on one chicken, fastened tight, and so close and solidly together that you cannot tell but that the parts are covered with a solid coating. What do you know about them? Can you give me a remedy that will enable me to kill them out and get rid of them? They do not seem to attack the bodies of chickens, only attach themselves to combs, wattles, around eyes and on head, etc. They are worse than mites, or lice, and kill small chickens. Tyler, Tex. J. D. B.

Answer.—Will some of our readers who have had experience in fighting these pests please answer above?

Question.—(1) How long does it take hens to molt if properly looked after? (2) What kind of feed is the best for molting fowls? (3) In what way can green alfalfa clover be used for poultry? (4) How high should a poultry fence be to keep in Single-Comb Leghorns? (5) How many White Leghorns can be kept on one-half acre? (6) I got a laying strain of White Leghorns from a reliable dealer, would I need to get one or more male birds for breeding from another strain, or would I keep males of my own strain? J. C. Milverton, Ont.

Answer.—(1) About six weeks. (2) Corn, wheat and oats, together with a feed of sunflower seeds, three or four times per week. (3) This may be cut up fine or ground and fed in the mash as a green food. (4) At least six feet. (5) Four to six hundred, depending on care given them. (6) Procure males of the same strain for the first year or two, after that you can no doubt produce males from your own flock that you can use to line breed.

Question.—(1) Will you kindly answer through your Questions and Answers columns a cure for leg weakness, and causes? (2) Should a thoroughbred Black Minorca cockerel have yellow feathers on neck and back? W. O. C. Indianapolis, Ind.

Answer.—(1) Leg weakness is produced from various causes. It is a form of rheumatism, and may be cured by using common baking soda in the drinking water, a tablespoonful to each quart. Plenty of green food should also be given; also plenty of exercise. (2)

No. This is evidently the result of some foreign blood being introduced into the flock.

Question.—I had one R. I. Red chick 7 weeks old suddenly get sick and die. Its bill turned dark and I found green spots on its legs. When I cut it open its crop was empty, but it seemed to be perfectly healthy. I have four others of the same age and kind that are sick and have the same symptoms, but their crops are full and they have high fever. I have been giving them sweet oil and put salts in their drinking water. They have large grassy runs and I feed dry bran and common chick feed, with plenty of grit. E. E. G. Jacksonville, Fla.

Answer.—Change their food and give them more green food. Also give a tablespoonful of common baking soda to each quart of drinking water.

Question.—(1) On the poultry plants where colony houses are used (about 6x6 feet), are the young ones raised in them until maturity, or how is this usually managed? (2) How far apart is it necessary to build small colony houses for chicks, so as to keep them from mixing or using the wrong house? (3) Is there any hope of a cure of a pullet that is very shaky, or rather seems drunk, but has a very good appetite and is not sick? Also please state cause, if possible. (4) Should one man be able to properly care for 700 layers and at the same time raise enough young ones so as to get one-half that number of pullets? (5) In the summer time will poultry use a dust bath inside the house? I would think they would prefer the ground for their natural bath. Which is best material for dust bath? (6) What is best to exterminate lice (large head lice) after lice powder fails? (7) After a new feather has been plucked, how long until a new one grows in its place? R. B. F. Homestead, Pa.

Answer.—(1) The stock is usually kept in the colony houses until put into winter quarters in the fall. (2) This all depends upon the amount of ground that is devoted to the colony system.

Protect your Chicks

It may be easy to hatch the chicks, but the real problem is to raise them.

When you have bought a lot of good eggs, and watched them in the incubator day after day for three long weeks, would it not be foolish to put the innocent little chicks in a brooder with a faulty burner? It certainly would not be "good business judgment" to do that when a high-grade, dependable Burner may be had for a nominal sum.

For over 50 years we have been making Lamps, Burners, etc., paying particular attention to the incubator and brooder line. We are safe in stating that we are today supplying about all of the large and important manufacturers of hatching and brooding apparatus.

MILLER BURNERS ARE THE BEST

and are recognized as such by concerns who put quality into their goods. When you buy an incubator or a brooder that has the MILLER BURNERS you have made no mistake. You have undoubtedly selected machines that will bring the greatest possible returns.

Don't throw that old Brooder away. A new burner and chimney will help to make it again useful.

The MILLER BROODER BURNER AND CHIMNEY shown here may be had from most incubator manufacturers, poultry supply houses, seedsmen, etc. For convenience of those in remote places we offer to send the Burner, Wick and Chimney, postpaid, on receipt of \$1.00. Of course, our goods are fully warranted. Order to-day. Prompt shipment.

EDWARD MILLER & CO., 12 Center St., Meriden, Conn.

3/4
ACTUAL
SIZE
\$1.00
POSTPAID

The houses should be at least 200 feet apart. (3) This is a nervous trouble, and would not advise doctoring. (4) Yes. (5) In the summer time the dust bath should be arranged under a shed in easy access to the fowls. Common road dust makes a good dust bath. (6) Lard and kerosene oil. A tablespoonful of oil to half a teacupful of lard. (7) At this season of the year six weeks to two months.

I think that J. H. B. can raise Light Brahmas successfully in Louisiana. I raise them, and have had no trouble so far. I think them as healthy as any of the American breeds and every bit as good layers, in fact better.

Grace Marchall.

New Orleans, La.

Question.—Would be pleased for information through your paper that would enable me to remedy the cause for what is the matter with my poultry. They seem to have some bone trouble. Several seem weak in the legs; one was so much so that it used its wings to assist in walking, especially when pursued, and on killing I find the joint of the leg, sometimes the knee and other times the thigh, to be in a red rough state instead of having the smooth gristle that it should have, and this red rough state occurred in the breast bone of one or two. Now these have been raised on a lot about 40x50, with plenty of mixed scratch feed, also fed bran, beef scraps and linseed meal in hopper, oyster shell and grit also, and feed plenty of oats and some sprouted oats; besides, they have the lawn to run on for several hours every day.

Cleveland, O.

F. M. C.

Answer.—Rheumatism, caused by the fowls becoming too fat, being fed on too concentrated a food or from being confined in poorly-ventilated quarters. Begin treatment by giving a dose of epsom salts, 20 to 30 grains, after which give them common baking soda in their drinking water, a tablespoonful to each quart of water. Apply carbolic ointment to the affected joints, rubbing it in thoroughly.

Question.—(1) Have built an open-front poultry house 16x12 and have 10-ounce duck in openings, which are 14x4 feet. Will enough air pass through duck to supply good ventilation? The duck seems to be woven too closely. Would cheesecloth be better? I have wooden windows to close in very stormy weather. (2) Have some very fine Barred Plymouth Rock pullets and cockerels which I hatched from eggs bought from a good reliable dealer. Will it be good policy to mate one of the cockerels with the pullets? (3) Have a pullet whose comb looks dry and withered, more of a brownish color, seems as if there is no life in it. She is very active, eats well and apparently is in first-class health. Will I keep her with the flock or separate her, and what treatment, if any? What is the trouble with it? (4) Have a Rose-Comb Barred Rock hatched April 4 and started laying at 4 months and 10 days old. The second egg was double yolked. She has been laying nearly every day since, occasionally skipping a day. Is that unusual? Would she be good to breed from? (5) Have a 1½-year-old Barred Rock cock. Don't know very much about him, as for points. He is very active, good comb, and legs well

set apart and has good crow. Would you advise using him in breeding pen? Detroit, Mich.

H. A. C.

Answer.—(1) We prefer unbleached muslin; cheesecloth is too light. (2) You should procure a yearling cock to mate with these pullets. (3) This comb will probably develop as she gets into laying condition. Rub a little vaseline on it a few times. (4) This is not unusual, and unless she is fully matured in every way would not make a good breeder. (5) Consult your American Standard of Perfection, and if this bird is up to Standard requirements he will be all right as a breeder.

Question.—(1) Am making a dry mash consisting of bran, cornmeal, middlings, gluten and linseed meal. I do not understand just what gluten is and where to buy it. (2) Is there anything that can be substituted for gluten? If so, what is it? (3) In keeping this mash before the fowls at all times, is there any danger of old hens becoming too fat (White Orpingtons)? R. A. N.

Falls City, Neb.

Answer.—(1) Gluten meal can be obtained from any poultry supply house or Blatchfords Calf Meal Factory, Waukegan, Wis. (2) Alfalfa or clover meal. (3) Occasionally there may be an old hen that will become too fat, but those that are good layers and active will not.

Question.—(1) How large should a house be for fifty White Leghorns, and also the scratching shed; also the wire run? (2) How old should the pullets be before the eggs are used for hatching, and how old should the cockerel be before the eggs are fertile? J. H. W.

Stone Mountain, Ga.

Two Bags Poultry Feed for the Price of One

One 25c bag Purina Chicken Chowder } 25c
One 25c bag Purina Scratch Feed }

(A Trial Offer only. Not more than two bags to a person)
(Offer limited to people living east of the Rockies.)

Col. Purina's Offer.

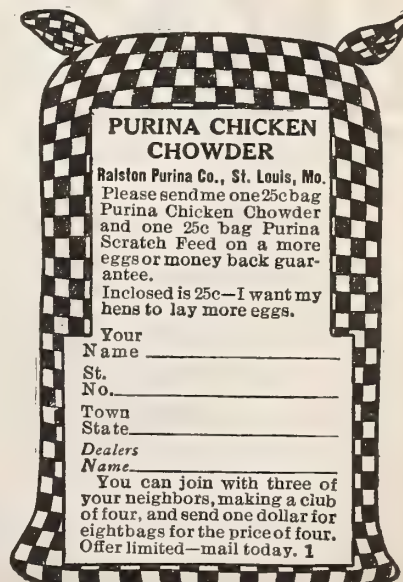

I want *you* to thoroughly test Purina Chicken Chowder, a perfect mash for laying hens. It is the natural egg producing feed, containing just the ingredients that are found in an egg. It's clean and pure and is properly proportioned for producing the most eggs. When used in connection with Purina Scratch Feed, it will produce more eggs than any other feed in the world and I can prove it to *you* with *your* hens.

I guarantee to increase your eggs or return your money

That's a bold statement and I couldn't make it if I didn't have the best feed in the country—the feed that will make *your* hens lay more eggs.

Wrap a quarter in a piece of paper (or send stamps) and mail it to us today, with your dealer's name, and I will ship, through your dealer, two 25c bags of Purina Poultry Feed, freight prepaid. If you fail to get more eggs, the feed will not cost you a penny. You have nothing to lose and every-thing to gain. The offer is limited, so mail the coupon today.

Col. Purina % Ralston Purina Mills, St. Louis, Mo.

GREYSTONE WHITE ROCKS

win by a mile at Madison Square Garden. At five shows, 1905-1910, won 12 out of 25 firsts, (more than double nearest competitor.) 3 out of 5 best display, 3 out of 5 best cock, hen, cockerel, pullet and pen, 5 out of 8 Champions, (5 times as many as any other exhibitor,) 5 out of 8 shape specials. Winners for any show at moderate prices.

Greystone Poultry Farm, F. H. Davey, Mgr., Yonkers, N. Y.

Silver Laced Wyandottes

At the great Illinois State Fair poultry show my birds won 3d cock, 1st, 2d, 3d, hens, 1st cockerel, 1st, 2d, pullet, in a very strong class. Have some very choice yearling and young stock in breeders and show birds, now ready to ship. I guarantee satisfaction.

August W. Schroeder

Chestnut, Illinois

200Lbs. of PEERLESS POULTRY GRIT SENT TO YOU FREIGHT PREPAID for \$1.95

Do you want to increase your egg crop this Winter when prices are highest?

If so, you should commence now to feed Peerless Poultry Grit—the great egg producer. One of the great secrets of poultry health is plenty of good, sharp, insoluble grit. Beware of the so-called grit that is not sharp. You want grit that grinds—Peerless Grit.

The wise poultryman pays particular attention to the quality of the feed and grit for his flock. Experience and profit have taught that the best is always the cheapest in the end. When you order Peerless Poultry Grit you get fresh grit direct from the mine. We mine and crush every day, and ship orders as fast as received. You get grit that is fresh, clean and pure.

PEERLESS POULTRY GRIT

is composed of Quartz and Feldspar—the two hardest and sharpest of rock-forming minerals—insoluble in acid and harder than steel—the ideal minerals for grit. If you expect your fowls to be vigorous and strong, and great egg-producers, and thus money-makers, you must feed properly and supply this grit. Start now and reap the benefits of your wisdom. Your neighbors will wonder at your success.

Send us your order to-day with \$1.95, and we will promptly ship 200 lbs of Peerless Poultry Grit, with all freight charges prepaid, if you live east of Missouri River and North of Ohio River. Freight allowance to places outside of this territory. Remember, we guarantee entire satisfaction.

Write for free sample and booklet, "A Few Condensed Facts Regarding Poultry Grit." You will learn something.

PEERLESS POULTRY GRIT CO.

924 BROADWAY, ALBANY, N. Y.

"TYCOS" the Mark of Quality

When you buy your Incubator or Brooder see to it that it is equipped with the "Tyco's" Thermometer. The best machine is no better than the poorest if the thermometer is unreliable. Remember the wise old saying, "A chain is no stronger than its weakest link." The thermometer is the very heart of the incubator. Thermometers may look alike, but it is the "hidden qualities" in the "Tyco's" which are not seen, that count for

ACCURACY—STABILITY—PERMANENCY

The higher grade incubators are furnished with the "Tyco's" Thermometer to insure better hatches. Many manufacturers consider it better judgment to use only the highest quality equipment in their machines. You make no mistake in selecting the machine furnished with the "Tyco's" Thermometer—the Mark of Quality.

Don't risk good eggs, time, labor and money with unreliable equipment, when you can insure results by simply insisting on a "Tyco's" Incubator Thermometer. We have hundreds of letters from prominent poultrymen saying they always use the "Tyco's" because of greater results and increased profits.

When you use your old machine again try a "Tyco's" Thermometer. You will be surprised at its dependability.

"Tyco's" Incubator Thermometer, each 75c. "Tyco's" Brooder Thermometer, each 75c. "Tyco's" Certified Incubator Thermometer, each \$1.50. "Tyco's" Incubator Hygrometer, each \$1.50. Send for booklet, "Incubator Thermometer Facts Worth Knowing."

Taylor Instrument Companies ROCHESTER N. Y.
The "Tyco's" Fever Thermometer should be in every home.

Answer.—(1) 14x28; scratching shed same size. The wire run should be twice this size. (2) Eight to nine months.

Question.—(1) Will you kindly tell me in your next issue (November) what breed is considered the best for layers, and what breed of chickens do you consider the best for this climate of Jersey City, N. J. (2) Where can I get a book telling me all about chickens and how to care for them when sick, etc?

Jersey City, N. J. E. J. S.

Answer.—(1) We never say in this department which breed is the best layers. Some claim one variety and some another. They are all good layers if given proper care. Any one of the standard varieties will do well in your locality. (2) We handle all kinds of poultry books. See list in this issue. Our poultry book, Diseases of Poultry, will give you full information about all diseases of poultry. Price, 50c.

Question.—Please answer in your next issue if packing hay in glass boxes is suitable for scratching litter.

Covington, Ky. A. F. R.

Answer.—Hay does not make very good scratching material. Oat straw is better.

Question.—(1) I have a fine Leghorn hen that has gone blind in one eye; otherwise she seems all right. Will this injure her as a breeder? (2) To whom should I apply for entry blanks? I desire to show poultry at Smithfield, W. Va. (3) How large a space is needed to fatten a Leghorn cockerel for show purposes? (4) How many chickens can I successfully keep in a building 10x12 feet? (5) Are Leghorns good free rangers as they are when penned? (6) Give a slight description of a good Leghorn cockerel as to points on comb, color of legs, weight, shape, and shape and carriage of tail.

B. G. S. Brown, W. Va.

Answer.—(1) No. (2) To the secretary of the Smithfield Poultry Association. (3) A coop about three feet square. (4) Twenty-five. (5) Yes. (6) See some of the photos in this issue, which is better than we can describe them, except as to color of legs, which should be yellow. Five points on comb.

Question.—How many pullets can be profitably wintered in an 8x11-foot house, dropping boards under their roost? They have an 18x24-foot barn for a scratching shed, with the run of a large garden in addition to their park on pleasant days. My birds are White Rocks.

H. C. B. Liberty Center, O.

Answer.—Where there is a scratching shed in connection from 40 to 50 fowls may be kept in a house this size.

Question.—Will you please state in the next issue of your journal what is meant by the terms cockerel mating, pullet mating, cockerel-bred females, and the difference in offspring of these matings?

C. N. Milwaukee, Wis.

Answer.—Space in this department will not permit us to go into a detailed explanation. These two matings are necessary only in some varieties, such as Barred Plymouth Rocks and Brown Leghorns. The breeders of these varieties make two matings, one to produce exhibition females and the other to produce exhibition males. These are designated as cockerel and pullet mat-

ings. These matings are fully explained from time to time in these columns.

Question.—(1) What are the proper quantities of food, soft feed in morning and grain at night, for about 30 chickens? (2) Do you approve of feeding with a hopper? Can they be made at home, if so can you give directions for making one?
F. T. L.

Chatham, N. J.
Answer.—(1) About six quarts. (2) Yes. You can buy them cheaper than you can make them.

Question.—(1) Do White China geese have knots on their head at 2½ months old? (2) Are they pure blood unless they have? (3) How many eggs will a White China goose hen lay in a season?
New Boston, Ill. W. E. D.
Answer.—(1) Yes. (2) Yes. (3) From 20 to 30.

Question.—My young chickens 3 or 4 weeks old and a few half grown choke to death; the windpipe is closed at the opening with a white substance. Eyes and head are all right; comb seems to be purple before they die. Can you tell me the trouble?
H. N. S.

North Fort Worth, Tex.
Answer.—This is evidently diphtheric roup. Procure some one of the various cures advertised in these columns and give as directed.

Question.—(1) Will you please inform me in your next issue what was the matter with my R. I. Red hen? She was 1 year old last May and was a good layer, only about once a week she would lay an egg about the size of a walnut; always ate good and was ap-

parently well until last evening she refused to eat her supper and this morning was found in the nest dead. I performed a post-mortem, but found nothing wrong, except a little bladder-shaped sack holding about half a tea-cupful of water, and not an egg of any kind, although I know she laid an egg only two days ago. I feed wheat twice daily and corn once. Oyster shells and wheat bran before them at all times?
(2) Will beef scraps take the place of green bone?
A. M.

Iron Belt, Wis.
Answer.—(1) We are unable to answer. (2) To a certain extent.

Question.—(1) Is the following a good mixture: Wheat, cracked corn, sunflower seed, caneseed, Kaffir corn, and buckwheat? (2) Is buckwheat valuable as egg-producing feed? (3) What is an absolute cure for roup when it first appears among chickens.
Odin, Ill. Mrs. W. B.

Answer.—(1) Wheat, 2 bushels; corn, 1 bushel; sunflower seed, 1 peck; Kaffir corn, 1 peck; buckwheat, ½ bushel; caneseed, 2 quarts. Mixed in this proportion makes a good scratch feed. (2) Yes. (3) There is no absolute cure for any disease, but there are a number of good remedies advertised in these columns that will cure most all cases, but we cannot recommend one above another.

Question.—(1) Would you kindly let me know the probable cost of raising 500 turkeys and have them ready for market in November and December? (2) Which are most difficult to raise, turkeys or chickens? (3) How much land would be required where turkeys

are fenced in? (4) Where can I get a good book on the care and management of turkeys?
H. J. M.

Schenectady, N. Y.
Answer.—(1) If on free range, about 50c each; if limited range only, about \$1 each. (2) Turkeys. (3) Turkeys will not do well in confinement, and we cannot say how much land is required. (4) We can supply you. Price, 50c.

Question.—(1) Has there ever been instances of eggs hatching the eighteenth or nineteenth day? (2) What is good to put on a sore? I have had a rooster fighting and he has two very sore feet.
H. H.

Van Buren, Ark.
Answer.—(1) Yes. (2) Carbolic ointment or any ointment that you would use on a cut or sore on your person.

Question.—Is there such a name as Ashlbury ducks? If so, what are the characteristics of that breed of ducks, or to make it more plain, what are the color and markings of such ducks?
Burlington, Wis. Mrs. W. E. L.

Answer.—There is what is known as the Aylesbury duck. They are pure white in color, with orange shanks and feet. They are natives of England.

Question.—Please inform me how to prepare chickens to ship about 1,000 miles. What kind of coops, also feed, and should they be watered?
Level, Ky. T. C.

Answer.—Use any one of the shipping coops now being made and advertised for this purpose. A tin cup should be fastened on the inside for water, and instruction on outside to express agents to feed and water.

POLEY'S WORLD'S BEST BUFF ROCKS

POLEY'S WORLD'S BEST BUFF ROCKS

POLEY'S WORLD'S BEST BUFF ROCKS

FIRST PRIZE C'K'RL. MADISON SQ. GARDEN N.Y. 1908-9.
BRED AND OWNED BY
J.W. POLEY ROYERSFORD PA.

ANGELO J. MYERS, Proprietor

JOHN W. POLEY, Manager

THE LINFIELD POULTRY FARM

Successors to John W. Poley, Originator Poley's World's Best Buff Rocks

Important Notice

WE DESIRE TO ANNOUNCE to John W. Poley's friends and customers and to any one interested in the BUFF ROCK BREED, that we have purchased his entire stock of "WORLD'S BEST BUFF ROCKS."

We have erected at LINFIELD, PA., a handsomely equipped and up-to-date poultry plant which from now on will be the home of this famous breed.

MR. POLEY, who has had many years' experience as a poultry fancier and who has spent fifteen years perfecting his "WORLD'S BEST BUFF ROCKS," has undertaken the management of our new plant.

We are now able to offer to you the finest line of BUFF PLYMOUTH ROCKS in the country.

"POLEY'S WORLD'S BEST BUFF ROCKS" whenever exhibited have won more first prizes than all the other competitors in the show.

Nine out of a possible fifteen firsts at New York in the last three years; nine out of a possible ten firsts at Allentown in the last two years; five firsts at one show at Philadelphia; and five firsts at the club meeting at Indianapolis; is a record which speaks for itself.

Now is the Time to Purchase Stock

Over fifteen hundred selected breeders and an unusual number of superior cockerels and cock birds from which to choose. If you are going to show this fall and desire birds THAT WILL WIN or if you need birds for breeding purposes, you will find it greatly to your advantage to either write or visit us before purchasing. Satisfaction guaranteed or money refunded.

POLEY'S WORLD'S BEST BUFF ROCKS

Fasten a small sack of feed on outside of coop.

Question.—Please state in your Questions and Answers department why breeders seldom say anything about Partridge Wyandottes. Are they a standard fowl? If they were bred to a white male would they produce white chickens? O. D.

Answer.—Partridge Wyandottes were admitted to the Standard in 1891. They

Florida poultry papers, if so will you give their address? (4) What are the worst troubles of poultry-raising in Florida? Mrs. J. M. T.

Answer.—(1) It is so considered. (2) We believe they would. (3) Not that we know of. (4) Fleas and lice.

Question.—I had ten young turkeys and they got what everybody say is the black head, but it is not. They

WHY I BREED ORPINGTONS.

They lay more eggs per year than any other breed. One of my pullets laid 260 eggs per year. You ask how to get eggs in winter. The answer—get White Orpingtons. In a government laying contest, held in Australia, they won first place, the pen averaging 252 eggs per bird during the year. Their eggs are very fertile. They are the best of mothers. They are very fond of a nest full of eggs; become broody in time to hatch the early chicks and are easily broken up from sitting, when they quickly resume laying. The chicks hatch out strong and are easily raised. One breeder has one hen that produced 300 chicks in a year (from the eggs laid by herself and her pullets). Three hundred descendants from one lone hen in twelve months. They mature quickly. White Orpington pullets have been known to lay when only three and one-half months old. They make broilers a month earlier than some other breeds. Their meat is juicy and of excellent flavor.

Last, but not least, there is money in them. The demand greatly exceeds the supply. You can get a good price for all the eggs and stock you have for sale. One breeder sold a pen of White Orpingtons—five birds—for \$7,500, and another pen of five birds for \$1,250. The same breeder sold several sittings of eggs at \$150 per 15 eggs, or \$10 for each egg. This is more than was ever paid for stock or eggs of any other breed. This season I had over 100 orders—at a good price per sitting—that I could not fill. I do not know of any breeder of Crystal White Orpingtons in California who was near able to supply the demand for eggs or stock.

Pasadena, Cal. S. Gaseoigne.

Portable henneries as manufactured by Nieman Bros. Mfg. Co., Mt. Olive, Ill.

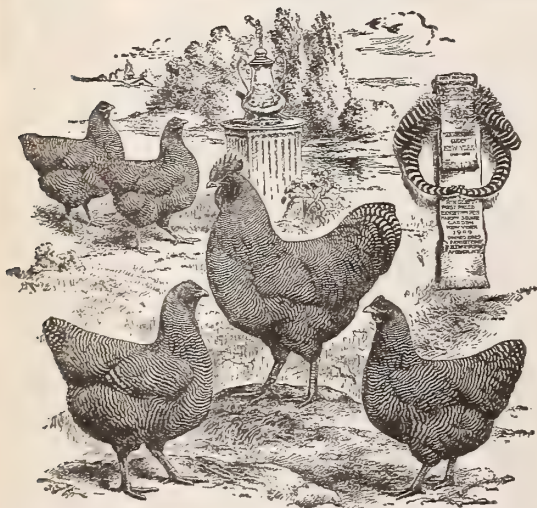

are bred very extensively at the present time. They would not produce pure white chickens if bred to a white male.

Question.—(1) Is South Tampa, Fla., a good poultry country? (2) Would Indian Runner ducks be profitable there, and if not, why? (3) Are there any

have tape worms. I saw what they passed and one by one they died. Now will you be kind enough to ask in your paper what is good for worms in turkeys? M. F.

Answer.—Will some of our friends who breed turkeys please answer?

Fashion's Proudest Birds ARE "RINGLETS"

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

E. B. Thompson's Barred Plymouth Rocks are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which has made the "Ringlets" America's leading strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the civilized world. The record stands alone and puts all others in eclipse—it is the most remarkable in the annals of poultry shows.

**The "Ringlets" are always imitated,
but never equaled**

I now have on my farm the largest and finest lot of superior exhibition and breeding birds—both male and female—I ever owned; they show that elegant blue color and bright, snappy, narrow "Ringlet" barring, that win under all judges and have made my Barred Rocks the leading silver cup and trophy winners at Madison Square Garden, New York, since 1887—nearly a quarter of a century. These birds will be the winners this fall and winter for the leading shows of America. Will mate breeders to produce winners if desired.

The enormous prestige of my "Ringlets," created by superlative quality, has made them the standard by which all other Barred Plymouth Rocks are judged

New richly illustrated 58-page catalogue mailed upon request; it is full of pictures of New York winners from life. You may have the product of my skill, reaped by 30 years' experience, at reasonable prices. Your wants will have my best and personal attention.

MR. FENTON REPLIES TO MR. ORR.

Editor American Poultry Journal:

Dear Sir: I note with interest Mr. Orr's reply to my article. I am not anxious to carry on any more discussion in any way over club affairs, but as he has asked me for my opinion on the Keating Cup award, I will give it purely from his reply.

It seems that Mr. Orr is very sore over the awarding of a silver cup to Mr. Keating at last Madison Square show. He says that at a meeting two weeks after the show Mr. Cleveland made motion that cup be awarded to Mr. K. for winning most number of points. Now, my opinion is that if it was not right Mr. Cleveland would not have done it. I have enough faith in Mr. C. to know that he would do only what he thought right, and I also feel sure that motion would not have carried if it was not a fair one. The man for you to go after is the man who made the motion, the man who seconded it and the men who carried it. That is no argument at all against the club. If you are so sore as you say you are over the matter, why did you accept \$5.00 from Mr. Cleveland as a special for Chicago? He was the man who made the motion, as you say. He must be the one at fault then. I cannot see where Mr. Keating has done anything wrong or hasn't the right to advertise his winning.

In the beginning of your article you say you are d——n sore over the affair, and later on you say you are glad he got the cup. Now, which is it?

You ask why the club did not award Mr. Cleveland a cup. The gentleman was at the meeting, and I am sure well able to look after his own affairs. If he thought he should have had the cup he surely would not have made a motion to have it awarded to Mr. Keating.

Why the club did not award you a cup on your two firsts I cannot tell, unless it was that the points won by Keating were more than those won by you.

In view of these facts, I cannot see where the club is guilty of any star chamber tactics. As for the secretary informing the rest of the members about it, I did not know he was supposed to inform the members of the club who won at New York, any more than who won at the hundred or more shows where club premiums are offered. I always labored under the impression that the club catalogue told you who won.

I know that what you say about breaking away from the parent body and starting in for oneself is very true, but in this case the reason for breaking away seems to me a very poor one indeed. I will leave it to the editor or anyone else who has read my article and your reply as to whether my arguments will hold water or not. Blood is thicker than water, as you say, but it's quite evident to me that yours is so boiling over being so sore that it's as thin as water, and I feel quite sure will thicken to normal when the heat of your passion has subsided.

That's right—don't trot along with a relative or club forever when you know things are not right—but before you desert show up your reasons, and when you do show your reasons to be against the club itself, and not against some few members in it.

Many men and women have stuck to their parent body or club when many

WOODS' S. C. BROWN LEGHORNS

Are the kind that WINS, LAYS and PAYS. More prizes at Missouri State Show, St. Louis, Dec. 1909, than any competitor, including 1st, 2d and 5th cockerel. 5250 birds on exhibition. Show birds and breeders for sale. The finest lot of cockerels I ever raised. : : : Tom H. Woods, Route 4, Fayette, Missouri

S. C. White Orpingtons

Kellerstrass Strain, won again at the big Butler Fair, Butler Pa., August 1910. 1st cock, 1st, 2nd cockerel, 1st, 2nd hen, 1st, 2nd pullet, 1st, 2nd pen. 50 June hatched cockerels at \$3.00 each. A few extra good ones \$5.00 each. No hens or pullets for sale.

**BARRED PLYMOUTH ROCKS**

Prize winners bred from Chicago winners. If you are looking for prize winners we can supply you with cocks, cockerels, hens or pullets that will surely win for you, at any show. Have succeeded in raising more and better birds than we ever had. All judges pronounce our Rocks as having the best barring, shape, color and undercolor of any they ever handled. Our Chicago winners in 1907 and 1908 prove this, our cockerels created a sensation. We won more prizes on cockerels than all competitors combined; we bred all of them, and have furnished many winners for all large shows. Many exhibition cockerels, of the grandest breed on earth, now ready to ship, also pairs, trios and pens carefully selected for either exhibition or breeding. Have a fine lot pure Bradley Bros. and Latham pullet-bred cockerels at \$3.50 to \$5 each. Don't fail to buy some of our birds, they are the best strain of winter layers in the world. Write for free circular showing our Chicago winners.

Money in Orpingtons

—OR—

THE SENSATIONS OF THE POULTRY YARD

Is the title of our New Book including all Standard Varieties, Buff, White and Black. The breed that has made money for all who have bred them.

The author of this book, Mr. Will H. Schadt, was one of the first breeders to recognize the wonderful merits of Orpingtons and has probably done more than any individual to bring them to their present stage of popularity. As organizer of the National S. C. Buff Orpington Club and Secretary for the first five successive years he raised the membership from 4 to 1500. During all this period much valuable data was gathered which is now being published for the first time. Besides ideal cuts of Orpingtons many articles will be published telling just how to intelligently mate and breed this popular fowl. It is impossible to even begin to enumerate the information given in this book, but whether you are breeding Orpingtons or not, you want to know why they will continue in favor so long as fowls are bred. We are going to sell this book in connection with a subscription to Poultry Post, one of the best 25c poultry journals published, giving all the latest and best news to poultrymen. A sample copy free. For 50c we will send you our book entitled "Money in Orpingtons" and Poultry Post 2 full years. If you are not fully satisfied with the book your money will be refunded. Send Silver, Stamps or Money Order. Address

of their worst enemies were members therein, and personally I have the greatest respect for one who does stick and by his efforts try to overcome conditions that he or she may think wrong.

I may be wrong, Mr. Orr, but I think "deserters" very fitting in this case, and will continue to think so until you can tell me reasons why you should form a new club, and what is wrong with the old one, outside of one or two officers. When you can do this I am with you. I have asked you on several occasions to tell me what you have against the club—not against the sec-

retary—that is wrong. You have not told me anything yet. Now, in your answer to this article, make your charges against the club, for that is what you left. Tell me also what wrongs there are in the old club, either against the club or its officers, that cannot be overcome.

I know you have some of the old members in your new club, but you know you said that you would rather desert a funeral procession and join a circus. Probably many who have joined with you would willingly give a dollar to see a circus providing that you took the part of the clown. I think if all who have joined your club would consider thoughtfully the arguments you are bringing up they would agree with me that the old club is all right, only it needs a shaking up or a calling down or something of that sort, and you fellows could have done it without "leaving the ranks" (if you like that better than "deserters"). At least one of your new members has written me that he thought so, too.

Yes, I know you have been after me, and I would be with you, but you won't give good reasons why you left the old club. I haven't anything against you, Mr. Orr—that is, anything that would make me consider you other than a good friend. I don't want you to think me angry at all because I cannot see your way. There are others, too, who cannot. I have asked for a reply, so let's hear from you. Remember:

Your arguments against the club; also why you left and what, in your opinion, is wrong in the club that cannot be overcome. What this new club thinks it can do that could not be accomplished in the old.

I will join you if you will give a reasonable answer.

Walter G. Fenton.

Mt. Clemens, Mich.

EGG, MEAT AND GENERAL PURPOSE FOWLS COMPARED.

Dr. H. F. Ballard.

THE letter by Mrs. Fred C. Hughes good many years there have been the text for this article. For a in the October A. P. J. suggested three classes of fowls, judged from a utility standpoint—the egg fowls, or those believed to be especially adapted and bred for the largest number of eggs, irrespective of size, either of the fowl or egg. As long as eggs are sold by the dozen the size of the egg does not come; it is numbers we are after, and any person who has had experience with a large number of varieties well knows that the especial egg fowl is below rather than above medium size.

The second class of fowls, the meat fowls, are those raised and sold especially as market fowls, and are generally understood to be those which will make the largest amount of meat on any given amount of food, or which will make a certain amount of meat in the quickest time, because these two characteristics are not synonymous. And these fowls are from medium size to the largest varieties known.

About the time the Plymouth Rock was originated there began a general endeavor to form, or originate by crossing the old, small-fashioned egg fowls with the bird then known as the Shanghai, the largest variety then known, to produce a variety or varieties which would combine the characteristics of

CRYSTAL WHITE ORPINGTONS

win, weigh and lay. At Illinois State Fair, we won 1st, 2d, 3d pullet, 1st, 2d hen, 1st cockerel on 10 birds entered and 161 in class.

Troy Medaris

Bement, Illinois

Food That Makes Hens Lay

Hens Crave Green Bone

Nature prompts them—it is rich in protein, the material eggs are made of. Don't "dope" your hens with "laying foods." Go to the market and get green bone for nearly nothing and prepare it fresh with a

STANDARD Bone Cutter (On Free Trial)

The easy-running, right-working cutter, favorite among poultrymen. Cuts all kinds of bones, green, dry, large, gristly and meaty, etc. Only machine that cuts square across the grain. 12 sizes. If you don't like it, return at our expense. Write for free catalogue.

STANDARD BONE CUTTER CO., Milford, Mass.

Cutter That Makes Good

Let Chas. A. Cyphers Save You 50% On A Standard Buffalo Incubator

IT MEANS dollars in your pocket to investigate the new Buffalo before placing that incubator order. Large repeat orders are coming in from last year's customers, proving that you will save a lot of time and trouble if you get a Buffalo instead of paying twice my price for an incubator not nearly so good. I want every one of my quarter million poultry friend and former customers to write me at once for full information about this money-saving, labor-saving incubator.

High Factory Cost The Vital Principles—heat—ventilation—regulation—are the same in the design, and has the added advantage that the thick asbestos insulation is also covered with galvanized iron, instead of cotton cloth, painted. The ventilation is my well known diffusion method that has made hatcheries of my design **The World's Standard**. The regulator is my compound toggle-joint design, with corrugated zinc leaves and flanged steel centers—the only design that has ever made close heat regulation possible. The lamp is my usual style—galvanized iron, seamless bottom bowl, with the addition of a radio-deflector below the burner, preventing overheating. The trays are strong and covered with galvanized wire cloth. The outer case is open-hearth galvanized iron and can never rust. The inner case is "Water-proofed Buffalo Board," and the walls are thick and well-packed. It has double doors, an inner one of glass and an outer paneled door. No better incubator can be made.

How I Save You Half I am able to Save You Half on this thoroughly well-built standard incubator only by Cutting The Selling Expense. I do not charge you for fancy literature and the salaries of a corps of high-priced officers and branch-managers. I haven't any dead-heads drawing fancy salaries. When you buy a "Buffalo" you deal with me direct and I give you three-fourths of the usual gross profit. When any poultry-raiser compares a standard Buffalo with another model selling at \$8.00 to \$10.00 more, I get the order every time. Again I get the order when he compares a Buffalo with the cheaply made boxes (called incubators) that sell at Buffalo prices.

Who is Chas. A. Cyphers? For the benefit of the beginner who is unfamiliar with poultry matters, these facts are printed. I wrote "Incubation and its Natural Laws" in 1894, the only scientific treatise on artificial incubation ever published. This work at once became the "Standard" in every country where artificial incubation was practiced. I designed and put the "Cyphers" incubator on the market in 1896 and continued to manufacture it, as President and General Manager of the Cyphers Incubator Co., until 1903, when I put out the "Model", which business I sold a year ago, and put the "Buffalo" on the market. Any poultry-man will tell you that the name "Chas. A. Cyphers" on an incubator means Quality the same as Sterling on silver.

Note My Prices

No. 0	50-60 Egg Size \$ 9.50	No. 2	220-240 Egg Size \$16.00
No. 1	110-120 Egg Size 12.00	No. 3	340-360 Egg Size 20.00

My Guarantee I positively guarantee that the Buffalo will hatch as well as any incubator made, regardless of cost. I guarantee it to be as substantially made, as well and as easily regulated as any incubator costing from \$8.00 to \$10.00 more, egg capacity considered. I guarantee it to be Fire-Proof and to last as long as any incubator ever built. **Your money back.** Send me your order today. Say which size you want and enclose the price with your order. My guarantee insures absolute satisfaction and protects you in every way.

Save A Third On Brooders

1911 Buffalo Colony Brooder is the best I ever built. It is roomy, well-lighted and Automatically regulated. It is made of pine lumber and its roof is covered with galvanized iron and will last a life-time. 1911 Indoor Brooder for indoor only, is a gem.

Indoor Brooder\$9.00
 Colony Brooder\$12.00

If you want more information before ordering, write for my illustrated circular describing Buffalo Incubators and Brooders.

CHAS. A. CYPHERS, President,
 Buffalo Incubator Company,
 4700 Ellicott Square, Buffalo, N. Y.

Read This Letter

The Crystal Springs Poultry Co., Oil City, Pennsylvania, markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent. of fertile eggs taken off this season—53%.

We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it. In the Buffalo you have a world-beater."

Patrick McEvoy, Manager.

the two into a medium sized variety, which would have the much coveted good points of both—eggs and meat; and these crosses came to be known as all-purpose fowls.

This endeavor has been crowned with surprising success, and the result is the up-to-date general purpose fowl as we know it today; and the varieties thus produced are the Plymouth Rocks, Wyandottes, Orpingtons and Rhode Island Reds, together with several minor varieties not quite so well known.

Notwithstanding the wonderful growth of these numerous varieties (and the varieties occasioned by color), there are but few breeders of them who will hold to the idea that they have exceeded the egg fowls for eggs, or the meat fowls for meat. But that they combine both these good qualities in one fowl to as large a degree as is compatible with size and egg.

Anyone knows a small hen will lay

Leghorns, Hamburgs, Games, Polish and Spanish, and from the big meat producers, the Brahmas, Cochins, Langshans and Dorkings. But I do not believe the said general-purpose fowls exceed the Leghorns, etc., for eggs, nor the Brahmas, etc., for meat—mind, I said exceed.

Another thing I do not believe, because my experience and observation teach me different, and that is that there is very much difference in good utility qualities between Plymouth Rocks, Wyandottes, Orpingtons and Rhode Island Reds; nor that the Reds, or any other one of the four, is going to run the other three out. And when I see writers making such one-sided prognostications I feel like making the prediction that in a few years said writer will have changed his variety to a newer one, or to one of the older ones in his class, which is just as good and has been all the time.

never break up a setting hen during the hatching season till she has set three weeks, and I never have setting hens enough.

Mrs. Hughes also misunderstood me as to the big layers and big setters. My observation has been that a big 10-pound hen is never a very good layer, and I do not believe you ever have that kind of hens in Reds; they do not weigh that much.

As to Mrs. Hughes' last question, I do not remember ever having written that the Cochin "was the only chicken." They suit me, and the fact that I cannot supply the demand for them at \$2 to \$10 each convinces me there are others who are as big fools as I am, and that makes me very, very happy; misery likes company, you know.

But it is the last part of Mrs. Hughes' last question that makes me feel "so funny, you know." She says the Reds are the best of the four vari-

First prize pen cockerel, Chicago, 1909.

First prize hen, Chicago, 1909.

more eggs from March 1 to December 1 than a large one. Also, anyone with experience knows a hen will not develop size and eggs at the same time. When she begins to lay she will stop growing; and will not gain an ounce in weight while laying a clutch of eggs. I will modify the last statement this much, to say that a hen that is laying an egg every day will not grow, but a hen may grow a little while laying an egg every second or every third day. I know whereof I speak in this matter, because I have experimented along this line, while I do not believe the average chicken raiser who matches up his pen and goes off half-cocked because some writer who has had a trial with them does not swallow all the big yarns told about his new-found favorite conglomerated mixture.

Now I firmly believe the all-purpose fowls fill a legitimate and long-felt want. They get all their good qualities from the little egg machines known as

Now for the benefit of Mrs. Hughes, I will say I am not opposing the Reds. They are undoubtedly a good general-purpose fowl. But when a breeder of them says that inside of five years everybody will be raising Reds, and that all other varieties will be relegated to the butcher shop I object and just say I don't believe it.

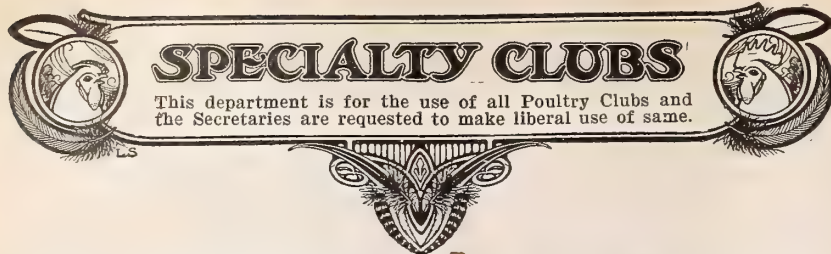

I have been breeding Cochins 28 years, and I want to say that I had more young chicks crushed to death under Plymouth Rocks than I ever did under Cochins. The feathers on the feet do not kill the little chicks, but a hen that will get up and dance about over the nest every time you go near her will kill more chickens than any other, little or big, but a Cochin hen does not do that; she has sense enough to sit still.

That Cochin hen that laid an egg in her coop with her chicks when they were two weeks old hatched her own chicks, so she had set three weeks. I

eties mentioned. Of course, all the breeders of all the other three varieties agree with her, and that makes me laugh some more. Who ever heard of a Cochin breeder claiming the Cochin to be the best all-purpose fowl?

The Southern New England Poultry and Pet Stock Association, recently organized in New London, with a charter membership list of about two hundred members, will hold its first annual show December 27-29, 1910, in New London, Conn. A long list of specials, including many silver cups, medals, etc., is included in the premium list. For information concerning the show, write the secretary, Hayward E. Beebe, Waterford, Conn.

The Westmorland Poultry and Pet Stock Association will hold its annual show February 9-11, 1911, at Moncton, N. B. Geo. H. Seaman, Sec., Moncton, N. B.

This department is for the use of all Poultry Clubs and the Secretaries are requested to make liberal use of same.

TO THE MEMBERS OF THE AMERICAN WHITE ORPINGTON CLUB.

I am in receipt of a letter from our secretary, Mr. F. S. Bullington, of the American White Orpington Club, Richmond, Va., stating that the annual meeting of the club would be held at the Kansas City show, November 29 to December 3.

Now, I would appreciate it very much to see as many members of our club at the meeting as possible. I would also like to see you bring some birds. I am going to tell you frankly that I am not going to exhibit any birds at the show, because it is my home town, but I can assure you that a person winning a prize at this show will get one of the biggest advertisements that he could ever receive, and an advertisement that will bring him orders for years and years to come. There will be more cash in gold and cups offered at this show than were ever offered at any show in America. While Mr. Quisenberry, the secretary of the State Poultry Board, has already issued his premium list, I am frank in saying that it does not contain one-half the special premiums and cups that will be given at this show. I am receiving free contributions of money and cups almost daily, which will be offered at this show, not alone on White Orpingtons, but on all known breeds, and there will be birds at this show from almost every part of the world, so please bear in mind that a winning at this show will be one of the biggest advertisements that any breeder of any breed ever had.

Ernest Kellerstrass.

The National Single-Comb Rhode Island Red Club will hold its next annual meeting and election of officers in connection with the Missouri State Show at Kansas City, November 28, 1910, at 7:30 p. m. The officers to be elected are a president, three vice-presidents, a secretary-treasurer, seven executive committee members, one delegate to A. P. A. convention. The club will also amend its by-laws and transact such other business as may properly come up before the meeting. Also to make arrangements for a large class of Single-Comb Reds at the coming National Fair—location soon to be announced. In connection with this meeting the club offers \$75 in cash special prizes to club members only. The Rhode Island Red School of Instructions, given by the National Single-Comb Club will be held in connection with the Missouri State Show at Kansas City, November 28, 1910, at 2 p. m. All judges and breeders are cordially invited to attend this meeting. Here the real live birds will be on the stand to demonstrate to the breeders of Reds, the true shape and ideal color, as well as their markings. And another very important point will be to see the changes to appear in the coming Standard. Several judges will be there and ready to discuss any and all questions on Reds. Any breeder will have permission to ask questions about Reds and to take part in discussions. J. H. Valliere, secretary, Cedar Rapids, Iowa.

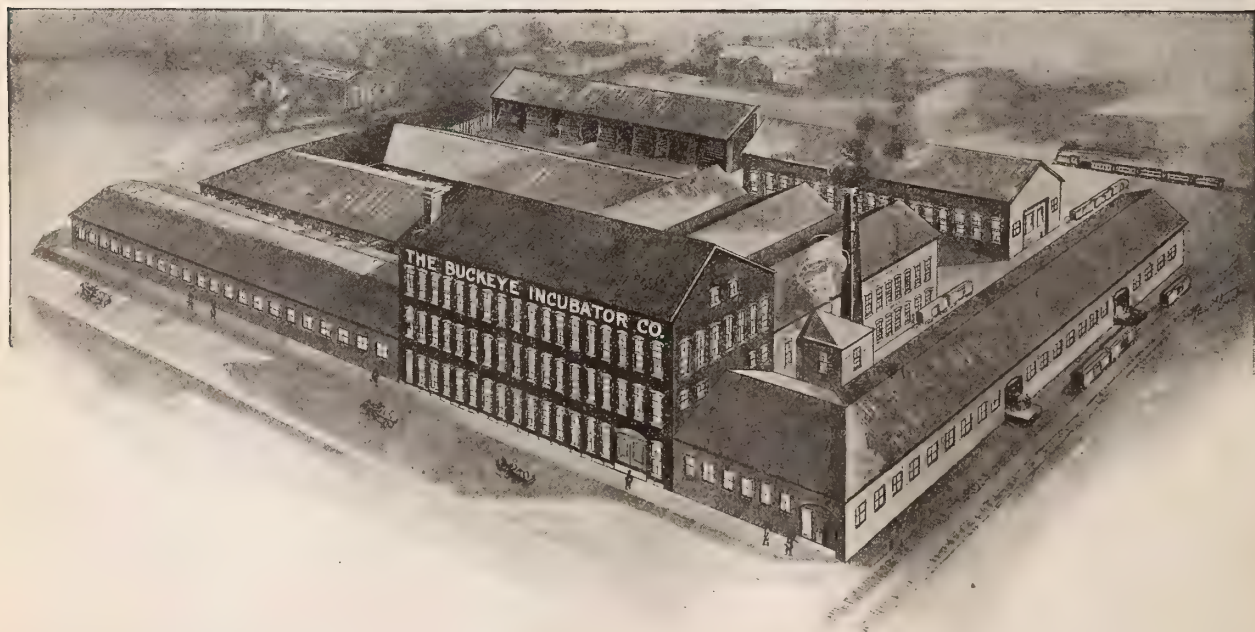

On Thursday, December 1, there will be held at Kansas City, Mo., a big meeting and grand rally of the members of the southwest branch of the Amer-

ican Poultry Association. Not only the members of the southwest branch are invited, but all other members of the A. P. A. and visitors as well, whether you are members of the association or not, are especially invited to be present with us on the above date. We will have with us that day speakers that will discuss matters of vital importance to each and every one present, and you will feel that it was worth while to be with us if you are a down-to-date poultryman or poultrywoman. If you miss it you will regret it, sure. Addresses will be made by Secretary S. T. Campbell, Mansfield, Ohio; Reese V. Hicks, Topeka, Kan.; T. E. Quisenberry, Columbia, Mo., and others will be added later, and will promise that every moment of the day something will be doing to help you in the poultry business. Let everybody come out and help us make this the largest and best meeting ever held by a branch association. W. S. Robison, secretary-treasurer Southwest Branch, Fayette, Mo.

The officers of the Boys' National Poultry Club, whose terms commence November 1, are: President, Lynn C. Townsend, Weedsport, N. Y.; first vice-president, Wm. F. Knauer, Holmesburg, Philadelphia, Pa.; second vice-president, Elbert E. Lawrence, Craig, Mo.; secretary-treasurer, E. Lawton Moore, Jr., Wyncote, Pa.; executive committee, Flem. Hagen, Jr., Walter E. Gardner, Wm. H. Gilborne, Jr., and Wm. P. Muirhead. The fifth place, that to which a member in the Mountain or Pacific states is entitled, is vacant. We especially invite young fanciers residing in that district to join.

All young men fanciers in America should join the club, and we shall be pleased to send our catalogue to anyone interested. The annual dues are 50 cents. Applicants are requested to give their names, ages, addresses and variety bred, and mention the American Poultry Journal.

The Pennsylvania State Branch has elected officers. At a meeting of the executive committee by-laws were adopted. The annual meeting of the

"This is the new factory recently built by the Buckeye Incubator Company, at Springfield, Ohio. It covers 60,000 square feet of ground space and has a capacity of 100,000 fifty-egg incubators and 50,000 Brooders and Portable Poultry Houses. The Buckeye Company are now confining themselves exclusively to the manufacture of Buckeye fifty-egg Incubators, fifty-chick Brooders and Portable Poultry Houses."

branch will be held at the Philadelphia show. A catalogue of the branch will be issued shortly.

The next annual meeting of the International Rose-Comb Black Minorca Club will be held December 10, at 2 p. m., in the Coliseum, at Chicago, in connection with the Chicago Poultry Show. Every breeder of this variety is requested to be present at this meeting, where matters of vital interest to the club will be considered.

Anyone who is able to make an exhibit this season of Rose-Comb Black Minorcas should not fail to send at least a few specimens to this annual club show. The regular cash prizes amount to \$45. Cash specials have been donated amounting to over \$35, and a \$35 silver cup will be given for best display. Two of the best known judges will place the awards. Judges who thoroughly understand Minorcas. Judge Sharpe Butterfield will place the awards in cock birds and hens; Judge W. A. Russell, in cockerels, pullets and pens. Send for premium list to Theo. Hewes, Indianapolis, Ind. The specials are open to club members only. Full particulars concerning membership may be had by addressing Lloyd C. Mishler, secretary, North Manchester, Ind.

The American Orpington Club begs to announce that they will offer at any show in the country the coming season a

710 CANTON STREET, LOUISVILLE, KY.

special ribbon to any member of the American Orpington Club winning a first at any show, if there is one or more entries, and a silver cup to any member at any show in the country for best display, provided there are three entries in each class, two members competing. The membership of the American Orpington Club has tripled during the past season, as the Orpington breeders are evidently appreciating the advantages of becoming members of the oldest and original Orpington Club in this country. A club in which every breed of Orpingtons receive an equal chance and equal advantages with another. Ernest Miere, secretary, Flushington, L. I.

The National Rose-Comb Orpington Club will offer special prize silk ribbons for the best rose-comb black, white and buff cock, cockerel, hen, pullet and pen at the poultry shows to be held in Boston, Mass.; New York, N. Y.; Cleveland, Ohio; Chicago, Ill.; St. Louis, Mo.; Kansas City, Mo., and Portland, Ore. As only members are eligible to compete for these prizes, Rose-Comb breeders should take the matter up with their secretary, Mr. A. R. Pollock, Piqua, Ohio. We will also offer the same prize at any show held under the A. P. A. rules where three or more of our members exhibit, provided the secretary is notified of such intention.

Black Orpington breeders, attention! We want you to join the club and win a medal or cup at your poultry show this year. Medals and cups are offered at every show in America, whether show catalog indicates that fact or not. Simply get the show secretary to vouch for your winning and if your dues are paid in full to date of show your medal or cup will be forwarded direct from the national secretary. All dues now payable—club year begins October 1. Don't miss your medals this year! Write at once to the secretary, Milton W. Brown, Station L, Cincinnati, Ohio.

The American Light Brahma Club offers as special prizes four handsome silk ribbons—one for best shaped male, one for best shaped female, one for best colored male and one for best colored female. Only members whose dues are paid to October 1, 1911, are eligible to compete for these specials. Membership fee is only \$1, and this pays up to October 1, 1911. For information in regard to the club write Frank P. Johnson, secretary, Station A, Indianapolis, Ind.

The annual meeting of the American Columbian Plymouth Rock Club will be held at Buffalo during the week of the great International Show. Questions involving the future conduct of the club will be discussed at this meeting and a large attendance is desired. Special ribbons are offered by the club, also cash prize. Edw. B. Kaple, secretary, Elbridge, N. Y.

The National Silver Penciled Wyandotte Club will offer their handsome set of silk ribbons at all poultry shows that print our notice in their premium list. One for the best cock, hen, cockerel, pullet and pen. \$2 pays fee and first year's dues. Join the club before the show opens to compete for ribbons. James S. Wason, secretary and treasurer, Grand Rapids, Mich.

The National Black Langshan Club will hold its annual meeting at the Kansas City Show, November 29 to December 3, 1910. We are offering our club ribbons at all shows this winter (to members) if notice of same is placed in the premium lists. M. S. Barker, secretary, Thorntown, Ind.

The National Rosé-Comb White Minorca Club offers silk badges at all state shows this winter. Send \$1 for membership to General Secretary Fred Alger, Waukau, Wis.

Editor American Poultry Journal.

Dear Sir: I want to give to the readers of your journal my experience with hatching chicks in incubators. So many chicks are lost every season from white diarrhea. All the care and remedies in the universe would do no good. I have read hundreds of letters in different poultry journals telling of their chicks dying like flies in a week to ten days after being hatched, but I never saw an answer giving any remedy that was worth anything. The cause was never reached. I had experimented several years, losing hundreds of chicks, and was just as much in the dark when I quit as when I began. With all the remedies, care and different kinds of feed they would die like flies inside of two weeks. But this spring I found the "long-looked-for" remedy. I picked up the March number of "Poultry" and there was the experience of Prof. E. F. Pernot of the Oregon Experiment Station. He said to fumigate your incubator with formaldehyde would remove the cause. I used about two teaspoonfuls of permanganate of potash to 1 ounce of formaldehyde. Put in a small dish and place in incubator and close up tight and leave for 12 hours. Do this before putting eggs in. I have a 360-egg size.

The chicks come out strong and hearty and live, and you don't see any white diarrhea. It was a great discovery and should be published in every poultry journal.

C. L. McFerren.

Bellville, Ohio.

Editor American Poultry Journal.

Dear Sir: As I am a reader of the A. P. J., and three other poultry papers, and a new beginner in the poultry business, I will give you my record for a year commencing October 5, 1909. I started with 2 yearling hens and 32 pullets, S. C. Buff Orpingtons, and got 2,722 eggs. I began setting hens in February—set 26 for the year; 16 of them run with chicks until they weaned them. Two of them died in March, 1 got killed in May, and I sold 7 May 15, leaving 24; 2 disappeared the last of July, leaving 22. I sold \$31.50 worth of eggs and have eaten \$10.45 worth. Did not advertise any, but sold nine settings for \$1 per setting, making a total of \$41.95. I raised 210 chickens. I now have the 22 yearling hens and 70 pullets. I aim to keep 75 through the winter. They have been through a heavy molt through August and September, and some are still moulting. I moved to a new place the first of August, but did not check their laying. I have not been forcing for eggs through moult period.

In January and February the thermometer ran to 20 below zero several days, but I got from 12 to 15 eggs per day.

Ed. Eaton.

Dana, Ind.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

At a meeting last Thursday, September 22, 1910, at Ridgway, Pa., the Elk County Poultry and Pet Stock Association was organized with the following officers: President, J. L. Brownlee; vice-president, Geo. Bartholomew; secretary, R. J. Rauscher; treasurer, A. S. Smiley. The meeting was very largely attended, and from the interest taken the outlook for a thriving association is very bright. They anticipate holding a show in the near future, dates of which will be announced later.

The Northwestern Poultry and Pet Stock Association will hold their sixth annual show at Iowa Falls, Ia., December 12-16. The State White Wyandotte Club cup will be offered at this show, and many other cups and large cash prizes. Plan to send your birds to Iowa Falls. U. J. Shanklin, judge. Send for premium list.—H. L. Dixon, Secretary, Iowa Falls, Ia.

More Inventions by Lee

Here's his new Incubator door all are talking about. Perfect ventilation for the first time.

Mandy Lee Incubators

supply life-giving oxygen freely to the eggs and just as naturally draw off the poisonous gases. The most important step ever taken in incubator ventilation—neither above nor below, but *right at the eggs*—the correct principle, for the new Mandy Lee is making better hatches of *stronger* chicks than any other incubator in the world.

We Measure Everything

Heat—moisture—ventilation. You *guess* at nothing. If the eggs are good and you follow simple directions your work with a Mandy Lee is as nearly an absolute certainty as anything can be. There is no more reason why you should buy an incubator that regulates nothing but heat than for a farmer to continue to harvest his crops by methods and machinery used 100 years ago. Your success with poultry depends on your ability to select equipment that is *right*—that's what you *always* get from us.

No guessing with a Mandy Lee

Send to-day for new catalog. Learn of these new improvements and of our new out-door, lamp-heated and regulated brooder, just what is needed.

GEO. H. LEE CO., 1101 HARNEY ST., OMAHA, NEB.
P. S. Have you received your copy of "Lee's Chicken Talk" and "Mandy's Poultry School," the two most popular poultry books ever published? *Free!*

Philadelphia will hold its fifth annual show at the Second Regiment Armory, Philadelphia, the week of December 13-17. The list of judges, although not quite complete at this time, is as follows: Mr. W. C. Denny, Buffalo, N. Y.; Mr. H. P. Schwab, Irondequoit, N. Y.; Mr. Charles H. Ward, Bethel, Conn.; Mr. W. Theo. Wittman, Allentown, Pa.; Mr. J. C. Punderford, Frenau, N. J.; Mr. Charles Nixon, Washington, N. J.; Mr. Joe Coleman, Marseilles, Ill.; Mr. Robert Seaman, Jericho, N. Y.; Mr. Frank L. Platt, Toledo, O.; Mr. James T. Baldwin, Wisconsin, Philadelphia; Dr. J. S. Wolfe, Bloomfield, N. J.; Hon. David A. Nichols, Chelton, Conn.; Mr. Edwin H. Morris, Sparkhill, N. Y.; Mr. John J. Ritz, La Mott, Pa. The entry fee on bantams, turkeys and geese has been reduced to one dollar, the prize money remaining the same as for the larger breeds. Premium lists may be obtained by addressing Show Secretary, 205 Mint Arcade, Philadelphia.

The third annual poultry and pigeon show of the Northampton County Fanciers' Association will be held in Bethlehem, Pa., during Thanksgiving week, November 23-26, 1910. The market building has been secured, assuring ample room to properly coop and display 2,000 birds. All new French coops will be used. The fanciers in and around Bethlehem are all working enthusiastically for the show, and a good exhibition is assured. Entries will close on November 8. Premium list ready. You should have a copy. Address the secretary, Herman J. Schneller, Bethlehem, Pa.

Following are the judges selected to place the awards at the great Baltimore show, January 3-7, 1911: David A. Nichols, J. H. Drevenstedt, W. C. Denny, Richard Oke, H. P. Schwab, W. Theo. Wittman, Robert Seaman, J. C. Kriner, Geo. Young, E. B. Ulrich, A. A. Ashley, Wm. Ehinger, W. K. Nester. For premium list send to Geo. O. Brown, Sec., 2027 E. North Ave., Baltimore, Md.

The Idaho State Poultry Association will hold its second annual show at Boise, Idaho, December 26-31, 1910. Miller Purvis, judge; Meldo Hillis, Sec.

The Portville Poultry and Pigeon Club will hold its fourth annual show at Portville, N. Y., January 24-27, 1911. Wm. F. Brace, judge; J. F. Nagel, Sec.

Ed. Brown, Mendota, Ill., the well-known breeder of Barred Plymouth Rocks and Pekin ducks, exhibited one hen at the late Illinois State Fair and won first prize. He also won 2d and 3d on a pair of Pekin ducks. Write him for what you desire in these varieties, he will treat you right.

Canandaigua, N. Y., Sept. 15, 1910. I have this day sold and delivered to Hillhurst Farm, Orchard Park, N. Y., my entire stock of Columbian Wyandottes, including cuts and good will.

This stock combined with the stock the Hillhurst Farm already has should place them well in the front rank of Columbian breeders, giving them a large stock of very high quality. C. J. Andruss.

A Case of "Wooden Leg"

Would you hire a man with a wooden leg? Hardly! A wooden leg is a poor substitute for real leg power. You would want a man with two good legs—full leg power—no substitutes.

Disks and other contraptions in common cream separators are like wooden legs—they are mere substitutes for lack of skimming force resulting from a wrong principle of construction. A properly built separator produces plenty of skimming force to do the work without disks or other substitutes. Claims that contraptions are needed in modern machines are disproved by the fact that

Sharples Dairy Tubular Cream Separators

contain neither disks nor other complications, yet produce twice the skimming force, skim faster and twice as clean as common machines. Wash many times easier and wear several times longer in consequence.

The World's Best. World's biggest separator works. Branch factories in Canada and Germany. Sales exceed most, if not all, others combined. Probably replace more common separators than any one maker of such machines sells.

CANADA'S BEST R. C. and S. C. BLACK MINORCAS

Winners of the Red and Blue at the largest shows on the continent. At the Canadian National Exhibition at Toronto in September, Canada's greatest fall show, in the largest and best class ever shown at Toronto, we won Single Comb—Cock 1st and 2d, hen 1st, cockerel 3d, pullet 1st and 2d. Rose Comb—cock 1st, hen 2d and 3d, pullet 2d. No other exhibitor won more than one first. At London same month we won, Single Comb—cock 1st and 2d, hen 1st and 2d, cockerel 1st and 3d, pullet 1st and 2d. Rose Comb—cock 1st, 2d and 3d, hen 1st and 2d, cockerel 2d and 3d, pullet 2d and 3d. We also won special for best collection in both R. C. and S. C., at both London and Toronto. We supplied winners for the best shows on the continent last season and we are in better shape than ever to supply exhibition birds this season. Scarcely a mail but what we get inquiries from last season's customers.

25 LEG BANDS FREE.

How often do we hear that old complaint of one's chickens getting mixed with their neighbors. Surely, there's no need to quarrel or go to law about the matter. Get a supply of leg bands of some practical make and mark your fowls. In no other way can we be certain of the age, breeding and laying qualities of each bird than to properly band them. During the next few weeks the Kemi-form Company of Cleveland, Ohio, present our readers the opportunity of obtaining 25 (numbered) Signet aluminum leg bands absolutely free.

These bands may be easily adjusted to fit any size chicken or turkey, while a new positive lock insures their staying on as if welded. No chaffing of fowls' legs when Signet bands are used.

All poultry keepers who recognize the importance of healthy fowls will welcome this free offer in connection with the purchase of a package of Kemi-form, the reliable disease preventative, cure and tonic. It is a well-known fact that serious sickness may break out in your yards at any time. You are never safe unless some good remedy is kept constantly at hand. A Kemi-form tablet dissolved in the flock's drink now and then means health insurance for your chickens. For the speedy cure of Rouse, Cholera, Chick-en Pox, etc., Kemi-form has no equal. Why not look up this firm's ad on another page and get some of these leg bands before the supply becomes exhausted. The Kemi-form Company guarantees to please you or return your money upon request.

Rockandotte Farm, Southboro, Mass., made almost a clean sweep at Nashville and Memphis 1910 on their White Plymouth Rocks and White Wyandottes, which fully demonstrates the fact that this farm produces some of the best stock in the country. Their winnings at Nashville were as follows: On White Plymouth Rocks, 1st cock; 1st hen; 1st, 2d, 3d and 4th cockerel; 1st, 2d, 3d and 4th pullet, 1st pen; special best pen in show, special best hen in show, special best pullet in show. On White Wyandottes, 1st hen; 1st cockerel; 1st, 2d, 3d and 5th pullet, 2d pen. At Memphis, on White Plymouth Rocks, 1st cock; 1st hen; 1st, 2d, 3d and 4th cockerel; 1st, 2d, 3d and 4th pullet, 1st pen; special best cockerel in show, best pullet in show, best pen of White Plymouth Rocks, \$50 grand prize for best 15 birds in one variety. White Wyandottes, 1st cock; 1st hen, 1st, 2d and 5th cockerel; 1st, 2d, 3d, 4th and 5th pullet, 1st pen, 30 ribbons on 30 birds. This is certainly one of the grandest records ever made by a single exhibitor at any show in this country and these birds were all hatched and raised on the Rockandotte Farm, which is owned by W. R. and Mrs. S. H. Graves, Southboro, Mass. This is not the only record made by birds from this farm; the first prize cockerel at Madison Square Garden, New York in 1908, 9-10 was bred by these people, also first Boston cockerel, 1910, and many other prize winners at the Boston show this year. At Memphis, Tenn., 1910, in a class of 132 Rocks, they won the four first prizes; also special for best pullet in show, and \$25 in gold for best cock, hen, cockerel, pullet and pen, all Wyandottes competing, and the \$50 Purina cup for best pen Rocks. Their winnings at New York were equally as good, and you cannot make a mistake in ordering show birds or breeders of these two varieties from the Rockandotte Farm, Route 4, Southboro, Mass.

J. A. Beckerdike, Millersville, Ill., the well-known breeder of White Plymouth Rocks, made an exhibit at the late Missouri State Fair, Sedalia, Mo., and won the following prizes: 1st hen, 1st pullet, 1st pen; 2d hen, 2d pullet, 2d pen; 3d cock, 3d cockerel, 3d pullet, 3d pen; special for best display of Rocks, all varieties competing. This winning, together with his past record, certainly shows that he breeds birds of quality. He has some exceptionally fine birds for the early winter shows, birds that cannot help but win the blue in the strongest competition. Write for his catalogue.

A DAY WITH E. R. PHILO, AT ELMIRA, N. Y.

We had seen pictures of the Philo Institution, etc., and were prepared for what we were to see, when we went there, but these pictures were in no way as convincing as the real thing when we saw it.

This mammoth building, costing thousands of dollars, stands as a monument as it were, to prove what the public think of the Philo System. For if it did not possess merit the public would have discarded it long ago.

In this building are located the offices on the main floor, in the cellar 2,700 square feet of floor space are used for the printing room, and the rest for the wood working room, where they manufacture their coops, which are sold in knocked down form. The upper floor is partly used for storage, and partly for recitation rooms for resident students.

Back of this building is a building where they manufacture their own gas, which is converted into electrical power to run the machinery, presses, etc.

There is also an incubator building, 20 by 100 feet, in which are sixty-eight Cycle Hatchers, holding 3,400 eggs. Besides these, there are literally hundreds of Philo coops. Mr. Philo informed us there were 300 old birds in these coops, and 4,000 chicks, and we believe it, for there were some chickens there, all healthy and doing fine. They were all sizes and ages. Some of the pullets raised this year were laying at the time of our visit, September 2.

Mr. Philo showed us birds whose parents, for seven generations, had never been outside of a Philo coop. They certainly looked strong, vigorous and healthy. This would certainly convince any one that their system had no tendency whatever to lower the vitality of the stock reared according to Mr. Philo's plan.

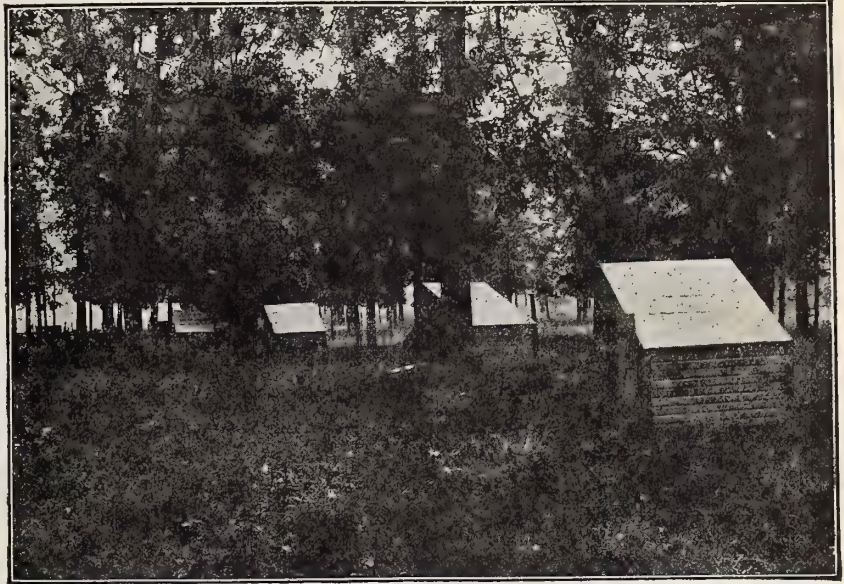

Any one coming here and seeing this plant would have to be convinced that Mr. Philo's system was an unqualified success, when followed out as he does it. This is intensive poultry culture, and disproves the old time theory that one must have large range for these birds in order to be successful. It is now possible, under the Philo System, for almost anyone to have a few chickens, and the public are realizing this through Mr. Philo's generous advertising, and thousands of people are now using his system, and have

chickens where they did not have them before.

To show you how the public are taking to it, we will tell you that they have received as many as 5,000 letters per day. It takes twelve girls a half a day to open these letters. The average number of orders received for their book last winter was 1,000 per day. Their business has grown so large that they have been compelled to rent warerooms in several cities, in different parts of the United

States, which includes some extra choice cockerels out of Buffalo Queen, the bird that created so much attention at Buffalo last winter. These cockerels will no doubt win the blue ribbons the coming season, and it will be well for our readers to communicate with Mr. Hayner if they desire something first class to exhibit at their early winter shows.

C. L. Buschmann, Indianapolis, Ind., the well known breeder of R. C. Rhode Island

SHADE FOR COLONY HOUSES ON MIDLOTHIAN FARMS, TINLEY PARK, ILL.

States, and they have opened a branch office in Oakland, Cal., to take care of the Western trade. We give you these facts as we found them. Certainly they should convince you of the merits of the Philo System.

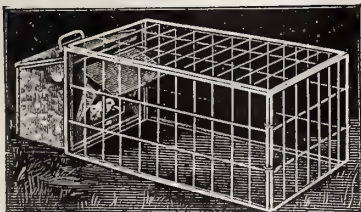

Jonas Hayner, Livingston, N. Y., the well known Barred Plymouth Rock breeder, reports that he has some of the finest young stock that it has ever been his pleasure to

Reds, reports the following winnings at Nashville, Tenn.: 1st, 2d, 3d, 4th and 5th cock; 1st, 2d, 3d, 4th and 5th cockerel; 1st, 2d, 3d, 4th and 5th hen; 1st, 2d, 3d, 4th and 5th pullet; 1st, 2d, 3d and 4th pen; \$50 silver cup for best and largest display; \$50 in gold for best and largest display; silver cup for 10 best pullets, all birds competing. Southard, judge. See report of Illinois State Fair for his winnings at that show.

White Rocks Exclusively

100 large early hatched cockerels, 100 pullets and 75 yearling hens for sale Prices and stock that can't be beat. My birds have always won more prizes than any other exhibitor. If you want a good show bird or good breeders, write me.

Model Setting Coop

Model Brood Coop

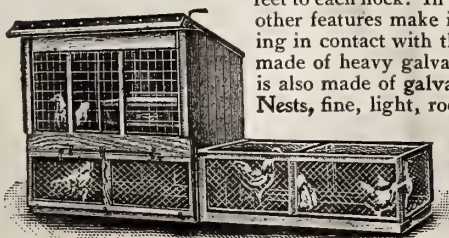

Model Colony Coop

Economy Trap Nest

Model Portable Hennyery, an ideal contrivance for keeping fowls in small flocks. It is just what you want if you have but little room, yet would like to keep a good many chickens. Nearly 500 layers can be comfortably kept on a city lot 50x150, allowing 100 square feet to each flock. In our Model Hennyery we have perfect sanitation, pure fresh air at all times and many other features make it indispensable to the breeder. Our **Setting Coop** prevents the setting hens from coming in contact with the other fowls. It is light, durable and practically lice proof. Our **Brood Coop** is made of heavy galvanized iron, is rat and vermin proof and weighs about 15 pounds. The **Colony Coop** is also made of galvanized iron, easily cleaned and perfectly sanitary. Our practical **Economy Trap Nests**, fine, light, roomy nest that cost but little more than a common nest. Space does not permit a detailed description of our goods in this ad and if you are interested and want to know about these appliances write for our descriptive catalogue.

POULTRY BEGINNER WANTED.

I have a position for a young man, who is sober and industrious, has the love of pure bred fowls deeply rooted in his heart and knows that he wants to make poultry-keeping his life work. It is a situation in which a young man can grow in salary as well as knowledge if he has it in him. I cannot afford fancy wages to start, as the work is not heavy, though none but a faithful man will care for all the details entrusted to him. Let me know how you are hooked up, tell me what is the least you will begin for and what experience you have had. If you mean business show it in your letter to me. Hurry your letter.

Amos Burhans.

Waterville, Minn.

On another page appears the illustrated advertisement relative to the S. C. Buff Orpingtons of John O. Willard, of Linden, Mich. He has been the vice-president of the National S. C. Buff Orpington Club for two years and an extensive breeder and exhibitor at the largest shows where he always makes an enviable record. Last spring in fifteen special matings he had about sixty prize-winning females and twelve prize-winning males, which had won at such shows as Madison Square Garden, New York, Chicago, Michigan State Fair, Lansing, Detroit, Jackson, etc., etc. During the spring egg trade, Mr. Willard sold and delivered over \$1,100 worth of eggs and turned down orders and money for nearly \$800 worth in addition. This season he has raised on his own and other farms about 1,000 Buff Orpington chicks from which he expects to realize \$2,500 over and above his own show birds and breeders. He is now offering young and old birds at living prices. During September he sent three different strings of birds to the Michigan State Fair, the Grand Rapids fair and to the Cadillac fair. He won fourteen out of fifteen first prizes and nearly all the others besides. Mr. Willard is now conducting his fall and winter sale. If any of our readers are interested in big wonderful Buff Orpingtons of high quality we advise them to get in touch with Mr. Willard at Linden, Mich. He gets out a fine catalog telling all about his stock. It's nicely illustrated with pictures of his birds, etc., and is free for the asking.

All poultry raisers each season suffer losses which, if eliminated, would effect a substantial increase in their profits for the year. One of the greatest losses to contend with is no doubt that incurred by the depredations of rats and mice. Conditions here are hard to meet, as traps seem to be unsatisfactory, and the use of poisons is only a risk of further loss, as they are obviously a source of destruction to poultry and domestic animals as well. It seems, however, that the solution of this problem has been found by the Pasteur Vaccine Company, Ltd., whose advertisement appears elsewhere in this issue. They have a virus which is furnished in either bouillon or gelatin form and which is fed to the rodents on bait. In the course of a few days a

mortal and contagious disease develops in the rodents which rapidly spreads. The disease is characteristic, however, in that it is confined to the rodent family. The virus might well be called the "Ideal Rodent Extirminator," for here is a preparation that affects not only the rats and mice that partake of the bait, but the disease, which

either the Chicago or New York office of the above mentioned company, if this paper is mentioned.

F. D. Sutton, Youngstown, Ohio, the man who is producing superior White Orpingtons, reports that he is almost sold out of surplus stock and any one desiring high

True type of R. C. Buff Leghorn as bred by F. A. Tecktonius, Racine, Wis.

it gives them, is communicated to their companions. It will thus be seen that an extensive area can be cleared of the rodents, and being fatal only to rats and mice, it can be used with safety anywhere without endangering other life. Our readers will find it to their advantage to give this matter their thorough consideration. Full particulars will be furnished on application to

grade Orpingtons from him will have to order quickly.

BLANCHARD'S WHITE LEGHORNS

The Leading Strain of Heavy Layers. Winners at Madison Square Garden, New York, 1903, 1904, 1905, 1906 and 1907

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are one of The Great Laying Strains of S. C. White Leghorns in Existence. No labor or expense has been spared in building-up perfecting the strain, and while the production of large, pure white fancy market eggs has been the main object, Standard Qualities have not been neglected. They are Large, Vigorous, Active and Handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for Hatching. Stock for Sale. Illus. Circular Free.

POST CARD BRINGS our free 56-page book, "The Why and How of the Miller System." Test our ideas far enough to form an opinion. If not satisfied, notify us in 30 days and we will provide return postage. Address Miller System Company, 14 7th, Binghamton, New York

Ferris' White Leghorns

Winners at Louisville, St. Louis, Toledo, Detroit, Pittsburgh and the Michigan, Indiana, Iowa and Tennessee State Fairs. : : : : :

THIS fine male won first as a cockerel at the Indiana State Fair last year and first as a cock at the Michigan State Fair this year. He is a typical Ferris White Leghorn—exceptionally fine in shape, graceful in carriage and has that snappy, intelligent appearance which all good show birds should possess. Notice his fine head, his concave back, his low tail, his style and finish.

His chicks show the same good points that have made him an easy winner, and many of them are early hatched, ready to sell now.

He is but one of several remarkably fine males that were in our breeding yards last season.

Hundreds of their chicks have reached their maturity; they are large, snow-white and typical in shape, with fine heads and low tails and they will win for you wherever you want to exhibit.

Prices are as low as such high grade stock can possibly be sold. Exhibition breeding males, sired by winners like the one shown above, at \$5, \$7.50, \$10 and \$15. Females at \$3, \$4, \$5 and \$7.50. These birds will win in ordinary competition, and are the kind that will breed winners. See our new catalogue for full particulars regarding them. Winners for the larger shows at \$20 and up for males and \$10 up for females.

I Ship Anywhere on Approval

Keep the birds three days, compare them with others and if you don't agree that they are worth a good deal more than I'll charge, send them back at my expense and I will refund your money at once.

Remember that we breed for size, health, vigor and profit as well as for standard requirements. We raise our chicks on free range and never breed from weak or unproductive birds, no matter how good they are from a fancy standpoint.

I want you to have a copy of my new 40-pg. catalog; it tells all about Ferris Leghorns and why you need them. It shows photos of the birds I sell and gives a more complete description of my stock, farm and methods than is possible in this ad. Gives a complete list of winnings and will convince you that you need this strain of winners bred to pay. A postal brings it.

THE FERRIS POULTRY FARM

555 NO. UNION GRAND RAPIDS, MICH.

Wm. Cook & Sons, Scotch Plains, N. J., originators of all the Orpingtons, have just issued their 1911 catalogue, which is larger and more handsome than ever and is filled with valuable information on the origination of the Orpington fowl and hints on general poultry keeping. By mailing them 10c and mentioning American Poultry Journal the catalogue will be mailed you immediately. This firm reports the Orpington business larger than ever, their largest sales being made through American Poultry Journal. Mr. Cook states he has several more thousand birds than ever this year and the quality better than ever. We can believe this when they won every first in the young cockerel classes at Allentown in September, winning 1st and 2d in Buff, Black and White Orpington cockerels, also 1st and 2d Buff Orpington cocks, 1st Buff pen, 1st Black pen and numerous other prizes. This was done in one of the largest Orpington classes ever gotten together at this season of the year. If you want a bird to win in the Orpington classes you can certainly get one or more from the originators of all the Orpingtons. Don't forget to send 10c for one of their large catalogues today.

Charles G. Pape, Fort Wayne, Ind., the S. C. Black Minorca breeder, reports the

vate management. This allows him to devote his entire time and attention to his birds, which are improving each year. Having the range of the farm, his stock is healthy and vigorous, good in color, shape and all other respects. Mr. Yant began in 1898 to establish his own particular strain of Barred Rocks. Since then he has devoted his entire time and attention to the work. The result has been that the Barred Rocks from Scenic Hill stands the equal of any in their class in this country. His winnings include Chicago, 1909. This was his first attempt in that city. He won more prizes on pullets in Chicago than any other exhibitor. Cleveland, 1910, he won 1st pen and 3d cockerel on two entries. The results at Akron, Canton and Youngstown, since 1902, have been practically a clean sweep on all first and second prizes.

Ten March hatched pullets laid 149 eggs in August. We are informed that Crystal Spring Farm furnished the chicks that made such a remarkable showing as outlined in our October issue, by H. H. Kaner, the winner of second prize in our prize article department. As space does not allow to go into details here of the result of the twenty-six chicks which were purchased by Mr. Kaner, we would ask all those interested to turn to Mr.

"ARISTOCRAT."

This is the original "Aristocrat" after which this famous strain was named. From him we fixed this wonderful type and color. His long deep horizontal body is plainly to be seen in all the splendid birds that fill Mr. Crowther's yards. The color of this bird is almost blood red, and it is so even all over that he has the appearance of one shade of brilliant glossy red from head to tail. He is large and well balanced throughout and shows fine breeding, not the slightest sign of coarseness anywhere. Clear red undercolor, good wing and tail, a head gear with the rest that stamps him at once as an aristocrat among reds. Bred and owned by Ira M. Crowther, Box A, Willoughby, Ohio.

following winnings: At the great Fort Wayne, Ind., fair, September 20-24, 1910—1st cock bird, 1st and 2d hen, 1st and 2d cockerel, 1st, 2d and 3d pullet, best pen, best exhibit in the poultry line at the fair and all specials offered by the American Black Minorca Club. At the Memphis, Tenn., Tri-State fair, in competition with seven exhibitors, we won 1st cock bird, 1st and 2d hen, 1st and 2d cockerel, 1st, 2d and 3d pullet and 1st pen, championship cock bird in the show, \$12 silver cup offered by Burns-Barry Company for the best pen of Minorcas. Gold leg bands and several other specials.

The Scenic Hill Poultry Farm, owned and established by Mr. Jno. W. Yant, is unique in the fact that it is an old fashioned "free range" farm. Mr. Yant has about 25 acres of farm land, nicely wooded and under pri-

Kaner's article in the October issue and read it again. We are further informed that on September 16 Mr. Kaner killed a cockerel (one of the original twenty-six) that weighed 7 pounds one ounce, alive. Scientific breeding must be back of chicks that develop and lay in as short a space of time. In writing to us C. B. Suavely, the manager, says he is so busy on their new catalog that he would like to compare notes with anyone busier to see what he does while he (Mr. Suavely) is sleeping. Address Crystal Spring Farm, R. R. No. 5, East Lititz, Pa., for catalog, mentioning American Poultry Journal.

Geo. F. Buck, Port Clinton, Ohio, the well known breeder of S. C. Brown Leghorns, reports that he has some nice show and breeding cocks that he wishes to dispose of at reasonable prices.

One of our new advertisers, whose ad starts in this issue, is the Breznol Poultry Farm, R. R. No. 2, Plainfield, N. J. F. A. Fuller, owner of the plant, is a very enthusiastic breeder of Single Comb White Leghorns, and selected for his foundation stocks, one of our noted prize-winning strains that also had a reputation as excellent layers, and he has this year reared about 2,000 head of very fine S. C. W. Leghorns. He intends to retain all of the pullets for layers and breeders for next year, and he has culled down the flock of cockerels very closely leaving about 200 very fine specimens which he is now offering to our readers at about half the price many others would ask for them. If in need of White Leghorns, we suggest that you write to Mr. Fuller. His ad will be found elsewhere in this issue.

The fine specimens of White Orpingtons, exhibited by Louis Lee Haggin, owner of Russel Cave Poultry Yards, Lexington, Ky., have again demonstrated their superior qualities, by winning at the great Appalachian Exposition. 1-2-3-4-5 cock, 1-2-3 hens, 1-2-3 cockerels, 1-4-5 pullet, 1-3 pen. These remarkable winning right through all of the classes, including every first prize, in such a hot class of White Orpingtons as was shown at this exposition, demonstrated beyond question that the quality of the birds owned by Mr. Haggin is second to none in this country. Mr. Haggin reports his young stock maturing in fine shape and he is well prepared to furnish exhibition and breeding birds of the finest quality. His ad appears elsewhere in this issue.

W. C. Pierce, Indianapolis, Ind., the well-known poultry judge, has recently gone into the breeding of S. C. Rhode Island Reds on an extensive scale, having purchased the entire flock of S. C. Rhode Island Reds owned by C. N. Hanson, Portsmouth, Ohio. He expects to furnish the public with birds unequalled in quality. His winnings at his first show of these Reds at the recent Indiana State Fair were splendid and goes to prove the quality of his stock. Mr. Pierce is too well known among the poultrymen to need any further recommendation from us.

Aug. W. Schroeder, Chestnut, Ill., breeder of Silver Laced Wyandottes, made the following winnings at the late Illinois State Fair: 3d cock; 1st, 2d and 3d hen; 1st cockerel; 1st and 2d pullet. Mr. Schroeder is an old breeder of this variety and is producing some of the very best birds in the country. He is now offering some choice exhibition stock for sale at very reasonable prices, considering the quality. See his ad elsewhere in this issue.

W. Etzenperger, Willoughby, Ohio, is offering some extra choice White Orpington cock birds in his ad in this issue. These are the well known Kellerstrass strain and he is offering them at prices that should move them quickly. He also has some choice Rose and Single Comb Rhode Island Reds, both male and female, that he is offering at exceptionally low prices. Better write him at once for full information.

Le Roy W. Seigfried, Box A, Waterloo, N. Y., reports the following winnings at the late New York State Fair: On 10 entries of Silver Laced Wyandottes, he won 1st old pen, 1st young pen, 3d and 4th cock, 3d and 4th hen, 1st and 2d cockerel; 1st and 2d pullet. On Pekin ducks, 2d old drake, 1st and 3d old duck, 1st young drake, 2d young duck.

W. C. Pierce, Indianapolis, Ind., the well known judge and breeder of S. C. Rhode Island Reds, reports the following winnings at the late Nashville, Tenn., show: Five prizes, including silver cup for best cockerel in show, all birds competing, over 300 S. C. Reds in competition. See report of Illinois State Fair for his winnings at that show.

E. E. Wilson, Indianapolis, Ind., the well known breeder of S. C. B. Minorcas, reports the following winnings at the late Indiana State Fair: 1st and 2d cock; 1st, 2d and 3d hen; 1st and 2d cockerel; 1st, 2d and 3d pullet; 1st and 2d pen. Every bird he entered won a premium. At the late Illinois State Fair he won 1st cock, 1st and 2d hen, 2d cockerel, 1st and 2d pullet.

Chas. P. Clemens, Oakland City, Ind., breeder of Partridge Plymouth Rocks, made a grand winning at the late Illinois State Fair, as follows: 1st, 2d and 3d cock; 1st, 2d and 3d hen; 1st, 2d and 3d cockerel; 1st and 3d pullet; 1st, 2d, 3d pen.

Russell Farm White Wyandottes

Winners at Guelph, Toronto, Boston and Ottawa. This season at above shows they won seven first prizes out of a possible 16 competed for. For sale: Young and old stock of excellent quality. We guarantee to please or refund purchase price. Booking egg orders now. Write your wants.

Jocoy's Poultry Feeder

Automatically feeds whole or ground grains. It feeds the smallest chick and the largest fowl. 12 fowl or 50 chicks, can feed at one time. It only requires a floor space of 12 inches. Fill the hopper at your leisure and the feeder will do the rest, and give the poultry a regulation feeding. Endorsed by state colleges. Agents wanted.

J. A. JOCOY - - - TOWANDA, PA

Buff ORPINGTONS Black

Choice young stock now ready to ship that will please the most painstaking breeder or may at once be returned at my expense. Describe your exact wants. Mention American Poultry Journal.

S. Luttrell : Route 1 : Waverly, Illinois

ONCE AGAIN LET US ASK---

Are You Getting all the Eggs You Would Like From Your Hens?

If not, the trouble is that you are not feeding them properly. Your hens are only machines and without food could not lay an egg. Accordingly it is the food they get that determines the number of eggs and it is scarcely an exaggeration that

THE PARK & POLLARD CO.

DRY-MASH

MAKES THEM

LAY OR BUST

Why? Because it is not a food cheaply prepared for the mere purpose of money making but the result of years of study and experimentation. It keeps the birds in the best of health and is in a class by itself as an egg producer. Naturally when eggs bring high prices they are hard to get and only the best food can be expected to produce them. Consequently it will pay you to start using this Dry-Mash immediately.

Order Some From Your Dealer

If he does not have it ask him to order some for you. Tell him we guarantee absolute satisfaction or money refunded, so there is no risk. If he will not do this, send us his name and we'll quote you prices direct.

At any rate, write today for our new illustrated book entitled "Poultry Truths," Worth \$1.00 but absolutely free.

SUNSWICK POULTRY FARMS, SO. PLAINFIELD, NEW JERSEY.

Where Single Comb Buff, Black and
White Orpingtons Are Bred in All
Their Purity—Also Blue and Buff
Orpington Ducks—Rufus Delafield,
Owner.

The Sunswick Farm is easily reached
from New York City by the Lehigh
Valley Railroad, getting off at the station
of South Plainfield, being only 26 miles
distant from the city.

This plant is certainly very well
equipped as a fancy poultry farm. Many
substantial and commodious buildings
necessary for the housing and rearing of
thousands of birds can be found here.
Young birds are reared on the colony
house plan and have the run of twenty-
six acres. Every attention is given to
the sanitary conditions, and the birds
were found in perfect health.

The whole plant was neat and clean,
and John Arnott, the manager, is an
Orpington expert, having been with Wil-
liam H. Cook in England, and came over
to this country with an importation of
birds (in 1907) (which was made by Mr.
Delafield). We were pleased to have
the opportunity to visit Sunswick Farm,
and see the Champion Sunswick strain of
Orpingtons, and we must say we were
not disappointed in the quality which we
found here. This farm has a long list of
winnings at our national shows, number-
ing over 300 prizes; at such shows as
Madison Square Garden, Boston, Cleve-
land, Allentown, Hagerstown, Baltimore
and Trenton, most of which are first
prizes and many of them being won at
New York and Boston during the past
four years. We saw here a White Or-
pington cock, "Champion" winner at Mad-
ison. This farm enjoys the distinction
of being the only Orpington farm that
has ever bred a White Orpington cock,
that has won first for two succeeding
years, at the great Madison Square Gar-
den show. Not only this, but he has
other undefeated records, having won first
for two succeeding years at the Boston
show, and also won first at Cleveland, O.
This champion has won five first prizes,
only being exhibited five times in three
of the best shows in the country. Any
one of the three above wonderful records
has never been equalled by any Orping-
ton breeder.

They not only have this one wonderful
bird, but they have many others equally
as wonderful, in each of the three vari-
eties of Orpingtons.

Sunswick has gone on the principle of
not advertising very extensively until
they had first produced the highest pos-
sible quality in large numbers. They
have been breeding many Madison Square
Garden winners for years and they now
feel that they have stamped the true Or-
pington type and correct color in each
variety of their flock. They have this
year raised a very large number of fine
specimens, and are now prepared to fill
orders for high class birds, in any num-
bers. The fine winnings which they have
been making in the keenest competition
during the past is known, and the quality
of the birds which they have been send-
ing out is known to those who are for-
tunate enough to have sent them in their
orders, but now that they have attained
the goal for which they were striving it
is their intention to branch out and pub-
lish the fact of their success to the poul-
try world.

There is now a great demand for Sun-
swick Orpingtons since the poultry public
has become aware of the wonderful qual-
ity to be obtained there. In proof of the
wonderful quality which they are breed-
ing we report their latest winning at Al-
lentown, September, 1910, which is in
Buffs, 1st and 3d hen, 5th cock, 3d and
5th cockerel, 2d pullet, 2d pen. Blacks—
1st and 2d cock, 1st and 2d hen, 2d and
3d cockerel, 1st, 4th and 5th pullet, 2d
pen. Challenge cup for the best black
cock which they have won for the second
time, and will now retain as the owner.
Whites—2d and 5th cock, 1st and 2d hen,
3d cockerel, 4th pullet, 2d pen. Gold
special for best white hen. Gold special
on white cock, special bronze medal for
best hen in show-room, all breeds com-
peting. This wonderful record, in keen
competition, such as there was at Allen-
town, has never been equalled by any
breeder of all three varieties of Orping-
tons. Their White Orpington, "Lady of the
Snows," won Gold special, for best White
Orpington hen in show, and for best hen,
all varieties competing. She is truly one
of the most wonderfully perfect speci-

mens it has ever been our pleasure to see, and as near perfection as it is possible to produce a bird, being a second Peggy. In fact, she looks very much like "Peggy," as you can readily see from her picture in their ad. This hen has a five-point comb, very good eye; is the ideal low-down Orpington type, with a full white, well-spread tail, with good white shanks and toes, and her plumage is absolutely white, being free from all creaminess, or ticking, in any section. You can see for yourself by her picture that she is the ideal Orpington type. She was the sensation of the Allentown show, and deservedly so, and Mr. Delafield can well be proud of her, for she is truly an ideal model white Orpington.

We also saw many other wonderful specimens among the White Orpingtons, and we think that the Sunswick birds will be heard from again this season in the show-room. The flock of Buffs we saw here is well worthy of special mention, for they are of a grand type; large bone and deep body birds, real Orpingtons in every section, and they have that beautiful light, even golden buff color, free from bronze and ticking in tails or any strong color of the wing bows. Most of them have absolutely sound buff wings and tails, and they run extremely

C. L. BUSCHMANN,
Indianapolis, Ind.

even in color throughout the flock, and are as fine as any one could wish to breed.

They have a fine and large flock of young Buff Orpingtons, being particularly strong in cockerels, and are prepared to supply many winners and breeders in this variety. The blacks are of equally good quality, being very large, short on the legs, broad, wide birds, up to and over weight, with that brilliant glossy green sheen which is so much admired by all Black Orpington breeders. Their young blacks are coming along nicely, and we found many fine specimens among them.

Then we must not forget to name the ducks, Orpington ducks, of course. Nothing but Orpingtons are permitted at Sunswick. They have these ducks in both buff and blue. We believe they were not only the first to import the blue ducks, but have the only flock of them today in America. They are of a good strong blue color, and are very pretty. Mr. Delafield informed us that the Orpington ducks, beat the Indian Runners, as layers, having proved their ability to do this in several Australian laying contests. This fact being true, they will surely become very popular.

H. T. Marshall, Sheridan, Ill., breeder of S. C. R. I. Reds, reports young stock now ready for shipment. He produces Reds of exceptional quality. Better write him for prices.

Notice to Poultrymen!

GERMOZONE Means Health

KEEP the general health of your fowls good and you will have little trouble with the diseases usually so common during the winter months. Proper bowel action is important, and especially where fowls are on heavy feed. Germozone has unusual value as a bowel regulator. It tones the system and keeps the fowl in good condition. Give it to all fowls *twice a week* in the drinking water and by so doing *know* that you are providing for them the best health insurance possible. No other poultry medicine in the world is to-day so generally used as Germozone; none other is so certain and far-reaching in its good effects.

Either in tablet or liquid form. Price 50 cents.

To Get Eggs in Winter

you must furnish the kind of food that makes eggs. Lee's Egg Maker is endorsed by the best feeding authorities in the Union as being the most satisfactory form of meat food obtainable; clean, wholesome, and contains more digestible protein than any other. Other foods may contain more protein, but none other has so large a percentage of digestible protein, and *that's what makes eggs*. Large egg-producing plants buy it in ton lots. Begin now. Provide your hens the best food—Lee's.

25c and 50c Packages. 25 lb. Pail \$2.00.
100 lb. Drum \$7. Freight paid on 100 lb. lots.

OMAHA, NEB.

It Surely Does Hatch Chicks

THAT'S what you want an incubator to do. You don't care so much how it does it, just so it hatches the most "livable" chicks. That's exactly what you can be sure of when you buy a

Prairie State Incubator

A High Record Every Time

The Prairie State machines are made according to tried and true principles of incubation. No guesswork, no mere theory. They are constructed of the best materials and built with the one end in view of hatching "livable" chicks. Besides this, they are the most convenient and economical. Easy to handle, safe and certain of results. The most expert and prosperous breeders use and recommend *Prairie State Incubators and Brooders* because they have found them best. Read this letter from one of the leading poultrymen in the country:

"We consider the Prairie State machines so far ahead of any other make we have ever seen or operated that they are in a class by themselves."

INTERNATIONAL CORRESPONDENCE SCHOOLS.

After the Allentown fair we paid a short visit to the International Correspondence Schools, Scranton, Pa., and were delightfully entertained by the genial Tom McGrew. Of course, everybody knows Tom; at least, everybody who has ever bred chickens for any length of time. Let me say that he is the most good-hearted, whole-souled man I know of, always pouring oil on the troubled waters, striving to bring about peace and harmony.

We do not know of any one better posted on poultry than Tom McGrew, who has for many years been a close student, and is always running down every theory regarding poultry matters, to see if there is any good in it. He has bred most everything, experimenting on color from a canary bird to Jersey cattle. All his life he has been studying the breeding, rearing and housing of fancy poultry, and he has accumulated as much knowledge as any one person on the subject. At the same time he has accumulated a library on poultry matters that is second to none. He has every known book on poultry, some dating back to 1713.

Mr. McGrew kindly took us up to the studio of Ed. Magargee, a bird and animal painter, who has been employed by the International Correspondence Schools to illustrate the course they are getting out on the breeding of standard-bred poultry for exhibition purposes. These paintings are all being done in oil, in true life colors, and will be exact reproductions in their books. The writer had the pleasure of being the first outsider to see Mr. Magargee's work. He had thirteen paintings completed and many sketches under way. To say we were surprised is putting it very mildly. We never saw such true life-like reproductions as those turned out by Mr. Magargee. They are not stiff inanimate objects, but true life-like birds. You would think that they could move, they look so real, and in no two pictures are the birds posed alike, and in every picture besides the male and female bird, there are other birds in the background, also of the same variety. Truly, this is to be a wonderful course, and with these handsome, realistic reproductions of all the varieties in their true colors, it will be by far the most valuable book ever published on poultry. The poultry public will soon have the pleasure of seeing pictures of all breeds as they really are. Mr. Magargee has painted all four varieties of the jungle fowl in natural colors, and this will show from what all our varieties originally came. These paintings are all made under the super-preciate the perfection attained until you see them yourself, and this you will soon have the opportunity to do. Certainly, every one interested in poultry will want a copy of this book in his library.

The standard of perfection does not begin to approach the illustrations in this work or in the knowledge which is given. Not only this, but Mr. McGrew tells you how to mate each and every variety, to produce the highest exhibition quality, describing double matings where they are necessary and revealing all the secrets known to the expert breeder of fancy poultry. Nothing is kept back. Certainly you will want this book.

Correspondence Instruction—The Advantages to be Derived from a Course By Correspondence.

The supreme advantage of Correspondence Instruction is that each student has an instructor who pays direct attention to his individual case. Correspondence teaching might be compared with having a tutor to coach the individual student in his lessons.

Many thousand students have been graduated from the International Correspondence Schools, of Scranton, Pa. Among these graduates are men and women who are now filling positions of high responsibility. Some have charge of the reconstruction work in San Francisco, others are doing bridge work across the Continent and drilling tunnels through the Rocky Mountains. Mining experts, civil engineers, railroad managers, architects, and electrical experts have been created as a result of having studied with the International Correspondence Schools.

Many do not understand their method of teaching. When a student is enrolled, Lesson Papers with answer papers are furnished. He studies the lesson and writes his answers to the questions and returns these answers to the schools. When received, they are carefully gone

Box M WHITING, INDIANA

over by expert instructors who correct all errors that may appear, grade his work carefully and report back to the student the percentage due the paper and the answers are returned to the student with corrections, if any, marked thereon. If a student fails to receive an average of 90 per cent or better the paper is withheld and the student is instructed, coached, and helped in his work until he understands fully the lesson paper and can correctly answer the questions before another lesson paper is sent him. Each individual is cared for in this way and no trouble is spared to have him fully understand the lessons.

Any question that may be asked by the students are answered by the Principal of the Division to which it belongs. Care is taken to have the student fully understand the lesson papers and, in addition to this, to have them fully satisfied on all points which they do not understand.

The Poultry Course.

The Poultry Farming Course, which is advertised in the columns of our paper, consists of a series of twenty-four lessons, the subject-matter of which is most complete. It teaches in three Lesson Papers how to build poultry houses of every kind, from the very smallest for Bantams, to the connected apartment house for many fowls. It teaches how to build houses for use in the coldest regions of the North and in the tropics as well. One paper is devoted to Equipment and Poultry-House Management. Poultry Feeding is taught in two Lesson Papers and they are the most complete of their kind that have ever been written. Natural Incubation and Natural Brooding are so well taught that no one should fail in the hatching of eggs and the brooding of the chicks with mother hens. Artificial Incubation and Brooding are well taught in two separate Lesson Papers.

The scope of these four Lesson Papers includes the method of obtaining the best possible hatchable eggs, of hatching a very large per cent of these eggs, and of rearing all or nearly all of the chicks. When we stop to consider that almost one-half of all the chicks that are hatched die before they are three weeks old, how much would it be worth to us all to have a Course of Instruction that would prevent this enormous loss.

Laying Hens, Market Eggs, and Market Poultry are considered in five Lesson Papers that embody every feature of poultry growing from the production of pullets to the production of a large number of fresh-laid eggs during the winter months, the best method of caring for laying hens and feeding them economically, yet in a manner that keeps them healthy and strong so that they may continue to produce many eggs. How to care for the eggs and to avoid the enormous waste that the United States Government has calculated comes to poultry growers from their not knowing how to care for their stock. The Government has placed this loss at more than sixty million dollars a year. How to avoid this is taught in the Lesson Papers.

Poultry Farming proper and how to run a Combination Plant are set forth in three Lesson Papers. Information relative to equipping and caring for a farm with many houses for laying hens is so well explained that anyone of average intelligence might equip one and conduct it properly after having studied the lessons. A Combination Plant includes poultry, squabs, fruit, bees, and summer and winter vegetables. This Lesson Paper alone might teach many how to establish a home near a town or city where they could make a living for themselves and family from having something to sell from the farm every day.

How to rid poultry houses of all their enemies, including insect vermin, animals and birds that destroy them, is well told in a paper devoted to this subject. How to rear turkeys, water fowl and squabs, including peafowls, guinea fowls, and pheasants is taught in four Lesson Papers devoted to them. Poultry Appliances of all kinds can be cheaply built as the result of having followed the teachings in a paper devoted to this subject. Diseases of poultry will be more fully treated than has ever before been attempted. The best informed pathologists and entomologists will lend their experience to the preparation of this paper.

The entire course has been written as the result of more than thirty years of varied and practical experience in all parts of the United States and other countries as well. Nothing has been omitted that can be embodied to advantage in such a course. T. F. McGrew, the author of the course and the principal of the School of Poultry Husbandry,

a branch of the International Correspondence Schools of Scranton, Pa., is so well known throughout the world that the mere mention of the fact that the course has been written by him and that he is at the head of the Instruction Department of this Division is a sufficient guarantee of the quality of the work. We

can, without hesitation, advise all who wish to succeed with poultry and who wish to avoid the losses that come to those who do not know how, to subscribe for and study the course. Full information can be obtained by writing to the International Correspondence Schools, Box 1004, Scranton, Pa.

"ENTERPRISE"

Meat and Food Chopper

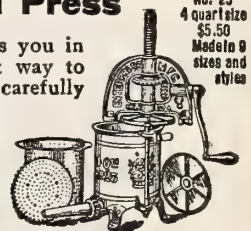

Turns scraps and left-overs into most savory dishes. The "Enterprise" is the only meat and food chopper that actually *cuts* the meat, fish, vegetables, fruits, etc., without crushing or mangling. The four-bladed steel knife revolving against a perforated steel plate does the actual *cutting*. The "Enterprise" has the fewest parts, is easily cleaned, cannot rust, and is practically unbreakable.

We make 45 sizes and styles of "Enterprise" Meat and Food Choppers—illustrated catalogue on request.

"ENTERPRISE"

Sausage Stuffer and Lard Press

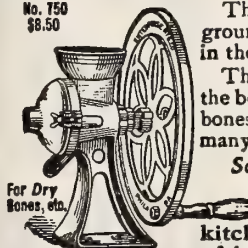

This machine will pay for itself in what it saves you in one butchering. The easiest, quickest, cheapest way to make the best sausage and lard. Strongly built, carefully and accurately fitted and does its work without a hitch. Our patented corrugated spout prevents air entering the casing, assuring perfect filling and preservation of the sausage. Can be changed into Lard or Fruit Press in a moment. Write for catalogue.

"ENTERPRISE"

Bone, Shell and Corn Mill

No. 750
\$8.50

This winter feed your hens on bone, shell and corn ground in an "Enterprise" mill and note the big increase in the egg supply.

The "Enterprise" is a splendid general, all-round mill—the best kind for the farmer and poultryman. It grinds *dry* bones, oyster and other shells, corn, etc. We also make many other household specialties. Write for free catalogue.

Sold at Hardware and General Stores Everywhere.

Write for "The Enterprising Housekeeper" a book containing 200 selected recipes and kitchen helps. Mailed to any address on receipt of 4c in stamps.

POULTRY DISEASES And How to Prevent Them BY J. C. NUCKOLS

Thousands of young chicks die because

poultry-raisers lack the valuable information given in Mr. Nuckols' book on Poultry Diseases and their Prevention. As manufacturers of the celebrated ESSO Re-Carbonized (Twice-Burnt) CHICKEN CHARCOAL we have a personal interest in saving these young birds and will be glad to send a copy of this book postpaid on request to every poultry-fancier. There is no "string" attached to this offer—the book is as free as air to you.

You can also have a small sample package of ESSO Re-Carbonized CHARCOAL free for the asking. Or if you prefer a larger package, inclose seven cents in stamps to pay cost of mailing.

write us. No better birds than ours are to be found anywhere. A poultryman who was sent out to look over our stock and plant reported as follows: "They have the finest bunch of cockerels I ever saw and you cannot speak too highly of them." That's what you will say too, if you see our stock. Let us tell you about them in our catalog. It's free for the asking. If you want to win at any show, tell us and we will fit you out. All birds shipped on approval. :: ::

Wm. H. Hoover, R. 2, Box 4, Polo, Ill.

"FACT AND ARGUMENT."

Behind every article possessing worth to humankind that is offered for sale, there is a reason why a certain portion of the public should buy it. Yet how many of the catalogues that come to our attention sincerely make an effort to find out the reason why its readers should buy and make that reason clear to those readers?

An excellent variation from the general rule is the catalogue entitled "Fact and Argument," which has just been issued by the Hall Mammoth Incubator Company, of Utica, N. Y. Here is found refreshing contrast to that kind of salesmanship talk characteristic of so much advertising literature, that keeps playing on the verb, "to buy," rather than on the reason why the reader should buy.

In "Facts and Argument" we find a very complete, although concise consideration of the entire subject of incubation. The principles that underlie natural incubation are explained with clearness and intelligence, and the ways by which these principles are applied to artificial incubation is shown by text and illustration. Any one not thoroughly conversant with the science of incubation can glean a deal of information from this booklet of that practical kind which he can apply right

in his own work with an incubator. The question of temperature and moisture is made clear and comprehensive. The chapter on this subject will alone be invaluable to every reader not now a "poultry expert."

But the intelligence and care that has been shown in the preparation of the copy is also revealed in the mechanical preparation. Large, clear type is used in the text, a joy to the man not able to read small type, and a pleasing feature to every reader. Excellent illustrations of views from many well-known poultry farms, as well as illustrations showing the simplicity of the Hall Equipments abound, and a handsome cover in brown gives a finish to one of the season's best catalogues. "Fact and Argument" is a fact and argument for the Hall Mammoth Incubators and Brooders in title and in truth.

Those of our readers who are interested in hatching and brooding on a large scale should write at once for this catalogue. It will be sent free on request, if you will mention this paper, by writing to the Hall Mammoth Incubator Company, Utica, New York.

J. N. Hazlett, Tarentum, Pa., reports having some excellent birds for fall and winter shows now ready to ship, in the following varieties: Cornish Indians, Houdans, Barred Plymouth Rocks, Single and Rose Comb Rhode Island Reds, Silver Laced Wyandottes. Mr. Hazlett has been an extensive exhibitor in the past and has won a great many premiums at all the leading shows throughout Pennsylvania. Prices and catalogues will be sent on application. Write him for what you want and mention American Poultry Journal.

George H. Rudy, Mattoon, Ill., the well-known White Wyandotte breeder, made almost a clean sweep at the late Illinois State Fair, winning 1st, 2d and 3d cock; 2d and 3d hen; 1st and 2d cockerel; 1st and 3d pullet, 1st and 3d pens. Don't fail to send for Mr. Rudy's new catalogue, which will tell you all about his winnings and full information in regard to his grand strain of White Wyandottes.

**CONNER'S AUTOMATIC FEEDER
AND EXERCISER.**

Inventors in this progressive age are busy inventing equipments for the poultry yards, intended for the comfort of the poultry as well as the convenience of the attendant. Among the most recent inventions for the poultry yard is the Automatic Feeder which, without a doubt, surpasses all other inventions. They not only are a great saving of time and feed, but can be relied on to faithfully care for your poultry of all descriptions, even to the smallest Bantam and growing chicks. These feeders are a necessity to every poultry plant, be it large or small. No breeder or farmer who keeps poultry can afford to be without one of these dry grain feeders, as they automatically scatter the feed and enable every fowl to get its share of feed and prevent the rats and sparrows from getting it. These feeders can be placed so that the grain will be scattered in litter, thus compelling the fowls to work for their food and keep them busy and out of mischief, as it is the idle fowl that acquires the habit of pulling feathers and eating eggs. Where these feeders are in use, the egg production is sure to increase, as the fowls are kept busy and happy from morn until night, and there is no danger of the hens becoming overfat.

The feeder fulfills a long felt want for a reliable contrivance for automatically feeding poultry. The machine consists of a hopper, which holds a plentiful supply of feed and is regulated by a disk on flat bottom of hopper. Under the hopper is a deflector, which scatters and evenly distributes the feed in every direction. Rods are connected with the disk which the hens while at work disturb and cause the feed to drop in small quantities at a time in the litter of the scratching pen, thereby keeping the fowls working for their supply of food, which is distributed evenly in all directions. This machine is made in several sizes, and is not only a great labor saving device, but is an immense saver of feed. It is impossible for a sparrow, rat or mouse to get any of the feed, and the saving from these pests alone pays for the feeder a dozen times over in each season. It is waterproof and perfectly dry no matter how hard it rains or how wet the surroundings, and dollars and dollars are saved in the feed bills.

The patentee will gladly send you a circular and give any further information you may desire. Address W. M. Conner, Jersey City, N. J.

It is gradually becoming recognized among poultrymen that perfectly pure charcoal is almost a specific for that dread disease, white diarrhea, which causes such enormous losses of young chicks every year. Realizing the value of absolutely pure charcoal as a disease preventive and having exceptional facilities for its proper manufacture, the S. Obermayer Company, with factories at Cincinnati, Chicago and Pittsburg, recently placed their "Esso" Recarbonized (twice-burnt) Chicken Charcoal on the market. Immediately after the first announcement of this improved product appeared in the poultry journals, thousands of poultrymen became interested and began the regular use of "Esso," thus undoubtedly saving the lives of a multitude of young chicks, as well as preventing disease among the older fowls. "Esso" Recarbonized Chicken Charcoal is neither a medicine nor a food. It is simply one of Nature's preventives for those ills which are annually playing havoc in poultry yards all over the country. The foremost authorities on poultry-raising agree that pure charcoal is as indispensable to the well-being of your flock as grain, grit or anything of the sort. You will find it advisable to keep a hopper full of "Esso" in the poultry yard at all times and let your birds eat as much of it as they want. By writing the Obermayer Company, at their Cincinnati office, you can have, free, a copy of J. C. Nuckols' valuable book, "Poultry Diseases and How to Prevent Them." You can also have a free sample of "Esso" Charcoal for the asking.

J. A. Rose, Scranton, Pa., the well known breeder of S. C. Rhode Island Reds, has accepted the nomination for the office of member of the executive committee of the Rhode Island Red Club of America and heads the list of nominees. Mr. Rose is well qualified to fill this position, as he is a thorough poultryman and up-to-date breeder of Reds, and members of the Rhode Island Red Club of America should certainly support him as a member of the executive committee.

Get out of the rut

Give your buildings the benefit of progress—same as you give the farm itself. Cover every building on the farm with Genasco Ready Roofing—the economical roofing that protects and lasts.

Genasco Ready Roofing

is made of Trinidad Lake asphalt—Nature's everlasting waterproofer. It prevents cracks, breaks, and leaks, and does away with damage and repairs. Easily applied without experienced help.

The Kant-leak Kleet does away entirely with cement and large-headed nails. Keeps seams absolutely watertight. Saves time in laying. Makes a beautiful finish. Ask for Genasco rolls with the Kleet packed in them.

Ask your dealer for Genasco. Mineral or smooth surface. Be sure you see the hemisphere trade mark. A written guarantee, if you want it. Gold medal (highest award) Seattle, 1909. Write for samples and the Good Roof Guide Book.

TAKE NO CHANCES
USE ONLY HEAVY CHARGES

THE coming show season looks like it would be the hottest yet, and unless you are out with a gun loaded to the muzzle with quality you won't win. That is why you must consider Duston Quality. His

White Wyandottes

have been winning continuously since 1896 the World over. This last season stock sold made marvelous winnings. The point is this, you want to hit the blue. I can turn the trick for you. Fitting all high class show birds as I have done for past 14 years. I guess I know a little bit about it. Look what I did to "them" at New York for three consecutive years, and then: Proven breeders and young from them personally mated by me for best results. Say: Just send me 10 cents for my catalogue writing needs and let me make you a proposition.

Arthur G. Duston, Box 1020, So. Framingham, Massachusetts

N. B. Always at the head. Have bred White Wyandottes as a specialist longer than any breeder in the country. Gave the others a start, why not you?

Diseases of Poultry

BY

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.
358 DEARBORN STREET -- CHICAGO, ILLINOIS

SPECIAL REMOVAL SALE.

We were agreeably surprised to learn of the extensive business operations of the Goshen poultry Yards, Goshen, Ind., but after finding what business methods they employed it was readily seen that success was assured them in selling standard-bred poultry. It is their greatest aim to make a satisfied customer with every sale.

In the first place every bird that leaves their yards regardless of the price paid is sent subject to approval of the purchaser. Where requested a score card accompanies each bird when the value represented is \$2 or more and last, but not least, they always strive to give just a little better value than agreed to when giving description and prices. This is done in the face of the fact that they are offering stock at regular "live and let live prices."

Several photos of their new home are given in this number and, although their farm is equipped to winter over 2,000 birds, it will be impossible to accommodate nearly all their breeders and several thousand head of young stock now on free range and practically matured. It is their expectation to erect new buildings to accommodate at least 5,000 head of laying stock, but, on account of overcrowded conditions at the present time, they are inaugurating a special sale in which they offer over 3,000 early hatched cockerels and about 1,000 yearling hens. They breed Barred, Buff and White Rocks, White Wyandottes, S. C. Black Minorcas, S. and R. C. Reds, S. C. White and Brown Leghorns and S. C. Buff, Black and White Orpingtons. If in the market for stock of any of these varieties it will pay you to look up their advertisement in this issue or send direct for their Special Stock Sale Circular, which can be obtained by addressing Goshen Poultry Yards, Goshen, Ind.

A large number of visitors at the late Illinois State Fair were attracted to the exhibition of Niemann Bros. Mfg. Co., Mt. Olive, Ill., who manufacture portable brooding coops, trap-nests, setting coops and portable henneries. Their appliances are without doubt the best on the market for the use of poultry breeders who have only a limited amount of space to devote to the raising of fancy poultry. Their model brood coop is made of heavy galvanized iron and therefore is practically vermin proof and are lighter and more sanitary than wooden coops, and can be scalded and disinfected and put in a perfectly sanitary condition in a few minutes. The trap-nests manufactured by this firm are light and roomy and costs but little more than the common nests and are a simple and perfect working trap; nothing complicated to get out of order. This is also made of galvanized iron. Their colony coops for growing chicks insure large, suitable and more sanitary quarters for the young stock than any other colony coop on the market. They are easily cleaned, and are set 8 inches from the ground. This provides a fine, cool resting place for the chicks during the hot summer days, and at the same time it gives the coop a dry floor, preventing roup and other diseases. This coop is 3x6 feet and when crated weighs 165 pounds. It is therefore easily moved from one part of the farm to another, so that the stock can always have plenty of green food during the summer time. If you do not know anything about the goods manufactured by these people it would be well for you to write for their catalogue, which is sent free upon request.

Gage & Huston, Williamsport, Pa. breeder of Barred Rocks and S. C. Buff Leghorns, have remaining a few exceptional bargains in choice breeding birds. Those looking for quality stock in above varieties will be interested in their prices. Males, from \$3 to \$5 each, and females at \$1.50 each. This firm has for some years made a grand show record at Williamsport, Rochester, etc. On our trip South last spring we visited their yards and wrote them up in the A. P. J. We have found them reliable and careful breeders and do heartily recommend them to our readers.

F. W. Peters, 460 E. 18th St., Erie, Pa., breeder of White Rocks, informs us that he has 15 snow white Rock cockerels, early hatched birds weighing from six and a half to nine pounds, that he is offering for sale at very moderate prices. These are nice specimens, as Mr. Peters culls his flock early, and sells all inferior birds to the butcher. If in need of White Rocks you will do well to look up Mr. Peters' ad elsewhere in A. P. J.

CONFIDENCE IN OWEN FARMS— DOES THE PUBLIC HAVE IT, AND WHY?

The point which impressed me the most upon my recent visit to Owen Farms, was the confidence which the public have in this farm, and I will endeavor to tell you why they may well have this confidence. First, I will refer you to the reproduction shown herewith, of a blank check sent to Owen Farms by Mr. A. C. De Hass, New Orleans, La. This is indeed the highest testimonial of the confidence shown in Owen Farms that it is possible to give, when a man will send a blank check to them and instruct them to fill it out for whatever amount they see fit, in payment for stock which was desired. Let me say that this is only one of the many checks which Owen Farms have received. Can you conceive, my friend, of any higher degree of trust and confidence in any one

ing fancy poultry because he loves it, not because he has to; and Mr. Delano is no less interested than Mr. Owen. Certainly the Owen Farms have made a great success of the poultry business. Originally Mr. Owen started out to have a commercial poultry plant, and built extensive buildings with that end in view, and in one year produced something like 30,000 head of commercial poultry. But as he had the instincts of a genuine fancier in his heart, this business was not satisfactory to him, and he soon took up the fancy end, to the exclusion of the commercial business entirely, and now Owen Farms is the largest fancy poultry plant in the world. During the two days of our visit at Owen Farms, it gradually dawned upon us the secret of their success, and I will herewith give it to you, in one word. One word, which is a great, strong word, and simply means everything that leads to success.

"ENTHUSIASM!" Perhaps I appreciate

that nothing is too large or too great for you to accomplish. That you are ever ready to do anything and everything within your power to please and satisfy each and every customer, even though you may think he is in the wrong, and you have already done all that you should do. This is what enthusiasm means, and by having it yourself you instill it into those who are around you and are assisting you in your work, and this leads them on to greater effort and more careful consideration of every detail of the business. In fact it is the very keystone of success, and certainly we have yet to find a man who has more enthusiasm than Mr. Owen.

As we said before, both Mr. Owen and Mr. Delano each know every detail of the very large business which is being transacted at Owen Farms, and all shipments receive critical examination by one or the other of them before they are sent out. They make a specialty of preparing birds for exhibition and have a regular little

A. C. De Hass,

than sending a blank check with instructions to the seller to fill it out for any amount that he wishes? Let me ask you a question. How many breeders are there that you know, that you would send a blank check to with these instructions? Another evidence of the great confidence which the public have in Owen Farms is the fact that they have doubled their business every year for the past four years. This is conclusive proof that they do deservedly enjoy the confidence of the poultry public. I shall endeavor to tell you why this confidence is well placed. In the first place, Owen Farms has unlimited financial backing behind it, and nothing is done without the sanction of Mr. Owen or Mr. Delano. Mr. Owen devotes his entire time to the business, giving even the smallest details his careful consideration; so to speak, he is heart and soul wrapped up in the business. He is breed-

ate more fully what this word "Enthusiasm" means, than the average individual, for the reason that I attribute to it whatever success A. P. J. may have attained, because I, like Mr. Owen, have an unlimited amount of enthusiasm. Mr. Owen is a many-sided man, and while he has banking and many other interests in the financial world, yet it is poultry with him, first, last and all the time. He eats poultry, sleeps poultry, and talks poultry. It envelopes and surrounds him, so great is his enthusiasm.

The word enthusiasm means that you have confidence in and honestly believe in your business. That you are willing to exert yourself even beyond your strength, to accomplish that which you have set out to do. That you have the highest ideals and a goal ahead, that you are striving for, and that no detail is too small, too insignificant, for your consideration, or

show-room of their own in their shipping room. Here birds are carefully washed and groomed, and such is the enthusiasm that not only Mr. Owen and Mr. Delano, but their other assistants here, see, in their minds, these birds in the show-room in which they are to go, with the ribbon hung up on their cages, and we are sure that they are very seldom disappointed when the time really comes.

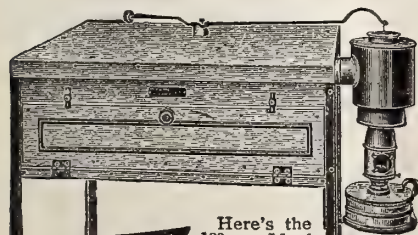

In the office we found Mr. Owen and Mr. Delano, both hard at work as their mail is very large, three stenographers being required to attend to the correspondence. Every letter has careful consideration at one or the other of these gentlemen's hands, and receives a prompt reply. But as Owen Farms is located on Martha's Vineyard Island, the mail is not received until late in the afternoon, and of course can be answered only the next day. We were surprised at the amount

BUFF ORPINGTONS

I won more firsts at the Great Chicago Show 1909, than any Buff Exhibitor. More prizes were mine at Indianapolis 1909, than all competitors combined. I furnish many of the winners at the larger shows, a very popular Strain. If you are ambitious to win, or improve your flock, better get your hands on a few. I condition free and guarantee to please. If I fail, birds are returnable.

of system which Mr. Owen has been able to incorporate into this poultry business. He is able, at a moment's notice, to tell you just how many cocks, hens, cockerels, pullets and pens, and how many eggs were shipped, and how many eggs were replaced because of poor hatches, and percentage of same in each variety which they bred, in any month of the year, and during the past several years. Not only this, but he can tell you how many cocks, vision of Mr. McGrew. You cannot apprehend, cockerels, pullets and eggs he is going to sell in any month, during the coming year; therefore he is able to figure and plan very closely, and can tell the men under him just how many eggs to set in any month in order to supply the demand that he is going to have for these birds six or eight months later.

Thus there is no reason for him to be overstocked, and because of this system Owen Farms is being run on a very economical basis, and the losses which often occur are hereby weeded out. They are in a better position to give you the best possible value for your money. It is always their aim to give you their full value, or even a little more, and they always stand ready to do anything within reason to satisfy each and every customer. All birds are shipped subject to examination, and may be returned if not satisfactory.

We will just say in closing that Owen Farm covers some 300 acres, and the many, many prizes which they have won at our largest shows during the past several years are too well known to need repetition here, but the many, many prizes which have been awarded to birds, shown by other customers, which have been bred at Owen Farms, are not known to our readers and never will be.

The soil is sandy and the situation is ideal for the production of the very best possible specimens, there being an abundance of shade everywhere. All birds used as breeders are removed from the breeding houses, and are placed in the woods in colony houses, during the molt, during which time all the houses are thoroughly cleaned, disinfected and white-washed before the birds are returned to them for the winter. This work was being done during our visit, and we can assure you it was well done. No diseased specimens were seen about the place.

We will not attempt in this article to tell you anything concerning the quality of the birds which we saw at Owen Farms. Suffice it to say, the old stock is coming through the molt in fine healthy condition, and will be able to repeat their many winnings all last year. And the young stock is to be found by the hundreds in each of the varieties which they breed—Buff, White and Black Orpingtons, White and Barred Rocks, White Wyandottes, single and rose comb R. I. Reds; but the quality of the stock which we saw there will certainly compare favorably with the best to be found anywhere.

We wish that each of our readers might be able to visit Owen Farms, that they could see and know these things for themselves. For our visit was a very pleasant one, also a very instructive one.

C. W. Zimmer.

THE "REGALS" WIN.

One of this season's notable winnings was made by John S. Martin, Port Dover, Ont., with his well-known "Regal" White Wyandottes at the New York State Fair here and in a class of 249 birds Mr. Martin won five first prizes and several minor ones; also silver cup for best display. Mr. Martin entered 60 birds, every one a gem and shown to best advantage. His first prize hen attracted special attention and without doubt was the show feature. Shape ideal, carriage and condition all that could be desired. Snow white color. Strong red eyes and beautiful head and comb. The five pullets shown were alike as could be, showing the same type, with extra size, with rich yellow legs.

To mention their points is simply to state "Regal" features. Mr. Martin reports having had a record season, and with 1,200 birds he is prepared to attend to all demands for stock. His catalog for the asking.

H. P. Schwab.

R. A. Hughes, Crete, Ill., one of the men who is helping to make the Black Langshans famous, won as follows at the late Illinois State Fair: 1st and 2d cock; 1st and 2d cockerel; 1st and 3d hen; 1st pen. Mr. Hughes has 500 head of stock for sale, which are of the grandest type of Langshans. See his large ad elsewhere in this issue.

The Kemiform Co.

2451 St. Clair St., Cleveland, O.

SECURE MAXIMUM RESULTS.

The great big poultry raisers find it profitable to feed a mash once a day. It's a lot of bother and trouble, to make your own mash. You are always short one or two necessary ingredients. A prepared mash that is attracting considerable attention is Purina Chicken Chowder. It costs less than the mash you could make and is many times better.

The Ralston Purina Company makes mash for millions of hens and not only always has the right ingredients in the right variety, but always mixes them in the right proportion for the most eggs. Buying thousands of tons of grains and seeds every month at the lowest wholesale rates, they are able to furnish Purina Chicken Chowder Mash ready for use at a lower price than the poultry raiser can buy the ingredients themselves. Purina Chicken Chowder is used by the largest poultry raisers in the country because they have found that it produces better results and costs less money than home-made mixtures.

Purina Chicken Chowder is composed of meat scraps, mill products and green alfalfa meal. It is absolutely pure and clean and is proving to be wonderfully successful in making hens lay throughout the entire year. A very liberal introductory offer with a guarantee of more eggs or money back is given on another page of this issue, which should appeal to every poultry raiser who is interested in larger profits and more eggs.

Experienced poultrymen know that a faulty burner on an incubator or a brooder will cause the loss of much valuable time, and very often the loss of the machine and its contents. The money loss may be considerable, but the loss of time at the best season for hatching and brooding can hardly be computed. Such losses are rarely covered by insurance. Beware of faulty burners. No poultryman need be annoyed by inferior burners if he will only see that the name "Miller" is on the burner for

the incubator or brooder, or when buying a new burner. The house of Edward Miller & Co., Meriden, Conn., was established in 1844, therefore, the "Miller" burners have 66 years of experience back of them. Today, Edward Miller & Co. are supplying nearly all of the manufacturers of incubators and brooders with their burners, collars, etc. Many poultry supply houses and seedsmen also handle the "Miller" goods. Therefore, if you ask for the "Miller" burners the chances are you will get the genuine. "Protect your chicks" is the title of the little booklet which fully describes the brooder burner and chimney shown here. A postal request will bring it by return mail. Write today, mentioning this paper.

Onlya Farm, Morristown, N. J., breeders of White Wyandottes and Barred Plymouth Rocks, report the following winnings. On White Wyandottes at the late New York State Fair, 1st pen; on Barred Rocks, 1st and 2d cockerel, 1st cock. At Allentown, Pa., on White Wyandottes 2d pen, 3d cock, 2d hen, 3d cockerel, 4th pullet. On Barred Rocks, 4th cockerel. At Trenton, N. J., State Fair, on White Wyandottes, 1st and 3d cockerel, 5th hen, 5th pullet. On Barred Rocks, 5th cockerel. At Hagerstown, Md., on White Wyandottes 1st and 4th cockerel, 3d, 4th and 5th pullet, 3d pen. This is the first year of showing for these people and we consider this winning magnificent, as every bird showed by them has been raised on their farm. They still have a lot of good stock to dispose of in both Wyandottes and Rocks at prices that are very reasonable for the kind of birds they send out. Write them and mention American Poultry Journal.

Sheffield Farm, Glendale, Ohio, reports the following winnings at the late Illinois State Fair: on Partridge Wyandottes, 3d cock, 2d hen, 2d cockerel, 1st pen.

Here's How I Look at this Poultry Business

It's not a gamble. My customers are having wonderful success. Some people have the knack of doing just the right thing at the right time. They are the successful ones. You can acquire the knack. You can learn to do the right thing at the right time by reading my book, every page a valuable lesson on poultry raising. I have seen it proved a thousand times. Try it yourself the Queen Incubator way.

I know as well as I know that I am living that a man, woman, boy or girl of fair intelligence can take my Poultry Guide and a Queen Incubator and Brooder and make money.

Proof? Yes, I'll put my machine against your time to prove it. But I want you to read my Poultry Guide and know something about the Queen Incubator way, to begin with. That is the only condition I require. The book gives you "the swing" of things, puts you in the spirit, tells you what to do, makes you go right. It's a great book. Over 3800 calls for it last month.

Send for it, read it and when you are ready I will send you a Queen (freight paid) for a long time trial—3 or 4 hatches, maybe longer. We will deal as man with man. I want you to prove that I am right about making a success with chickens and I am going to give you a chance to do it thoroughly.

Getting my book does not bind you to buy a Queen if you don't want it. Put your name and address on the slip below, cut it out and send it to me. Address

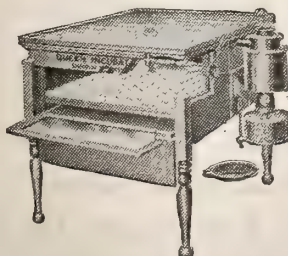

WICKSTRUM, Queen Incubator Man, Box 4, Lincoln, Neb.

WICKSTRUM, Box 4, Lincoln, Neb.

I will read the book, anyhow. See about trying a Queen later. Here's my name and address

Andrews' White Wyandottes

Won FIRST, SECOND and SIXTH COCKEREL and FIRST PEN at BOS-SON, 1910. Have won first pen four successive years. Let me quote you prices on a winner or breeder. They are guaranteed to win for you.

J. W. Andrews Box J Dighton, Massachusetts

White Crested Black Polish THE FOWL OF BEAUTY AND UTILITY

At the late Springfield, Ill. State Fair, my birds won 1st cock, 1st hen, 2d and 3d cockerel, 1st and 3d pullet. Have some high class exhibition stock for sale, both old and young, that will win in any show. All birds shipped on approval. 30 years a breeder.

W. H. SNOOK - - - POLO, ILLINOIS

Barred, White and Buff Rocks, White Wyandottes, Buff Orpingtons, Bronze and Bourbon Red Turkeys, Ducks and Geese

GREAT SALE lasts about 5 or 6 weeks longer, $\frac{1}{2}$ to $\frac{1}{4}$ real value, as we must close out several hundred more birds before cold weather, as we cannot properly feed and care for so many. Fine new fall catalogue free.

GREAT WINNING—See writeup about my birds, as to what others say of my winning at the Illinois State Fair; the greatest fall show ever held in the midwest. Our birds have won at Madison Square Garden, New York, Chicago, and all the big shows. We sell them to you with a guarantee to win at shows or your money back. They have been bred for the greatest show qualities for 15 to 20 years and should win anywhere. We will sell them cheap if ordered in November, and can be delivered when you are ready for them.

WONDERFUL LAYERS—Five of our hens averaged 244 eggs in one year. Individual records higher. They have been bred to lay for years and will give you far better results than birds not line bred for great egg production for years. Our customers write us that they are great winter layers. Our surplus goes cheap during November. If not satisfactory money refunded.

TURKEYS—Bronze and Bourbon Red turkeys. We won our share of ribbons at the State Fair; our birds in past 2 years have won at Madison Square Garden, New York, Missouri State and other big shows; they go cheap. The 2nd cockerel at Illinois State Fair for sale cheap, others for December and January show better—will go cheap.

DUCKS AND GEES—Indian Runner and Pekin Ducks, Toulouse and Embden Geese. We have some fine ones and will sell them cheap.

WE PREPAY EXPRESS—Our fine new catalogue free, giving our winnings, experience and other valuable information. Tell us your exact wants when you write so we can give definite prices.

FIFTEEN Silver Cups free, given to 15 poultry shows whose members buy the most birds from us. Get your friends to buy from us and get one of the largest and finest of these cups for your show. Our catalogue tells about them.

F. Gage Cutler, R. F. D. 13, Carthage, Ill.

A NEW BOOK.

We recently received a copy of Mr. Ernest Kellerstrass' new poultry book, which is certainly a work of art, and is filled from cover to cover with instructive reading matter. This book contains 336 pages and cover, and tells how to make a success in the raising of pure-bred poultry. This book is just off the press and sells for \$1.00, and it is worth the price.

We recently called on the White Birch Poultry Farm, Bridgewater, Mass., breeders of S. C. and R. C. Reds, Rowen, Pekin and Indian Runner ducks, Mary B. Conant, proprietor; W. H. Withington, manager, and must say we were very much pleased with the large flock of both R. C. and S. C. Reds we saw there. The quality of the same is far above the average. It would be difficult to find a flock of any variety of equal size that run so true to the standard requirements. These birds are deep, brilliant, rich red color and show grand type throughout, many of them having exceptionally long backs. We handled specimen after specimen which were free from smut, the under color being rich red clear down to the skin. They also breed Rowen and Pekin ducks, and both the light and dark fawn-colored Indian Runner ducks in large numbers. We were not surprised the following week when we dropped in to the Brockton fair, which, by the way, was the quality exhibition for that section of the country, to find that of the 89 birds entered by the White Birch Poultry Farm

First Prize Cock-Bird at the Cleveland Show, Jan., 1910. Bred and owned by Frank Scheilang, R. R. No. 2, Erie, Pa.

77 of them had been placed under the ribbons, even in this strong competition. You will find their advertisement appearing elsewhere in this issue and we suggest that you write them before placing your order elsewhere.

The subject of roofing is one which calls for a great deal of attention from the man who is going to build. In selecting most articles you can tell from the looks of it which is best, and can select the one you think is most expedient to buy. But merely looking at a piece of roofing isn't enough; you can't tell any more about it by looking at it than you can judge a nut by looking at the shell. The true test for roofing is to see how it lasts after it has been on a building for several years. F. W. Bird & Son, of East Walpole, Mass., manufacturers of Bird Neponset products, make strong use of this argument in their advertisement of Paroid roofing. They say, "Our proposition is to point out a Neponset roof in your own neighborhood. See a time-tried roof instead of a little sample." These are something about an argument of this kind that rings true, and it will doubtless appeal to those who wish to select a roof that is sure to last. F. W. Bird & Son also make the Neponset waterproof building paper, and Neponset Florian sound deadening felt, which are sold under guarantees no less convincing than that of Paroid roofing. Their offer is to guarantee satisfaction or refund not only the cost of the roofing, but the cost of laying it. Needless to say they can make this offer with the assurance that it will never be necessary for them to redeem it.

GETTING EGGS IN WINTER.

Why don't hens lay in winter? "It's agin natur," says the old fashioned man or woman who "keeps" chickens. The poultryman who makes his chickens keep him, knows, however, that hens will lay in winter and lay regularly, if fed egg-making foods.

And, curiously enough, egg-making foods are cheapest of all. Cut green bone, the best of all, costs almost nothing, because your butcher will generally give you all you need. Even if green bone costs you five or ten cents, its food value for eggs is many times greater than grain, so that you actually reduce the poultry feeding cost.

The "trouble" of cutting green bone with such an easy machine as the Dandy Bone Cutter is no greater than preparing a mash. Any reader who is skeptical either of the egg-making value of green bone, or of the ease with which it is cut in a Dandy, may secure one of these cutters for free trial. In any event, every poultry feeder should write to the Stratton Mfg. Co., Box 17, Erie, Pa., for a copy of the Dandy Poultry Book. It is sent free to our readers.

H. C. and C. W. Sixt, West Park, Ohio, breeders of S. C. White Leghorns and White Wyandottes, reports some excellent stock in both varieties now ready for shipment. They make a specialty of producing show birds and have been winning many of the coveted prizes for a number of years past at many shows, including the great

Cleveland, Ohio, show. Among the many coveted prizes they won a handsome silver cup for the best display of Leghorns at Cleveland January, 1908, on an entry of 12 birds, 60 birds competing, also 1st, 3d cockerel, 2d, 3d pullet; 4th, 5th hen and 2d pen. Their birds proved their quality by winning the silver challenge cup twice in succession at Cleveland show, 1908 and 1909, for the best display of Leghorns, and this in two of the hottest classes of Leghorns that ever came together at Cleveland. This in addition to their previous winnings at Detroit and other shows, proves their superiority. Their Wyandottes are equally as good and they have the quality in either variety at a reasonable price. They guarantee all stock to be entirely as represented and is returnable if not satisfactory. Therefore, you will run no risk in placing your order with Messrs. H. C. and C. W. Sixt. For further information, we refer you to their ad, which appears elsewhere in this issue.

One of the successful breeders of S. C. White Leghorns is N. P. Easling, Pekin, Ill., proprietor of the Parkside Poultry Farm. Mr. Easling's business has developed to such an extent that he found it necessary to recently add 11 acres more ground to his place and to erect numerous poultry buildings. He now has six laying houses 16x100 feet, and altogether has a total of 40 buildings on his farm devoted to his S. C. White Leghorns, and now has a capacity of 10,000 birds and without doubt

has the most up-to-date poultry farm in the state of Illinois, devoted exclusively to one variety. If you are not acquainted with Mr. Easling you should be, as he has the faculty of making friends with everybody who becomes acquainted with him. Send for his large catalog today and become acquainted with the man who is doing so much for the S. C. White Leghorns in this part of the country.

Just as we are going to press we received information to the effect that the Cyphers Incubator Company has taken over the business and good will of the Boston Dry Food Hopper Co., Boston, Mass., and that these valuable and popular devices are now for sale at Cyphers Incubator Company's seven places of business, Chicago, Ill., Buffalo, N. Y., Boston, Mass., New York City, Kansas City, Mo., Oakland, Cal., and London, England, also by more than 1,000 agents who carry in stock goods of their manufacture. The Boston Food Hopper has played and will continue to play an important part in making the dry feed method of poultry feeding highly successful on economical grounds.

F. Gage Cutler, Carthage, Ill., won as follows at the late Illinois State Fair: On White Rocks, 1st, 2d and 3d cock; 2d hen; 2d and 3d cockerel; 2d and 3d pullet. On Barred Rocks, 2d cock; on Buff Rocks, 3d pullet; on Bronze Turkeys, 2d cockerel, 3d hen.

Make Your Hens Lay

When Eggs Are Worth Most

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

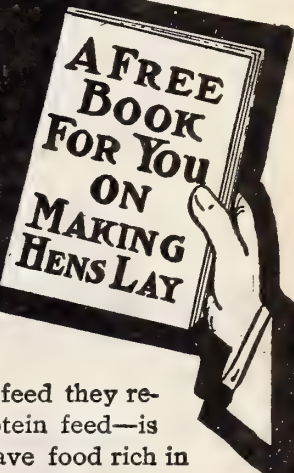

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on 10 Days' Free Trial—no money down. If satisfied after the trial, buy it. If not, return it at our expense.

You want our good books, at any rate, send for them. We'll forward by return mail.

A UNIQUE EXPERIENCE.

We have it straight from a well known poultryman that the lice and mite question—for him at least—has been absolutely done away with. Last summer he visited the Dustyne experimental pens at Whiting, Ind., and to his great surprise found hundreds of birds that had never known what vermin of any sort are. From the incubators they had been put into hovers, the floors of which had been dusted with Dustyne. When they moved to the colony houses, Dustyne went with them. When they were old enough to use a dust bath, they had one of Dustyne. Upon the most careful examination, this poultry expert could not find even the least sign of vermin. Not only were the birds of every age absolutely free, but the whole place was, too. Moreover, this breeder, by the use of Dustyne, brought about exactly the same conditions on his own place—a thing he had regarded as impossible till he learned of Dustyne. And this man is only one of many of the biggest poultry raisers in the country who gladly admit that they have absolutely solved the vermin problem with Dustyne. You can learn the names of these men, just how they have brought about those wonderful results, and how you can do it, too, if you will write the Poultry Dust Bath Company of Whiting, Ind.

In another part of this issue we give an illustration of the new farm recently purchased by C. L. Buschmann, Indianapolis, Ind. This farm contains 239 acres of land and is located at Carmel, Ind., fourteen miles north of Indianapolis. All buildings, trees and creek are just as represented in the picture with the exception of the poultry houses in rear of the two barns. These houses are now in course of erection. This farm will be devoted to the raising of Rhode Island Reds exclusively, and they are planning to raise at least 5,000 chickens there the next year. Mr. Buschmann during the past few years has made an enviable record with his R. C. Reds at all the large shows at which he has exhibited and his winnings this fall at the State Fairs have never been equalled, to the best of our knowledge, by any Rhode Island Red breeder in the country. See his list of winnings elsewhere in this issue.

In addition to the number of birds that he has raised during the past year he has added the entire stock of R. C. Rhode Island Reds of C. N. Hanson, Portsmouth, Ohio, having purchased the entire stock, together with his records, good will, etc. The addition of this stock to his already large flock will put Mr. Buschmann in the front ranks of breeders of this variety of fowl in the United States. Send for one of his handsome catalogues and get better acquainted with Mr. Buschmann.

White Leghorn Poultry Farm, Pekin, Ill., begins their advertising campaign this month. This firm comes to us very highly recommended and our representative who visited them recently reports that they have S. C. White Leghorns of exceptional quality. They have gone into the business on an extensive scale and aim to have one of the best equipped poultry farms in the state. Their young stock have unlimited range which insures vigor and health. They are in a position to supply exhibition stock or breeders. Write them for prices.

Midlothian Farms, Tinley Park, Ill., is one of the largest poultry farms in the state of Illinois, and is under the direct management of John G. Poorman, an expert poultryman, who is building up a magnificent plant. They recently decided to devote this plant, which consists of 110 acres, to the breeding of Rose and Single Comb Rhode Island Reds, exclusively, and are therefore making a sacrifice sale of all their Barred Rocks, White Rocks, Buff Orpingtons, White Orpingtons and White Wyandottes. This is a grand opportunity for buyers to get some choice birds at low prices. Better write them at once and get first choice.

The poultry exhibit at the Tri-State Fair in Ft. Wayne in September last was the largest and most complete in the history of fairs in Ft. Wayne. H. F. Kennerk, exclusive breeder of the Red Raven strain of single Comb Rhode Island Reds, won 1st cock, 1st pullet, 1st, 2d, 3d and 4th hen in very strong competition. His exhibit attracted a great deal of attention. Mr. Kennerk has more than 500 young birds coming on and can supply your wants.

BABY CHICKS. Buy Day-Old chicks, Cooley Chicks. I can supply you with strong, sturdy, healthy, growing White Leghorn and Barred Rock day-old chicks from prize winning stock. Fastest growers. W. A. Winter, Box 125, Red Bank, New Jersey

Important Correction

IN the October issue of the American Poultry Journal, there appeared a two-page advertisement of the Buckeye Incubator Company, in which a statement was made "Over 150,000 in Successful Operation." It will be noted from the comma that another cypher was intended. It should read, "Over 150,000 in Successful Operation." We call the attention of our readers to this correction, and also their two-page advertisement in the November issue.

A Moulting Hen Needs a Tonic

Shorten the non-productive moulting period—hasten the return of normal vigor in the hen, and be ready to reap a harvest while the rest of "hensdom" are still shedding feathers. A daily use of **Dr. Hess Poultry Pan-a-ce-a** will help you do it. It is a perfect aid to digestion and causes the maximum amount of food to be assimilated and hens to become profitable layers throughout the winter.

DR. HESS Poultry PAN-A-CE-A

is a scientific tonic, the prescription of Dr. Hess (M. D., D. V. S.) and the result of experiments conducted by him in his own poultry yards. It contains just the elements to make the hen in confinement as natural as she would be at liberty. It cures gapes, cholera, roup, indigestion, etc. Poultry Pan-a-ce-a has the endorsement of leading poultry associations in United States and Canada. Costs but a penny a day for 30 hens, and is sold on a written guarantee.

11-12 lbs. 25c., mail or express 40c.
 5 lbs. 60c.
 12 lbs. \$1.25.
 25 lb. pail, \$2.50.

Send 2 cents for Dr. Hess 48-page Poultry Book, free.

TRY IT AT OUR EXPENSE

**NO. 9
DANDY**

Try a "DANDY" Green Bone Cutter for 15 days at our Expense.

Know what a good, cheap feed it will prepare for you.

We make the "Dandy" in several sizes, suitable for the man with a dozen hens as well as the man with a thousand fowls. We can fit your needs at a price you can afford to pay.

GREEN BONE is a money-making feed that practically costs the poultryman nothing. With a "DANDY," he prepares it himself from scraps that would otherwise be wasted.

Green Bone furnishes in greater measure than any other available poultry food, the elements necessary to keep poultry egg-producing. It supplies flesh and muscle-making nutriment, keeping the fowl in excellent working order.

The "Dandy" prepares the cut green bone properly for feeding—like coarse corn meal—does not crush, splinter or leave it in lumps. By its correct construction it grinds fast, runs easy, and is quickly and easily cleaned—good points that you will appreciate. No other cutter compares with the "Dandy," and we want to send you one on 15 days free trial so that you can see for yourself just how and why it is superior to them all, and why it will be a money-maker for you.

Write for free catalog giving sizes and prices of cutters. It also contains a lot of valuable information about green bone and how to feed it.

Be sure to ask for our free trial plan and get your order in early.

Grow Mushrooms

BIG AND QUICK PROFITS
Small Capital to Start
A Safe Business

Over 12 years' experience enables me to give practical and reliable instructions in the business. From a start with only a few dollars capital I built up the largest mushroom farm in America. No matter what your occupation is or where you are located here is an opportunity to acquire a thorough knowledge of this paying business. I have shown thousands of men and women how to add \$5 to \$60 per week to their incomes and will gladly show you. Send for book giving particulars, how to start, cost, etc. **Address**

Jackson Mushroom Farm, 5878 N. Western Ave., Chicago, Ill.

How Will YOU "Size Up"

When you come in contact with the man whose "Yes" or "No" means Success or Failure for you?

At such a time your future will hang in the balance. Have you the training to decide the test in your favor? If not, you can get it.

Mark and mail the attached coupon, and the International Correspondence Schools will send to you full particulars about a course of training that will qualify you for a responsible position in the work you like best. With such a training you will be equipped to stand the test—to "size up" well. If you can read and write, and have a little spare time each day, the I. C. S. will train you in your own home—no matter where you live.

Mark and mail the coupon. Learn how you can be helped to a better position and an increased salary. Sending the coupon will place you under no obligation.

Send the coupon NOW.

International Correspondence Schools
Box 1004-S, Scranton, Pa.

Please explain, without further obligation on my part, how I can qualify for a larger salary and advancement to the position, trade, or profession before which I have marked X.

C. C. KEMPTON, Secretary, 205 Mint Arcade, Philadelphia

GREIDER'S FINE CATALOGUE

of pure-bred poultry for 1910, 262 pages, handsomely illustrated, 150 engravings, photos, 30 fine colored plates, describes 65 varieties of land and water fowls, gives low prices of stock, eggs, incubators, poultry supplies, etc. How to care for poultry and all details. Price 10c. send-to-day.

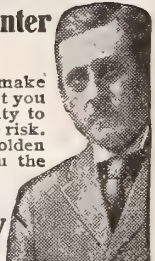

B. H. GREIDER, Box 101, Rheims, Pa.

Feed Grass

To Your Hens in Winter to Get Eggs

Cut Clover or Alfalfa will make hens lay all winter. I want you to give me an opportunity to prove this. I will take the risk. My practical book, "The Golden Egg"—sent free—tells you the easy, rapid way to prepare this ration in a

Humphrey Rapid Clover Cutter

and I will give you a trial free. If you have 12 or more hens you should get the Humphrey Helps—as necessary in a poultry yard as a hen house. They double and treble your profits—I guarantee this—because you can get from 150 to 250 eggs per hen a year. Write me today.

Humphrey
New Street Factory, Joliet, Ill.

Just
Out

This is Profitable Poultry Raising

Every egg is virtually "a bird in the hand" when your poultry raising is backed by expert knowledge that eliminates failure and assures the greatest of money-making success. This knowledge you cannot get second-hand out of a book. It must come to you *first-hand*—from experts who are making big money raising poultry and who *know* how to advise and help you. This help you get in the home course of Poultry Raising conducted by the International Correspondence Schools of Scranton.

Every phase is covered—from selecting eggs to marketing for profit. The subjects include:

How to select most profitable breeds; feeding; marketing eggs and poultry for profit; natural and artificial brooding; natural and artificial incubation; laying hens; combination plant; poultry appliances; enemies of poultry; poultry houses and management; turkeys; water fowls; squabs, etc.

Additional value of this course is found in the fact that the experimental plant of the I. C. S. is the largest poultry farm in the world—the celebrated Rancocas Poultry Farms—where experiments of every kind are made for the benefit of those taking this course.

The I. C. S. Course saves time, saves money—insures success. The season is here. *Here* is the money-making way.

For full particulars write to-day to

PROMINENT POULTRY PEOPLE ENDORSE AUTOMATIC FEEDING.

There is no subject in poultrydom at the present time which is attracting so much attention as the subject of Automatic Feeding and Exercising of Poultry. Nearly all of the prominent breeders, and thousands of those not so prominent, have their yards and pens equipped with Automatic Feeders and Exercisers, and it seems to be only a question of a very short time until all yards, both large and small, will have one or more of these machines.

The River Home Poultry Yards, Perrysburg, O., was among the very first of the prominent breeders to equip their yards. They installed about sixty Norwich Automatic Exercisers and Feeders in their yards about two years ago. The machines in the River Home Poultry Yards at once attracted wide attention, and a great many people who visited their yards insisted on taking feeders home with them, so that the River Home Poultry Yards had difficulty in keeping enough machines for their own use, this finally resulting in their becoming general agents and distributors for the Norwich Automatic Exercisers and Feeders for all of the United States East of the Rocky Mountains, excepting the Atlantic Coast states, the New England States, Pennsylvania, and New York. The Feeders and Exercisers are now shipped to them in carload lots and they are sending them out as fast as they can get them.

U. R. Fishel of Hope, Ind., the noted breeder of "The Best in the World" White Plymouth Rocks, has equipped his yards with the Norwich Automatic Exercisers and Feeders and gives his opinion of them in the following language:

"I wish to tell you that the more we use the Norwich Exercisers and Feeders, the better we like it, and we have found that it is the greatest saving device we have ever had on the farm. As you know, I now have in use more than thirty of the Exercisers and Feeders and no man could buy them for three times what they cost me if I would be compelled to do without them. I wish all poultry fanciers could know their great saving that they make in feed bills, to say nothing of the other good qualities they possess."

A. E. Martz, of Arcadia, Ind., whose specialty is high class S. C. Buff Orpingtons, and who is president of the National S. C. Buff Orpington Club, gives his experience with the Norwich Automatic Exercisers as follows:

"My last order of Norwich Automatic Exercisers and Feeders was duly received. This puts thirty-six of these Exercisers and Feeders in operation on my plant, but will need more as soon as other yards are completed. There has been nothing within the range of my experience that saves as much labor and feed, that produces such a uniform growth in chicks or puts hens in finer laying fettle than this Exerciser and Feeder. Its use should be universal."

When such poultry people as the River Home Poultry Yards, U. R. Fishel and A. E. Martz, give the Norwich Exerciser and Feeder their unqualified endorsement as the greatest feed and labor saver ever invented, it would seem as though poultry raisers should not hesitate to try them and that they should not experiment with untried or inferior machines.

Every one who sees the Norwich Automatic Exerciser and Feeder in operation is delighted. There is no subject so important as the correct and economical feeding and care of poultry. The feed is the great bill of expense in poultry keeping, and a device which saves feed and labor and at the same time makes the birds exercise properly is certainly a boon to the poultry industry.

The River Home Poultry Yards has a full-page advertisement in this issue telling about the Exerciser and Feeder, and their famous Light Brahmas and Barred Plymouth Rocks. They tell us that they have many pullets laying this season at 4½ months of age, and they attribute this result largely to the fact that these pullets fed themselves from the time they were five weeks old from the Norwich Exerciser and Feeder. We understand that more than thirty thousand of these machines are in daily use in the United States and that they are now being put out at the rate of about 5,000 per month. This immense sale enables the River Home Poultry Yards to furnish them at a very reasonable price, so that every one who keeps poultry can afford to use them.

Rock-Bottom!

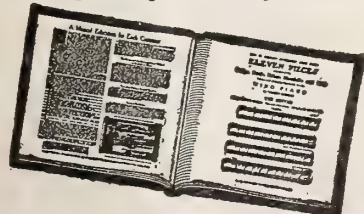

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. **Remember: all freight charges prepaid, no matter whether you keep the piano or not.**

Send for the best, safest, most instructive book of piano-buying information ever compiled; the
Book of Information FREE!

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

WANTED TO BUY—Homer and Carneaux pigeons, also Hamburgs, English Red Caps and White Orpingtons in large or small lots. Name lowest price in first letter. Matthew Mertz, 907 W. 15th St., Des Moines, Ia. 9-10-1f

WANTED POULTRY—How many pullets for five dollars? One night we lost enough to buy many guns, and the dogs never said a word. We got busy, bought a couple of dollars' worth of wire, a dry battery, a bluestone battery and an ordinary bell. Open front of poultry house crossed by wires, and two wires lead from chicken house to bed room. Anyone cutting wires, touching wires together, tearing a board off chicken house or opening door rings bell. Apparatus is simple but bound to ring if everything is not in good order after buildings closed for the night. No one takes chickens without bell telling us about it. Do you need such protection? Write for information in regard to different methods of putting in electric burglar alarms. John S. Ross, Cokeville, Westmoreland County, Pennsylvania. 11-3

WANTED—YOUNG GUINEA HENS, one pound each and over. Also Dressed Squabs. Write for prices before selling. Homestead Squab & Poultry Co., Reading Terminal Market, Philadelphia. 10-3

Hartman Stock Farm Poul. Yards COLUMBUS, OHIO

Eggs for hatching from our noted prize-winning Buff, White and Part. Wyandottes, Barred Ply. Rocks and S. C. W. Leghorns. Our birds have won the lion's share of 1st and 2nd prizes wherever shown. Eggs, \$3 and \$5 per 15. Choice stock always for sale. Day old chicks from our best stock for sale from March 15 to June 1.

:: VASS' BUFF, BLACK AND WHITE :: ORPINGTONS

acknowledged the world's best. After June 1st I will offer eggs at less than half their value. This is chance of your life to get in line for some of my strains of Orpingtons. Never in my twelve years breeding Orpingtons have I had such youngsters as I have at present time large broad, deep bodies, heavy bone, shape and color to burn. As I was the first importer of Buffs to America and have won over 1,200 prizes, I believe I have some of the best birds in America today. June is month to hatch the winner for late winter shows and can furnish the eggs that will set you in line for blue ribbons. Write for prices. Booklet free. :: C. E. Vass, Washington, New Jersey

KING'S FAMOUS BARRED PLY. ROCKS AND SINGLE COMB WHITE LEGHORNS...

again prove their superiority by carrying off the highest prize at the great York Fair, having won the medal for the best cockerel in the show. I have 100 exhibition and breeding cockerels and pullets. Also 200 S. C. W. Leghorn Chicks for sale. My chicks are all raised on farm and are strong and vigorous.

SHEPPARD'S FAMOUS ANCONAS

THE WORLD'S BEST

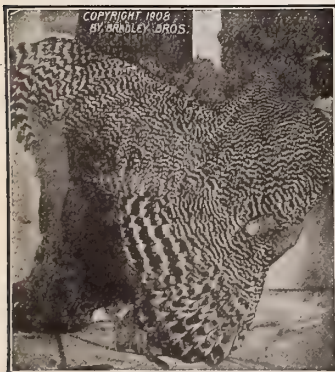

Champions at the world's greatest shows, including London, Eng., N. Y. City and Cleveland. In 1907-8 they won all the 1st and 2d prizes at Madison Square Garden in the largest Ancona class in the history of the big show. Have since won three times as many 1st and 2d prizes as all the other breeders together. In the great 1910 International show, in the largest and strongest class in the history of the world, my birds again distinguished themselves by winning three times as many **first prizes** and **silver cups**, and four times as many special club ribbons as all others combined.

: SPECIAL SALE :

of a large lot of handsome cockerels from my Madison Square winners, at reduced prices. Just what you want for new blood to build up your flock. A splendid lot of pullets and hens at reduced prices to make room for winter quarters. Single and Rose Comb. My stock have the **great egg record** of 256 average. Send for circular and prices.

OF

Pigeons and Bantams

By F. W. DeLancey

One hundred pages, handsomely illustrated. The best ever published on the subject, because it goes into details; illustrates and describes all the leading varieties.

It Tells You---

How to mate—How, when and what to feed—How to tell males from females—System of feeding—Training the racing Homer—Disease—Building and construction of houses—History and origin of the different varieties. The most complete pigeon book published.

Bantams

It not only describes and illustrates the leading varieties, but tells you all about the mating, care and keeping. Articles by America's foremost breeders and best authorities. No Bantam or Pigeon breeder can afford to be without this valuable guide.

Price 50c or with a year's subscription to The Poultry Item, the largest and best eastern poultry journal, 75c

Here's Just One, More Like It

Cornwall, N. Y., July 18, 1910.

D. Lincoln Orr, Esq., Orr's Mills, N. Y.

Dear Sir:—In reply to your letter of inquiry regarding my opinion of your new digestible mash, I would say that we have kept this food before the birds in our laying houses constantly since its introduction. We consider it the greatest egg producing food that we have ever used. To those desiring quantities of market eggs we would say—use Orr's Digestible Mash. Yours truly,

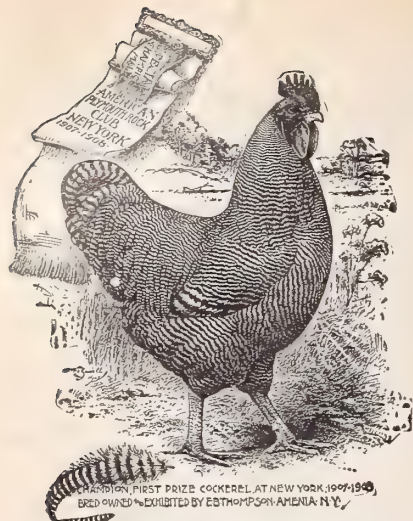

PALMER R. BOWDISH,

Breeder of Columbian Wyandottes, Single Comb Buff Orpingtons and Single Comb White Leghorns.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square
Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

Breeders and Exhibitors of Barred Plymouth Rocks and Single Comb White Leghorns

If you want winners for the fall or winter shows, single birds, pairs, trios, pens or any number, why not send to us? We won the majority of Blue Ribbons at Orange County Fair, New York; all the Blue Ribbons in both classes at Troy, N. Y., 1909; more Blue Ribbons and Specials than all our competitors combined, in both classes at Tri-State Fair, Memphis, Tennessee, 1909; first prize pen Single Comb White Leghorns, and many other places. Cup presented by the president of the National Single Comb White Leghorn Club for scoring the greatest number of points at Madison Square Garden, December, 1909, and January, 1910, and at Boston, Massachusetts, January, 1910, we won every Blue Ribbon in Single Comb White Leghorns and every Special, including the American Poultry Association Medal for the best male of all the Mediterranean class and in Barred Rocks, won many places and the Special for the best shaped female. If we can do all the above, why not send to us to help you out? Send for literature and particulars as we consider giving information a pleasure without charge. We have breeders, show birds, eggs for hatching and day-old chicks for sale in season.

THE PRICE WRECKING CATALOG. HOW TO ANSWER THIS AD.
We publish a 1,000 page handsomely illustrated catalog that we call "The Price Wrecker." It is a book descriptive of our operations. It explains our purchases at Sheriffs' Sales, Receivers' Sales and Manufacturers' Sales. The goods are shown true to life and fully described. Our broad, binding guarantee is fully outlined. The liberal terms we make our customers have made us thousands of friends everywhere. No chance for you to go wrong. Your money back if you are not satisfied is the key-note of our business methods. Low prices combined with quick, accurate service has given us a vast army of satisfied customers. Our Catalog is the most wonderful book published anywhere. Each one costs over \$1.00 to produce, yet we give it to you absolutely free without obligation of any kind. Just fill out the coupon in the next column and send it to us at once, and we will immediately mail you free of all charge this magnificent Economy Guide, "The Great Price Wrecker." If there are any special articles you are interested in say so on this coupon. We will give you complete information.

F. A. Tecktonius, Route 7, Racine, Wisconsin

Hoover's Barred Ply. Rocks

Have been winning the blue ribbons at the leading shows for years and their quality is undisputed. The stock is farm raised, and is therefore healthy and vigorous. This combined with right breeding makes quality of the very highest

1,000 Birds For Sale

Many of them fit to win in any show in the country. If you want to win at the winter shows; if you want birds for the breeding yard; if you want cocks, hens, cockerels or pullets of highest quality; write us. No better birds than ours are to be found anywhere. A poultryman who was sent out to look over our stock and plant reported as follows: "They have the finest bunch of cockerels I ever saw and you cannot speak too highly of them." That's what you will say too, if you see our stock. Let us tell you about them in our catalogue. It's free for the asking. If you want to win at any show, tell us and we will fit you out. All birds shipped on approval. Mention American Poultry Journal.

Enlarge Your Poultry Business

Candee Incu-Brooders and Brooding Systems Will Pay You a Steady Profit Each Season

 Poultry and Eggs never brought such prices as prevail today. Now is the time to enlarge your business and reap the golden harvest.

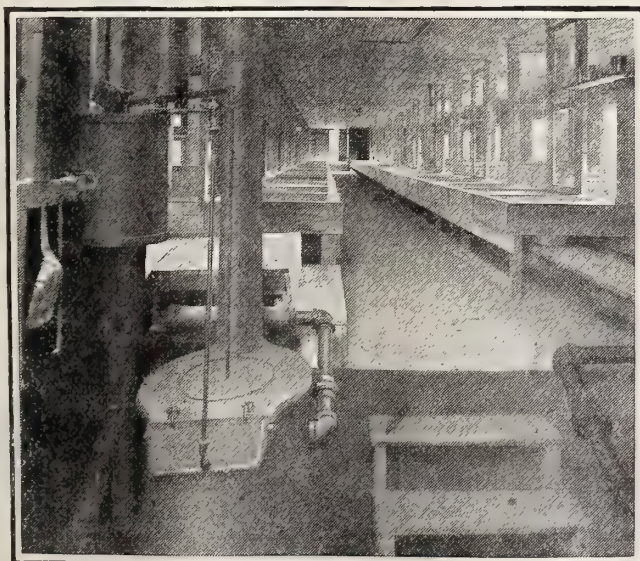

Incu-Brooder For Custom Hatching and Baby Chick Trade

Lowest Cost of Operation -- Because only compartments in use are heated, saving coal.

Easiest to Operate -- Takes but two minutes, night and morning. Outside weather conditions cannot affect it. No float to get out of order.

Highest Efficiency -- Because heat of each compartment is controlled by a separate thermostat.

Best Results -- Because you save on your coal, time and labor and gain in the percentage of chicks hatched, making the greatest possible profit.

Candee Hot Water Brooding Systems

Simplest -- Requiring but four pipes, against six in every other system. Result: quicker installed and the initial cost is less.

Easiest to Tend -- Require but a minute night and morning, regardless of size.

Healthy Heat -- No danger from oil or fire and no fumes. Result is healthy chicks.

Lowest First Cost -- Less than installation of equal capacity of oil heaters.

Lowest Running Cost -- Coal cost less than oil cost for equal capacity.

Our **Pedigreed White Rocks** are also winning right along in the hands of our customers. When once you give our birds a trial you will raise none but the **Bickerdike Strain.** They are **trap nested** for eggs and are **great layers.**

A grand lot of exhibition birds, selected breeders and utility stock for sale. Circulars free. Write your wants to

J. A. Bickerdike : Box A : Millersville, Illinois

Don't RISK the LIFE of your CHICKS by Using FAULTY BURNERS

The burner is the most important part of your Brooder. If the burner is wrong there is great danger of losing your chicks and brooder, to say nothing of your time, labor and money.

Thousands and thousands of chicks are burned up every year because of poor burners. Experienced and successful poultrymen know that the

MILLER BURNERS ARE THE BEST

to be had regardless of price. For over 50 years we have been making lamps, burners, etc., paying special attention to the incubator and brooder line. We are now supplying about all of the leading manufacturers of hatching and brooding apparatus. When buying your next outfit see that the name "MILLER" is stamped on the burner. That name on a burner is equivalent to "Sterling" on silverware.

The **Miller Brooder Burner and Chimney** shown here may be had from most incubator manufacturers, poultry supply houses, seedsmen, etc. If they cannot supply you, we will forward same, post-paid, on receipt of \$1.00. Satisfaction guaranteed. Don't delay getting your brooder in good working order.

BUFF, BLACK AND WHITE

ORPINGTONS

SUPERLATIVE QUALITY AT MODERATE PRICES

We have now mated up some of our best pens for the egg trade in the Southern states. The prices will be from \$3 to \$30 per 15.

Our eggs are hatching winners in almost every state in the Union, Canada and Mexico. Here are two letters received today, one dated Nov. 1, 1910, Tacoma, Washington: "Last spring I ordered a setting of eggs from you, paying \$5 for same. Nine chicks hatched and one fertile egg was broken by the hen, one chick was killed by the hen, one chick died from unknown cause. The remaining seven, six pullets and one cockerel, are beauties, not a bird in the bunch but is worth more than the cost of the setting. Thanking you for past favors, I am, respectfully, C. A. Sturmer, 1213 S. 35th Street." This and several hundred letters like it show that we know how to produce fertile eggs and pack them so they will hatch any distance from our farms.

Here is another letter that came in same mail, dated Nov. 5, Roseville, O.: "Judge Platt of Toledo, representing R. P. Journal, was in town Monday evening and I had him look over my Orpingtons. He says that pullet 'Flossy' will score 96, and that I need not be afraid to put her up against anybody's pullet. According to his judgment there is not a pullet in the pen but will score 94. I feel very proud of my birds to have a man of Mr. Platt's experience pronounce them so good. I doubt if there is a better pen in this part of the state. Yours truly, H. U. G. Weaver." Mr. Weaver paid us \$5 for the eggs from which all these birds were hatched. He has a standing offer from us of \$150 for chicks hatched from a \$5 setting of eggs bought of us. He prefers to keep them. They are undoubtedly worth twice what we offered him.

Send for our booklet telling of the wonderful laying records made by chicks from our eggs in hands of customers. It will show that we have not forgotten utility in our pursuit of the fancy.

Here are some facts we want you to remember: Our egg customers have won on young stock from Boston, Allentown, Hagerstown to the Pacific Coast and from the Lakes to the Gulf!

Remember that in BUFFS we had one of the best strains in the country before we bought the Littell flock and made our sensational importations, including Crystal Palace winners, and last, but not least, added the famous BAKER BUFFS that won Judge Stanfield's trophy for best Buffs he judged last year at Madison Square, Chicago, National Club Meet at Cleveland, etc., etc. If we were able to win more prizes than we made entries before a single one of these tremendous additions were made, WHAT MUST BE OUR STRENGTH NOW?

In WHITES—Some of the oldest breeders in the land are today coming to us for their winners. Our Snow Lady was famous before we imported our sensational English birds—bear in mind that we imported the Champion Cockerel of England and Crystal Palace winning females. We have imported we think the very cream of England. Just today we got over twenty more grand cockerels with immense bone—grand type. We have pens all made up of the grandest big massive glistening white birds ever brought to America.

In BLACKS—But who does not know of our wonderful Blacks? So universal is the knowledge that we have the best Blacks in the world that we have to announce that we will not part with another superlative female—requiring all for our own immense egg trade. It is enough to say we still have Empress, most remarkable producer the world ever saw—the hen that fixed the type of American Blacks so that today the English cannot produce birds good enough to compare with our superlative Blacks.

We are now ready for the Southern egg trade, and also for the calls for exhibition stock in Buff, Black and White Orpingtons. Some of the cream of the Baker birds and also the imported birds are for sale now, also any number of grand cockerels in either color. We must limit absolutely the number of Blacks of the highest grade, as we have been sold out early. We have many hundred good birds left fit for small shows in Black, and a very few superlative cockerels, but positively no more superlative females will be sold till after the hatching season is over. We have some grand sons of Champion for sale; also some grand pullets. Also several grand imported cockerels and a few cocks.

Any Number of Moderate Priced Birds in Either Color

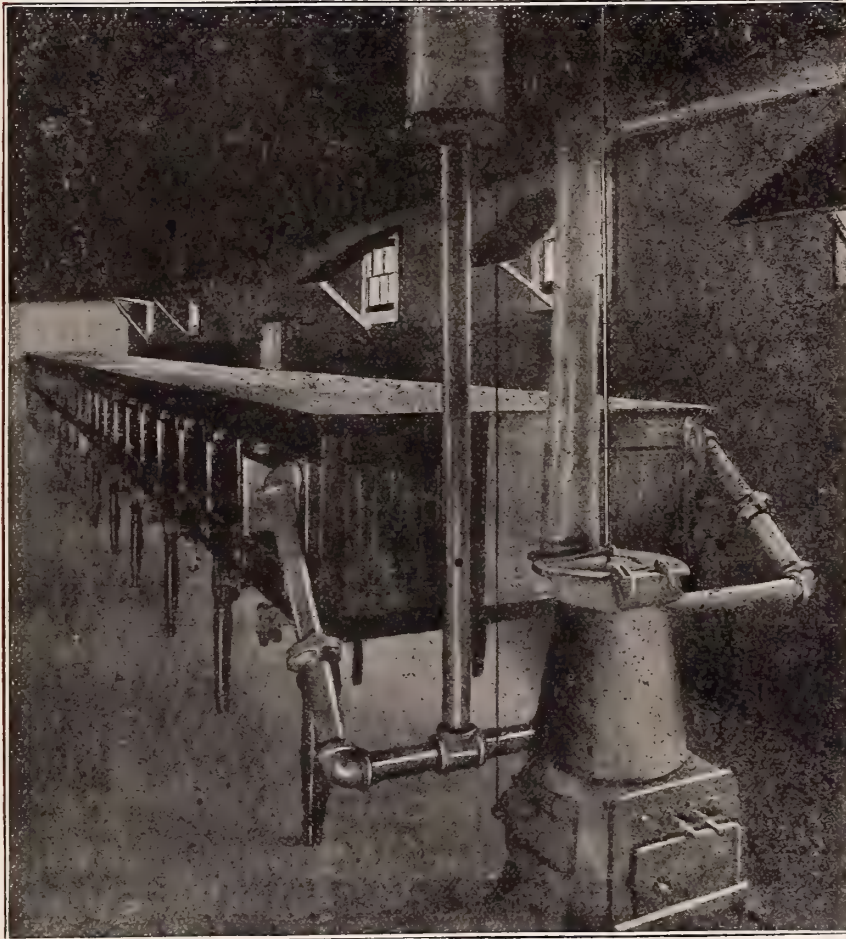

Here is a tip: The Cheviot Farms Strain birds were unknown four years ago. We operated in a back lot. Today we have the most famous birds in the world in our matings. Get into the balloon that is going up, not into the one that is coming down. SEND FOR OUR FREE BULLETIN. It will show what our skill has produced in our own hands and those of our customers. Book your orders for spring delivery NOW from our better matings.

Don't fail to send 25c for a year's subscription for the Orpington Quarterly—or make it 50c and add a year's subscription to the American or any other 50c poultry journal. Address

The Cheviot Farms, Milton Brown, Proprietor, Station L, Cincinnati, Ohio

The Newtown Giant Incubator

A SUCCESSFUL INCUBATOR

GIGANTIC possibilities of service to you alert to the opportunity for greater success.

It will interest every up-to-date poultryman to know that the Newtown Producing Co. has invented, perfected and is now selling

Incubator and Brooding Systems

the guarantee of reliability of which is assured by that now world-famous name.

Pertinent Facts

The Newtown Giant Incubator insures the highest degree of success possible, at the least expense consistent with good results. These unparalleled results are attained by:

First—Practical poultrymen desiring the equipments.

Second—Duplicating natural incubation as nearly as possible.

Third—Making the regulation as nearly automatic as possible.

Fourth—Putting into the machines best materials and workmanship combined with close expert supervision over the construction of the systems.

At Last a REAL Brooder System

that will allow of individual regulation of both the heat under the hover, and the height of the hovers above the floor.

CHICKS of various ages, sizes, and breeds can be raised at the same time in consecutive hovers.

SUPPLIES the proper amount of moist air to the chicks.

RAISES successfully those weaker chicks that are sure to die in other makes of brooders.

TURNES your losses into profits.

Personal inspection of the new incubator and brooder is invited at the Philadelphia Poultry Show in December, during which time they will be in full operation there.

Your request for a catalog, written on your business letterhead, will meet with prompt attention. Your further interest and satisfaction is guaranteed.

Its Construction

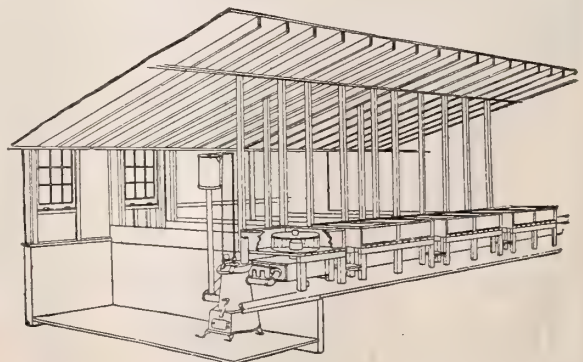

The NEWTOWN GIANT is built of hard wood, with brass finishings, by skilled labor, IN OUR OWN factory. It will last a lifetime.

Its Capacity

Built in sizes ranging in capacity from 2,100 to 20,000 hen eggs and upwards, or 80% of these numbers of duck eggs.

Its Cost

Smallest machine, capacity 2,100 hen eggs, sells for \$300. The NEWTOWN GIANT insures the hatching of better chicks or ducks than any other incubator.

TANNENBAUM FARMS

Barred Rocks and Columbian Wyandottes

Our "Victor Strain" Wins

First Columbian Pullet, Madison Square Garden, 1910

BECAUSE we spared no expense and by careful selection secured the **best** foundation stock in the beginning, and because we have spent years in carefully perfecting our "Victor Strain" until we had our blood lines thoroughly established, so that they are reproducing themselves. We have been doing this quietly, but now that we have succeeded we are ready to let you share in the result which we have attained.

We Won at Madison Square Garden

Our first Columbian pullet last year was a wonderfully perfect specimen, and was praised by all Columbian breeders. At the great Cleveland show in a hot class of Barred Rocks our first prize hen received the admiration of all Barred Rock fanciers. We have again gone out in keen competition and demonstrated the quality of our Victor Strain by again winning nearly every prize for which we competed at Ohio and West Virginia State Fairs.

These recent winnings are but a repetition of what we have been doing in the past, and one more link in our long chain of **success**. These winnings should **prove to you** that in producing our "Victor Strain" we have been working along right lines and that we are in a position to furnish you exhibition and breeding specimens with quality, the equal of our winners.

Bargains For You Now

Being somewhat overstocked at this time, we are offering in **Barred Rocks** 200 cockerels and 200 pullets bred from our prize winners, both cockerel and pullet bred birds. Among these we can pick out many birds that **can win** in the smaller shows and the rest of them are high class breeding specimens. Remember these birds are bred to fit the new standard requirements and **we guarantee we can please you**.

In **Columbian Wyandottes** we will sacrifice 50 hens, 100 cockerels and 100 pullets. These hens were in our breeding pens and are fine breeding specimens, being strong in black markings; they will put color into your flock. Show quality predominates in our flock of young Columbians and we are prepared to furnish you with **exhibition specimens who can win the blue**.

All we ask is a chance to show you our "Victor Strain" and we **know** we can **please you**, in fact we **guarantee to please you** or refund your money. We breed **quality** only at Tannenbaum Farms.

Special pens mated to supply the Fall egg trade. Write us your wants today. Mention American Poultry Journal.

TANNENBAUM FARMS

WILLOUGHBY : : OHIO

I Tell You How

I made \$3,600.00 in one season from 30 hens, on a lot 24x40, by feeding the scraps from my table three times a day. I'll give you the names of those who paid me over \$2,000 for the eggs alone from these fowls—you can refer to them.

I'll tell you how I make my chickens weigh 2 1-2 pounds at 8 weeks of age.

I tell how I prepared my chickens for the show room, so that I won over 90 per cent of all the blue ribbons offered during 1907 and 1908. This has never been published before.

How I raise ninety-eight chickens out of a hundred that I hatch—how I feed my chickens for egg production—how I keep them healthy and free from disease—how I tell the layer from the poor layer—how I break up my broody hens without injuring them. I tell you how to pack eggs to keep them fresh—how I mate my chickens for breeding and fertility—how I run my incubators and supply moisture—how I raised my famous \$10,000.00 hen, "Peggy"—how I bred my big egg-laying strain. I tell you all about broiler plants, egg plants, etc.

I tell you about everything that is necessary to success in the poultry business.

It also gives you my opinion and experience that I have had with advertising solicitors of poultry journals.

It also gives you my opinion and experience that I have had with poultry judges in the show room, and why, in my opinion, the little fellow don't get what he thinks he ought to have in the show room. I tell it just as I have seen it and experienced it. There are several pages in this book taken from my records, and from my cash book and ledger. There are no secrets—I tell it all.

See what others say on opposite page.

"I Made \$18,178.53

NET PROFIT

In One Year, Selling Chickens & Eggs"

I took a flock of 1,638 chickens and made them net me a profit of \$11.09 per bird in 12 months' time.

My farm and books are open for inspection to any State Poultry Experimental Station. If your station doesn't find the above statements true, I'll donate \$1,000.00 in cash to your institute.

My New Poultry Book Tells How I Did It.

It covers all branches—it tells everything necessary to success with poultry. It tells you what I have done—how I started.

Try my way and you can raise them by the thousands

It shows you a picture of the first hen house I built, 6x6 feet in size. It contains over 50 full-page pictures of buildings and views taken on my farm. It was written from actual experience

Send \$1.00—and a Copy of the Latest Revised Edition of the Book Will be Sent You by Return Mail.

NOTE—Ask the editor of this Poultry Journal or any "licensed" poultry judge as to my reputation as a breeder.

"KELLERSTRASS WAY"

The Kellerstrass Farm,
Kansas City, Mo.

I received your book sent me Saturday a. m. It would have been worth to me \$500.00 if I had had it last spring. "Good Book," common sense learned by hard-earned experience. Worth \$1,000.00 to me. Respt.,

L. R. HAYWARD.

Clinton, Ia.

Kellerstrass Farm,
Kansas City, Mo.

The book, "The Kellerstrass Way of Raising Poultry," received, and will say it is the most sensible and practical book on poultry that I have ever read, and I would not part with it for ten times its price if I could not get another one. Very truly yours,

H. C. HEINSEN.

Albany, N. Y.

Ernest Kellerstrass.

Dear Sir:—I received your book. Comparatively speaking, it is WORTH MORE MONEY.

Very truly yours,

GEO. W. CAMPBELL.

The American White Orpington Club,
Richmond, Va.

Dear Mr. Kellerstrass:

Received the book O. K., and it certainly is brim full of meat; you have the other fellows beat a mile for real down chicken information, and I have all of the books, as well as some practical experience in the 15 years I have been breeding.

Fraternally,

F. S. BULLINGTON.

Hurst Pierrepont,
Garrison-on-Hudson, N. Y.

Mr. Kellerstrass

I have read your book with deep interest, and want the satisfaction and pleasure of telling you how much I admire your wonderful enterprise, your unbounded success and your most beautiful and peerless poultry. I have the greatest wish to visit your farm, and as I am honored with a permit, I hope some day to avail myself of the privilege.

It must be a great satisfaction and joy to you to have been able to do all you have done, and to have given inspiration to very many people.

It is not probable that it would be possible for anyone to excel you. You have no doubt brought poultry raising up to the goal of excellence, but if in the future there should happen to be others capable of following your great example, you will have reason to rejoice that you were the first to give them such an inspiration. What greater good can we do in the world than to be an example so perfect in whatever way that others may desire and succeed in following. What most people need is inspiration. Many talents lie dormant. The desire has not been roused to put forth interested efforts.

When one such as you and Luther Burbank come to the fore it has the effect of stirring desire and ambition. Blessed are such individuals; they have accomplished a great work, and posterity will not forget them.

Sincerely yours,

M. BECKWITH.

Winchester, Kans.

Dear Sir:—Received the book all O. K. this a. m. and find same very interesting and full of GOOD SOUND LOGIC.

Yours truly,

CHAS. FORSYTHE.

Mr. E. Kellerstrass,
Kansas City, Mo.

Dear Sir:—Received your book all right. Am well pleased with book; best dollar's worth I have ever received.

Yours truly,

CHAS. P. GOETZ.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Adah, Pa.

Dear Friend:—The book at hand. I got so much interested in the book that I couldn't lay it down. It is the best book that I ever opened on poultry talk. I think every person that has a bird on his lot or farm should have one of these books. I was surprised when I read where you opened those chicks and found lath nails and tacks in their craws. I never heard of such a thing; it stands to reason that would kill them.

H. M. GROVER.

Irrington, N. J.

Ernest Kellerstrass:

Dear Sir:—Received your poultry book; it is worth many times the price, and should be in the hands of everyone handling chickens, as it contains information that would take many years to learn.

Yours very truly,

JOHN SELFELDER.

Kellerstrass Farm,
Ernest Kellerstrass, Prop.,
Kansas City, Mo.

Elyria, Ohio.

Dear Sir:—I was very much interested in your book, as I believe that it gets closer to nature than any other book that I have seen, and am much interested in your Crystal White Orpingtons.

Yours very truly,

H. H. CLOUGH.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Augusta, Ga.

Dear Sir:—Yours of a recent date to hand, also your book of "Kellerstrass Way of Raising Poultry," which I appreciate very much. I must say I think more of it than all the other books I have ever received.

Thanking you again for the book you sent me, and assuring you that I am and will from now on follow your way and no other,

Yours truly,

G. K. JOHNSON.

Hot Springs, Ark.

Mr. Ernest Kellerstrass.

Dear Sir:—Please excuse my apparent slothfulness. I have not had a chance to write to you, since I received the book. I would not take three times the cost of it for it. It is all good common sense, and no man could have known it without experience, and it takes time to find out such. I am a thousand times obliged to you. I feel as if you had given it to me. I am not a breeder of any particular breed. I just raise a few for home use, but I like to make them pay. I am an admirer of the work and hope in the near future to go in it for a business.

Thanking you again, I am,

Respectfully yours,

R. S. TONEY.

Grey Bull, Wyo.

Received book all right. It suits me fine. Is worth its money in any man's country. Yours as ever,

J. T. ROBINSON.

Oklahoma City, Okla.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Your late poultry book received, and I have received very much valuable information therefrom. I believe I can now begin the poultry business intelligently and successfully.

Very respectfully,

T. W. SHACKELFORD.

Jennings, Kans.

Ernest Kellerstrass.

Dear Sir:—Enclosed please find \$1.00 for your book, "My New Poultry Book." Your ad. was sent me by one who has your book and thinks it is a grand book.

MRS. C. H. DANLEY.

Calgary, Alta, Can.

To Kellerstrass Poultry Farm,
Kansas City, Mo.

Dear Sir:—Received your book O. K., for which I thank you for the quick reply, and having read it through, may say that in my estimation the book is worth its weight in gold to anyone who has or takes interest in poultry.

Yours truly,

B. DICKINSON.

Victoria, B. C.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Received your poultry book and enjoyed reading it. I like that kind of language you talk. Your book cheers me up, and I have decided now to go into the poultry business.

Yours truly,

WM. COLLEN.

Asbury, Mo.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I like the book fine, and would not part with some of the information for many times the price of book.

Very truly yours,

C. J. RHOADS.

Birmingham, Ala.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Sir:—Have just received your book—found it very interesting. Am sure it will be of much help to me. Don't see how I could do without it.

Yours truly,

J. W. GILLESPIE.

Brandon, Manitoba.

Mr. Ernest Kellerstrass.

Dear Sir:—I received your book, and think it far ahead of all others. Everything so plain and to the point.

I remain,

S. E. WOODLEY.

Chicago, Ill.

Mr. Ernest Kellerstrass.

Dear Sir:—I have your late book on your way of raising poultry, and have been reading it. Am very much taken with your way—am proud of my book.

W. PICKENS.

New York City.

Ernest Kellerstrass,
Westport Station,
Kansas City, Mo.

Dear Sir:—Please find enclosed check for \$2.00 for two copies of your "New Book on Poultry." I received a copy of this book from you some weeks ago, but it was so admired by a friend that I gave it to him, and now want one for my own use.

Very truly yours,

THEODORE CRANE.

CHAMPION SUNSWICK STRAIN

OF BLUE BLOODED

Buff, Black and White Orpingtons

Winners of Gold Specials, A. P. A. Diplomas, Silver Cups, Sweepstakes Prizes, Specials for Shape and Color, Etc., Etc. Over 350 prizes in four years at such shows as Madison Square Garden, Boston, Cleveland, Allentown, Allentown and Baltimore.

"I am trying to tell you what I have won at Allentown, Penna., 1910, the Clinton Fuller Challenge Cup for the best Black Orpington in the show. My name is Black Sultan. I live at the Sunswick Poultry Farm, South Plainfield, N. J., and my owner has a lot more like me."

allenge Cup on our Black Orpington cock, "Sultan," for the best Black Orpington in the show. See the cut well up beside him. This is the type we breed in Blacks. We have won in all classes at all the largest shows in the country. We can supply you with winners in Blacks as well as in our other varieties.

Our White Orpingtons

Our "Lady of the Snows" was again crowned champion winning the great Sweepstakes cup at the great Allentown Fair, October, 1910, defeating every cock, hen, cockerel and pullet in the show and there were nearly 7,000. Our White Cock, "Champion Madison," is the sire of the great hen, "Our Lady of the Snows," and many of our young birds have won 1st prize and silver cup at New York, '07; 1st at Boston, '08; 1st and special New York, '08-9; 1st and 2 special, Boston, '09; and 1st prize, Cleveland, '09. Isn't this the kind of stock you are looking for? Isn't "Our Lady of the Snows" a beauty? Isn't she the best that you have ever seen? (See cut on opposite page.) Well, we have other hens related to her and some of her sons and daughters for sale. Let us start you with a fine pen or trio of our Blue Blooded Buff, Black and White Orpingtons. Start right and stay right. Our prices are reasonable and we guarantee to please you. Write to us.

Buff and Blue Orpington Ducks

These ducks have repeatedly beaten the Indian Runner as layers. We have the only flock of Buffs in the country. Start with them now and get in on the ground floor.

Sunswick Poultry Farm Rufus Delafield, Owner

Our Buff Orpingtons

have won at all the above shows during the past years and have **quality** bred into them, but this year they are better than ever and are truly Buff leaders of the Orpington breed. Our "Champion Golden King," a "Blue Blooded Buff," was champion "Sunswick" and only exhibited in 1908-9. He won the following: 1st prize and \$50 silver cup at Allentown 1908; at Madison 1st prize in open class, 2 silver cups, 1st prize for best shape in class. First and shape special, Boston, '09, and first at Cleveland, 1909. We have 800 grand young birds containing these blood lines, many sired by Champion Golden King, and can supply you **show birds** and high class breeders having this blood bred into them for several generations.

Our Black Orpingtons

We won the Clinton Fuller Challenge Cup on our Black Orpington cock, "Sultan," for the best Black Orpington in the show. See the cut well up beside him. This is the type we breed in Blacks. We have won in all classes at all the largest shows in the country. We can supply you with winners in Blacks as well as in our other varieties.

S. C. WHITE ORPINGTON HEN

"Our Lady of the Snows" the bluest of Blue Blooded hen is the most powerful of White Orpington :: ::

SUNSWICK POVLTRY FARM
SOUTH PLAINFIELD,
NEW JERSEY

She won in a hot class at the town, 1910, first prize and special for best White Orpington hen; also the grand sweepstakes prize for the best hen in the class, now, all breeds competing, and she was the "sensation of the show." She is the daughter of "Champion Madison," was bred and reared at Sunswick and only the bluest of Blue Blood flows in her veins. She is deservedly a "champion hen" and will be heard from again. If you want some of her progeny, book your order now.

THE LINFIELD POULTRY FARM

Successors to John W. Poley, Originator Poley's World's Best Buff Rocks

Important Notice

WE DESIRE TO ANNOUNCE to John W. Poley's friends and customers and to any one interested in the BUFF ROCK BREED, that we have purchased his entire stock of "WORLD'S BEST BUFF ROCKS."

We have erected at LINFIELD, PA., a handsomely equipped and up-to-date poultry plant which from now on will be the home of this famous breed.

MR. POLEY, who has had many years' experience as a poultry fancier and who has spent fifteen years perfecting his "WORLD'S BEST BUFF ROCKS," has undertaken the management of our new plant.

We are now able to offer to you the finest line of BUFF PLYMOUTH ROCKS in the country.

"POLEY'S WORLD'S BEST BUFF ROCKS" whenever exhibited have won more first prizes than all the other competitors in the show.

Nine out of a possible fifteen firsts at New York in the last three years; nine out of a possible ten firsts at Allentown in the last two years; five firsts at one show at Philadelphia; and five firsts at the club meeting at Indianapolis; is a record which speaks for itself.

Now is the Time to Purchase Stock

Over fifteen hundred selected breeders and an unusual number of superior cockerels and cock birds from which to choose.

If you are going to show this fall and desire birds THAT WILL WIN or if you need birds for breeding purposes, you will find it greatly to your advantage to either write or visit us before purchasing. Satisfaction guaranteed or money refunded.

POLEY'S WORLD'S BEST BUFF ROCKS

WHITE WYANDOTTES

No variety can be more popular for their compact, well rounded, broad, deep bodies and breast, YELLOW SKIN, and meat of the finest texture that makes the ideal table fowl. Their quick maturing qualities again commend them for egg production.

THEY HAVE NO EQUAL. The White Wyandottes will be found to be excellent winter layers, laying the bulk of their eggs in the cold winter months when the SINGLE COMB varieties are taking their vacation. They lay when the market is the highest, therefore the White Wyandottes

**Lay More Dollars Worth of Eggs
than Any Other Breed**

Another advantage of the White Wyandottes over other breeds is the close-fitting comb. A frosted comb means to check egg production at once with all SINGLE COMB VARIETIES.

With our White Wyandottes this never occurs, even in the coldest weather, in the extreme north. All in all, we have in the White Wyandottes more good utilitarian qualities than are found in any other breed. They will satisfy and please you, and as a source of income will give you a larger per cent. on the investment than any variety you may invest in. As to exhibition qualities our White Wyandottes have upheld our claim of

The World's Best

in the leading shows of the country. Send us a dime to cover cost of mailing our handsome catalog full of valuable information you should have.

Cyphers Mammoth Incubators

Are Doing Highly Satisfactory Work in Hatching Chickens and Ducklings

Read the Following Reports and Judge for Yourself

THE CYPHERS MAMMOTHS FOR 1911 (Capacity 4,000 to 60,000 eggs) are shipped knock-down at low freight rates and can be set up quickly and exactly by any man who is handy with tools. Detailed photographs and plain instructions furnished with each machine. Are suitable to install and use successfully in ordinary incubator house or cellar, above or below ground, or in any large room or apartment. Can be taken down on short notice without injury and moved to another location.

Hatches Both Kinds of Eggs

CRITTENDEN POULTRY FARM
James Hopkins, Proprietor

S. C. W. Leghorn
Baby Chicks Our Specialty

Also Custom Hatching Capacity
26,000 Hen Eggs

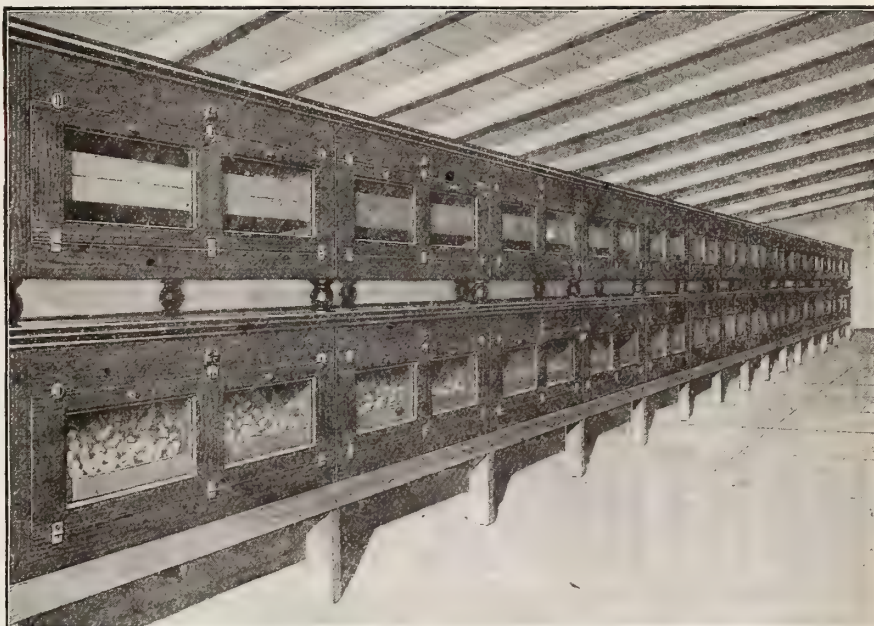

Crittenden, N. Y., June 8, 1910.

Cyphers Incubator Company, Buffalo, N. Y.

Gentlemen:—I have closed my second season operating the Cyphers Hot-Water Mammoth, 26,000 egg capacity, and have just taken off a hatch of 86 per cent on hen eggs. Have had three hatches of duck eggs that gave me 99 per cent and two that gave 100 per cent hatches. While you installed this Mammoth machine for duck egg hatching you see it will hatch hen eggs as well. I expect to have at least 30,000 day-old chicks to dispose of next season, also a large number of ducklings. The Cyphers Mammoth is easily operated. I have used natural gas for heating it. My highest gas bill for the big Incubator, my Brooder House, two gas engines and heat and light in residence was \$10 per month. This same capacity in small machines would cost me three times as much. My Mammoth machine will be open for custom hatching on March 1st this season.

Very truly yours,

JAMES HOPKINS.

Latest Type Hen Egg Cyphers Mammoth Incubator, Capacity 11,200 Eggs, now in use on Cyphers Company Poultry Farm, Buffalo, N. Y.

Require Less Labor—Better Results

ELDRIDGE POULTRY FARM, Inc.

Broilers and Roasters
For Market

Day-Old Chicks and Eggs
For Hatching

Taunton, Mass., September 14, 1910.

Cyphers Incubator Company, Buffalo, N. Y.

The Mammoth Incubator, 6,000 hen egg size, that you installed for us last season, has given good satisfaction. The chicks hatched by it showed up in much better form than those from our old machines, being stronger and much more vigorous. The Cyphers Mammoth in our hands has been easier to care for and has required less labor than the lamp-heated machines and the results have been better.

Very truly yours,

ELDRIDGE POULTRY FARM, A. S. Eldridge, Manager.

"Has Given Perfect Satisfaction"

OCEANIC DUCK FARM

Capacity, 60,000 Ducks Annually

E. O. Wilcox, Proprietor, Speonk, Long Island, N. Y.

Speonk, July 30, 1910

Cyphers Incubator Company, Buffalo, N. Y.

Please quote me prices on twenty sections of your Hot-Water Mammoth Incubator to be installed on my plant this fall. I would want them attached to the forty sections that you installed for me last year. This machine has given perfect satisfaction. It is easily operated and the quality and quantity of the ducks hatched are much ahead of those I have hatched in lamp-heated machines. I have operated twenty lamp-heated machines of another make this season, and the Mammoth Incubator has out-hatched them 13 per cent. The temperature regulation is perfect, and I figure that I have saved at least \$150 on fuel alone this season. During the brooding period the death rate has been very low, as the ducks were extra strong when hatched. Very truly yours,

E. O. WILCOX.

SPECIAL CIRCULAR

If you are interested in custom hatching, or are selling day-old chicks, or are operating or planning to operate a large practical plant of any kind, write at once for our special circular (just printed) showing pictures of the latest pattern Cyphers Mammoth. Prices and full particulars furnished on request. Address factory and home offices or nearest branch house.

CYPHERS INCUBATOR COMPANY

YOU SAVE MONEY

by using Conner's Automatic Feeder

Our feeder should appeal to you as a practical poultryman if you are interested in securing the **best** possible results at the **least** possible **expense**. Conner's Feeder will save you money in many ways. It saves in feed not being wasted, in the feed sparrows, pigeons, rats and mice would eat, and the birds not over-eating which causes indigestion, liver trouble and many other diseases. Besides when your birds are sick they won't lay and then there is the time and trouble of doctoring them. And again if they get too much feed and do not get sick they become over fat in which condition they will not lay and are a dead loss to you.

Feed costs money these days and it pays to save it. You know the man with the feed pail carries the profits of any flock in his hands.

With the Conner's Feeder all these intricate problems of just when and how much to feed are overcome for the birds **feed themselves** and they know how much they want, at the same time they have to work and exercise for it and consequently they will not secure too much. The Conner's Feeder never forgets, it always feeds them a little at a time just as they want it, the same as they would secure it were they on a free range getting their food the "**natural way**." Remember you do not have to be home at feeding time and that their feed is always kept dry, sweet and clean, and that when the sparrows can't get anything to eat, they cease to come to your poultry yard, and the lice which they invariably carry and the diseases which they are apt to bring and contaminate your flock by drinking out of the same drinking vessels are dispensed with. All these risks and losses are eliminated where Conner's Feeder is used. A noticeable increase of egg yield always follows, after Conner's Feeder has been installed.

You save many times its cost the first year in labor, feed and scratching material

Every shrewd poultryman who wishes to make the most out of his poultry will want the Conner's Feeder when he realizes what a big saving their installation will mean to him. We know you will be more than satisfied once you try our feeder. May we have your trial order to-day?

W. M. Conner, Jersey City, N. J.

PARTRIDGE PLYMOUTH ROCKS

THE wonderful new breed that is attracting so much attention. Combining great utility with striking beauty. Breeding now more true to type than most old breeds, and all from single standard matings.

They will please you, make money for you and prove a good investment

EXHIBITION and breeding birds for sale in any number desired. Let me start you right in the breeding of thoroughbred poultry and you will make money from the very beginning. Send to headquarters. Write for what you want.

ORIGINATOR OF PARTRIDGE PLYMOUTH ROCKS

Poultry Profits Insured

Wouldn't you like to insure your hatches?—to get larger, stronger chicks?—to know that the temperature in your incubator is right? The "Tycos" Incubator Thermometer clears up all doubts because of its absolute accuracy. As a part of the equipment of an incubator it is a guarantee of the quality of the machine. That's why the higher grade incubators are now furnished with "Tycos" Thermometers. Accurate temperature indications are too important to be slighted by unreliable thermometers. Each and every "Tycos" Incubator Thermometer has the full benefit of our Sixty Years' experience in thermometer making, and could not be better made or more honestly accurate. The careful attention to details makes it possible for us to guarantee that

"Tycos" THERMOMETERS Are Absolutely Dependable

Don't take a chance with your eggs, time and money on an unreliable thermometer. Insist on your incubator being equipped with "Tycos" instruments. If your dealer cannot or will not furnish you with a "Tycos" equipped machine write us for a list of such incubators as are furnished with "Tycos" Thermometers. When you buy new thermometers, insist upon the name "Tycos"—every genuine instrument bears the name.

Don't Build

that new hen-house or think of fixing up the old one until you get our large 100-page catalogue (over 100 illustrations) telling all about POTTER SANITARY POULTRY HOUSE FIXTURES, VERMIN PROOF ROOSTS, PERFECTION FEED HOPPERS, SIMPLEX TRAP NESTS, feeds and supplies of all kinds—just what the progressive, up-to-date poultry keeper wants to more

profitably carry on his work. POTTER FIXTURES have been on the market over eight years and are used and recommended by thousands of poultry raisers. They are complete, convenient and sanitary and great savers of time and labor. The henhouse outfit shown above is but one of three styles and twelve different sizes which we make, so no matter how your house or pens are arranged, they can be completely and cheaply fitted up with POTTER SANITARY FIXTURES.

A \$40 Hen House

THE POTTER PORTABLE SANITARY HEN-HOUSE shown above is but one of several styles and sizes which we make. This house is 8 x 10 feet in size, completely equipped with two Potter Outfits, two pens, room for 15 hens in each. Can you beat this house for \$40. Our large new catalog (32 pages and 28 illustrations) is now ready. It shows all portable poultry houses, brood coops, pigeon lofts, etc., in all styles and sizes. We can furnish you a better house with more satisfactory equipment for less money than you can have one built for at home. If you are in need of a house or coop of any kind send for our catalog.

Winter Layers

are what every poultryman wants, so that when eggs are high every hen more than pays for her keep. A full egg basket means a full pocket-book. Why not take time by the forelock and get in line to have a flock of all laying hens, not half layers and half drones and barren hens that keep you just even because of expensive feed. It's easy to have a flock of all laying hens if you will only do the same as thousands of other poultry keepers are doing and use

THE POTTER SYSTEM

of selecting laying and non-laying hens and increasing egg production. This is the original system which tells you how to keep a flock of only laying hens and thus get more egg money. Right now is the time to lay your plans for a flock of winter layers by using the Potter System and picking out the layers from the non-layers, so that you keep only laying hens. You should not kill or sell a single hen until you know whether she is a layer or not. The Potter System teaches you this. Our 100-page book entitled, "DON'T KILL THE LAYING HEN," contains the complete POTTER SYSTEM and all the secrets of selecting laying and non-laying hens and increasing egg production. Below we give a list of some of the subjects covered.

The Potter System Teaches You

How the Egg Grows; Nature Controls the Laying Organs; The Secrets of the Potter System; How to Pick Out the Non-Laying Hen; How to Determine the First Stage of Egg Development; To Know How Far the Hen is Toward the Laying Point; How to Pick Out the Hen That is Laying; To Know the Hens That are the Most Prolific Layers; To Know How and When to Cull the Non and Poor Layers Out of the Flock; To Know the Ones to Sell and the Ones to Keep; Why Early Spring is the Best and Most Practical Time to Cull the Poor and Non-Layers Out of the Flock; How to Tell the Hen That Has Laid Out a Batch of Eggs and Other Information Regarding Setting Hens; The Best Way to Break Up the Broody State; How Eggs Can be Produced in Winter, and Some of Nature's

Laws Regarding Egg Development Explained; How the Laying Organs are Affected when the Hens are Infested with Vermin; How to Avoid Wintering Hens That are Likely to be Poor Winter Layers; How Overfeeding Before Egg Development Starts May Reduce the Egg Production; The Laying Hen Should be Educated—When, How and Where; How to Separate the Poor Layers from the Good Without Handling, or How They Will Separate Themselves; How to Buy Hens in the Fore Part of Winter, That Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring; How Roup and Similar Diseases Affect the Laying Organs of Hens; also How the Laying Organs Become Disabled by Other Causes; Ten Ways to Suspect Hens That are not Laying.

If you want your hens to make you more egg money this winter than ever before, you will not delay in writing for our large catalogues and circulars telling all about our fixtures, houses, etc., and the Potter System. Send two red stamps to cover postage on our catalogues and your request will have prompt attention. Potter Poultry Products are for Particular Poultry People, and if you are particular, you will write us today.

PAPE'S SINGLE COMB MINORCAS

In the King Row at Three of the Season's Greatest Events

Tri-State Fair

Memphis, Tenn., 1910—1st cock bird; 1st and 2d hen; 1st and 2d ckl; 1st, 2d and 3d pullet; 1st pen

At MEMPHIS, TENN., we won CHAMPIONSHIP COCK BIRD, (all birds in the show competing), \$10 in GOLD for best exhibit, gold leg band and \$100 silver cup for best pen, all varieties competing. At FORT WAYNE, IND., we won GOLD SPECIAL for best display, all varieties competing. These winnings should demonstrate to you that our birds are EQUAL TO ANY IN AMERICA. They are bred to produce LARGE WHITE EGGS AND MANY OF THEM and if you are looking for real pleasure and profit in poultry, write your requirements. Eggs for hatching now ready.

At the "Best in 40 States Fair"

Ft. Wayne, Ind.—1st and 2d cock bird; 1st, 2d and 3d hen; 1st and 2d ckl; 1st, 2d and 3d pul; 1st pen

For three consecutive years our birds have won the CHAMPIONSHIP HONORS AT THE GREAT MID-WEST SHOW at the COLISEUM, CHICAGO, ILLINOIS.

Charles G. Pape, Box 74, Fort Wayne, Indiana

Ferris White Leghorns

A FERRIS WHITE LEGHORN MALE

Winners at Louisville, St. Louis, Toledo, Detroit, Pittsburg, Grand Rapids, and the Michigan, West Michigan, Indiana, Iowa and Tennessee State Fairs.

At the recent Michigan State Fair we won 9 prizes on 9 entries including every 1st. At the Iowa State Fair, we won 1st cock, 1st hen, 1st cockerel, 1st pullet and 1st pen. At the Tennessee State Fair we won 1st cock, 1st hen and several other prizes.

Winners that Pay

are the kind we sell. They are the kind you need. We have bred White Leghorns for years—bred them for size, health, vigor and heavy egg production. We raise them on 30 acres of free range, feed them scientifically and give them every attention necessary to correct growth from chickhood to maturity.

That's Why They Pay and Win

There isn't space in this ad to tell you all the good points of Ferris White Leghorns so I want to send you my

New 40-page Catalog

It shows photos of the birds I sell as well as many of my winners and gives a more complete description of my stock, farm and methods than is possible in this ad. It gives a complete list of winnings and will convince you that you need this strain of winners bred to pay. A postal brings it.

A FERRIS WHITE LEGHORN FEMALE

1st pullet, West Michigan State Fair, September, 1909. 1st hen, Iowa State Fair, September, 1910.

WE HAVE several hundred pullets and hens to sell that are the same type as this hen. They have good long backs, low, well spread tails, good heads, snow white plumage, rich yellow shanks, and they are large, vigorous and bred to lay. See our catalog for prices.

I Ship Anywhere on Approval

Keep the birds three days, compare them with others and if you don't agree that they are worth a good deal more than I'll charge, send them back at my expense and I will refund your money at once.

Remember that we breed for size, health, vigor and profit as well as for standard requirements. We raise our chicks on free range and never breed from weak or unproductive birds, no matter how good they are from a fancy standpoint.

THIS fine male won first as a cockerel at the Indiana State Fair last year and first as a cock at the Michigan State Fair this year. He is a typical Ferris White Leghorn—exceptionally fine in shape, graceful in carriage and has that snappy, intelligent appearance which all good show birds should possess. Notice his fine head, his concave back, his low tail, his style and finish.

His chicks show the same good points that have made him an easy winner, and many of them are early hatched, ready to sell now.

He is but one of several remarkably fine males that were in our breeding yards last season.

Hundreds of their chicks have reached their maturity; they are large, snow-white and typical in shape, with fine heads and low tails and they will win for you wherever you want to exhibit.

Prices are as low as such high grade stock can possibly be sold. Exhibition breeding males sired by winners like the one shown above, at \$5, \$7.50, \$10 and \$15. Females at \$3, \$4, \$5 and \$7.50. These birds will win in ordinary competition, and are the kind that will breed winners. See our new catalogue for full particulars regarding them. Winners for the larger shows at \$20 and up for males and \$10 and up for females.

Double Profits

IN THE
POULTRY BUSINESS

CUT OFF
 $\frac{3}{4}$
OF YOUR
FEED BILL

MADE possible by following the directions given by Clarence Ward, son of C. J. Ward, the founder of the oldest, largest and best poultry paper in America—the American Poultry Journal. Mr. Ward was brought up in the poultry business and has made a practical study of it from A to Z. He gives to the poultrymen of this country the benefit of his experience in his new book—

Successful Poultry Culture

which contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of **saving three-fourths the feed bill**, and many other valuable pointers which will save you many times the price of the book.

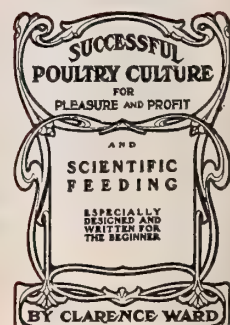

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin-Money for Women; Boys and Poultry Culture; Poultry on the Farm; How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model Poultry Houses; Profits in Poultry Culture; Scientific Feeding.

Only 50c**

**NOT A
SYSTEM,
BUT
TRIED OUT
FACTS**

We have contracted for a large number of these books at a price which enables us to offer this lot at half price. The regular price of this great book is \$1. We have cut the price to 50c. Send 50c in money order, coin or stamps and get a copy at once. It will pay for itself in a few days, no matter if you raise 50 or 5000 fowls. Address

**American Poultry Journal
Publishing Company
358 Dearborn Street
CHICAGO**

You Run No Risk

in buying mixed breeds when you buy of the specialty breeder, but how about the fellow that breeds EIGHT VARIETIES on one plant and permits them all to run together most of the time? We have 120 acres devoted entirely to one breed, and know it is a hard problem to keep them from mixing, then think of eight varieties on one small farm.

U. R. Fishel's White Ply. Rocks

are line bred and absolutely pure, as our recent winnings show: First and second cock, first and fifth hen, first and third cockerel, first pullet, first and second pen, grand champion best cock in show, special best display, special best Plymouth Rock, grand champion best pullet in show.

At Great Hagerstown, Md. Fair, '10

A show of nearly seven thousand entries, and the competition as great as it ever was at New York, Boston or Chicago. The above record added to our winnings at New York, Chicago, San Francisco, Buffalo, New Orleans, Syracuse, Atlanta, Nashville, Indianapolis, Springfield, Columbus, St. Louis, Kansas City, Dallas, Portland, Seattle, St. Johns, N. F., Charleston, St. Paul, Detroit, Cincinnati, Louisville, Great St. Louis World's Fair, Pan-American and Jamestown Expositions, Great Crystal Palace and Dairy Shows, England; in fact no show of note the world over but what Fishel's White Rocks have won, therefore they are justly conceded everywhere as

"The Best in the World"

Compare our record with that of the breeder who breeds eight varieties and shows at one or two places, and who is compelled to buy a flock of good birds every season or two to have some good ones. The "Best in the World" are none too good for you, and we have ten thousand strong, vigorous, farm raised birds to sell you. Choice exhibition birds, selected breeders or utility flocks. Remember, we breed on a 120-acre farm but one variety, and they Fishel's White Rocks—"The Best in the World." Send two dimes for catalog; it will interest you. Write me.

Eggs Ten Dollars Per Fifteen

U. R. Fishel, Box A, Hope, Ind.

OWEN FARMS

Owen Farms White Rocks

OWEN FARMS + GREYSTONE FARMS

What does this mean? It means that Owen Farms has purchased and received at Vineyard Haven the complete flock of White Rocks of Greystone Farms of Yonkers, N. Y., and the good-will. This is truly the greatest consolidation of two flocks in the poultry world that we know anything about. For years Owen Farms have struggled against Greystone at New York Madison Square Garden. For years Greystone has struggled against Owen Farms at Madison Square, New York. Greystone, as all know, was presided over by Mr. Frank H. Davey. No one could fit birds better than Mr. Davey and put them in the show room with more dazzling, beautiful whiteness and perfection of condition. The contest was almost as keen between the ability of our Mr. Delano and Greystone's Mr. Davey as it was between the birds. The last two years these two flocks have won 1st and 2nd collection and the great majority of all points in White Rocks. Now they are together; not only the flocks together, but the two men, Mr. Maurice F. Delano and Mr. Frank H. Davey, instead of struggling against each other at Madison Square Garden are now struggling with united fraternal purpose for the good of Owen Farms and their customers. The whole White Rock world will congratulate Owen Farms on the fact that Mr. Davey has come and is here, adding his great strength, both of character and ability in the poultry world, to further advance our White Rocks. Many more White Rocks and much better White Rocks will be the watchword at Owen Farms, and I feel sure that every reader who is interested in this grand breed will feel that what Owen Farms cannot do for them in White Rocks cannot be done. We can assure all of the many customers of Greystone in years past that their interests will be as well taken care of after this change and in fact better than ever before.

Owen Farms White Orpingtons

Is the business in White Orpingtons large? Indeed it is: by far the largest single business in fancy poultry in this country today if the demand and the possibility of filling that demand could be taken into consideration. No one in this country will commence to fill their White Orpington orders, either for stock or eggs, that they will receive this year. Of that I am confident. That Owen Farms will, I do not believe. We were unable to last year and although we have five times the capacity, both in eggs for hatching and in birds for sale, I still believe there will be no possibility of our satisfying the demand upon us. It is going to grow. For years this condition is going to exist and every one who starts at once in White Orpingtons is going to reap the harvest that always is large when the popular demand is more than the supply. We have said we would be head and shoulders to the front in White Orpingtons. We are confident that this is true and will remain true, and will be able to supply you with better eggs for hatching and better stock in White Orpingtons than any farm in this country. No pains and no expense has been, or is being, spared at Owen Farms to attain this result. Write early. Order eggs early. Do everything early, as far as White Orpingtons are concerned. It will be the only way not to be disappointed. Again I say, order eggs early. If you do not do it and you read this advertisement now, kindly remember what we said about it.

Owen Farms Buff Orpingtons

While we have said in regard to White Orpingtons that it was perhaps the biggest business in the United States, considering it from the standpoint of demand, we do not hesitate to affirm that there is today being done actually more business in Buff Orpingtons, for the reason that it is possible to do more business because there are vastly more Buff Orpingtons in the United States than Whites. The business in Buffs is growing very rapidly and always will. The Buff still continues to be larger in the Orpington class in England and in

OWEN FARMS

this country than any other and the settled favor of a buff bird among the fanciers of the United States that has all the intrinsic merits of the best poultry is acknowledged by the fancier and by the utility man. No bird is more beautiful. No bird is more majestic, and certainly no bird is more useful than the Buff Orpington. Leaders we have been; leaders we are; leaders we shall continue to be in this most beautiful of the Orpingtons. We are fully prepared to take care of all business in Buffs that may come. Our breeders are in excellent condition. Our matings are being made now and our eggs for hatching will be ready when this advertisement appears and we shall give to purchasers of our eggs far better results than ever before. Stock in Buff Orpingtons we can always send very promptly and at very short notice.

Owen Farms Black Orpingtons

In the showroom the Black Orpington is apt to be the sensation of the Orpington alley. Size apparently predominates, although it is not true that weight predominates. The Black Orpington does not weigh as much as to all appearances he would weigh, although Blacks are fully up to weight. They are looser feathered than either of the other varieties and when one is handled it is immediately apparent that the Buff and White, although not to appear-

ance as large, still weigh as much. The Blacks are growing steadily in popular favor. The best individual birds that have ever been brought to America Owen Farms have imported. The best blood that exists in England represents Owen Farms' flock of Blacks. Our winnings have demonstrated our Blacks to be in the very first rank and we can and will furnish you both eggs for hatching and stock that we dare to say will give you the best Blacks in this country.

Owen Farms Barred Rocks

In England you can go from London to Edinburgh in twelve hours. This is almost from the extreme south to the extreme north of that country. From Manchester or Birmingham, which is about in the center, two or three hours will take you in all directions from these points throughout England to any show being held in that country or to any farm where the best are bred. Think of it! How easy it is there to do business. If every fancier in America could come and see Owen Farms' Barred Rocks with an average journey of four or five hours how surely would we have every Barred Rock fancier in the course of time visiting us to inspect and know our flock and how welcome they all would be. A group of ten Barred Rock fanciers could gather around ten cockerels which we have and spend an entire half day studying and admiring these birds from their type and appearance on the ground and from the close examination in handling. We believe that such a group of ten of the best fanciers in Barred Rocks in America would conclude that no ten cockerels could surpass them. The same group of enthusiasts would come to the same decision in regard to pullets. We have many more and better cockerels and pullets than we showed at New York last year. It is a wonderful lot and we know exactly how they were bred and produced. We can as surely help you out in sure improvement in Barred Rocks as can any dealer in this country. Fineness of barring, depth of under-color and barring, sharp, bright, snappy males and females, with magnificent type and great size, prevail at Owen Farms. Barred Rocks at all prices, both cockerel and pullet bred, can be most certainly supplied you to your entire satisfaction.

up the perfect Wyandotte." I was delighted at these replies because I am especially fond of the White Wyandotte and I am glad to know and to announce that it is a fact that the White Wyandotte is holding its own and advancing both in numbers and in quality.

The White Wyandotte is not a small feature at Owen Farms. It is one of the very largest and most important of all our interests. We are enthusiasts on the breed. At New York last year and at Boston it was generally conceded that the pullets of our two winning pens were as near the ideal as perfect specimens as had ever been exhibited. Proud and delighted am I, therefore, when I can say without any hesitation whatever that our pullets and our cockerels are better than last year. We can put up better birds along the line in all four classes as individuals and we can mate together better pens for exhibition and for our egg trade. Owen Farms expects to furnish you by far the best eggs for hatching in White Wyandottes they ever produced. They cannot help it. Twenty-five cock birds and twenty-five cockerels that they have for their pens this year will rank far better as fifty male birds than any fifty in this country. I would have no hesitation to accept any conditions whatever in regard to an individual contest between any individual fancier or any farm in this country in a like number of White Wyandotte male birds to be exhibited and shown privately or publicly. These are strong words, but they are right. We have the ideal White Wyandotte in its most perfect form.

We shall be glad to book your orders for show stock because we know what we can do for you. We shall be glad to book your order for White Wyandotte eggs for hatching because we know the results will be pronouncedly the best you ever had from any source whatever.

Owen Farms White Wyandottes

I asked Mr. Frank H. Davey, a noted judge, what his experience had been in the shows this year where he had judged. "How were the White Wyandotte classes; first, in numbers, and, second, in quality?" His reply was that invariably the White Wyandotte class is one of the very largest, if not the largest, class in the show. To the second question he answered, "The quality is marvelous. Nearer to the standard of perfection, whiter in color, better far in head points, better eyes, combs, breast, spread and length of tail and in general curves that go to make

Owen Farms S. C. Rhode Island Reds

I like to talk about the past and present. When it comes to the poultry business this is actually what counts, for the future to a very large extent takes care of itself from the past and the present. But, unfortunately, in the

OWEN FARMS

R. I. Reds I am precluded from saying much about the past and must confine myself to the present. The present S. C. R. I. Red is a marvel. It has the following grand points in its favor. It is a very hardy bird. No stronger chicks are ever reared than R. I. Reds from good stock as they come today. The eggs for hatching have remarkable fertility. The hatches are very large and the young chicks come so strong that the old expression, "You can't kill them except with an axe," has a lot of truth to it. The R. I. Red male and female mature early. The pullets commence to lay at four or five months' old. They lay exceptionally well; are among the best layers of any breed known. The color of the S. C. R. I. Red has developed into a beautiful dark red, which is different than any other poultry color in existence. It has an individuality all its own. It has a gloss, sheen, brilliancy and depth that is surprising and fascinating. The evenness of this color is getting more pronounced every day and today is very satisfactory. The undercolor is strong and generally clean. The wing markings are especially good and the tail markings as well. The type is well settled and favorably accepted by all. The S. C. R. I. Red is popular. Our Mr. Delano, Mr. Cosh and Mr. Davey, together with the writer, the proprietor of Owen Farms, have visited many shows this autumn up to the present time and the R. I. Red classes have been nothing short of wonderful and the enthusiastic fanciers around and among the Reds are the successful fanciers and breeders of the country. Owen Farms' S. C. R. I. Red flock represents the very best in this grand variety. It has all the points that have been enumerated above. We have type, color, markings, head, eye, etc., that make our birds in the very top class. We can demonstrate it to you by winning for you. We can send you birds on approval that you will be glad to get at the price. If you want to start a flock of R. I. Reds from EGGS FOR HATCHING we are positive that you can do it to better advantage in ordering from us than in any other way. If you wish to start from stock we can supply it.

OWEN FARMS WINNINGS IN S. C. R. I. REDS.

We have never shown in this class. Our winners are growing in our yards. Confidently do we predict that the future will give us the same marvelous results in winning in S. C. R. I. Reds that it has in every class in which Owen Farms has entered. More I cannot say. Your confidence in us in this respect must be founded upon what we have done and the truth of what we have said in the past.

Owen Farms R. C. Rhode Island Reds

As you have read, so you know, that Owen Farms consists of a series of farms. In order absolutely to do the very best we possibly can in Reds we have decided to place our Rose Comb R. I. Reds at an entirely different farm than where our Singles are reared and kept. Our R. C. R. I. Reds will be under the care of Mr. Frank H. Davey at the same farm where he will preside over our White Rocks. Every breeder who reads this will understand the importance of this step. There is truly no close relationship between the S. C. R. I. Red and the R. C. R. I. Red. Far better is it, we

believe, that these two varieties shall be kept absolutely distinct and as far apart as circumstances will permit. These two flocks are separated by over three miles of distance, and if you are a fancier of the Rose Comb you can understand that the R. C. R. I. Red of Owen Farms is being as distinctly bred, as carefully handled and as well managed as though it was the only variety in any possible way that Owen Farms was interested in. That is the main point for you to consider. We can and will do for you in this variety just as much, and we can do it just as well, as though this was the only breed we handled. Our flock represents the same in color, type, markings, head points and every characteristic of the breed as we have indicated above in the Single Combs. We know the varieties of Reds. We know the business and we are yours to command.

OWEN FARMS R. C. R. I. RED WINNERS.

What we said about the Single Combs is true here about the Rose Combs. The future is before us, and that we shall make it answer the questions asked of it we are confident and we leave you to judge.

Eggs For Hatching

Our methods for producing our eggs for hatching this year will be exactly the same as last. Our pens will be mated with the same care. Our very best birds will be mated in them in each of our varieties. We shall give the public exactly the same chance of getting eggs from the very best birds we own and raising the best chick of the year. We shall issue a mating list as in former years, and your application for it at an early date will be to your advantage. Our prices will be exactly the same as last year. While our quality has improved, and while we have exceptional birds that could be mated into pens that would warrant the highest price paid for eggs for hatching in the United States of America, we do not propose to change our prices in any particular. Our prices will be the same in each and all of our varieties and are as follows:

10 eggs for	\$ 7.50
11 eggs for	8.25
12 eggs for	9.00
13 eggs for	9.75
14 eggs for	10.50
15 eggs for	11.25
50 eggs for	60c each, or \$30.00
100 eggs for	50c each, or 50.00

We guarantee a good hatch. In the event of your not having a satisfactory hatch we will furnish you a number equal to your first order at one-half price. Express charges will be prepaid on all orders for eggs (ten or over) for original orders, but not on eggs at half price, either on account of unsatisfactory hatch or on account of lateness of the season, which half-price season commences June 1st.

**Successful Egg Farming**

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, winter and summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how other men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

Everything guaranteed

Our Barred Rocks are Bradley strain. We claim for our stock large size, narrow barring, good combs and eyes, clean yellow legs and bright plumage, free from brassiness. Our cockerels are unusually good this year.

Our Rhode Island Reds are in both combs and are great egg producers. We have about 400 pullets and more than 200 cockerels to offer and feel confident that we can please. Some yearlings also for sale. Write before the good ones are gone.

Our Buff Turkeys are a fine strain. Scores of pleased customers are our friends. Our stock has buff wings and tails, and is large and thrifty.

N. B.—Remember that our guarantee is backed by the American Poultry Journal, and if you are not well pleased with your purchase stock can be returned and money will be cheerfully refunded.

William Osburn, Goose Lake Poultry Farm, Morris, Illinois

THE MOST PROFITABLE BREED

You breed poultry for pleasure or profit. Strong claims are being made for some breeds, but there are no requirements that the Black Langshans cannot fill as all around layers, winter or summer table fowls, the show room or hatchers and breeders. 28 years' experience with the most of the popular varieties has shown me that the Black Langshan has no superior. Their quality and appearance of flesh as well as weight proves them the only substitute for the scarce and high priced Turkey, while they are the easiest and hardiest fowl to raise. Bred pure for centuries with no taint of foreign blood places them in a class by themselves. As for quality for three years in succession have won all firsts on males at Chicago but one, and has furnished first prize males for New York, Buffalo, Scranton, Springfield, Ill., and smaller shows everywhere. At the Ill. State Fair last month we won 1st and 2d cock, 1st and 2d chl., 1st and 3d hen and 1st pen. Every one of the above winners were bred at Hewes' Farm. We buy no stock to sell. Eighteen acres free range and our entire and personal attention. We have paid and received the highest prices ever known in the U. S. All stock on approval or price refunded.

R. A. HEWES : CRETE, ILLINOIS
JOIN BLACK LANGSHAN CLUB AND BUY LANGSHANS WHETHER YOU BUY OF ME OR NOT

I WANT YOU TO WIN

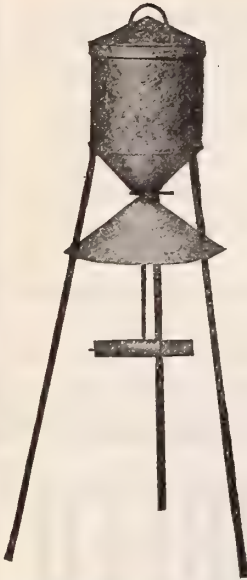

At your shows this season, and I want you to win with—

Wolverine Strain White Plymouth Rocks

Using such winners for your breeders, you can raise your own winners for next year, for the Wolverine Strain has been line-bred for many years and have won in the best competition this country affords. Not only this season, but every season since 1903. I have a larger and better lot of show birds this year than ever before. They can win for you at any show. My prices are reasonable—I don't ask you to pay for the reputation back of my birds and allow you to be the one and only judge as to whether or not you paid too much for the stock I send you. If you are not entirely satisfied with stock sent you, return it at my expense and I refund your money without a question. No breeder has better stock or stock more carefully bred. No breeder has better facilities for breeding, raising, conditioning and fitting for the show room. And (the main thing of all) no breeder makes a fairer or broader guarantee, or is more anxious to please you, than I am. You can not afford to overlook my strain when making your inquiries.

LYMAN H. HILL : STATION 1 : JACKSON, MICHIGAN

DON'T PEN YOUR BIRDS WITHOUT The Norwich Automatic Exerciser & Feeder

Our machine will add to the benefits derived from the summer free range, and keep your birds in condition for the coming show season.

It is endorsed by the largest poultrymen in the country as the only **Perfect Automatic Feeding Device ever offered** and will positively effect a saving of over 20% in your feed account, increase egg production, eliminate the **labor and care of feeding**, while the average weight of the flock is materially increased **and every bird fit for market.**

THE NORWICH AUTOMATIC EXERCISER & FEEDER has been "tried out" for over a year on the largest plants in the industry, and on the results.

We **GUARANTEE** the purchaser absolute satisfaction in every respect, or money and expenses refunded after a **30 days' trial.** It therefore costs you nothing to prove our claims, and we want you to try our machine.

The latest advocate among our list of big poultrymen is **Mr. U. R. Fishel**, who puts his stamp of approval only on such articles as he knows are perfect, and just as represented. Full descriptive printed matter for the asking.

NORWICH AUTOMATIC FEEDER CO.

20 WATER STREET

NORWICH, CONNECTICUT

THE SECRET OF WINTER EGGS

Don't force your hens by feeding patent or prepared foods. These often lead to serious injuries.

Feed them on fresh meat scraps, green bone and substitutes for the green stuff of the summer, and above all, give them plenty of fresh water of the right temperature.

Cold water in summer acts as a tonic, whereas warm water at that season makes them listless and lazy.

Warm water in winter stimulates the fowls and acts as an invigorator, consequently it keeps them up and doing. Result—More eggs.

Weldon's Fireless Poultry Fountain and Hopper Feeder

has made it possible to keep warm water before your fowls during the cold winter months for 36 hours without the use

of a fire. It is built like a fireless cooker and works like a "Thermos" bottle. 64% of an egg is water. Your hens can't lay if they cannot supply the necessary moisture for the eggs. Coax them to drink by keeping warm water before them at all times during the winter in one of our fountains. **The egg yield will double and triple.** Get a copy of our **Free Book** giving the experience of successful poultrymen with this invention, by addressing

ANDREWS WIRE AND IRON WORKS, SUB. STA. C, ROCKFORD, ILLINOIS

HARRISON'S SQUARE DEAL

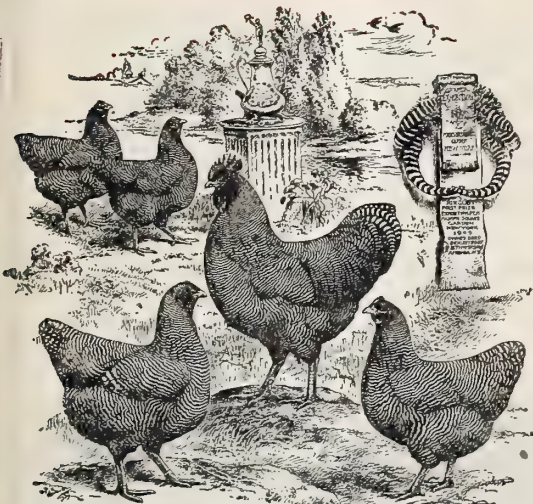

At Ohio State Fair, 1910, won 1st cock, 1st hen, 1st cockerel, 2d and 3d pullet; no pen shown. Quality stock for sale, sired by Cleveland, Hagerstown and State Fair winners. In competition they score to 9614. Free illustrated circular. Please mention American Poultry Journal.

Dr. S. R. Harrison, - R. R. No. 10 - Shelby, Ohio

WHITE ROCKS

Fashion's Proudest Birds

ARE "RINGLETS"

E. B. Thompson's Barred Plymouth Rocks are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which has made the "Ringlets" America's leading strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the civilized world. The record stands alone and puts all others in eclipse—it is the most remarkable in the annals of poultry shows.

The "Ringlets" are always imitated, but never equaled

I now have on my farm the largest and finest lot of superior exhibition and breeding birds—both male and female—I ever owned; they show that elegant blue color and bright, snappy, narrow "Ringlet" barring, that win under all judges and have made my Barred Rocks the leading silver cup and trophy winners at Madison Square Garden, New York, since 1887—nearly a quarter of a century. These birds will be the winners this fall and winter for the leading shows of America. Will mate breeders to produce winners if desired.

The enormous prestige of my "Ringlets," created by superlative quality, has made them the standard by which all other Barred Plymouth Rocks are judged

New richly illustrated 58-page catalogue mailed upon request; it is full of pictures of New York winners from life. You may have the product of my skill, reaped by 30 years' experience, at reasonable prices. Your wants will have my best and personal attention.

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

OVER \$12,000 PROFIT

On 1953 Laying Pullets

The ordinary poultryman will say it can't be done—that \$2 to \$3 per hen is the very utmost that even an expert can make clear. He will say that even if a few experienced men could make \$6.41 per hen, it is impossible for two mere beginners.

And yet that is exactly what the Cornings, father and son, **did do**. Starting four years ago with only 30 hens, with no experience, with Prof. Gowell's bulletins as their foundation, with many experiments and much hard work, this was the result—over \$12,000 clear profit. Read the whole story in our

Corning Egg-Book

(entitled "**\$6.41 per Hen per Year.**") Not what the Cornings might do, or could do, or want to do, but what they **did do**. Facts, figures, names, dates, photographs of their plant, plans of their houses, all proving the remarkable claims.

The book tells everything—where the Cornings find their market, why they raise only white-shelled, sterile eggs, how they keep hens laying regularly in winter, when they hatch chicks that are to do their best work in December and January, how to mix the feed that produces the most eggs, how to prevent losses, how they found the best breed for egg producing, and how their whole system works to that one end—eggs, EGGS, EGGS. It gives photographs of their plant, and complete working plans of their buildings, which can be made in sections, large or small, as needed.

OUR GREAT OFFER	{	<i>American Poultry Journal, 2 years</i>	}	<i>\$2 VALUE</i>
		<i>Farm Journal, 2 years</i>		<i>\$1.00</i>
		<i>Corning Egg-Book, Postpaid</i>		

American Poultry Journal is the oldest, largest, and best poultry paper in America. Contains up to 188 pages in a single issue, and is the only poultry paper published that illustrates the different varieties of poultry on its front cover each month. Since 1874 its editors have succeeded in publishing a journal interesting and educating to poultry raisers.

Farm Journal has for 33 years conducted a poultry department known the country over for the ability of its editors and the value of its contents. It is the standard monthly farm and home paper of the country.

Each of the 600 wide double-column pages contains profit-making information—simply **INVALUABLE** to the practical poultryman. Lewis Wright is perhaps the best known of all successful poultry experts, and the results of a lifetime's study and experience are crowded into this big, handsome volume.

WHAT EXCUSE HAS ANY POULTRYMAN NOW FOR NOT OWNING HIS COPY OF

Wright's "New Book of Poultry"

The one pre-eminent virtue of Mr. Wright's book is acknowledged to be its intense **THOROUGHNESS**. **EVERY** breed you will find is exhaustively treated—**EVERY** question that has ever harassed a poultryman is answered and settled in the most practical and economical way—**EVERY** detail of the poultry business is discussed with authority. Examine the work in your home, on our Special Offer, and judge for yourself how valuable are the chapters on: Poultry Houses and Runs; The Science of Feeding; Practical Management and Feeding of Fowls; The Egg and Sitting Hen; Incubators; Rearing and Care of Chickens; Poultry for the Table; Poultry Farming; Exhibition Poultry and Utility; Pedigree or Line Breeding; Practical Breeding and Rearing of Prize Poultry; Exhibiting; Shows—Judging—Trimming—Technical Terms; Poultry Diseases and Vices—Vermin; etc., etc.

Poultry Spells Profit to Every Owner of This Great Work

This work tells how to convert egg failures into egg successes; how to systematize at all stages; and all about the management of the industry right down to the marketing point. Conditions in all great poultry centers and countries are discussed, and the best practical business methods of each explained. From beginning to end the book keeps the **PAYING POINT** strictly in view; all facts, figures and explanations are based upon **ACTUAL EXPERIENCE**.

One Encyclopaedic Volume of 600 Large Pages Thoroughly Indexed

Beautifully Printed and Illustrated and Strongly Bound

Forty-five full-page plates in color and black-and-white embellish the pages of this splendid work; all by J. W. Ludlow; and there are innumerable pictures scattered throughout the text. The work is finely printed in a large, clear, readable type and bound in stout, extra durable cloth binding with lettering in gold; gilt edges on three sides. Size of volume, 9x11x2. Weight, seven pounds. Without doubt the finest poultry book ever published.

The Best and Most Practical Poultry Book in the World

has been the verdict of experts everywhere, and we believe a thorough examination at our expense of this entirely new and rewritten edition of the book will convince you that this statement is no exaggeration. It is impossible in this limited space to set forth the innumerable details in which this book excels all others. An examination alone can do this. That is why we urge you to take advantage of our

Special Offer to Readers of American Poultry Journal

Let us send you this great work **ON APPROVAL**. We want you to examine it thoroughly before deciding. We want you to judge for yourself its great, practical, money-making value **TO YOU**. The price is only \$8.50. Just send us 50c with the coupon opposite and you will receive the book, carriage prepaid. If after five days you don't want it, simply notify us and hold subject to our order. We will then refund your money. If you keep it pay us the balance \$1 a month until settled in full.

"A Battle of Chicks"

A Yard of Chicks: This is a beautiful picture one yard long and eight inches wide, the original of which was painted by the celebrated artist, Ben Austrian. It illustrates a group of little chicks battling for possession of a butterfly which was caught by one of their number. This picture is very lifelike, being painted in twelve colors, and an ornament in any home. If you like little chicks you should not be without this picture, as it is without question the prettiest chick picture ever produced.

"Duckling's Paradise"

A Yard of Ducklings: W. M. Cary's famous painting reproduced. It illustrates a group of young ducklings taking to water. Picture is a yard long and about eight inches wide, and a good mate to the Battle of Chicks illustrated above. These two pictures will brighten up the home of any poultry fancier.

American Poultry Journal, 358 Dearborn St., Chicago, Ill.

Sales of commercial eggs (sterile, not for hatching) netted the Cornings \$8130.81 in one year. Everything else on the farm, considered merely as by-products, added \$4290.00 more profit. The total for the year, with 1953 laying pullets, was

\$12,000 PROFIT

It is no wonder that this remarkable achievement, first made public last year, created amazement in poultry circles. No such profits as \$6.41 per hen, on a large scale, had ever been heard of before. A few doubted.

And yet that is exactly what the Cornings, father and son, DID DO in 1908. Starting five years ago with only 30 hens, with no experience, with Prof. Gowell's bulletins as their foundation, with many experiments and much hard work, this was the result in 1908—over \$12,000 profit from 1953 laying pullets. Read the whole story in the

Corning Egg-Book

(entitled "**\$6.41 per Hen per Year**"). Not what the Cornings might do, or could do, or want to do, but what they DID DO. No impossibilities, no wild promises of fortunes from a few hens in a dry goods box. Simply a cool, careful, comprehensive account of how scientific egg-raising makes money (\$12,000 per year) for two hard-headed business men.

Are all Recognized Poultry Systems Back Numbers?

The Corning Egg-Book tells everything—where the Cornings find their market, why they raise only white-shelled, sterile eggs, how they keep hens laying regularly in winter, when they hatch chicks that are to do their best work in December and January, how to mix the feed that produces the most eggs, how to prevent losses, how they found the best breed for egg-producing, and how their whole system works to that one end—eggs, eggs, EGGS. Many photographs of the Cornings' Sunny Slope Farm, with complete working plans of their buildings, showing brooder and laying houses, colony houses, breeding pens, door and floor construction, etc., etc. From these plans any builder can reproduce the plant, in whole or in part.

Corning Laying House No. 2. 1500 hens in 2560 sq. ft.

(This last winter the Cornings had 3000 hens, and in January were getting 75 cents per dozen for eggs.)

The latest (11th) edition of the Corning Egg-Book contains much new matter. The operations of Sunny Slope Farm have been carried on with great success since 1908, and the latest figures of egg production, etc., are now included in the book. Some additional buildings and alterations in the plant are noted. The essential part of the Corning Egg-Book, the unique methods that make it revolutionary and epoch-making, are unchanged.

There is only one way to get the Corning Egg-Book, and that is by accepting the following great offer:

Copy CORNING EGG-BOOK, postpaid } **ONLY \$1.00**
FARM JOURNAL four full years }

Book and paper may go to different addresses if necessary. Our other booklets, "THE MILLION EGG FARM," "\$100,000 PER YEAR FROM POULTRY," or "POULTRY SECRETS," may be substituted for the CORNING EGG-BOOK at the same price.

FARM JOURNAL has for thirty-three years conducted a poultry department known the country over for the ability of its editors and the value of its contents. Besides this strong section, which of itself makes the paper valuable to every chicken owner, its other departments are ably conducted and widely quoted. It is the standard monthly farm and home paper of the country, with already more than 750,000 subscribers. It is clean, clever, cheerful, intensely practical; boiled down; cream, not skim-milk. Its editors and contributors know what they are talking about and can quit when they have said it. It is for the poultryman, gardener, fruit man, stockman, trucker, farmer, villager, suburbanite, the women folks, the boys and girls. **Regardless of what you may think NOW you will find Farm Journal is for YOU too.** It is illustrated and well printed on good paper. It has not a medical or trashy advertisement in it.

THE ORR'S SILVER LACED WYANDOTTES

The old, original, famous unmixed, prize winning Ray Whitaker-F. E. Orr strain. Without an equal in all superior points as proven by records and history, that can be relied upon. The only true Wyandottes; only thoroughbred; only strain that can fulfill all that original quality, that made the name Wyandottes famous. Best breeders of true type and unequalled utility quality, that means the greatest COMMERCIAL bird of them all. No English deterioration in these birds. They will win your favor in experiment and comparison with any other strain or variety for everything desired in poultry production. If you want absolutely the world's best—try them.

WE WON ALL FIVE FIRST PRIZES AT BOSTON, 1909, AND AGAIN IN 1910

Cocks, 1, 2, 6; Hens, 1, 2, 4, 6; Ckls., 1, 4, 6;
Pullets, 1, 2, 3, 4; Pens, 1, 2, 3.

There is no expression in our language that conveys the same meaning as the word "stung" when applied to your feelings after paying good prices without receiving equivalent value in return. The possibility of "delivering the goods" depends, not upon good intentions, but upon actual **production**, and in order to produce good birds it is absolutely necessary to have first class stock and the experience and judgment to mate and develop them, gained only by actual experience.

Among the males that headed our mating this year are the following that have proven their superiority by their winnings in such competition that carries with it "conviction beyond prejudice." 1909 Boston winners as follows: **1st prize cock; 1st and 2d prize ecls.; 1st and 2d prize pen ecls.** 1910 Boston winners as follows: **1st and 2d prize cocks; 1st, 4th and 6th prize ecls.; 1st, 2d and 3d prize pen ecls.; 1st prize pen fowls cock.** We have never before raised as many good birds as this year. We can furnish you sons and daughters of the above **prize winners** mated as you desire, or we will mate them for you in line with our experience and judgment. It don't cost us any more to raise "our kind" than it would if they were the "other kind," and it's a mistake to think that we charge any more for them. Discriminating buyers realize the importance of individuality backed up with high-class ancestry. Those who don't realize this fact have a very costly experience in front of them.

OF IMPORTANCE TO YOU

You want eggs this winter, as many of them as you can possibly obtain from your flock. We offer the readers of *American Poultry Journal* a book which competent authorities recognize as a text book, and its title is

Winter Eggs and How to Get Them

This work is one of the very latest in the FARM-POULTRY series and is by John H. Robinson, editor of FARM-POULTRY. It is undoubtedly one of the most valuable works ever published, because it treats thoroughly of a single very important subject only. It tells in clear, concise, plain everyday language all that is new and best about how to get eggs in winter. Eight of its twenty-six chapters are devoted to the feeding methods of recognized experts, which alone are easily worth several times the price asked. The cost of the book is 25 cents, but we make a

Special Offer {of Farm-Poultry, one year, and a copy of the book,} **ONLY**
 "Winter Eggs," both , , , , , , **60c**
 (Price to Canada, 75 Cents)

FARM-POULTRY, issued monthly, and price of which is 50 cents per year, is the great National authority on all matters pertaining to the poultry industry. For 21 years its teachings have embraced everything that the beginner or expert should know about Incubating, Brooding, Rearing, Feeding, Mating, Housing, Exhibiting, Killing, Dressing, Marketing, etc., etc. It is recommended in highest terms by all the leading professors of Poultry Husbandry at the largest Agricultural and Experiment Stations. This is unquestionably one of the finest and most timely combination offers ever made to readers of this publication, and one that will please and profit you greatly. We pay all postage. Send order and remittance to

THE POULTRY BUSINESS IN A NUTSHELL

Describes Our New Book Entitled

Ten Chapters on Poultry

The most Complete Works in plain and condensed form that has ever been published. All subjects of vital importance to every poultryman fully covered.

Each Chapter Complete in Itself and Worth Alone Many Times the Cost of the Book.

Chap. I. How to do Your Own Scoring. Schadt's Simplified Score Card.

(Tells the relative merits of Score card and Comparison judging. Which is correct?)

Chap. II. How Poultry Profits can Yield \$1,000.00 on a City Lot.

(This can actually be accomplished by any person with ordinary intelligence.)

Chap. III. Fireless Brooders Fully Explained. Why Better Than Mother Hens.

(Converts are made for this system of brooding by thousands. Will revolutionize the poultry industry.)

Chap. IV. A Study of the Day Old Chick Business. Is it Profitable?

(Tells how anyone can make large profits by taking up this branch of the poultry business.)

Chap. V. Explicit Directions on the Preparation of Fowls for the Show Room.

(This chapter tells why many breeders with inferior fowls win in the show room.)

Chap. VI. Secret of Developing Chicks so they Attain Wonderful Size.

(By this method chicks at maturity exceed the parent stock in weight by several pounds.)

Chap. VII. Secret of Developing Chicks so they Lay at Eighteen Weeks.

(This can be done by anyone with almost any variety of fowls.)

Chap. VIII. Reducing Chick Mortality to a Minimum. Information Worth Dollars.

(Practical experience of a successful poultryman whose losses reach less than 5 per cent of the chicks hatched.)

Chap. IX. Why Chicks Die in the Shell on the Eighteenth Day. Very Valuable.

(Question that baffles all authorities on artificial incubation. Fully explained and how to prevent this loss.)

Chap. X. How, When and Where to Advertise to be a Successful Poultryman.

(Tells how to establish yourself as a successful breeder. A very valuable chapter.)

Nothing like this book has ever been published. Whole books have been written on the subject contained in just one chapter, but here we are offering the same as ten complete books for the price of one. Everything is written in a clear plain manner so the instructions can be carried out by anyone. No matter what branch of the poultry business you are in some one thing in this book will be worth what you pay for the entire offer. You need it regardless of what branch of the poultry business you follow.

We are going to sell this book in connection with a subscription or renewal to Poultry Post, one of the best poultry journals published; carries 10 distinct departments; is a clean, bright, live journal, giving all the latest and best news to poultrymen, and reaching you promptly the first of each month. You should be sure to have it on your list. A sample copy will be sent free.

For 50c we will send you our book entitled "Ten

Chapters on Poultry" and Poultry Post 2 full years. If you are not fully satisfied with the book your money will be refunded by returning the book promptly. In ordering simply write your name and address in the space below and mail it to us with 50c silver, stamps, money order or personal check. Do it now before you forget.

S. C. WHITE LEGHORNS

THE BEST LAYING STRAIN BY TEST

Prize Winners at Illinois State Fair, 1910—In one of the largest shows ever held there, Judge A. F. Kummer of Butler, Pa., the Leghorn judge, pronounced our winning cockerel as one of the best he had ever seen. Our exhibition was admired by all. Prize winning hens scoring 95½. We have for sale a large number of April and May hatched cockerels which will make fine show birds for the coming shows. Young stock all raised on free range on clover and blue grass pasture. Fancy and utility stock, eggs by settings from prize winning pens and eggs by hundreds from utility pens and day-old chicks for sale in season. All inquiries receive our most careful attention without delay. Satisfaction guaranteed. Write for prices.

We received special mention on our exhibit at Illinois State Fair and write up on our farm in November issue of this paper

WHITE LEGHORN POULTRY FARM, BERGSTRESSER & FISHER, PROPS., PEKIN, ILLINOIS

Contents of the New Book

	Page
Preface	7
The Object of Secrecy	9
How the Egg Grows	11
How Nature Controls the Laying Organs	12
The Secret of the Potter System	15
How to Pick Out the Non-Laying Hen	18
How to Determine the First Stage of Egg Development	22
To Know How Far the Hen is Toward the Laying Point	25
How to Pick Out the Hen That is Laying	28
To Know the Hens That Are the Most Prolific Layers	28
To Know How and When to Cull the Non and Poor Layers Out of the Flock	35
To Know the Ones to Sell and the Ones to Keep	42
Why Early Spring is the Best and Most Practical Time to Cull the Poor and Non-Layers Out of the Flock	43
How to Tell the Hen That Has Laid Out a Batch of Eggs, and Other Information Regarding Setting Hens	44
The Best Way to Break Up the Broody State	48
How Eggs Can Be Produced in Winter, and Some of Nature's Laws Regarding Egg Development Explained	51
How the Laying Organs Are Affected When the Hens Are Infested With Vermin	60
How to Avoid Wintering Hens That Are Likely to Be Poor Winter Layers	61
How Overfeeding Before Egg Development Starts May Reduce the Egg Production	64
The Laying Hen Should be Educated, When, How and Where	68
How to Separate the Poor Layers from the Good Without Handling, or How They Will Separate Themselves	69
How to Buy Hens in the Fore Part of Winter, That Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring	73
How Roup and Similar Diseases Affect the Laying Organs of Hens; Also How the Laying Organs Become Disabled by Other Causes	74
Ten Ways to Suspect Hens That Are Not Laying	102
Three Ways to Prove Their Laying Condition	102

DON'T KILL The LAYING HEN

NO, don't kill your layers, for they are payers. And if you knew the **POTTER SYSTEM** you not only could pick out the laying hens, and thus avoid killing them, but you could also pick out the non-layers and drones and save your feed money. How many times have you taken a hen to the block and then after killing and dressing her found to be in full laying condition? Real money in her (in eggs) and you didn't know it. If you know the Potter System you will never purposely kill another hen, and this alone means the saving of many dollars in a short time.

NEW BOOK ON THE POTTER SYSTEM

**Of Selecting Laying and Non-Laying Hens,
and Egg Production**

Contains 100 Pages and 30 Illustrations

When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets, it contains, cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others; therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "Secret" family, and stop killing the laying hen, thereby greatly increasing your poultry profit.

The price of this great book is only \$1 and it will save you hundreds of dollars. It has done this for others and will do it for you. In order to provide every poultryman with a copy of this great book we will give you this book, a copy of **PROFITABLE POULTRY RAISING**, (treating on the subject of scientific and systematic poultry feeding for rapid growth and development and large egg production), and a full year's subscription to the oldest, largest and best poultry paper in America, all for \$1.25.

Wayne Wentworth—The Born Poultry Fancier

Written Expressly For American Poultry Journal by Frank C. Williams

With a loving kiss, Mr. Wentworth left his wife to arrange the flock of poultry, and then went to the store. He soon returned with a half-dozen small candles and a couple of yards of tinsel, and, like two children, they began work on the tree.

First they tied it securely to the back of a chair and placed it before the window. Then they looped the tinsel through the branches, secured the candles firmly and then placed the big rooster on the chair in front of the tree with his flock of hens around him. Then they stood back to admire their work. "We'll have the tree where Wayne will see it as soon as he opens the door," said his mother, with shining eyes. Mr. Wentworth wanted to light the candles to see the general effect, but his wife insisted that Wayne should be the first to light them.

So, after tying on the cookies and putting the finishing touches to the tree, they tidied the room and prepared to go to bed.

But first they went hand in hand to Wayne's little crib, where he lay fast asleep. Here they lingered in quiet joy, knowing full well how pleased Wayne would be on beholding his flock of pretty yellow "chickies" on Christmas morning.

CHAPTER 2.

CHRISTMAS morning dawned clear and cold. Mr. Wentworth looked across the room toward the crib which Wayne was fast outgrowing, and saw a pair of wide blue eyes looking at him.

"Aren't you going to get up and see what Santa Claus has brought you, Wayne?" he asked.

"Santa Claus can't bring me any chickies in the city, papa, and they're all I want," answered the child, his face clouding a little.

"But don't you want some nice candy and cakes, and a picture book; won't they do as well as chickies for a little while? Maybe, some day, we'll be situated so we can have a whole yard full of chickies—I hope so." Mr. Wentworth was smiling at the rueful expression of Wayne's wise little face as he bestrode the side of the crib.

He pinned a blanket around him to keep him from catching cold, and together they went into the cozy living room. Here they were glad to find a nice fire burning in the stove, Mrs. Wentworth having risen early to view the work of the previous night. The diminutive Christmas tree in all its splendor stood near the window, at the back of Mr. Wentworth's easy chair. The sun was shining through the frosted window panes, and the rooster and his flock of hens gleamed in painted grandeur. But even the diamond glint of the snow crystals on the window pane failed to outshine the light in Wayne's eyes when he beheld his poultry.

"Oh, papa!" he cried, "where did Santa find such pretty chickies? They look almost as if they are alive—and all one kind! Oh, if they could only walk around and eat! Wayne would give them half of his bread and milk every day."

He knelt among his treasures, disdaining the cakes and

candy, and fondled the wooden pets as lovingly as a girl might caress a new doll.

"Where am I going to keep them," he inquired. "They have no place to roost. They can sit under the Christmas tree for a little while, but when it dries up, like Cousin Hattie's did last Christmas, then my chickies won't have any place at all."

"Well, Wayne," replied his father, after breakfast we are going out, and we'll see if we can find some nice planed lumber somewhere. If we do, we can build a nice house for your pets. We can build it according to directions in the last American Poultry Journal and maybe, when we live where we can have real chickens, we'll build a larger house on the same plan. Mamma is very good to be willing to stand the noise and have the muss around. But we must try to be as quiet as possible, or the neighbors will be taking you and your chickies to jail.

"I don't want my chickies to go to jail," Wayne rejoined quickly with a serious expression on his face. But a moment later he was laughing gleefully at the idea of turning carpenter, and as soon as he had eaten his breakfast his mother dressed him warmly and he started out with his father to look for lumber with which to build the chicken house.

As it was Christmas Day, they found none of the carpenter shops open, though they walked around a long time looking for one. But, as luck would have it, Mr. Wentworth was slightly acquainted with a man who had a shop in the rear of his house; so they went there and Wayne's father explained the circumstances. The carpenter was very much amused by the zeal with which Wayne joined in the conversation regarding the chickens, and took his visitors into the shop, where they selected some light, smooth lumber. He very kindly loaned Mr. Wentworth a wheelbarrow and helped him to tie on the boards, refusing good-naturedly to accept anything in payment, beyond Wayne's pretty little speech of gratitude, saying he might call the favor a Christmas present.

They stopped at a small shop on their way and bought some nails and a light hammer. These Wayne carried under his arm with an air of great importance.

On reaching home, the child could hardly wait to take off his coat and muffler before starting in to work.

After he had stood long and silently in the old familiar attitude, with hands clasped behind him, watching his father undo the lumber and carry it into the house, his curiosity got the better of him and his tongue began to wag again.

"Papa, can we build a house for my chickies like the one we saw in that American Poultry Book you brought home?"

"What kind of a house do you mean, son?" inquired the father, anxious to draw the boy out and find what his ideas were.

"Oh, you know, papa—one with an open place outside for the chickies to scratch in."

"Oh! you mean an open front scratch shed, Wayne. Yes I guess we can manage it all right, but it will have to be very small. Your mother insists that we leave space enough in the room for her stove and table, you know." Here Mr. Wentworth gave his wife a good-natured wink.

"And I want it to have roosts for my chickies to go to sleep on, papa—I can put 'em on as if they was alive—And can't you make one of them feeder things like you was reading about? You showed me the pictures of 'em, papa."

"Yes, son; I'll try."

"And a nest box, too—and another box for them to dust in, like my real chickens had?"

"But, my dear child, wooden chickies won't get lice on them, because they haven't any feathers for them to breed in."

"Yes, but I'll have real, live ones some day, papa, and then I'll want a house just like you're going to build now—only bigger; so we can keep the little one to go by, the way mamma does when she makes my clothes."

Mrs. Wentworth joined in her husband's hearty laugh at the child's artless comparison, but his father promised to make it as Wayne wanted it.

Measurements were carefully taken, and Wayne was encouraged to help all he could. The miniature house was three feet in length, and one and a half feet wide. A partition was put in the middle, and the roosting room and the scratch shed were of the same size.

Everything was progressing smoothly, when Wayne almost

sonally supervised each detail of the work before he was satisfied to go to bed.

His father, too, was tired, but had taken great interest in the carpentering. He had planned the work and arranged everything, but Wayne had done all the hammering and a great deal of the sawing.

"That boy would make a good carpenter," Mr. Wentworth remarked to his wife, as they cleaned up the sawdust and litter that evening. "He seems to have a knack of putting the nails just where they belong, and when I showed him how to take measurements, he fell in with the idea in a manner that would put to shame many a lad of sixteen or eighteen."

"Yes, but there's no danger of Wayne doing anything but raising poultry," said Mrs. Wentworth, laughingly.

Not long afterward she asked: "Do you think, dear, you can see far enough ahead to have any thought of leaving the city?"

"I do look ahead to that end all the time, wife," replied Mr. Wentworth. "In fact, I have figured the possibility down to a fine point, and—barring sickness or accident—I think we may plan to go to the country in June or July. You know we have a little money coming on that note of your brother's in May, and if he is able to pay it, it will do wonders for us—with what we can save between now and then."

"Come, we must go to bed now, as tomorrow will be another work day, and your eyes look heavy." And he kissed his wife's brow, on which the anxious look of the last few months had changed to one of hopeful joy.

Wayne was up early the following morning. He had a great many finishing touches to put on his little chicken house, which was a gem in its way. He had been too tired in the night before to attend to the lighting of his Christmas tree, begging his father to keep right on with the carpenter work. Now, however, he examined the tree with new interest. When his father came home he found it lighted up and glistening with the reflected lights of the tinsel; while in the poultry house in the kitchen the beloved chickens were sitting on their perches, ready, as Wayne said, to go to sleep.

He would not allow the candles on his tree to be burned longer than a few minutes, as he said he wanted to light them every night "just a little tiny while," and make them last a long time. And he was as good as his word; for almost a fortnight the candles were lighted before he retired, and burned for about five minutes; when they were extinguished, and while still warm and smoking, were safely laid away for the next evening's entertainment. Finally, when the New Year was about a week old, they sputtered and flared for the last time, and Wayne said regretfully, "I guess that's the last of them, mamma, but they burned for a long time. I'm glad my chickies' lives don't go out like that; they're just as good as new." And he smiled delightedly at the thought.

One evening in early April Mr. Wentworth came in with a graver face than usual, and when supper was over told Wayne to go out and play on the walk in front of the house. The child put some of his chickens in a basket and calling the little girl who lived across the hall, they went out to play.

"Sit down, Mary," said Mr. Wentworth. "I have something to talk about that I didn't want our boy to hear. I don't want to excite any false hopes of our going to the country until I get your advice and go a little deeper into the matter with you."

"Well," said Mrs. Wentworth, I must say that when the country is mentioned I'm almost as interested as our child would be; so just unburden your mind at once and you shall certainly have the best advice I can give you."

"You have never failed me yet, Mary, and I'm depending on you now. To jump right into the subject; a friend of mine—or, at least, a fellow worker—wants to sell a small place situated about twenty-five miles out of the city. It contains about ten acres, with a very small house which, I imagine, does not amount to anything. But, he claims, there is a pretty good barn, and a couple of outhouses that have been used for pigs and chickens. It is for sale at a very low figure, and he is willing to sell for part cash, the remainder on time. Now, my idea is that we go out and look the place over next Sunday. If it looks promising and we decide to take it, we will move out there, and I will keep my position here in the city and run out there every Saturday night—"

"Now wait!"—as his wife opened her mouth to protest, "I know you are going to say you don't want to live there alone,—and neither would I want you to. I have other plans, which came to light today when I received this letter from my brother Ben. I will read it to you." And opening a letter, he read as follows:

"Dear Brother Jim,—

"I have not written to you for some time, but have not

"AND ALL ONE KIND."

burst into tears, saying, "Papa, there ain't any door or window. We've got to have a door and window!"

The window was promptly furnished, with a small piece of isinglass for a pane; and the little door was hung with pieces of leather cut from an old pair of Wayne's baby shoes that his mother had not thrown away. The leather made capital hinges, and Mr. Wentworth whittled out a miniature hasp which he used in fastening the door. Next, some old wire netting from a door frame was used to cover the front of the scratch shed, while a drinking fountain—somewhat ill proportioned to its surroundings—sprang from a corn can combined with a saucer.

"Now, if we were building a large outdoor house, Wayne, we would cover the roof with some good roofing paper. However, I guess this one will keep pretty dry in the kitchen. But we'll have to remember about that when we have live chickens—dampness is so fatal to poultry, you know."

When finally the house was completed it was long past Wayne's bedtime. But, sleepy as he was, he put his pets to roost first. Then he carefully closed the door, and took a long time to fasten the hasp, sighing and yawning as he worked. Looking up, he caught his parents' pleased expression, and clapping his hands he wept for very joy, leaning against his mother's breast. He went to bed that night with blisters on his hands and knees, and a smile on his lips.

The budding fancier had thus early taken, all unwittingly, an important step toward becoming a good poultryman—he had seen to it that his flock was well housed and had per-

forgotten you and yours. My health has been very poor; in fact, I have been obliged to resign my position with the railroad, and must rest for a few months. I have enough money saved to keep me nicely for a few years, and I thought I would visit my relatives for a while, and travel more as I grow stronger. I wish you were living in the country. My doctor tells me I ought to get out in the open air and "dig and delve" until Mother Earth does what his pills and pellets have failed to do: namely, stop my cough and put some color into me. However, if you can make a shakedown for me somewhere in your little home, I'll come about the first of May, and when after school closes your little son and I can spend our days in some of the city parks, which will be the best substitute I know of for the country. Give my love to Mary and Wayne. Take care of yourself, old man, until I see you.

Your affectionate brother,

"Ben."

As Mr. Wentworth finished reading the letter he glanced expectantly at his wife. She sat in silence for a few minutes, with downcast eyes, studying the hit-or-miss pattern of the rag carpet. Then she looked up with a bright glow of excitement burning in her cheeks:

"I see what you have in mind, Jim. You think Ben could live with Wayne and me on the place, and you will hold your position here in the city until we see how things are going to turn out. It's a fine idea, and though I shall miss you dreadfully, dear, through the week, I am in hopes we may like the place, more for Wayne's sake than our own, as I fancy the child is looking a little pale this spring."

"I have thought the same thing," replied Mr. Wentworth thoughtfully, "and I think I'll tell the owner of this property, Mr. Cooper, that we will look it over next Sunday. Even if the place does not suit us, the outing will do all of us good. Today is Friday and you can bake a few fixings tomorrow, so we can take a little snack with us to eat."

"Yes, and you had better write to Ben tonight and tell him to come. Whether we go away or not, we'll make him welcome wherever we have a home to shelter us. And now, Jim, let me tell you my news of today. It looks as though our near relations had been thinking of us, for I got a letter from my brother also, and he says he can pay back the five hundred dollars you loaned him four years ago, and adds that he will send us good interest, which he wants us to put in the bank for Wayne. He said you should have let him know when you were in such financial straits, and he would have sold some of his stock to raise the money. But as it is, I'm glad you didn't, for it wouldn't have helped us very much then, and now when it comes it will prove to be what Aunt Peggy calls 'a godsend.' See, here is Brother Will's letter.

"This is indeed a lucky day for us, Mary, and, as you remarked, the money is a small fortune just at this time. We will do as he says with whatever he sees fit to send us as interest, and Wayne can start a small chicken business when he is older. It doesn't seem possible, Mary, that our baby will be eight years old in a couple of weeks; how time does fly!

"Well, we had better sleep on the matter and see whether tomorrow's sunrise brings us any new ideas." With these words he stepped to the door in the twilight and called Wayne in from his play.

Morning found them even more pleased with the project, and when they told Wayne what they had in view, the child almost wept for pure joy.

"And can I have real, live chickies, papa?" he shouted—"and a house for them to live in—and take the whole care of them myself?"

"You certainly may, Wayne—if we take the place," said Mr. Wentworth, as he kissed him good-bye. "Now, don't build too many chicken coops in your fancy, little man, for we may not be able to live in the house after all. But we'll know tomorrow. Good-bye, my boy." And with a wave of his hand to Mrs. Wentworth he was off to his work.

(To be continued.)

The new Standard of Perfection will be used by judges after December 1. Don't try to get along without it.

A little money spent now in fixing up your houses and coops will prevent sickness in your flock later.

Put in your winter supply of feed now. It is cheaper and of better quality than it will be later.

Fowls should be fed at regular hours for best results.

POSSIBILITIES OF THE POULTRY INDUSTRY

Learn the Lessons Taught by Successful Poultryman—A Short Review of Two of This Country's Largest Plants

—Mr. Twining's Quarter of a Century's Pronounced Success—Mr. Watson's Record With a New Plant—They Get Good Money From Poultry—Some Opportunities for Others.

Written by H. P. Schwab, Eastern Representative A. P. J., Irondequoit, N. Y.

Part V.

OW little or half of the world knows how the other half lives, has been truly said years and years ago, but they do live, and succeed each in their own way. Desires and habits differ, but in the main contentment reigns and the pleasures derived from life are according to their conditions, worth living for. Much of this applies to our poultrymen; their conditions to a great extent are similar, but they little know how the rest live; they know of the Great Plants, but are doubtful. They can see the possibilities of poultry-breeding, and after their own fashion derive some profit from their poultry. But is

PAPE STRAIN

"NELLIE WAYNE."

this profit the limit, and are they receiving their full due, are questions for consideration.

Thanks. The American people are not too easily satisfied, and but little contentment will be found unless they are assured that they are receiving not only the full amount of product and its full value. To these desires with their efforts are due that which is noticeable in all lines of trade and has made the general prosperity which we enjoy possible.

Poultry Abreast of the Times.

The poultryman, in method, no less than the manufacturer and merchant, is abreast of the times. Details have been mastered and today we find throughout the world poultry plants where many thousands of dollars are invested that are turning in a profit far in excess of that derived from most any other line. That there is money in poultry we trust even the most skeptical will believe, but how to get it is the one question that confronts some with doubts.

We have before stated in this same line of articles that location and home conditions should first be considered. Some locations will not pay the high prices of others. In these the producer must seek his markets. Still even those locations have their advantage in cheaper food, cheaper

land and help, and with much less money invested. To that when the balance is struck the advantage will be found small for any one particular section.

The pronounced success attained by so many in this line form a beautiful illustration of what has been, and can be, done. There is nothing freakish or unnatural about these, and there can be no possible doubt but that the same success awaits others. The continued annual increased demand for

A prize winning White Plymouth Rock. Bred and owned by J. H. Trobaugh, Delphi, Ind.

choice poultry and eggs over the supply forms a condition that confronts the poultrymen to solve. It is a well-known fact that the demand increases far more rapidly than the supply, and that this question is apt to always confront us, assuring at all times profit-paying prices.

One of the Oldest and Greatest Plants.

It was our pleasure last spring to visit several of the largest poultry plants in three states, and in the short time allowed us to study their mode and success we found no great secrets involved, it being simply a question of plenty of common sense with conditions understood and business methods involved. We inspected plants established for more than a quarter of a century to some just roofed in, and at all were assured of their success. All were running at full capacity and each unable to keep up with their orders. We may well call these chicken factories, for poultry, both alive and dressed are turned out in thousand lots and eggs by the ton. Now these are facts, and if any of our readers have doubts we would be only too willing to furnish them any proof called for.

That the managers and help at these plants are skillful, goes without saying. The man that can feed and care for poultry and produce 95 per cent fertility of all eggs, as well as the man that can hatch 90 per cent of all fertile eggs are experts. Time alone, with a strict care to business, make them so, and when we note their work we do not doubt these record hatches.

It is our intention at this time, and probably in a later issue also, to refer to several of the large plants, as an object lesson, where the poultry business is carried on a scale and to an extent far above our fondest expectations. It truly is impressive to enter a plant that has successfully existed for over 25 years. Where poultry has been the one question, its detail mastered and where extensive as time has made it, we find further improvement and enlargement each year, with the end not in sight. We refer to Afton Farms, S. B. & E. W. Twining, owners, Yardley, Pa.

At this as well as at all other large plants, only the Standard breeds are kept. Their extra value for all purposes has long been conceded; besides, it adds the fancy side of the question to that of market poultry and opens the way to this large field with extra prices. While Afton Farm has made its real success with market poultry and each year has marketed close to the hundreds of thousands, their sale of choice breeders with a known laying quality has added to their popularity a new branch that is receiving popular favor. Twenty-five men are employed the year around. Every day is its season, with styles and fashions always the same. Their only care is quality, the best of which costs no more to produce than an inferior article.

We were immensely pleased with our inspection here and could not help but note the evident satisfaction of the owner and the prosperity seen at all sides. Experience has been a good teacher, as it always is, where its lessons are

noted. This being one of the first large plants inaugurated, much depended on close experiments and noting all conditions. Mr. Twining did not have the experience of others to profit by, as the breeders of today have. His work has made history and has opened the doors to success for others. As poultrymen we all owe much to Mr. Twining. While at this time we simply cite this plant as an illustration of what has been done with its stability and progress. Others can do the same, right now, and under far more favorable circumstances than those accorded Mr. Twining.

Mr. Watson's Five Years' Work.

At this time we also have in mind a great plant started but five years ago in a modest way and under very modest circumstances, referring to the Newtown Producing Company, Newtown, Pa., Mr. H. L. Watson, manager. In just five years' time from nothing beyond determination to a business of close to \$40,000 for last year, practically in any other line under same conditions, we could fill pages and still fail to do Mr. Watson full credit for his work.

Here again we can well say it is impressive to visit and to note the thoroughness in every department that has brought the quality and their success as well. While we consider Mr. Twining a born fancier, his father having started their business and he growing up in it, Mr. Watson is a made fancier, still a young man, full of ambition, and when looking over the possibilities for life's business entered the poultryman's ranks. With the above figures before us, can we well ask has he regretted it? But we will ask, what other line of business would offer such opportunities, or where would it be possible to seek more healthful and desirable work? With poultry the competition is nothing more than a stimulant, to create more and larger plants, to tax every resource in an endeavor to supply the demand. We shall never live to see real price competition with either poultry or its product—eggs.

The very same conditions that have confronted us for years prevail today, and the same possibilities, with increased facilities are before us right now, and when we advise you, "reader," to grasp them, we do so freely and with a heart's desire to better and improve your conditions and value to your fellow-man.

We have in mind other plants and other men that have worked along similar lines, with similar results, and to

R. C. Caldwell, "The Baby Chick Man," Lyndon, Ohio.

further illustrate the chance the beginner has for success will refer to them later. We want to show our readers what others have done, and are doing, and to further impress upon them just what can be expected should they make the attempt. Mr. Watson's and Mr. Twining's success is not unnatural. No, not even any exception to the rule. They have succeeded because they have tried.

WHO'S WHO IN HENDOM

The first heat of writing the matter for this issue finds me pretty sore. Today is election day in my state. County officials have bored me to the death with their bum talk and bumper cigars. One of the latter exploded just as I was getting it going good and I've vowed a vow that I would send the foolkiller to look over his family tree, or such branches of it that may be alive at the time of said foolkiller's call.

Now I remember one time when a certain man was running for an A. P. A. office. He was about at the meeting of the body; it was during the dark ages when we met and elected most anybody to any office, passing about bad cigars. I chanced to receive one of those Cabbago La Ropas, and shiver my toplights; if I didn't have the sensation of smoking a combination of alfalfa, hair and oakum! The donor of that cigar stood right there forcing me to smoke it. He didn't have the manhood to get away out of sight so I could pitch the thing through the window.

Personally I do not mind an election cigar if it is a good one. But I shall never vote for the officer or candidate for office who gives me one and then makes me smoke it. I might say in passing that the A. P. A. candidate aforementioned did not get elected to office. After the meeting proper was over we electors who were cigared by him met and formed the Society for the Prevention of Forced Smoking of A. P. A. Candidates' Cigars.

If I had been getting it in the neck like this last month when I wrote the tirade against the Runners For Office, they would have been dead and buried now. I would have seen to it myself and considered the time well spent. But even if I feel pretty mean I shall be as easy as I can with the judges who show up for treatment this issue.

There is Billy Russell, prince of roosterinos, chicken judge extraordinary and critic of the hens rather special. He should never be used roughly. It would soil those new patent leathers, disarray that new tailor's model and smear his standup-laydown collar. Billy is one of those examples of the Creator's art that goes to show what a fellow can make of himself if he sticks to one thing all the time and learns it well and does it well. Billy is a fellow that makes ballast. He knows chickens. Every one likes him and they all call him by the handle of his name, though his wife prefers to speak of him as Will. He is very decisive in what he does and never but once made a mistake that I know of, and I know him well. If your bird is not placed in the line when he judges your classes and you remonstrate with him he does not make a roar that sounds like Fred De Vore on the outside of a limburger or camembert; no, sir! He just goes to the coop where the apple of your heart is caged and pulls out the mut and shows you that you are not half so well acquainted with the bird and the standard as you advertise that you are.

There is some sense to that.

Years ago, Billy broke into the chicken business by beginning to clean out his mother's henhouse on damp, nasty mornings. He liked the work. He still loves it, for he does most all his work about his little ranch. After a while, the folks all around learned that he was a chicken feller and they called on him to judge a local fair, which was about twenty years ago. The next year he judged a few more and is still at it and will be good for a great lifetime of work yet. Most of the fall is spent in handling the big state fairs. Then when winter's chill blasts rack the rheumatiz in your joints he starts out on the smaller shows and handles two of them most of the weeks of the winter. He is in great demand. He prefers to get among the real breeders of fowls rather than fanciers.

Bigger shows have no terrors for this dauntless little henman. He knows just what it takes to make up a chicken in most any old thing of a pure bred bird, American, Asiatic, English or Continental. It was born right in him. He cannot

L S

help it. Bred in the bone describes it rightly. When one fancier mentions Russell, others do not take off their hats and stand with bowed heads, but rather perk up their ears and say they know him and like him.

Yes, we all like Billy. His judgment cannot be questioned successfully or any other way. He is of the chickens, chicken; and of the duster, a king. If he had taken to novel writing and applied himself as industriously to it as he has to the chickens he would be an author of one of the best sellers. Diligence rewarded should be your thought when you hear of or see him. He has been financially well treated among the fanciers and as a breeder, and we can truly point to him

with pride and say with a great degree of fervor in our trembling voices, "Long may he wave!"

And now let us go over to North Topeka, Kan., where that old timer, Charlie Rhodes, allows his mail to go. Once, years ago, when I was a kid in knee breeches, Charlie Rhodes judged a show at Sedgwick. There were six hundred birds facing the judge. I had a coop of Cornish Games there as well as a lot of Pit Games. I was about as rich as a smaller brother who paraded the show with his red topped boots, so I could not afford a printed card. But not to be outdone by the friends of mine who had cards, I took some of theirs and wrote my name and address on them and mentioned that I was a breeder of said varieties. My schoolmates geyed the life about out of me. But I stood it and braved the judge.

I have the score cards yet which C. H. Rhodes signed; and Charlie laid his hand upon my curly head and said that some day I would make a fancier. He was right or nearly so, though the wife would modify this statement. I stood at one side and watched him score the birds, drawing on all the reverence that I could summon. Today in shows all over the land there are other small boys who stand gazing just like I did at that time and in a few years they will be advertisers and breeders of repute. So is the fancy extended. The boys who catch the fever are the ones who make the stayers.

Though Mr. Rhodes is a member of the old guard in the central West he is not a back number in any way. He is right to the front in all the matters that pertain to better birds of all the breeds. One year that I forget the exact number of since the high water at Topeka, Charlie judged more winter shows than any other judge in the United States. He does his work well. I never, in twenty years of having known him and heard of him, remember a word that might have been said of his unimpeachable character. He has stood higher than a great many and yet is a man of the rank and file.

When he watched his famous Black Cochins float away during the flood at Topeka there were tears in his eyes as large as biscuits. I think this flood carried off every male bird he had. That was enough to wring grief from the eyes of a brass idol. And about as far as Black Cochins are concerned it got Charlie's goat. He says he has not been able to get a strain of blood to take up the work again.

Charlie is a dignified man and his humor is of the subtle sort at times. He does like a good story, though, and tells one in inimitable manner himself. When you next meet him ask him for the celebrated self-defense story about the man who was very fond of codfish.

And now, good people, we come to the subject of self-made men.

The woodbine twineth near the glen of mortality and the whangdoodle mourneth for its first-born in the shadow of the trees of life, but we seldom see judges like Drevenstedt. Ah, Mandy, 'tis a bad omen. Drev has been judging for years and years and it makes me grow gray to think of the time when he began in the long, long ago.

Drev has been chickening all his life. I do not know his age, but he probably struts down the sunny side of sixty. At any rate, he is old enough to have judged the first show in America that could really and truly call itself a show. Drev has judged in Maine, then skated over into the next state south and kept going on down till he reached the southern shows with their cracking good southern birds. Everybody knows Drev or has read him. Right now he is being read a great deal. He is putting more time and thought into the game of judging and fancying right now than he ever did before, and this means a lot.

They say he is as much at home among the varieties as he is among the story tellers. They say he is a regular hen wiseheimer. They also say a lot of other things complimentary to him, but what's the use of quoting when he is practically a next door neighbor and a friend in the stress of poultry troubles? There is not a big show in the land that Drev has not been in the duster in its aisles. Now that is what I call class. He has the grandstanding habit and cannot get over it. He will be judging when the fancy has seen his head grow white with eighty or more winters. He will be judging when we each and all attain the goal of our ambitions in producing a New York winner.

In fact, we cannot get along without him. He is a landmark of the country when it comes to hen things and is one

who followed in his path. It's chicken, pure bred chicken, ribbons, cups and medals, articles about the fancy and breeders in general, that take up his time. Oh! what a great life! Nothing to do but chicken around here and there seeking the good things of the game and letting the rest go to pot. But let us let him rest in peace. He has earned it and deserves it. Therefore give unto him that which is his.

And bless my soul! If here doesn't come Tom Southard. I don't care if Curtis has or has not written Tom up for the Rogues' Gallery of Henmen; he is my meat. Tom dates back to the time when Kansas City fanciers held what they called a Mid-Continental. It was the ambition of my life to visit that show, as I was quite a pup. Tom was there—so I envy him. He has been there ever since. He is a mid-westerner. He knows a lot of folks and a lot more know about him. Iowa, Missouri, Kansas, Colorado, Nebraska and half a dozen other states know where and when Tom has adjudicated for them and done his work well.

When the Rhode Island Red boom hit the West, Tom was on the spot. He had been breeding a few selected birds and does yet. He calls them the Heap Fat Squaw strain, or something like that. He names his males Chief Ukmugukluc and Sitting Steer, Rain-in-the-eyes and Butcher Boy. For his pullets and hens he uses Laying Heifer, Running Cow,

Light Brahmas, Prize winners at the best shows. Hen showing perfect wing coloring, such as is also found in the general run of stock bred by River Home Poultry Yards, Box B, Perrysburg, Ohio.

of those who rocked the cradle of the eastern fancy. He is the best material for a roasting editorial, as he takes it like a man. He never gets mad. He never says all he would like to, and they also say that he is very diplomatic. I guess this is where he gets his laurel wreath. Laurel is something we do not have too much of in the chicken fancy, and to have seen it is enough, but to possess it is far greater.

Drev and Tom McGrew know more about bantams than all the others put together, I was about to say. But I might say it and then modify it to read at one time they knew all this. It was not so long ago either. But the bantam fancy has grown a lot recently and it would be bigotry to acclaim too much for one or both.

To hold a New York show without Drev would be like holding a glass of champagne, pronounced sham-pag-ny, for someone else to drink. Drev is always there. He could not be kept away. It would be like running the Chicago show without The Hewes. You simply couldn't do it. It would be out of the scheme of perfectly natural things. Those of us who think that it would be the greatest thing in the world to travel about to the big shows with Drev and soak up some of the coin that goes begging for his services, to say nothing about getting all the fun out of the game of pure bred poultry breeding without the attendant dirty work, his story of how some day he is going to settle down on a little Virginia farm and pick cucumbers, does not appeal. Drev is another of those fellows who have given about all their time to the chicken game. It has paid him as it would any one

Little Eyes, Eyes-of-the-sky and Soubrette. These names Tom finds to bring business and make a stir. They certainly tickle the ears. One of his pullets, Little Squaw I think her name was, he showed at Chicago a couple of years ago and got a place in the line. He might have gone higher up with her, but he had her looking so really Indian in her make-up that the judge was not unafraid to get close to her.

Tom is a great jollier. He jollied that great layout of birds to the first American Royal Poultry Show. He went right out where the birds and their owners at the fairs were promenading and made the fellows sign up quick. There is a lot of skill demanded in this. It takes more skill to get up a big show than it does to judge them after they are on hands.

What Tom undertakes he does well. That is why he is making good from year to year as a judge. He does not aspire to judge the M. S. G. show all by his lonely, but strives to do well the smaller shows that are entrusted to him. Western fanciers are glad of this, as they want him to stay out here and know that if ever he made a great big hit at some of the big events he would be taken from amongst them. When Tom was a youngster he was so awkward, so his folks say, that he got his feet tangled up in his sleep, to say nothing about it when awake. This redounds to his credit. He is careful how he walks even now. He wants to be on the safe and sane side. He is big and husky and yet never shakes a ham-sized fist under the nose of an opponent. This is well indeed for me.

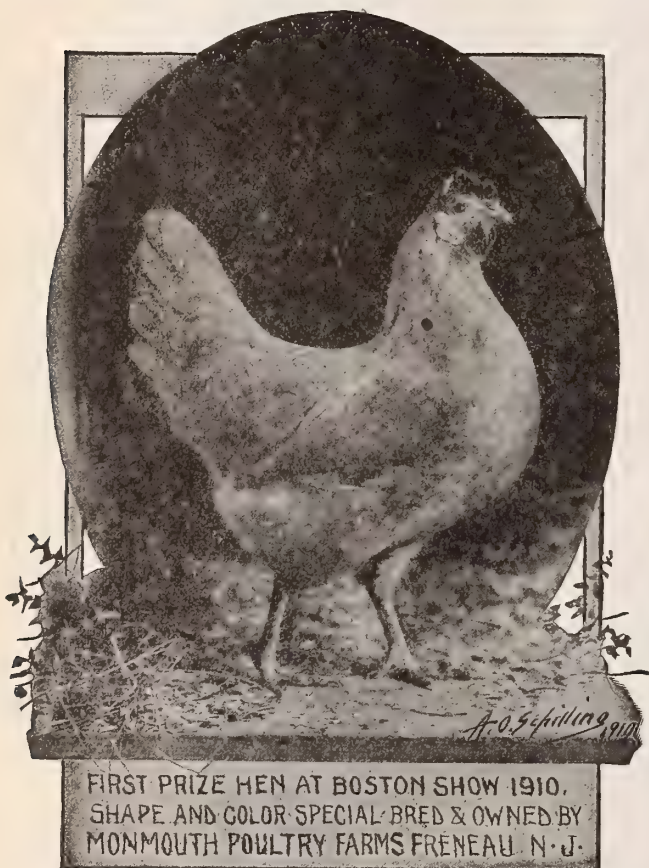

FIRST PRIZE PEN
WHITE WYANDOTTES
SEPT. NASHVILLE, TENN. 1910
GEO. H. RUDY, MATTOON, ILL.

But we all like Tom. He takes his medicine like a little man and never tries to swell up to a hundred and twenty-inch wheel base. You do not have to hold him with a half Nelson after he has judged the birds of a show. He stays there with his explanation and enlightens the amateur and novice and thus makes for the uplifting of the fancy.

Henry Schwab is another judge who arrived on the night train, so the family Bible records, and is with us yet. I have to be pretty careful how I tackle Henry, as he is working occasionally at writing some things for these columns and can stab me if he wants to. He will not stab me in the back, I am sure. If he does stick me, he will come right out into the open and give me a chance to run or stand my ground. Henry's tongue is sharp. It is keener than sharp, and folks say he writes just as well, so I am careful.

If there is a man in the duster game who looks better when inside it than Henry, I would like to know where to find him. He is no swivel-faced and ordinary looking chicken man. He is there with the goods. His one look carries the authority with it. And then he is a regular chicken shark, telling at a single glance whether a bird has enough merit to soil his hands or not. Just shut up the aisles and turn Henry loose inside

and he will do the rest. He doesn't need to know who they belong to either, for that is not his way. Onlookers who do not even know a breeder, or who don't know that such a thing as a fancier is in the room, will say, "That fellow knows his business." It is a way Henry has that makes the birds shuffle their feet and walk to the front of the coops to be handled.

Now the long suit of this man is Barred Rocks. But recently the Columbian Rock fanciers have appointed him special judge of this variety, though we do not know whether he has a pen or two of these hid off back of the house or not. He is well posted on all the gems of the Standard. During the winter he is employed in the East all season at judging. It is a line of work that he takes to naturally as he does to eating, and Henry is a good feeder. He doesn't care if all the big guns have their batteries on him when he is handling the Rocks at New York. They cannot feaze him. He knows Rocks like he knows the way about his hen houses, and that is an end of it.

The East is full of Smiths, but they all claim to have arrived through their ancestors on the Sunflower, Mayflower or the Passion Flower. But of all the Smiths, there is none better known in the fancy than Arthur, dean of the Rockists who go down to the Garden in autos. Arthur Smith has been so

long identified with William Ellery Bright and his Barred Rocks and Brown Leghorns, that we cannot recall the union of these two names in the chicken prints. Two hearts that beat as one, and two souls with but a single thought, was coined by Shakespeare when he had them in mind.

They plan together, they strive together for the same goal, they carry home the trophies together and seldom are separated in idea. At least this is the way their actions talk, and you know that actions speak pretty loud. Arthur gets away from home now and then. He calls home the East. He has to be there pretty steady to keep things down, as the East tips right up when he is away. Not long since he came out to Chicago with a line of Rocks that were termed killers by those who saw them and went up against them. Now Arthur's one idea is that in showing he will go up against anything once. They cannot totally push him off the map. If he gives in any with that Bright banner the map tears.

So this year, to get in touch with the more needy brother, the western Rock fancier, Arthur has consented to come out to Topeka and judge the show that will be held by the American Plymouth Rock Club, or such part of it as wends its way out there. Arthur is a nice fellow, who does not intrude his presence on one. He does say his say at the A. P. A. meetings when he gets a chance and feels the fight blood jumping up into his neck. This is a fine trait. It is one that comes of the Puritan blood.

Brown Leghorns are a hobby with Arthur. He eats their eggs for breakfast and dotes on them for supper. But for Sunday dinner give him a Rock by all means, fair or foul! He says that if the real old-fashioned Irish mumps so enfeeble a Brown Leghorn that she is not fit for laying, she certainly is not real good for the table. He has a host of likes and dislikes, like the likes of which we never saw before. Here are a few of them:

A cold compress on the head of a dissatisfied exhibitor makes him retract a lot of what he says about a judge.

Never try to remove a case of bumble-foot that has settled in the region of a bird's eye. Use an ax, as it is much more humane.

Never try to remove a wart, sometimes called a side sprig, off a bird's comb with a jack-knife. Try something else.

A water-cooled nest box is a great thing when you are breeding our strain of Brown Leghorns. Use asbestos for nest box filling.

It is foolish to try to reset a lopped comb with a safety-pin. Get a meat ax and amputate the foot just behind the duodenum.

THE AMERICAN DOMINIQUE

WISH to treat briefly the "oldest American breed of poultry," as the one "best utility breed"—from the farmer's standpoint—which exists today; and this, not because I am a fancier and would advertise my wares; but because in the past seven years I have tried faithfully—not by tens, but by hundreds—the three most popular American breeds, viz., Rocks, Wyandottes, and Rhode Island Reds; and witnessed in other hands the Buckeyes and Javas; and am convinced by this experience on a large utility poultry farm that, side by side, with the same care, we have today no other breed that can surpass as a utility fowl this our one old foundation breed. She is in reality, of all American varieties, the one truly middle weight hen. It is a well-known fact that a Hamburg or Leghorn, of 2½ pounds weight, can produce a full market sized egg, as large as many Brahmas—in which the Standard demands 8½ pounds—will produce. For the farmer the one of these is too small, too flighty, and has little value when through laying; the other is too large, too lazy, and too expensive a feeder for the work she does. Just half way between these extremes, the lightest of all the American breeds, yet heavy enough to produce poultry of the finest and plumpest quality, and with the long, spreading tail and wings which bespeak an activity known in no other, stands this grand farmer's ideal. In nearly all, if not every part of this land, it is a common custom for farmers to cross breed their fowls. In spite of the fancier's constant assurances that this is unwise, hundreds of knowing, think business men follow this method year after year. I know today of one of our best Buff Wyandotte fanciers who habitually crosses a Leghorn cock on to his utility pens, "because," he says, "I can get so many more eggs with less trouble."

In this state there are hundreds of breeders who follow this method for the same reason, and beyond a doubt there is reason in it. In our anxiety to compete in body with the larger varieties, we have placed the Standard so heavy that on the farm, or in open range, the average feeder must breed

his birds clean away from Standard weights, and shapes, to get best results. This is a tendency which is true of all our American breeds.

We are not here to take up the "cudgel" with any true poultryman, who declares what he can do with his favorite breed in egg production, no matter how heavy they are; we are even ready to grant that some men can make some Standard weight Brahmas lay as well as the best Leghorns ever lay. Unfortunately, or fortunately, the majority of poultry keepers are not professional poultrymen. And they have no time to study Standards or Standard weights. A flock of Barred Rocks near our home has been kept intact for many years, and occasionally replenished with cocks of new blood. They have free range, good housing, and good housewife's care. Today this flock will average fully two pounds under Standard weight and are as good a utility flock as one often sees. We have seen the same results with Wyandottes and R. I. Reds. The average practical farmer's hen on free range and best producing conditions will not go over 5 to 5½ lbs. in weight and very often she will drop to 4 lbs. without in any way diminishing her plumpness or the excellence in quality of her meat.

Such a hen is the old American Dominique in her normal condition. Nothing more detrimental to her well-being was ever attempted than when the Standard tried to raise her weight to that of the other American breeds. Fortunately few breeders responded to the call and so she has been kept

First Pullet Missouri State Show, December, 1909. Owned by Maple Dell Poultry Farm, F. Gage Cutler, Prop., R. F. D. 13, Carthage, Ill.

pure and practical in size. One of her worst enemies has been the poultry "judge" who had not learned, or could not distinguish between a cock with long curved sickles and a hen with full spread rudder tail and the short, stubby type found in the Rocks; and so placed awards, regardless of shape, on color alone.

The American Dominique, to be true to herself, must have the pert form, plump, partridge-like breast, and agility, which are in themselves a guarantee of all a farmer asks. At seasons when eggs were becoming scarce we have never seen her equal in production; and as an all-around farmer's fowl we know of no other pure breed that so nearly proves itself to us as "just all we could ask it to be."

When the fanciers of America awaken to the possibilities that lie in this breed, which no other can infringe upon without being untrue to its type—the cock's long, barred sickles sometimes reaching two feet in length; the boastful, proud carriage, the fiery red eyes of the warrior; the yellow legs and skin, and plump, meaty breast, which would grace either the show room or the market window; and the hen's large rudder tail, putting her entirely out of class with any other American breed; these with color problems unsurpassed, we shall find them where they have already started with a rapid stride, viz., at the front.

W. H. Davenport, Colrain, Mass.

MATING FOR EARLY CHICKEN PRODUCTION

Chickens Produced Out of Season Seldom Attain Perfection—In Mating Sound Judgment Must Be Used—Feeding and Housing

Written for American Poultry Journal by Joseph Shakespeare, England.

THOSE who intend competing at the early shows of 1911 should begin to put their intention into practice by getting breeding pens together. Cockerels and pullets are the main features at the early events, and if birds are to be got as near as possible to Standard weight, not only must they be hatched out as early as possible in the year, but they must be looked after for all they are worth. Chickens produced out of season seldom attain to the perfection reached by those birds which are hatched out when nature distributes to bird life her store of insect and vegetable foods. Not only do the birds that are January hatched fail to produce high quality plumage, but they lack the fine finish of the show specimens produced in March and April. Still, if early ribbons are to be captured, one must produce early birds, and endeavor to get as much size into them as possible, as size often makes up for lack of quality in the eyes of those who place the awards at early shows.

In the mating-up of the breeding stock sound judgment must be exercised if the best results are to be achieved in the way of strongly fertilized eggs, and youngsters are calculated to steer clear of the ailments likely to attack chickens during a season of climatic changes. In the first place, no birds must be mated-up for breeding till they are thoroughly well through the moult. They should have passed through the moulting process naturally, and not subjected to any artificial means with the object of forcing them through the moult. The ideal hens for the production of early chickens are the birds that have been helped through the moult by good sound constitutions coupled with rational feeding on such foods as produce feathers and repair such losses as are caused to the bird's physical organs during the production of new plumage. The hen that lays through the moult cannot produce both eggs and feather to perfection, and when the plumage is not perfectly formed it is a sign that there is some physical defect in the bird, such defect being traceable to the production of eggs during the month. The birds with the strongest constitutions will be those which get quickest through the moult, and such birds are the ones to select when mating up the breeding pens. I have only referred to hens, not pullets, as experience has taught me that if strong, livable chickens are to be got, the two-year-old hens must be looked to for their production. Given two-year-old hens that have passed kindly through the moult and got into laying again by November, one can, if a proper mating is made, insure stronger progeny than if pullets were mated-up.

In mating-up stock for the production of exhibition birds, one stands a better chance of getting good specimens from hens than from pullets, as one has, or should have, an idea of the true value of the females: So many pullets change into undesirable adults. They win all that they are capable of winning in their earlier life, and fall short of Standard requirements when fully matured. The true value of an exhibition fowl lies in its ability to score high at two, three, four, or even more, years of age. Early-raised birds must be regarded as a special class of stock, especially produced for a special purpose, namely, for putting down at the early shows, and should not be—and especially in the case of pullets—chosen for the breeding of early chickens. When young birds have gone the rounds of the early shows they need rest, and not physical work in the breeding pen. The results of the mating together of overshadowed young stock are many. The birds themselves are constitutionally ruined; their eggs, being small, produce birds that, in their turn, will produce small eggs; the egg germs will lack sufficient vitality to account for strong, rearable progeny, and the majority of the youngsters will reach early graves instead of early shows.

Having chosen the right kind of hens, the next thing necessary will be the choosing of suitable males, and before dealing with the breeding qualities of the good stock male, I may say for the benefit of the novice, that in mating-up the breeding pen the faults of the one sex should be compensated for by the virtues of the other. The one sex may be too dull in color, the other should possess brilliancy of plumage, and so on with all the points of the breed mated-up. It is impossible in the space at command to deal fully with the mating up of fowls for the production of exhibition

specimens, as there are so many breeds possessing dissimilarity of character. The novice should thoroughly study and commit to memory the exhibition standards fixed for the sexes of the breed he keeps, and in mating-up should, as pointed out above, as far as possible have any faults in one sex outbalanced by good qualities in the other. The male bird to head the breeding pen should, for preference, be a

TEDDY I

Bred and owned by Truckenbrod Bros., Mendota, Illinois

well-developed and active cockerel that has never seen a hen before entering for the "matrimonial stakes." He should be handled to ascertain that his condition is hard, his comb free from any signs of inward disease, his eye full and bright, and his plumage close-fitting. His crow should be loud, clear and frequent, and his gait that of the warrior. Such a male is calculated to sire strong, rearable chickens, and chickens calculated to render a good account of themselves when judged for Standard weight.

If the hens are not yet in their winter breeding quarters and are laying, some difficulty may be experienced in shifting them without checking egg production. The best thing to do will be to take the birds off the perches at night and to quietly relegate them to their new homes. This will prevent much excitement on the part of the hens. Hens that are not laying and in the breeding pen should be shifted without delay, and should be mated-up, as the presence of the male will hasten the egg-producing organs into activity. Too many hens should not run with the male at this season of the year, remembering that the birds will be deprived of those natural conditions which prevail and account for egg fertility when insect and vegetable life are abundant. Of the heavier breeds, four or five females will be ample to run with the male, while of the lighter breeds, six or seven will be ample.

Fowls to lay and breed well during the winter months must be fed on a generous diet, one rich in albuminoids, fats and mineral salts. Such things as ground oats, biscuit meal, pea meal and bean meal should form the basis of the breakfast mash. These should be changed about, as a daily change of food is conducive to health and egg production. In adding bulk to the mashes, steamed clover, roots and other vegetables should be used, and the feed should be worked into a crumbly state by the addition of coarse flour, or sharps, as they are often called. Meals made from barley and maize should be omitted from the mash, as in such form they are liable to cause an excess of internal fat. The mashes, if possible, should be mixed with skim milk, and the importance of animal food in some form must not be overlooked. At such times as the birds are deprived of natural green food through inclement weather, green food in variety must be provided, and exercise must be induced by scattering fine grain among litter under the day shelters, but should the weather allow of the birds being at liberty, they should run in the open as much as possible, as no exercise artificially created can excel that to be found on a free range, when strongly fertilized eggs are the object in view. As supper feeds, oats, wheat and maize may be used in rotation, but should a spell of mild weather set in the latter grain may,

with advantage, be excluded from the bill of fare. The birds should be a little under rather than overfed, so that activity may be created. Inactivity at any time is fatal to the well being of breeding stock, but especially so during the winter months. Water vessels should be kept out of the reach of the snow, or the fowls will eat the latter and do themselves harm. Crushed oyster shell, old mortar, sharp grit and charcoal should be kept within reach of the birds, and a dust bath should be provided for them. Too many deprive their fowls of a dust bath during the winter, being probably under the impression that lice hibernate in cold weather. Lice don't go on strike at any time, but, if allowed to flourish, put the hens on a strike from which they do not easily return to business.

The sleeping quarters, while being rendered proof against winter storms, should be kept on the airy side of ventilation. If the breeding stock is physically strong enough to mate-up for the production of early chickens, the birds should stand a fair amount of cold, if the air is dry. What should be avoided in the houses are damp and draughts. The air, however cold, will not harm the birds if the feeding is right, and they are induced to exercise as much as possible whenever inclement weather deprives them of liberty in the open runs. Breeding stock possessing sound constitutions, activity among the birds, sensible feeding and good shelter are the factors that account for the production of early chickens calculated to reach maturity.

GROWING LAYING STOCK

THE main product of commercial poultry keeping is eggs. Also the very nicest to handle, as the labor of packing is rather light work—more desirable than dressing stock. Therefore the main object in raising poultry is to get stock for egg production. To have a paying quantity a little managing is a great help. Pullets are by far the best for many eggs, and hens are best for eggs to raise young for this reason: The hen lays a larger egg and the larger egg produces a larger, stronger chick. This applies especially to all the smaller breeds, from Minorcas down to Bantams. Because hens are the best for breeders, many think cocks better than cockerels. This is a wrong conclusion, for I found years ago that it made no difference

TEDDY II

Bred and owned by Truckenbrod Bros., Mendota, Illinois

in age, only if anything the cockerel is by some odds the best, for he is not run down by overwork or other ills that may come with modern poultry keeping. I see it claimed that cockerels breed many more pullets than cocks. If this is so, it is another great point for Leghorn breeders, for but few cockerels are wanted in raising egg farm stock.

I have been watching the different small and large farmers around me grow their poultry stock, and I think a few very valuable lessons can be learned from what I saw.

First, my one flock of Brown Leghorns were hatched April 10. They were put with hen on an old sod-fed commercial chick feed. Then cracked corn and wheat, later all the corn they could eat. Very little feed on their run. Pullets began

TEDDY III

Bred and owned by Truckenbrod Bros., Mendota, Illinois

laying at six months old, or a little younger. Had meat been added and a little stimulant in the form of poultry powder I could have hurried the eggs, but they are wanted for stock, and I let them grow naturally.

I had three yards of Single-Comb Brown Leghorns from which a man having a small lot hatched and put in a brooder fifty chicks. At about the same time one of our very best farmers bought sixty eggs, hatching forty-five. These were put with hens with about 150 other chicks. Fed well until started, then fed what they thought well since then. They are now six months old and pullets not laying and cockerels mostly three pounds in weight. Now hear about the fifty out of the same yards. They were set by the side of a wheat field and after four weeks old or six weeks had the run of the field. The pullets are laying and the cockerels run from four to five pounds each.

Another man hatched three settings of Single-Comb White Leghorns. They were put in the wheat field by themselves in May—hatched in the first weeks of May—and the cockerels run from four to five pounds when five months old. These were not fed at all after they were five weeks old. I know another farmer, who is a splendid farmer and prosperous, whose Leghorns grow too slow. They never get their full growth and never make the best layers. Too little feed. Then another loss is the cockerels are marketed from six weeks to two months later than they should be, costing more because of slow growth and going to market when prices are lower.

The perfect food, as you can gather, is soft grain, grain that has fallen on the ground and swelled, and the insects also are no small matter. I know of a flock of Rose-Comb Brown Leghorns raised by a man on a small lot next to a butcher. The butcher gave him the cleanings from his sausage-cutting machine. This rich lean meat made the stock grow fast and they soon came to laying and layed wonderfully. He is a professional man and took a fancy to another breed, and the pullets, or thirteen of them, were sold to a man who put them on a regular grain diet. Those pullets never laid well again. That was a lesson I was glad for, for I am sure it is wrong to raise stock on a very rich diet, for many will be sold when plain grain will be fed and fowl's system has accommodated itself to this rich food, and will likely never do well again and the breeder and breed will be blamed.

It is not so much what we feed to growing stock, only so they have plenty all the time. It is natural for chickens to have food in the crop at all times, and if they can get food at all times they will not overeat. I know it is a great mistake to underfeed young chickens, and much is lost by it. Feed well and market at the right age.

POULTRY HOUSE ESSENTIALS

Ventilation of the Utmost Importance—Light an Inexpensive Factor to Health—Perches Should Be Removable—Next Boxes and Nesting Material

Written for American Poultry Journal by Joseph Shakespeare, England

THE ultimate results attending the keeping of fowls depend to a very great extent upon the way the birds are housed. Did the writer have the choice between some of the structures he has seen and a tree for fowls to roost in, he would certainly choose the latter, for under such conditions the birds would be able to inhale pure air, be provided with light, and enabled to find a firm footing in such a position as would enable them to descend to the earth without injury to themselves. Old ideas die hard, and there are among poultry keepers many who imagine that anything in the way of four walls and a roof is good enough for the sheltering of fowls, but such an idea is as erroneous as the idea of ever getting good results from stock kept on tainted ground, or fed with unsound food.

Ventilation.

Without an adequate supply of pure air neither man nor beast can thrive. It is an inexpensive essential to the well being of fowls, yet how many poultry houses there are that are insufficiently ventilated. Many poultry keepers insist on having the ventilators fixed only above the roosts, and at the extreme height of the house, and this is right as far as it goes, but how can there be a proper interchange of air unless there is an indrawing of pure fresh atmosphere from below? When the fowls are at roost the air naturally becomes warmer and more buoyant, and rises to the top ventilators and escapes; but not unless there is an equal volume of air drawn in below to take its place. The warm, vitiated air, therefore, in spite of the top ventilators, hangs about the house, and being breathed over and over again by the fowls, it loses its vitalizing oxygen. Can one wonder why fowls sheltered under such conditions lose their health and activity? If the house is not an open-front one, see to bottom ventilation; or, better still, have the front removed entirely and convert the structure into an open-front one. If the house is unadaptable to the open-front principle, have a row of 2-inch holes formed along its front and back, and in such a position as to be well below the roosts. Cover the holes with lengths of boarding in such a manner as to slant downward and a little away from the holes to prevent keen cur-

TEDDY V

Bred and owned by Truckenbrod Bros., Mendota, Illinois

rents of air from playing directly upon the birds when at roost. But be it understood—and I write from practical experience—no mode of ventilating a poultry house can excel that adopted where the open-front structure is in use. I, like many more, used to coddle the birds during the winter months, and when the open-front house was introduced I was

guilty of being among the suspicious, and thoughts of empty egg baskets, and fowls with colds rankled in the mind till the thought struck me that our American cousins experienced more severe winters than we, and their birds laid as well or even better than ours, in face of the fact that all the protection they got in the coldest weather was a canvas blind. That was some years ago, and during which time I have used nothing but open-front houses. In the house whose front is provided with canvas covered sliding frames we not only get a free interchange of pure air during the night time, but during the daytime we can allow the full sunlight to stream into the structure and do its beneficial work in destroying the microbes of disease. The benefits to be derived from the stream of sunlight which is allowed to enter the poultry house cannot be overestimated, and such houses as are inaccessible to the microbe-destroying messenger of old Sol are faulty in construction. Whichever kind of house is used, let it be provided with an entrance for all the light possible.

Light.

What an inexpensive factor to health light is, and yet thousands of poultry keepers deprive their fowls of its benefits. Take two patients suffering with the same ailment, place one in an ill-lighted chamber, and the other in a well-lighted one and to the interior of which the sunshine can find free access. Medically treat both the same, and the one in the gloomy apartment will be fortunate if it does not succumb, while the other is likely to recover.

Light is a great factor in the maintenance of health. As pointed out above, sunlight destroys many germs of disease

than two feet high, and those for the heavier breeds, such as the Orpingtons, not more than eighteen inches high, while for the feather-legged tribe they should be so placed as to enable the birds to step onto them. It is a wise plan when ordering poultry houses from the makers of such to consider the class of birds they are to shelter, and to specify in the order the height the perches are to be placed. This will often obviate the trouble of having to rearrange the perch rests. Have no fixed perches in the houses, or anything else but what is getatable for lice extermination. Many lice travel to the birds during the night time and via the perches, and many devices are resorted to to check the enemy, but the best insect-proof perch I have yet invented consists of a 2x1½-inch batten cut to length as required for the perch. Along the upper surface of this is tacked a length of 1½-inch wide ordinary lamp wick, and on top of this is nailed a length of 2x½-inch lumber with ½-inch poles previously formed through it, and a foot apart along its center. The outer and upper edges of this strip of lumber are nicely rounded. When the perch is fixed in position the spout of an oil can filled with kerosene is applied to the holes in the upper strip, and by capillary attraction the fluid is carried along the whole length of the perch. One application of oil will last many months, after which the operation is repeated. This device is a certain check to the approach of insect pests, the latter fighting shy of the smell arising from the oil. Many exhibitors of poultry dislike the idea of the legs and plumage of their birds coming into contact with oil, and the dressing of perches with kerosene is not resorted to, but such fanciers need not be at a loss to check the invasion of lice by way of

May Cockerels in September. Quality White Wyandottes. Pangalow Farm, Indianapolis, Ind.

that otherwise might account for sickness and death. It dispels damp from the interior of the houses, and as damp is the forerunner of disease, avoid it in the structure at all costs. Let the light stream in. Don't be afraid of the temperature of the roosting places going down through having them fitted with large adjustable windows or blinds. Cold never yet killed a fowl sheltered in a dry, well-lighted structure. It is damp, draught and darkness that play havoc with the birds. Fowls roosting in trees during the coldest weather seldom fail to maintain health and vigor—which, indeed, may be said of all the birds living in an undomesticated sphere, and such fowls are generally the last to contract roup or tuberculosis.

Perches.

There is more virtue in the well-shaped and properly-fitted perch than is generally imagined. Perches are often far too narrow or too broad, or placed too high for the class of fowls they are intended to roost. Many are in use with upper edges as sharp as the saw left them at the mill. The fowls have no choice but to roost upon them, or they would certainly choose those with nicely-rounded edges, even as anyone who had the choice between a piece of rock and a feather pillow would choose the latter. Perches should never be less than two inches wide, and of sufficient thickness to withstand the weight of the fowls when occupying them. They should not be placed at different heights, nor too high for the birds to reach without flying. They should be placed so far apart as to enable the birds to descend from them without a perpendicular fall. Perches for the lighter breeds should not be placed less than three feet apart, and not more

than two feet high, and those for the heavier breeds, such as the Orpingtons, not more than eighteen inches high, while for the feather-legged tribe they should be so placed as to enable the birds to step onto them. It is a wise plan when ordering poultry houses from the makers of such to consider the class of birds they are to shelter, and to specify in the order the height the perches are to be placed. This will often obviate the trouble of having to rearrange the perch rests. Have no fixed perches in the houses, or anything else but what is getatable for lice extermination. Many lice travel to the birds during the night time and via the perches, and many devices are resorted to to check the enemy, but the best insect-proof perch I have yet invented consists of a 2x1½-inch batten cut to length as required for the perch. Along the upper surface of this is tacked a length of 1½-inch wide ordinary lamp wick, and on top of this is nailed a length of 2x½-inch lumber with ½-inch poles previously formed through it, and a foot apart along its center. The outer and upper edges of this strip of lumber are nicely rounded. When the perch is fixed in position the spout of an oil can filled with kerosene is applied to the holes in the upper strip, and by capillary attraction the fluid is carried along the whole length of the perch. One application of oil will last many months, after which the operation is repeated. This device is a certain check to the approach of insect pests, the latter fighting shy of the smell arising from the oil. Many exhibitors of poultry dislike the idea of the legs and plumage of their birds coming into contact with oil, and the dressing of perches with kerosene is not resorted to, but such fanciers need not be at a loss to check the invasion of lice by way of

Nest Boxes, Etc.

Nest boxes should be periodically cleaned out, disinfected and replenished with clean nesting materials. There is no other appliance in the poultry house that can equal the dirty nest box for the accumulation of lice, and for the loss of sales in eggs, owing to the latter being rendered unpalatable looking. Dirty eggs tell tales about neglected work in the poultry yard. Place the nest boxes in the shadiest part of the house, as fowls like seclusion. Let them be only of sufficient height as to enable the birds to enter, so that pullets on the point of laying may be prevented from transforming them into miniature scratching sheds, and from breaking any eggs that may have been deposited. The egg-eating vice is often contracted through nest boxes being too high and placed in the lightest part of the house. Pullets commencing to lay scratch about in them, and if an egg is broken, it is liable to become consumed, and the egg-eating vice acquired. It is essential that thorough cleanliness be observed in the management of poultry houses. Let the interior cleaning, disinfecting and lime-washing be carried out periodically. If you neglect this work it will leave its detrimental mark upon the fowls. Show me the inside of a poultry house and I will tell you the condition of the birds that tenant it. Allow no dangerous cracks to remain in the walls of the structures; they mean roup and loss in eggs. See to abundance of ventilation without draught, disinfection, cleanliness, and the keeping at bay of insect pests, for such are the main factors to success in the housing of poultry.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to B. E. Hutchinson, Brookland, D. C., and the second prize to J. F. Laughlin.

START RIGHT

THIS being the season at which the beginner in poultry usually casts about to make a start in this the most fascinating, and if managed in a practical and hard-headed way, one of the most lucrative pursuits, one may justly say that the oft-repeated advice to parents, viz., "Start the child correctly, then, and only then, will he grow into the desirable and successful citizen of the future," proves none the less true in giving advice to those who would, figuratively speaking, begin as the child and by the aid of experience and study rise by easy and sure stages to any considerable standing in the poultry fraternity. I would, at the outset, have him burn one motto indelibly into his memory's pages:—START RIGHT!

In those two short words we may have a host of applications, most of which should be mastered, in their essence, if one would rise from the many pitfalls or snares into which, we may say without fear of successful contradiction, the majority of the beginners in the past have fallen after brief and sad experiences. All, or nearly all, of these failures could have been happily averted should they have given the subject closer study and delved deeply into its various ramifications before making a rash or hasty trial. Valuable time would then have been saved as well as replenishment of the bank account rather than the bankrupt or foreclosure sale to some "wise guy" who is always waiting for the "easy money."

After such experiences the disgruntled one is prone to rise up and vociferously denounce the poultry business as a failure, when, in reality, the failure lay wholly at his own door. These failures, followed by such erratic and false statements as usually emanate from those having what they narrowly consider a justifiable grouse against the poultry business in general, exert a strong influence and are potent factors in discouraging those who have observed such a failure from making any serious effort on their own account.

The wise person is he, though stumbling, who rises again and goes forward with renewed energy, more resolute than ever before, the better prepared through such experiences, dearly purchased though they may have been, to attain his cherished goal—"success."

From my own experience I would advise the beginner to observe, as closely as his circumstances will allow, the following rules or suggestions looking to the elimination of the most common causes of failure.

First, select the best bred fowls which you can afford to purchase of the variety you most admire or which are most popular and consequently most in demand in your locality (presuming that you expect to build up a good local or home trade before venturing into the broader field of competition with established breeders of note); also taking into consideration the factors which make for quick and regular profits. In the observance of this rule you should emphasize the necessity of placing quality as your

motto, not quantity, for it takes just as much feed and labor to produce the ordinary grades of poultry, which eventually pay but little profit at best, as to produce the better grades bringing you large profits, frequently five to ten times the profit of mongrels.

Some may argue that they have not the funds to purchase a yard of the best. To these we will say, try only a few of the best possible to get with the means at your command and, if properly cared for, in a very brief period you will be the proud possessor of a fine yard, which, after the wise and proper culling out process and the proper mating up of the future breeding pens, will be the surprise of all your friends, a delight and satisfaction to yourself and family, and will be the first strong and enduring round of the ladder leading to an assured future success in what is recognized as one of the most lucrative pursuits.

Perhaps the host of readers of this journal recall the opinions, so clearly and emphatically given, by such well renowned poultrymen as "Thompson," "Hawkins," "Dustin," "Fishel," etc., etc., in an issue of some two years ago, in which they frankly stated what they would do and the kind and quality of stock they would use should they be just plain amateurs and were starting all over again. Their unanimous verdict was to buy the very best blood possible, even though only starting with a pair or trio, and placing quality ahead of all else, cutting out all fancy buildings, appliances, etc., until a flock of the very best obtainable in the breed of their choice was established in their yards. To the "chicken crank" with "cold feet" I may add that some of the purchase prices advised therein would make his already low temperature of enthusiasm take on a decided "frost." On the other hand, I can safely assume that the very wise and practical advice, coming as it did from men of such caliber and who were known to have made a great success financially, has started many hundreds on the bright road to success. Great should be the praise of such men not only for their own achievements, but for the everlasting good handed down to those who would, in their limited way, strive to emulate such benefactors.

As an illustration of this point (if you will pardon a personal reference) my first few years in poultry raising on a small scale and as a side issue, with some fair stock, not mongrels, either. I found my profits on twenty-five to forty fowls ran from \$12 to \$20 per year, or about 50 cents per bird (feed being at that time 25 to 35 per cent cheaper than at the present).

During the past season a pen of six well bred fowls of a very popular variety have returned me between \$4 and \$5 per bird, even after selling the original pen before the breeding season was half gone. Like many others, I was, previous to this experience, somewhat skeptical as to various statements as to large profits being made by various advertisers of popular breeds.

In my second rule I would urge the necessity of feeding properly and judiciously at all seasons, as well as during the varying periods of development.

No two seasons or ages are exactly alike in respect to the physical condition and needs of the fowl; this, therefore, necessitates a close study and careful consideration of what foods are best during the propagating or chick period, the developing and feathering period, the maturing and finishing off process, either for the laying house or show room, and, later, the treatment of the mature fowl, either for egg production or for the breeding pen.

My third charge would be to place another very good motto ever before you, i. e., cleanliness, for have we not all been taught from childhood that "cleanliness is next to Godliness" in the human family? Why not a paramount necessity with the lower order of animals or our feathered friends? I believe the vast majority of amateurs already are fully recognizing the necessity of the above, for I have seen very few of such a class disregarding, knowingly, the above command as applied to their feathered friends.

The fourth suggestion would be to urge the absolute necessity of closely weeding or culling out of your flock each season the poorly formed or underdeveloped specimens, also giving close attention to the requirements of the particular breed as regards type, size and the requisite markings, thus giving you nothing but first class specimens to carry over or for use in your breeding pens. Incidentally your flock will show off to decided advantage to prospective buyers of stock or eggs; many good orders being sacrificed by failures in the proper observation of this very necessary detail by those who are otherwise a success.

As a fifth rule, and one to be borne well in mind at the outset, is to begin your venture on a small scale or at the bottom of the ladder; be a plodder to start with, not striving to be a "headliner" the first year or two, but be content to rise slowly, if need be, if slowness means sureness in this as in other lines of conscientious endeavor.

As a guide to your financial success keep as comprehensive a record as possible of all receipts and expenditures, or other necessary data, just as any progressive business concern.

The final rule we may aptly term the "Golden Rule" of poultrydom. Always apply the same code of morals to yourself as you would feign to apply to others, or which you would expect of your merchant or any class of dealers upon whom we depend so constantly for our very existence day by day. Keep ever before you that never to be forgotten adage as to honesty being the best policy and at all times being its own reward, and you will soon be making your share of the history in your community and the poultry fraternity as well. Do not sit idly down and miss the golden opportunities passing your way and lamenting like the "Judge" in "Maud Muller," "It might have been," but "be up and doing," "be a hero in the strife."

START RIGHT. When? NOW.

Brookland, D. C.

B. E. Hutchinson.

I HAVE LEARNED

THAT cleanliness is one of the most important factors in the poultry business; without cleanliness comes lice, mites, roup and deaths, and a general falling off in egg production and weak offspring.

I have learned that a very small crack or air hole in the rear of a poultry house on top or bottom will cause much trouble among the fowls from colds and swollen eyes and watery nostrils.

I have learned that a leaky roof is worse on a flock of valuable hens than a chicken thief. A leaky roof is torture and slow death to any flock. Try to imagine cold rain soaking down through your bed clothes for eight or nine hours,

and then you will have a good illustration of how it must feel to the warm body of a fowl, and how she must feel next morning.

I have learned that fowls will scratch and dig in the ground in winter just the same as in summer; but how many poultry men are furnishing their birds a place to dig? Hens cannot dig through a concrete floor, or a board floor. A good floor is all right in a poultry house, but I believe that a space should be left in each house without a floor, same to be filled with sifted earth, sand or fine gravel. This earth space to be situated so as to get the sunshine sometime during the day. My houses have no floors except "Mother Earth," which is spaded in winter the same as in summer.

I have learned that air-slaked lime sprinkled on the floors, on dropping boards, in cracks and crevices, and about the runs, is worth its weight in gold as a germ destroyer.

I have learned that one part air-slaked lime and one part sifted wood ashes mixed together will act as an excellent lice powder; also that goose oil will cure colds among poultry quicker than any other remedy I have ever tried (by bathing head and throat). Ask your doctor about the value of goose oil as a remedy for croup among children; then try it on your sick fowls that act croupy or roup.

I have found that clover hay is excellent litter, also furnishing a large percentage of green food. I have learned that poultry should have warm water to drink in cold weather.

I have learned that 150 hens will eat one-half bushel of potato parings cooked and mashed, mixed with 1 pound of alfalfa meal and two pounds of wheat bran. Some hens wouldn't eat that much potato parings in a week, particularly in cold weather.

I have learned that powder (I don't care who makes it) will not kill head lice on baby chicks. I have learned that hens that set in July and August will molt after leaving the nest and be in full laying for the next season by October 1. I have learned that hens set in boxes on a level with the ground will seldom break any of the hatching eggs entrusted to them.

I have learned that crude carbolic acid poured into scalding water and the solution poured in cracks and on dropping boards is sure death to red mites. I have learned that white diarrhoea does not exist among my hen hatched and brooded chicks. I have learned that crowding of birds on the roosts causes colds.

I have learned that a sudden change to cold weather will affect egg production to a greater extent among Leghorns than it will R. I. reds. I have learned that for one to be a successful poultryman you must devote much time in reading and expend some cash in advertising.

I have learned that following the above-mentioned means hard work, and hard work means success.

PREPARING BIRDS FOR EXHIBITION

The Proper Method of Washing and Preparing Birds For the Show as
Advocated by E. Cobb, the Noted English Breeder,
Judge and Authority

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

WASHING of fowls for exhibition is of so much importance, and yet so often poorly done, that we may as well go through the whole process of how to wash a fowl for exhibition.

In all our experience in getting birds ready for show we have never found a method of washing so successful, as that advocated by Mr. E. Cobb, the noted English breeder, judge and authority, on all matters pertaining to poultry. We have followed this method for years, and as we cannot improve much on it, we cannot do any better than to quote him in full. He says:

"Always rub down the way the feathers lie, never against the webbing." Such were the only, or, anyhow, the chief instructions we had on this subject for many years. Many a time have we struggled with two or three Brahmas or

B. M. BILLINGS,
OBERLIN, OHIO.

One of B. M. Billings' prize winning R. C. R. I. Reds.

Cochins from about 2 p. m. to 12 and after at midnight, only next morning to find that in many places the feathers would not web out properly, and that even after the second or third day the birds would be termed by many "badly washed." Everyone we spoke to on the matter told us that we hadn't properly rinsed the soap out, till at last we felt this must be the case, and the next bird we performed on was rinsed in four different lots of water after being removed from the soapy bath. Still the result was much the same next morning. We then requisitioned the aid of a friend to work the pump whilst we held the bird underneath. This he did for the space of ten minutes, drenching both the bird and ourselves through to the skin. We both survived, but there was little else of encouragement worth mentioning. Repeated failures only made us the more anxious to learn the correct way to do it, and eventually a chance occurring to purchase a stud of White Cochins, we stipulated that the vendor should give us a lesson in washing. This he did, and it was thus that we obtained our first insight of the proper method to be employed.

Before starting to wash a fowl, always see that the necessary appliances are in order and ready to hand. These

consist of three large zinc washing baths (the larger the better), a copper full of hot rain water, three or four good sized soft towels, a cup (or a tin mug is not so liable to get broken), a bright fire, a contrivance for placing the birds into a dry, which may consist of an ordinary exhibition hamper with the lining removed from the front, or a light wooden frame, covered at the top, sides and back, and divided into partitions to prevent cocks from fighting, can be built specially for the purpose. Having arranged these in order, and well littered the floor of the drying accommodation with clean straw, and obtained sole possession of the kitchen for the time being, a start can safely be made.

Take a certain amount, according to the number of birds to be washed, of Sunlight or Spratts' poultry soap, cut it up into thin slices and place it into a vessel of water over the fire until it has boiled up and dissolved.

Fill two of the baths about half full of warm water; the water should not be too hot, but so one can comfortably hold one's hand in it, say 110 degrees of heat. Fill the remaining bath about half full of cold water, and mix a little blue in it.

Now take the bird and dip him into one of the baths with warm water, pressing his body underneath the water so as to well soak the outside feathers, then whilst parting the feathers—pulling them back so that the bird's flesh is visible—with one hand, take the mug or cup in the other hand and dip it into the water and pour into the feathers. Perform a similar operation all over the back, neck and upper parts of the birds, and with that portion of the body that is underneath the water separate the feathers with your fingers, so that the water can get well into the roots of the feathers and thoroughly wet the fluff. You might hold a bird's body for some minutes under water, and yet when you took him out find that the under portion of his feathers in many parts were not wet at all. And this is one of the great secrets of a successful wash, viz., thoroughly wetting the feathers all over before applying any soap.

If the lather is now ready—there should be no lumps in it—the bird may be lifted out for a second and a lather emptied into the bath. Or, and this is the plan that we ourselves prefer, prepare the lather so that at the time you wish to use it, it is cool enough to dip one's hand into it. Take a little in the hand and rub it on the feathers.

Now, when washing a bird, disabuse your mind of the idea that you are handling something that is brittle and liable to break. When once the feathers are thoroughly soaked with water you may treat them in the same way as you would a piece of flannel, rubbing them backwards and forwards, and completely getting every atom of dirt washed out.

Take the head first and place it between both hands, and rub your hands backwards and forwards as if you were washing a ball. Do the same with the neck, continually supplying a little more lather as occasion requires. Then take the back; this is best done by supplying the lather with one hand, when necessary, and rubbing the feathers backwards and forwards with the other. As we said before, don't be frightened about breaking them, they will stand a lot of such treatment, and often require it. The wings can next be taken in hand; these are best washed by placing one hand underneath the feathers and rubbing well with the other, and the tail should also be similarly washed. The upper part of the breast can be done by one hand only.

Having gone so far, get an assistant to hold the bird up, by seizing a wing and thigh in each hand, and slightly turning the bird over so that its breast is facing the operator. The latter can then take some lather in one hand and rub up and down the sides of the breast bone. Let the assistant then take hold of each wing only, and the operator by placing one hand underneath some of the feathers at the stern or sides and rubbing some lather with the other, can remove all dirt from the quarter. Finally, let the assistant hold the bird by seizing a wing and thigh in one hand and the remaining wing in the other hand, leaving one leg at liberty. This the operator can easily get clean by the rubbing with one or both hands.

Before proceeding further, we will just mention that at times a bird often gets very dirty in its foot feathers or at the tips of its wings. Should such happen, it is best to clean these parts first of all. Soak the feet or ends of the wings in warm water, getting the feathers well wetted. Dip a nail brush into the lather, and, whilst the bird's wing or foot is being held firmly and flat on a table, scrub the feathers well until quite clean.

Having removed every particle of dirt, rinse out as much soap as possible; let your assistant then hold the bird by its wings, and then squeeze out as much of the soapy water as possible. Then plunge the bird into the clear warm

water and go through a very similar performance to that which you have completed, the only difference being that this time you use no soap. But the act of rubbing the feathers in the same kind of way, and continually pouring on of clean water during your progress, will effectively remove all traces of soap which, if allowed to remain, will not permit the feathers to web out properly.

S. C. BLACK ORPINGTON COCK
Bred and owned by R. J. Knisley, Pine Rose Farm, York, Pa.

Whilst thus engaged, let your assistant pour a little water into the third bath, where a little bluing has been placed, just sufficiently hot to take off the chill, and having thoroughly rinsed the bird, squeeze its feathers in a similar way as before and place it into the remaining bath. Again let the water get well into the feathers, and then, whilst he is being held up, take hold of handfuls of feathers and squeeze out as much moisture as possible, especially squeezing the breast, fluff, tail and thigh feathers.

Now place him on a perfectly clean table, and taking one of the clean, soft towels previously mentioned in both hands, rub his head and neck in the same way as you did when washing; in fact, the whole body may be treated in a similar manner. By the time you have gone over him once, or perhaps before, if he be a big Brahma or Cochin, your towel will be wringing wet, and a second or third towel becomes necessary before his feathers appear fairly dry. When, however, they are, he should be placed in the drying cage before the fire. But should he appear a bit off color from the operation, a teaspoonful of brandy and water or port wine should be administered; in fact, in any case, this treatment will do no harm, and often good. Having got him safely ensconced in front of the fire, one's labor is by no means finished. The fire should be bright and warm, but care must be taken that he be not placed close enough to blister his face or lobes or too quickly dry his feathers in any one particular spot, as, in that case, they are liable to become twisted. The bird should be continuously shifted around and, if it be necessary to leave him for a time, an old tablecloth should be hung over the front of the cage to protect him.

If they have been well rubbed with the towels, they will very quickly web out again, but if at the time of going to bed some hens seem rather damp, they had best, if room permits, be placed together in front of the fire, a cloth thrown over them, and the fire made up for the night.

Some people simply place the birds near the fire in an open cage, but we are convinced that by more or less covering the cage up, and thereby stopping too free an

escape of the moisture arising from the fowls that the feathers web out considerably better.

By the next morning, if all has gone well, the birds should be dry, and merely requiring a few hours to plume themselves, in order to put on the finishing touches to their toilet, and should now be removed to comfortable quarters well littered with soft clean straw, and fed. But on mentioning feeding, this reminds us that no soft food to birds that have been washed the previous day, as they are frequently inclined to be loose and the giving of soft food aggravates the evil. Neither should much water be allowed during this period.

Always use soft water, if possible, for the purpose of washing poultry, or at any rate, as soft water as you can get, as hard water is not at all suitable.

Some fanciers, instead of using the hand to apply the lather, make a sponge answer the purpose, which is also effective. Others never prepare the lather previously, but simply make it as they proceed by the aid of the sponge. We, however, much prefer the former method, as the soap in this case is easier rinsed out.

It has been stated by exhibitors that the washing of black and buff colored fowls is unnecessary, and we will admit that though it may not be of as great importance as in the case of white plumaged birds, yet it makes such a great difference in the lustre of the plumage, that it pays well to do it.

One warning here we feel to be necessary, use very little bluing, for if you use too much, you will have to do your job over after your bird is dry.

On the day previous to sending the birds to the show, the final touches should be applied, and every little item carefully done. Wash the feet in warm water, but do not use any soap for this purpose. A nail brush will do good service in cleaning their legs. After drying, a few drops

BLACK LANGSHAN
BRED AND OWNED BY
R. A. HEWES
CRETE, ILL.

of sweet oil, well rubbed into their legs, will put a fine gloss on them and very much improve their appearance.

Don't oil the "red" on the birds, as the slightest exposure to dust makes the parts look infinitely worse for the operation; diluted vinegar will give the desired results without any attendant drawback. Next take the bird on your lap, and carefully, with a soft silk handkerchief,

smooth down his plumage, and quite a little additional gloss can be put on the bird this way.

Much more might be said regarding how to fix up white earlobes, and the face of the Black Spanish, but suffice it to say that if the bird's lobes have been gently rubbed down, a little powdered zinc will improve their appearance, and stop them from blistering. Be careful how you enter your fowls for exhibition, and see too that each label is fastened where it belongs, and be equally careful that the right bird is put in the right place.

And now the attending to your fowls has come to a successful end, the intending exhibitor for show room honors is ready to send off his birds, and it is with great anxiety he sees them leave, but if any of them returns with a blue ribbon, yes, even less, I know he will handle that bird with almost pious reverence.

SOME ENGLISH IDEAS

Written for American Poultry Journal by Dr. H. F. Ballard, Okenoa, Illinois

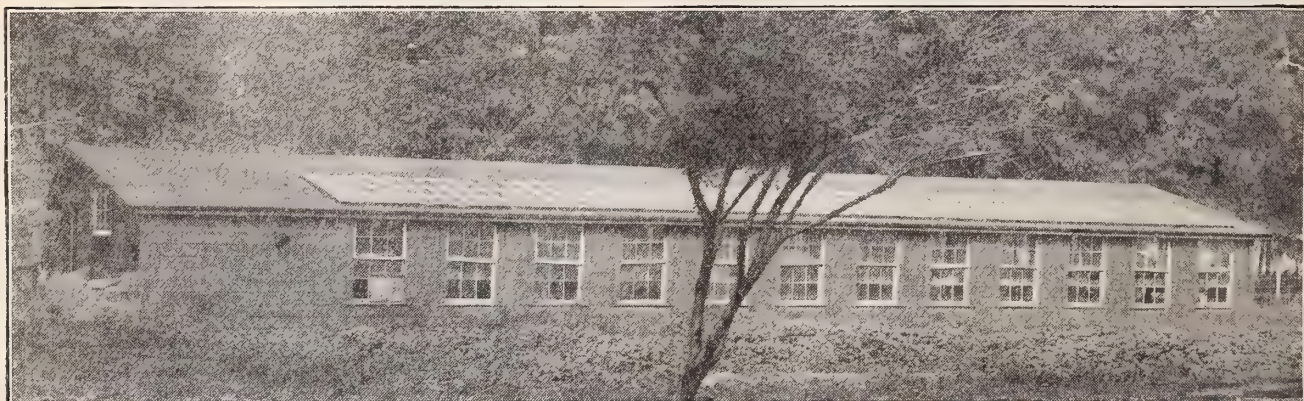

THE following extract is taken from The Feathered World, London, England: "One is constantly hearing of poultry keepers in some districts who are seriously troubled by foxes, the vermin appearing more numerous and aggressive than ever, and occasioning considerable expense and trouble in preventive measures. Instances where raids by these destructive pests have resulted in the destruction of a score or more valuable birds are common, and of course there is nothing to do but grin and bear the loss.

"In the odd cases where a show of claiming compensation is

remarked once before, I met two breeders of Reds at the Bloomington poultry show last winter who told me they were going to give up the Reds because they "set too much." Now, remember, I am not trying to "run down the Reds." I simply don't believe they are any better than Rocks or 'Dottes. In all the reports of experiments in egg contests which I have ever seen, neither the Reds, Rocks or Orpingtons won. It was always either Leghorns or Wyandottes. The truth of the whole matter is, in my opinion, that general purpose fowls are not, par excellence, egg fowls. They are a combination of egg and meat production, therefore do not stand at the extreme top in either; on the principle that a mulatto is neither a white man nor a negro. (You see, I was born in the south, but I never could see any sense in the principle that one drop of "black blood" made a negro; unless you adopt the corresponding principle that one drop of white blood makes a white man; poor rule that will not work both ways.)

My observation and experience convinces me that it is a pretty safe proposition to price Cochins by the pound, regardless of qualities otherwise. Most buyers are looking for big birds and very few are finding them. Since the craze for extraordinary length of feather has set in, it is hard to find Cochins up to weight. On the other hand, some of the judges are giving prizes to the old-fashioned slim-legged birds when they have the size. The idea that you can get a short-legged bird combined with heavy weight is a myth. I never saw a short-legged, heavy-leg and toe-feathered Cochin that was up to weight. The only place where such a bird can win is in a comparison show. Several years ago I shipped a Partridge Cochin cock that weighed about nine pounds to a man down in New England. He said he had young pullets that weighed more than the cock, and I tried my very best to buy one of those pullets, but he would not even set a price on one of them; my secret opinion was that he was a liar. He

View on the new home of Goshen Poultry Yards, Goshen, Ind., showing main brooding house, 70 feet long, now equipped with hot water system, which will heat the building sufficiently this winter so it can be used for fireless brooders during zero weather.

made, the offer of a mere trifle of eighteen pence or two shillings per head for birds worth guineas is more in the nature of an insult than anything else."

Now what do you think of that, you free-born American poultry raiser? You could not kill the fox, because Mr. Monocled Englishman wants him for a fox hunt! There would be a dead fox in their regions and Mr. Englishman would be kicked off the place when he came nosing around with his pack of fox hounds.

Here is another quotation, an answer to a question in The Feathered World: "As your pullets are just five months old you need to be in no great hurry for they will be nothing amiss if they do not commence to lay for another month, for you say they are crossed with Orpingtons, and that variety does not commence to lay very early." Orpington breeders on this side the water have been trying to make us believe they began to lay at less than five months old.

Here is a quotation from The American Poultry World: "Actually, we do not recall ever having seen a report of heavy egg production by an individual bird or by a pen or flock of Rhode Island Reds. What do you Rhode Island Red men (and women) think of that—'honest Injun'? Maybe it is because we do not read the poultry papers as closely as we should. All right, but in our nineteen years in the poultry business we have never attended a chicken banquet where a man, woman or child has had the temerity—not even once—to get up and tell what good layers the Reds are, and then give some facts, a concrete case or two, to back up the statement."

Doesn't that sound "Cochin-y," Mrs. Hughes? And as I

"didn't have no sich pullets," as Sarah Gamp, one of Dickens' characters says.

The following remarkable answer appeared in The Feathered World, to an engineer who asks for the best variety for winter eggs: "As you require winter layers, but do not care for Orpingtons or Wyandottes, then I cannot see what variety is going to suit you, for as you say Orpingtons are inclined to be very broody, and Wyandottes you say lay very small eggs, I cannot recommend Croad Langshans; they, too, have the same fault as you have found with your Wyandottes, and also they are inclined to go broody. Of course, the lighter breeds, such as Leghorns, Minorcas, Andalusians, etc., would not suit you, as they are not the best of layers. The most suitable breed for your desire would be a cross between Minorcas and Buff Orpingtons for then you would be improving the size of the eggs, and counteracting the broodiness, but as you require a pure breed, then I do not see what use they will be to you. Wyandottes I have found are layers of rather large eggs; in fact, much larger than the average Orpington eggs, but then strains differ a great deal in this respect, for you seem to have got hold of a very poor strain of 'Dottes.'

Wouldn't such an answer as that "stir up the animals" among our Orpington and Wyandotte breeders on this side of the water? To say that Orpingtons are "broody," and that Leghorns, Minorcas and Andalusians are not the best layers, would bring down on the head of the perpetrator "vials of wrath," yea, whole bottles and jugfuls of it, and again the idea that Wyandottes lay larger eggs than the much-vaunted Orpingtons, Whew! ! !

THE CARE OF DUCKLINGS

FOR the benefit of the readers of this paper who may be starting in the duck business for the first time, and have not had experience in hatching them, I will begin with the duck eggs before the ducklings are hatched.

First, the eggs must be from strong, healthy breeding stock; and second, they must be well hatched. Having these two important parts in view, we have the first foundation for a good flock.

Duck eggs require twenty-eight days or four weeks to incubate. They usually begin to pip the shells on the twenty-seventh day and on the following morning they should be coming out quite lively and should all be out by the evening of the twenty-eighth day. You will observe that they are unlike chickens, who come out of the shell very soon after they are piped. Sometimes ducklings will break the shells twenty-four hours before they hatch out, so do not get impatient if they do not come out readily, for they require more time than chicks.

If an incubator is used, keep the temperature as near one hundred and three degrees as possible, turning the eggs twice a day and allowing them to air or cool once a day, till they feel quite cool to the touch but still warm when applied to the cheek. After the twenty-sixth day they will need no more turning. When they begin to pip the shells the temperature may be allowed to rise to one hundred and four or five degrees, but no higher. The increased heat will help to liberate the ducklings with less effort.

Let the ducklings remain in the incubator from twelve to twenty-four hours after hatching, thus giving them time to get thoroughly dried off and become strong on their feet before removing them to the brooder, which should be heated to about ninety degrees previous to receiving them. Keep the temperature at ninety for the first week then it may be gradually lowered about five degrees each week.

After the fourth week they will not need much artificial heat during the day except in very early spring. Place the brooder where they can get the sun in early spring and you will be surprised to see how they will prefer the sun's rays to the brooder.

grit. Mix this with sweet skimmed milk or warm water until the food is well moistened but not sloppy. Feed this ration four or five times a day for the first three weeks after which meat, meal or scraps may be added, about one-tenth part at first and gradually increased till at seven weeks they may be fed one-fifth meat without any danger of bowel trouble. At three weeks old they should also have cut

First prize White Wyandotte cock, Illinois State Fair, 1910. Bred and owned by Henry C. Dippel, Box A, Indianapolis, Ind.

grass or clover meal, in bulk about one third. Do not feed them more than they will eat up clean, as if left to sour in the trough it will cause bowel disorders. If the ducklings can have green grass in their yards they will pick up all they require and it will not be necessary to mix any with their feed.

To keep the ducklings from wandering, use movable fences made of twelve inch boards set on edge with stakes driven in the ground on either side to keep them in place. These can be easily changed once a week to fresh grass ground and by so doing will keep the ducklings well supplied with plenty of green food. The Pekin ducks and some other large breeds will seldom jump over a twelve inch fence. If you have not grass ground enough a good green food can be supplied by sowing rape broadcast. It grows very rapidly and makes a good vegetable food. Do not allow the young ducks to have water to swim in, as they will not grow as rapidly nor fatten as quickly and their meat will not be as tender. Keep fresh water before them to drink and immerse their heads in at all times, especially at feeding time, as they must have drink while eating.

Ducks must also have shade in the warm summer months. If you have no shade trees you may make shade by driving posts in the ground letting them project out about two feet and nail poles or slats horizontally on top, covering them with boards, canvas or anything to keep off the scorching sun in the middle of the day. These shade places will answer for their roosting places after they begin to feather.

Ducks that are fed and cared for by this rule will dress from three and a half to four and a half pounds when eight weeks old and should be marketed when not older than ten weeks, as they pluck easier, look nicer, and bring a better price in the market than at any other time. Keep their roosting places well cleaned as they will loose as much by roosting in a dirty, foul place at night as they will gain through the day with the best of food.

Good food properly fed is half the battle and proper care with a sprinkle of common sense is the other half, and by combining the two you will be able to raise ninety per cent of every duckling hatched.

Sidney Centre, N. Y.

A. E. Vandervort.

After removing the ducklings to the brooder, offer them their first meal, fine sharp sand and luke warm water. This supplies them with grit and gets their digestive organs in condition to receive their first food which is a mixture of one part corn meal, one part middlings, two parts wheat bran and one-tenth sharp sand, fine oyster shells or chicken

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

A Merry Christmas

We wish the readers of the American Poultry Journal a Merry Christmas. We trust that the past year has been one of success for you and that this success will but urge you on to greater efforts another year. This is the way we personally feel about the American Poultry Journal.

We will not at this time make you any promises as to what we are going to do, except that we are going to give you the biggest and best publication that lays within our power to do. We intend to give you the best possible information it is possible to obtain on all subjects pertaining to the production of fancy poultry, and we hope you will co-operate with and assist us by furnishing us with any poultry news that may come under your observation.

We are trying to run the American Poultry Journal on conservative lines in the interests of its readers and advertisers, and it is our constant effort to give you the best of everything. If you are pleased with the American Poultry Journal we would like you to tell your friends. If not, we would be glad to have you tell us your criticisms. The prospects for a prosperous season this coming year are better than they ever were before, and the price that is now being paid for fancy stock and eggs far exceeds that of the past. There is plenty of room at the top for the best breeders of high class stock, and it is up to you to produce this stock and then convince the people that you have it, and secure your share of the golden harvest.

In closing, we again wish you a Merry Christmas and a Happy and Prosperous New Year.

The great interest that is being taken in the winter course in poultry husbandry in all agricultural colleges is only another evidence of the hold that the poultry industry has on the people all over the country.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

The One-Man Plant

Not long ago a friend made the statement that after his little plant got beyond the place where he could care for it himself and handle all the details of it, the profits went down, so after all he cut down his work and increased the value of his output. There is a deal of sense in this. Good fanciers and breeders get their money out of their investments because they personally care for all the little details that go to make up the whole work. When they cannot handle them themselves, then the work is not cared for properly, and the stock shows it, consequently the quality of the birds suffer.

The fancier who is trying to make a living from his fowls must have everything done right. He cannot trust too much to others. His time is more valuable in the simple feeding of the birds than to trust this much to the hands of another. Yet when he does all his own work, with the possible excepting of some of the cleaning which he can hire a boy or old man to come in and do, he must have the labor-saving devices everywhere they will be of value to him. We know a poultryman who uses gas to heat all his incubators, and this saves a great deal of time in lamp cleaning as well as giving better results in steady temperature.

Another uses electricity for the same purpose. Another uses a gasoline engine for cutting bone and clover and grinding feed. A different man will have his plant laid out so that he can do the greater part of his work under one roof and tend his flocks with the smallest amount of time. All these little things help to make the work lighter and better done. One of the greatest hindrances to the man who tries to do all his own work is the generally poor equipment that we see all over the country in the yards of poultrymen. Good ideas in the laying out of yards and buildings are not to be had with-

out experience, as one man will not be pleased with the methods of work of another.

With the help of some member of the household, the office work of a one-man plant can be done each evening or during an hour of rest from manual labor. There are hundreds of poultrymen who are making a nice living out of the business and who are a credit to the fancy, each and all following out their own ideas about how the most can be accomplished with the least labor cost. Equipment is their first consideration. They are so fixed that what steps they take count.

The one-man plant is a little enterprise that makes toward specialties. It takes up the breeding of a certain breed or variety and makes a big thing of it, the proprietor knowing that in concentration there is strength. And it is astonishing to a lot of folks who thought that one man could not handle a large business, to find that when one is equipped for the work there is a great amount that can be accomplished which too much help would mar or spoil entirely, or, in other words, one man can do more than two who are not well fixed to carry out their work.

The Big Western Shows

Well, this is how they stack up:

St. Joe,
Topeka,
Kansas City,
Omaha,
Lincoln,
Denver,
Minneapolis,
Sioux City,
Des Moines,
St. Paul;

and in setting them down we have not placed them in their true sequence and according to importance. We have given them just as they come to mind,

and may have left out one or two; but we cannot now recall more than these.

The Kansas City show needs nothing said about it. Tom Quisenberry and Ernest Kellerstrass are attending to that. The press notices have been ample. The show will be a buster for size, and the quality fairly sizzling.

St. Joe is going to hold her show in the new Auditorium, and it will be the best one ever held in that city. There are thousands of fanciers tributary to St. Joe who will send or bring thousands of birds, and the association having always paid its debts and done what it agreed to, will not have trouble to get out a big attendance of breeders and a fine lot of admissions. We are glad to note these fanciers all coming out strong for comparison and adopting it as the standard of awarding prizes.

Omaha has been holding a number of good shows in the past, and this winter she expects to break all records. The Auditorium will be used for the show, as it has been in years past, and this means ample light and heat and fine gate receipts. Anton Lundstrom is the new secretary and he will make a showing that will be in keeping with his energetic self.

Denver is another great show held in an up-to-the-hour manner and one that is a good place to sell birds and advertise. It is a sort of intermontane show that makes a fine place for all the breeders in its territory to try out for the final honors of a good show season.

Topeka is one of the babies. It will not be a baby in size. It will step right into the first rank first time out of the box. No getting around that. Hicks and Rankin and two-thirds to three-fourths of the fanciers in the state are behind it. Uniform cooping, ten specialty judges, dollar entry fee, comparison judging, ribbons up the second day, lectures by the judges, cash and special prizes by the wagon load, banquet, special hotel rates, are but a few of the inducements.

Minneapolis holds the state show of that state. It will run about three thousand entries. The quality will be a try-out for the shouters who claim a lot, and the money is in the bank to pay the prizes. Cups, specials and a good lot of free advertising in the big dailies means something to draw a full entry.

St. Paul holds her show about the first week in February. Good attendance and comparison judging, cash prizes, a clever set of officials, uniform cooping, a selling show par excellence, these and other things are held out as inducements.

Lincoln holds the Nebraska state show. It is always a good one. They have not come to uniform cooping and comparison work, which mean quick decisions and no bother as yet, but in time they hope to make these advancements. The fanciers of the state turn out in good shape with a couple or three thousand birds, and there is a great crowd in town all week to help the selling end, as the allied agriculturists meet during the same week.

Sioux City held her first big show last season and expects to eclipse her previous efforts. No doubt she will do this very thing. She has engaged a couple of well-known judges to handle the birds, and has the commercial men behind her.

Every one of these shows is worth going to for a couple of days by all

breeders who live in their sections, and they should send their birds if they can. Better get into line for the great boom that is taking place in the poultry business this coming spring. Show what you have. Buy to help out your string if necessary, but show. Get out among the buyers and get a fair share of the trade that is going on.

What About This?

It was not a thousand years ago that the first article on preparing fowls for the show room was written, and, strange as it may seem to readers of poultry journals, it has not been the same article appearing season after season ever since. Every fall we are called upon to read about the same things that we perused a year ago. It is time that Arthur Smith or F. H. Davey or Maurice Delano wrote a standard book upon conditioning fowls for shows, so that we would be spared the awful matter served up to us from season to season.

The wise fancier has been preparing for the shows that he intends exhibiting at for the past year. He so cared for the fine show cockerel that graced his last season's breeding yard so that he was not spoiled by having the females eat the spikes off his comb, or exposed so that it was frosted, or tortured during the summer, with the sun and rain to kill a beautiful plumage.

When the breeding season was over his show birds were so yarded and fed during the summer that he was proud to show them and did not have to apologize for their looks. He was not one of the men we shall mention when we write our great tale of mystery, "Where Do the Great Show Cockerels Go To?" He brought his fine cockerel back into the show as a cock bird, and folks said he had a great lot of luck in summering his birds over. He did what he did well. He never tried to overdo. He knew that room for a few really good ones meant more breeding reputation in the end than trying to accomplish too much with too little.

This winter, follow this suggestion when you go about the aisles of the big shows. Study the winning poultryman. Try to get his angle of view and see how he looks at things. You may find that he is conscientious in what he does. You may discover that he is wrapped up in his work. You might learn that he has been years accumulating his knowledge and skill to do one thing well. You will find him well read, well fed, well dressed, and honest and full of ability. He is doing what he does a little better than the average. What he is doing in the way of work is planned ahead just as the financial coup we sometimes here of in Wall street. There is a head on his shoulders. Take a look around and see these things and a lot more.

Plenty of Opportunities

The market poultryman was never in such a strong position as he is today. As wild game for table purposes is being harder and harder for the caterers to obtain, they are falling back on more squabs, pigeons, broilers, capons, guineas, young turkeys and other delicacies which the poultryman can produce. The field is widening. Prices are better than they have ever been.

Beef and pork and mutton stay on the high rungs of their respective ladders, and there is nothing for the consumer to do but go without or pay the price.

Market fowls of the commonest kinds shipped from the poultry sections of the interior states are now bringing good figures. Better figures generally than have obtained for quite a while. The Thanksgiving market was not glutted this season, nor will be the Christmas trade. The turkeys and geese and ducks are finding more use at home than to be converted into cash and this cash expended for pork or beef. We are a great nation of poultry eaters and becoming greater. We are learning to produce more of it at home and for the home table than ever before.

European nations are co-operating among themselves to prevent any further slaughter of game for export or domestic use. The covers of pheasants and partridges, grouse and quail, all over the world are becoming more and more depleted. This food supply must be filled in some manner, and now it looks as if the poultryman and the allied agricultural interests will have to take the jobs on its hands. Most all of the states of this nation have closed the previous consent to the sale and purchase of game for table purposes. If each of us does a little in the work of filling the market with something to take the place of this game that has been killed out of covers, we shall reap in total a great reward for the time and effort we put into the work.

Mr. Turk

Last month and this, Mr. Turkey received a lot of attention.

No wonder that he went about with a long face that looked like an undertaker's at a big funeral! But after Christmas festivities are over this gentleman should take on a brighter look. Things will be looking up for him. Those who produce turkeys will begin to manifest some concern about their breeding flocks for another year, and if Mr. Turk puts on his proudest strut and calls on his deepest vocal chords, the chances are all in his favor of being selected for a worthy duty.

There is too little attention given to turkey breeding. The market end of the business is profitable, but still more profitable is the breeding of larger and better boned turkeys, those of better markings and shape. Many a woman is known locally as the turkey woman. She probably has the knack of getting them hatched at the right time of the season and does well with them after they are hatched. The chances are that she buys new blood each season and tries for larger ones than ever, as well as better marked birds. If she does, she soon is making a nice thing out of the business.

Turkeys can be reared on less ground than once we imagined. There are newer breeds of these fine fowls that do not wander quite so much as the one that claims so much of wild blood. We saw one woman rearing turkeys in a small town of about twelve hundred souls, and she was making it go. She raised to market age nearly two dozen of the Bronze variety. She said that the secret of keeping them at home was regular feeding and lots of it. The birds could depend on her and she on them under such liberal feeding.

Plan to try a few turkeys the coming spring if you have a bit of unoccupied space, and give them a chance to turn money-makers. If you are thinking of buying better breeding stock than you have, why not get in touch with those producers of it now. We are going to have another great selling season of both stock and eggs. It has started and there will be nothing to stop it. Turkeys are a good investment. Give them a chance.

Prince T. Woods Resigns

The poultry world will be much surprised to learn that Mr. Prince T. Woods has resigned his position as associate editor of *Reliable Poultry Journal* and managing editor of *American Poultry World*, and is now in no way connected with Mr. Curtis or any of his business enterprises.

Mr. Woods has been connected with R. P. J. for a number of years, and when *American Poultry World* was launched on the sea of poultry journalism he became managing editor, and by the poultry fraternity was considered one of the cornerstones of this new publication.

Mr. Woods is going to take a much-needed rest for a few weeks, but will no doubt be back in the harness on some other publication in the near future, as he is too good a writer to be lost to the poultry industry entirely.

Mrs. Helen T. Wood has also resigned as editor of the woman's department in *American Poultry World*.

Out of the Air

While the sectionists are working to coop the annual meeting of the A. P. A. here, there and yonder, and while the spirit of getting memberships is upon us, let us not forget that if we hold the next meeting in Denver we will be but working westward with the tide of population and spirit of hedom. The fancy is growing bigger every season in the western states, and soon we shall see as many shows west as east.

Proportionally, the central West and the Coast are growing in things chicken faster than other sections. It is time we took note of this fact. Whatever can be done to encourage the growth should be gone ahead with. There is no place where feed and building materials will be cheaper during the next fifty years than the central West. These have much to do with the breeding of pure bred fowls and the building of poultry farms.

Boston is far to the east when considered from the Coast standpoint, and vice versa. Let us get our heads out of the clouds and select some central place that is in the line of excursion and hold it.

Illinois Branch, American Poultry Association

A special meeting of the Illinois branch of the American Poultry Association was held at Springfield, Ill., October 5, 1910, at the state fair grounds. President Fred L. Kimmey presided and Mr. D. E. Hale was elected and served as secretary pro tem.

After a free discussion as to where the American Poultry Association grand gold medal, grand silver medals, and diplomas should be awarded, the motion was made, seconded and carried

unanimously that the Illinois state show to be held at Springfield, Ill., January 2-7, 1911, shall be known as the Illinois state branch of the American Poultry Association show, at which shall be offered the American Poultry Association medals and diplomas.

On motion it was decided that the first annual meeting of the Illinois state branch of the American Poultry Association should be held during the Illinois state show at Springfield, Ill., January 2-7, 1911.

A motion was made, seconded and carried that President Kimmey recommend to Secretary Campbell of the American Poultry Association that Mr. F. C. Hare, Quincy, Ill., be appointed state organizer of the American Poultry Association for the state of Illinois.

D. E. Hale,

Secretary pro tem.

Fred L. Kimmey,
President.

An Important Sale

Owen Farms, Vineyard Haven, Mass., recently purchased the entire flock of white Plymouth Rocks from the Grey-stone Poultry Yards, Yonkers, N. Y., and thereby secured some of the best white Plymouth Rocks in the country.

The Grey-stone White Plymouth Rocks under the management of Frank H. Davey, has made an enviable reputation in the show room during the past years, and especially at Madison Square Garden, where they have won the cream of the prizes year after year.

The Owen Farms also secure the services of Mr. Davey, who has the reputation of knowing how to produce white Plymouth Rocks up to standard requirements and, in fact, a little beyond standard requirements.

Mr. Davey is also a judge of national reputation, having judged at some of the largest shows in the country during the past few years.

This addition to the Owen Farms' flock of White Plymouth Rocks puts them, without question, in the front rank of White Plymouth Rock breeders in this country, but it only goes to show that nothing is too good for this farm.

Rotten Egg Industry Exposed

It has just come to light that a large business had been carried on in the city of New York in the sale of rotten eggs, which had assumed such gigantic figures of 1,000 cases per day. These eggs being used by the bakers in the manufacture of sponge cakes, lady fingers, etc. As a result of the investigation which has been started, the chief food inspector and two of his assistants have been suspended pending further investigation. This trade has been carried on for years under the tract permission of the inspectors, and it is high time that something was being done. With the traffic in these putrid eggs stopped, the demand for good eggs will be so much the greater. May the good work go on.

An Apology

In our November issue in the prize article department appeared an article entitled "Early Laying and How It Is Done." This article was signed by C. A. Umoselle, Hammon-ton, N. J.

Shortly after the November issue was

in the mail we received a communication from F. O. Wellcome, Yarmouth, Maine, who informed us that he had written this article and same was published in the *Poultry Keeper* in October, 1909.

We accepted this article in good faith, not knowing that Mr. Umoselle had not written same, we therefore apologize to Mr. Wellcome for the publication of this article without due credit being given him for same.

A Correction

In the list of winnings of the Illinois State Fair, which appeared in our November issue, O. C. Van Doren was given the credit of winning third on Single Comb White Leghorn hen. Mr. Van Doren did not exhibit any birds at the Illinois State Fair, and third hen was won by the White Leghorn Poultry Farm, Pekin, Ill.

In our write-up of the Hagerstown show, in mentioning R. C. Rhode Island Red winners we made a mistake in the address of Mr. M. C. Richardson, who was a prominent winner in this class. His correct address is M. C. Richardson, Jr., Front Royal, Va.

Winter Course in Poultry Keeping at Pennsylvania State College

This course covers the months of December, January and February. Students in this course are not only given lectures and recitations, but practical work as well, and an opportunity to familiarize themselves with all lines of poultry husbandry followed on the college poultry farm. Five hundred hens are kept here and some interesting fattening experiments will be under way, also some extensive experiments in fattening fowls for market.

The poultry department has an incubator room with a capacity of 2,500 eggs and a brooder house with a capacity for 900 chicks. This is being equipped with steam heat, and students will have an opportunity to secure practical experience in hatching and raising winter chicks. They will also be given an opportunity to acquire practical experience in judging fowls for show and market, caponizing, fattening, killing and dressing for market, and poultry house construction. Special attention will be given to poultry diseases.

In addition to the regular poultry work, special poultry lectures will be given during farmers' week by well-known specialists. Special lectures are also provided from time to time during the course. In addition to the poultry work, students will have an opportunity to take some work in general agriculture, live stock or horticulture. This course is open to women as well as men. The tuition is free, the only charge being a small sum for incidentals.

Those who are interested should address Homer W. Jackson, instructor in poultry husbandry, State College, Pa., for any additional information which may be desired.

Michigan Agricultural College

The Michigan Agricultural College, like most of the agricultural colleges throughout the country, is giving more attention to poultry than ever before,

and this winter they are going to give an annual short course in poultry raising consisting of eight weeks, beginning January 3rd, ending February 25, 1911, including a one-week course of poultry institute, February 13-18, 1911, and their annual poultry show, February 14-17, 1911.

The short course in poultry raising is offered for those who expect to engage in the poultry business. It is a concentrated course, extending over a period of eight weeks, but including the subjects taught in the course for regular students.

H. L. Kempster is the instructor in poultry husbandry. For further information address Agricultural College, Lansing, Mich.

New York State Agricultural College

The demand for instruction in a winter poultry course at the New York State College of Agriculture at Cornell University, Ithaca, N. Y., is unprecedented, and Professor Rice informs us that the course is now filled, and their only hope of admitting others is that some persons who have accepted fail to take the course. It is exceedingly important that persons who desire to take the course should secure their announcement and send in their applications at once in order to be certain of a place in the class next year.

He also states that if they are able to occupy their new poultry building at that time, for which an appropriation of \$90,000 was recently made by the New York State Legislature, they probably can accommodate all, or nearly all who are likely to apply. If, however, the building is not completed by December 1, 1911, they could not accept more than 55 students, their present number.

H. E. Moss, who for a number of years has been connected with Cyphers' Incubator Company in an official capacity and has been in charge of their large feed mill and their branch house located at Kansas City, Mo., has severed his connection with that company and is now with the Handy Hatcher Company, of Kansas City, Mo. Mr. Moss is well and favorably known to poultrymen all over the United States, and is well equipped to make a success in his new venture.

The South Central Branch of the

A. P. A. was dissolved at the Appalachian exhibition and four state branches are now being organized—Tennessee, Kentucky, Georgia, and Alabama. The prospects are good for a large number of new members in all of these states.

Secretary S. T. Campbell attended the Hagerstown fair and secured many new members for the Maryland and Pennsylvania branches.

POULTRY IN OREGON.

With every facility for the poultry keeper, with the best climate and highest prices, Oregon is facing a shortage of poultry products and the Portland Commercial Club and the Oregon Agricultural College have undertaken a campaign of education intended to bring about a larger production.

James Dryden, professor of poultry husbandry at the Oregon Agricultural College, Corvallis, has issued a book on poultry for the Commercial Club, that is now being distributed free of charge to all who are interested. It is hoped by this means to stimulate the poultry industry in Oregon, thus shutting off to some extent at least the big purchases every year of poultry and eggs in the Middle West.

Oregon is producing several million dollars' worth of poultry and eggs per year but Prof. Dryden believes this is only a drop in the bucket to what it will be turning out within a few years. He finds ideal climatic conditions here for the industry, with varying temperatures to suit the ideas of different fanciers.

The price of food, he says, should of course be considered. Wheat is the principal poultry food on the Pacific Coast, but corn will grow successfully in some sections. Eastern Oregon is one of the best wheat districts in the United States, and there are few, if any, sections where wheat is lower in price than here. Wheat is also grown in Western Oregon to a limited extent. Vetch is more largely grown for hay in the Willamette Valley. It is sown in the fall and may be cut early in the spring for green feed and it may be pastured by the chickens in the winter. In the Willamette Valley kale is largely grown for a green feed in winter. Nowhere in the country is it more successfully produced than here. Kale

planted in the spring or early summer will furnish excellent green feed in the fall and winter. In our mild, open climate, it continues to grow during the winter and it is greatly relished by poultry as well as cows. The dairyman depends largely on kale in winter. As much as forty tons of green kale per acre can be grown. It is not uncommon to get heads to weigh 25 to 35 pounds. In feeding to poultry a head is hung up in the yard where they can eat it at will or the chickens may be permitted to run in the kale patch. Green feed, therefore, may be cut all the year around in Western Oregon, and to the practical poultrymen this solves a troublesome problem in feeding. In Eastern Oregon, where the fowls have the run of an alfalfa patch, no other green food is necessary. In winter the dry or cured alfalfa will furnish all demand for a bulky green food and the climate of that section makes possible the curing of alfalfa in a perfect condition.

Oregon, says Prof. Dryden, has as good climate as can be found in the United States, we have as good soils and as cheap feed as any other state and we have excellent markets; in fact, the best in the country are found in the Pacific states. The following table gives the price of eggs on the farm per dozen for 11 months of 1909, taken from the year book of the Department of Agriculture:

	North Atlantic States.	Middle West.	Pacific States.
February	30.3	25.3	34.3
March	25.5	18.5	24.0
April	20.0	15.9	21.8
May	20.4	17.2	21.8
June	21.8	17.4	22.7
July	23.5	16.9	24.1
August	25.7	17.0	25.8
September	27.6	17.3	28.7
October	28.7	19.0	31.6
November	33.1	21.7	35.4
December	38.0	25.1	40.5

Eggs sold at wholesale, in Portland, as high as 55 cents a dozen during the past winter and the lowest price during the last spring was 22 cents. The reason for such high prices for eggs is that the population of the state is increasing faster than the supply of poultry products and also the demand and consequent high price of eggs in Alaska.

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS

It is acknowledged the world over to be the greatest laying and exhibition strain. I have 500 grand yearling hens for sale now at \$2 per head, and hundreds of cockerels and pullets after Oct. 1st.

D. W. Young : Box 1-A : Monroe, New York

Big Bargains in Reliable Breeders

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

CONDITION.

Its Value In the Show Room—How to Get It—A Chance for Faking.

Written by Dr. H. F. Ballard.

A CERTAIN number of points are allowed on each variety in the Standard for condition. A judge told me a few days ago that in some shows the score cards provided had no blank or provision for condition. Out of fifty cards which I hold at present by three different judges, not one is cut even a fraction of a point on condition; at least one-third of them should have been, if that section is intended to mean anything. Like symmetry, the way it is used at the present time it is a complete farce. For all the good these two sections are doing they had much better be eliminated from the Standard entirely.

What is condition? What did the Standard makers mean when they put it in? Why did they give it a value of six to ten points when the average judge ignores it entirely? Why have a section, or two sections, taking up twelve to fifteen, or twenty, points on a card which could be much better distributed somewhere else? Why don't the judges use them? I do not mean to answer these questions. I am asking for information.

The first question is the only one I shall try to answer, and I may get that one wrong.

A bird to be in perfect condition should be fully matured; fully feathered; well-fattened, but not too fat and clean.

Look that definition over and see if it does not just about fill the bill. Can you add anything to it without faking? If so, what?

Many young birds are shown that are not well-matured; indeed, this is so common as to be the rule. Not being well-matured, they lack in almost every section, and may be cut in almost every section, when the cause of the defects, all over, is a lack of maturity, a lack of condition, but they are not cut a particle for condition. Then why not throw condition out as a section?

A specimen, lacking maturity, may be poorly feathered, because the feathers are too short, not fully grown; some may not be one-fourth grown, lacking the length of feather, the birds are poor in shape; consequently, they are cut all over for shape, due to their lack of feather. They are in no condition to show, but they are not cut at all for condition, even though that is the whole cause of the trouble. Then throw it out!

A bird may be old enough to be well-matured, but be poor in flesh, being angular, leggy and bony; he is again cut all over for shape, whereas, if he were nicely fattened he would be well-shaped; he is out of condition. The judge slashes him all over for shape, but never a cut on condition, the cause of most of his cuts on shape.

Occasionally, especially in old hens, they may be so fat as to be off in shape. This is not very common, but it is sometimes seen. It affects their shape to a less extent than from being too poor. You never saw a hen too fat that was cut on condition. In fact, condition to many breeders means fat. It means a great deal more than that, or it means nothing. A bird to be in good

show condition must be clean. This applies to all varieties, no matter what the color. The feet, legs, breast and fluffs of birds are especially apt to be dirty, and the man who sends his birds to a show instead of going with them is very apt to be beaten by the man who goes with them to be sure they are clean on the morning they are to be judged. The other fellow's birds may be no better; perhaps they are not as good, but the dirty bird is handicapped from the start, and is very apt to be beaten at the finish. I once saw Charlie Andrews at a show with his White Cochins. They were perfectly white, and especially clean, and Charlie was sitting in a chair in front of them to

the right length, but they will not stay there. At least none I have ever been able to buy did.

But the most common feather-pulling is on account of color. It has been a long while since I raised Barred Rocks, but I see by journals they are still having trouble with black feathers, and occasionally a fellow gets left because he missed one.

I do not believe rubbing a comb with alcohol to make it a little redder is faking, but coloring a white ear-lobe is. I see that some writers claim that a little butter color on the legs to make them yellow is perfectly allowable, but I suppose paint would be a fake.

I have seen birds that were as per-

A familiar scene at Pleasant View Farm, Millersville, Ill. Healthy, happy and glad they are living.

see that they stayed clean till after the judge had passed on them, anyway. No wonder he always won.

The above are all perfectly legitimate elements in the definition of condition. There are a few others which are on the ragged edge between true and false conceptions of condition. The biggest, most common and most doubtful practice used to get good condition is feather-pulling. I believe the pulling of tail feathers in Cochins is very common. Cochins do not grow the kind of tails we see in the ideal cuts that are published. Of course, there is a time at which the tail feathers will be about

perfectly white as they can be grown, cut all over for color because of dirt. Why not cut them on condition, if that is all that is the matter with them? "But that would make a double cut!" You cannot make anything but double cuts out of condition and symmetry if you use them at all. That is the very point I want to make. Either use them according to the Standard, or throw them out entirely.

The Northern Iowa Poultry Association will hold its fourth annual show at Gowrie, Iowa, January 2-6, 1911. C. H. Rhodes, judge; S. R. E. Anderson, Sec'y.

INCREASING SIZE OF TURKEYS.

IT is a fact that turkeys can be bred up to an exceptionally choice quality if you only have common or good grade turkeys. But it is best, in my estimation, to dispose of all your mongrels and breed only from the very best-bred fowls possible.

I am aware of the fact that there are some turkey growers in this country who simply will not buy pure-bred females under any circumstances, but will buy the best males they can find. This, of course, is better than not to venture into pure-bred turkeys at all.

A fine flock of fowls can soon be

great layers. It was not uncommon for the pullets to lay from sixty to seventy eggs each season. There is no question, however, but that breeding up a strain of choice turkeys after this manner is entirely legitimate, but the objection to this method is, it is entirely too slow. To be successful, we must cope with the age. The age today calls for a more rapid system, and we find it in buying a trio or pen, and never at any time consider the idea of building up a high-class flock from mongrels. By starting with pure-bred fowls you will be a number of years in advance of starting with grade stock. If you start with pure-bred fowls it is necessary to purchase a new tom each succeeding

simply useless and should not be tolerated when we consider the present high prices offered for strictly prime specimens. Breeders who cannot afford a well-bred tom have no business tampering with turkey culture. There are several advantages to be gained in the practice of using only breeders that are vigorous and of the best blood lines obtainable, and the one that appeals to me most forcibly is the fact that you can advertise your turkeys and conscientiously recommend them to be as good individuals as grow. Your customers will soon build up faith in your advertisement and eventually provide you a steady income at a nice premium over current market prices. Another feature in favor of buying a new tom is you escape the danger of producing infertile eggs. This alone would justify any breeder in the purchase of a new, well-bred, vigorous tom each succeeding year. Turkeys that are in-bred invariably throw a large percent of infertile eggs. A lot of infertile eggs means a failure in a crop of turkeys the coming season. It is my experience that the most money is made by purchasing a new tom at least every other year, and make the purchase early, before the best toms are all sold. Remember, too, that it is not the largest toms that grow that are most desirable for breeding. Such specimens are not desirable for show birds, but not for breeding. Insist on getting the medium-sized toms for breeding purposes. They are most satisfactory.

Saltville, Ind.

BORAX WATER FOR CHICKEN LICE.

Of all the remedies I ever tried to keep the chickens free from lice, borax water is the most effective and easiest to apply. The lice seem to breed around the vent and in the fluff, and I used to powder my hens there about once a month. Last spring I wet them with borax water instead of using insect powder, and they were free from lice all summer. In the late fall after they had molted they had lice again. Another treatment with the borax water, and they have been free from lice all winter.

Borax is cheap and one pound will make enough borax water to treat one thousand hens.

Who would not rather squeeze a little water on a hen than to sprinkle her with vile smelling poisonous insect powder?

Mrs. O. E. Harmon.

Liberal, Mo.

Don't overlook the great international show to be held in Buffalo, January 23-29, 1911. Remember that \$50.00 cash will be divided among the exhibiting members of any specialty club making the largest exhibit; this is stirring up great interest among the clubs. This is given in addition to 25 per cent rebate on club members entry money. Stanley A. Merkley, 308 Brisbane Building, Buffalo, N. Y., is the secretary, and he informs us that he has a few more premium lists on hand and will send them to any one who will drop him a post card.

For sixteen years Iowa's one big show has been held at Cedar Rapids. The dates for this year are December 26-31. Russel and Shanklin, judges. For premium list, address E. D. Monilaw, secretary, Cedar Rapids, Iowa.

A trio of winners at Pleasant View Poultry Farm, Millersville, Ill., where are raised the best in boys, Collies and White Rocks.

grown by only buying the very best males you can get. The writer knows of a well-known turkey breeder in Kentucky who started out in turkeys with mongrel hens, and purchased the very best males he could get every year until he built up one of the finest strains the world has ever seen. In fact, his fowls today are recognized as the leading turkeys of his section. The writer has seen them on their native grounds, and to my surprise I never saw a more uniform size and color as I saw there. Their markings were almost ideal, very large bone and frame, with almost ideal shape. Not only were they good in the above mentioned points, but were really

season, and you had just as well have pure-bred fowls as grade turkeys.

True, you may some season manage your flock so as to not be compelled to buy a new male, but as a rule turkey-breeders, in order to keep up vitality, must necessarily head their pens with new males, as the in-breeding of turkeys is quite different from most any other fowl. They simply will not stand in-breeding. There is nothing, to my knowledge, that will work disaster to a flock of turkeys as quickly as the practice of in-breeding.

The price of a good, well-bred tom is in the reach of every turkey-grower, and the breeding of related birds is

A WRONG START.

I am going to tell you how I made a wrong start with chickens. I got the chicken fever about four years ago. The first wrong done was to buy the common or barnyard fowl, but think there are some good barnyard chickens that are good layers, but there are more poor ones. I don't know what Standard breed poultry is, because I never owned any only a Leghorn rooster, and I don't think he was up to the Standard. Now this means I want you to start with Standard poultry, then you will have all of the same size and color, and I think they are better layers and are therefore worth more than the barnyard chickens. And that is what all the Standard bred poultrymen say (if I may call 'em so). After I had bought these chickens I thought they were coming out of the eggs too slow. I made up my mind to send for an incubator and a brooder and just fire 'em out of the eggs. I sent to many different firms after that incubator and brooder catalogue. (Remember it was in Canada I got my chicken experience.) But now I was in the box. I didn't know which one to send for. They all said they were the best and all had different prices; some were low and some were high, and I had never seen an incubator or brooder, so it was hard to decide which one to buy. At last I sent \$11 to Illinois for an incubator and brooder, because this was the cheapest one. I sent for it in March, and I didn't get it before October. This was a long time to wait, because I wanted to start hatching about in May. The freight and duty were \$8, but I was happy. I had to haul it home 15 miles. I got it started and put in about 100 eggs and I got about 40 chicks. Well, I thought that was all right. I put them in the brooders. It was a hot water tank in bottom, but let me say right here, never buy a brooder with the hot water tank under it or any brooder that heats from the bottom, because that is unnatural to heat the chicks' feet and keep their backs cool, when the back should be warm and their feet cool, and it had a tin can in the center, but that didn't do much good, because they were all crowding for that tin can. It was a 100-chick brooder, but it would be right for about 25 chicks. I am going to start again next summer, but I bet you I will get one that heats from the top. I for myself think hot water is better than hot air or just as good. I had a dugout for a poultry house, but it was nearly always damp. And now, about the result. Out of the first hatch I had one chick left in December, and I started the incubator in March the next year again, and got better results right along until at least I got about 60 per cent. But I raised about 20 chicks out of each batch. I remember one time I fried all the eggs in the incubator—I had turned the flame too high.

E. B. Solie.

POULTRY SCHOOLS.

In holding a poultry school at Barnum, Minn., the Extension Division last month entered on a new line of educational endeavor. The school was held under the auspices of the Farmers' Co-operative Association of Barnum, October 24 to 29. Tickets for the five-day course were sold at \$2 each for individuals, or \$3 for a family. The attendants numbered forty in all; their ages varying from ten to

sixty-one years. They included representatives from five different towns. Regular "school hours" were observed, with the customary recess.

The school was conducted by Mr. N. E. Chapman, of the Extension Division, assisted by Professors Gaumnitz and Lane, of the School of Agriculture, and by Editor Nourse, of the Poultry Herald. On each evening there was a lecture. One evening the public school entertained the poultry school, and on another the poultry school reciprocated the courtesy.

The text-book used, "Bingham's Progressive Poultry Culture," was presented to each pupil by the state, which also supplied note books and pencils, and a copy each of "Egg Money; How to Increase It," and "Chicks: Hatching and Rearing," to every ticket holder. In addition to the valuable instruction imparted during the session, he thus received about \$2.50 worth of books in return for the price of his ticket.

At the close of the session those in attendance organized the Carlton County Poultry Association. This body will hold monthly meetings and will do much to foster the poultry interests of the section. It will also prove a valuable auxiliary to the county fair.

The Extension Division proposes to hold similar five-day poultry schools in different parts of the state, wherever a sufficient number of persons can be found to pay the small fee required for the course.

IF AT FIRST YOU DON'T SUCCEED, TRY, TRY AGAIN.

In looking back over the last two years since we embarked in the full-blooded poultry business, and seeing our many mistakes, will relate a few serious ones, hoping that our experience will help someone who is a new beginner. After having read quite a great deal about full-blooded chickens, decided on the R. Reds, and hearing of a gentleman in our own city who had Reds, we purchased a setting of his best eggs at \$1 per setting, supposed to be from two-year-old hens. Our idea in getting Reds was that we were getting large birds, which were good layers. I think it was eight pullets we raised from this setting. Of course we were very proud of our full-blooded Reds. But being very much worked up over good poultry, we attended a poultry show in Anderson, Ind., the following January, and we were very much surprised to find the chickens we had raised resembled the R. I. Reds very little. They weren't up to the Standard in any one point, but if they had proved to be extra good layers we might have overlooked that, but here they fell down again. So there was one year lost by us not being as familiar with the breed as we should have been, and not buying of a reliable dealer. In the meantime we were taking two poultry journals, which every beginner should have at least one good poultry paper visit him monthly, and none is better than the American. We decided as we had failed the first year to try again. Now comes mistake No. 2. We purchased a setting of eggs at \$3 of a well-known fancier and raised to maturity seven pullets and two roosters, but we soon found we had made a mistake of buying show birds when we were after good layers. Now I have not one word to say against this fancier we bought our eggs of. It was our own mistake, as he advertised show

birds, but I have often thought that perhaps they would have made good layers had we not made the mistake No. 3 of not feeding heavy enough for early maturity. We were raising from 150 to 175 common fowls at this time and having free range for our chickens we let these run with the others instead of keeping them to themselves and feeding properly to develop into early layers. It is my belief that right here is where so many mistakes are made by new beginners, is that of not properly feeding chicks to develop them for early layers. Well, I have sold these seven pullets and purchased six pullets bred to lay, or of the laying strain, and have these mated to a rooster I raised. Now I know enough about chickens to know I need expect no perfect color birds, but I am after layers. What the result will be has yet to be determined, but the chicks I get from this mating shall receive the best of care and be fed for early maturity, after Philo system. Hoping these mistakes shall benefit someone and that I will not have to write of mistakes another year, but that I can write of success, with best wishes for all in the poultry business.

Mrs. C. E. Martin.

If when you remove your birds to winter quarters you find any stunted or deformed pullets, do not give them house room. Dispose of them as soon as possible. At any price you will not profit by keeping them and they never look well. In order to get eggs in winter the fowls must have a variety of good, sound grain, plenty of fresh air and exercise.

Before the pullets are put into winter quarters the house should be thoroughly cleaned and whitewashed. The pens should have from six to ten inches of litter and all grain should be fed in the litter and the birds made to scratch for the most of their food, as the birds will not get as much exercise when penned up as they had on free range.

Be sure to give the birds plenty of fresh air. Do not be in a hurry to close the windows. If your house is built so that no draught strike the birds while on the roosts, you can have the windows open day and night until very cold weather.

HEWES FARM SCORES ANOTHER GREAT WINNING.

At the Grand Central Palace Show held in New York City, November 18-24, Langshans bred at Hewes Farm won first and second cock, second and third hen, second and third cockerel, first and fourth pullet, and cockerel heading first pen. These birds were owned and exhibited by Mr. C. M. Ferry, of New York City, who bought them of Mr. R. A. Hewes, of Crete, Ill., at a very long price. These winnings are published with the full consent of Mr. Ferry and shows that his judgment in buying Hewes Farm stock was not in error. For three years in succession Hewes Farm has not lost a first on cock at Chicago, and has won first, second, third and fifth in 1908 and first and second in 1909. In 1907 showed one cock and one cockerel, won first on both, beating the first prize cock from New York. This is the second time Mr. Hewes has furnished the first prize cock at New York, as well as winners at Buffalo, Boston, Scranton (Illinois State Show) and the nearly clean sweep at the Illinois State Fair this fall. The reputation this farm has for producing winning males is not equaled by any breeder of any breed, and has done more to bring back and popularize this grand breed than all other agencies combined. Look up the large two-colored ad in this issue. This proves the faith Mr. Hewes has in the selling power of the American Poultry Journal.

There Are Few Poultry Keepers In The Land

BUT WELCOME
TALES OF SUCCESS

secured by honest, persistent efforts; and the many letters being received daily by Mr. R. H. Essex, congratulating him on his enterprise, are just so many evidences that the great majority of poultrymen and poultry women appreciate his endeavor. The splendid addition Mr. Essex has just made to his Company by the purchasing of the Cornell Incubator Company of Ithaca, N. Y., completes his reorganization of the Model Incubator Company, which work he began last spring, and with the additional equipment and valuable patents makes the

Robert Essex Incubator Co.

(The name by which it will be known in the future)

The Leading Manufacturers of Superior Equipment for Artificial Incubating and Brooding

Mr. Essex wishes to thank poultry keepers generally for the extraordinary growth they have brought to his business since he secured the Model Incubator Company. It assures him that he possesses the confidence of poultry keepers throughout the country. His ability to supply their needs has now been materially advanced by the purchase of the Cornell Incubator Company, for it completes the organization of a manufacturing Company that produces a most complete line of Incubators, Brooders and Poultry Supplies, including Thermometers and Hygrometers made in its own factory—the only Incubator Company in the world that is so equipped. This purchase also brings together two leading lines of Poultry Remedies and Laboratory Products, with the exclusive rights to manufacture them. It brings together a collection of Incubator and Brooder patents and other valuable rights such as never before have been owned by one firm of Incubator Manufacturers in this or any other country. Told in a few words, it will be clear to observant readers that the ownership of

THE MODEL INCUBATOR COMPANY AND ALL ITS PATENTS THE CORNELL INCUBATOR COMPANY AND ALL ITS PATENTS

places the Robert Essex Incubator Company in a position to offer poultry keepers the best poultry equipment on earth, designed under Patents which do not admit of their use by any other firm. (One of these patents sold not so long ago for \$12,000). It enables the Robert Essex Incubator Company to offer poultry keepers, at the lowest possible prices, the Latest and Best Incubators and Brooders that have ever been placed on the market, and makes it the *most advanced Incubator Company in the world*.

Let us tell you about the man; then let us suggest that you write us about these superior machines. Read what the Leading Poultry Journal Editors of America say about "Bob" Essex:

From *Poultry Monthly*, Syracuse, N. Y.

"The model Incubator is now in the hands of one of the best pilots in America. The purchasing public can feel sure of the most courteous and honest treatment at all times."—D. M. Green, Editor.

From *Poultry Keeper*, Quincy, Ill.

"Absolute reliability can be placed on Mr. Essex and his promises to not only maintain the high standard, but to work along progressive lines. We know of no one who is better qualified for his work."—F. Piggott, Editor.

From *Inland Poultry Journal*, Indianapolis, Ind.

"Mr. Essex knows the incubator business in all its most minute details. He has a line of goods that are well introduced, and they have given good satisfaction to thousands of customers."—Theo. Hewes, Editor.

From *American Poultry Journal*, Chicago, Ill.

"Mr. Essex is well qualified. His motto is 'Be on the square, and make no promises you cannot satisfy.' His thousands of friends know that he has lived up to this in the past, and will continue to do so in the future."

—Jas. W. Bell, Editor.

From *Poultry Herald*, St. Paul, Minn.

"Assuredly the Model Incubator Company has fallen into good hands. If a sincere desire to serve the interests of customers and a remarkable knowledge of incubators and brooders and poultry keeping generally will place that company in the very front rank, there is no doubt it will take that position."

—H. A. Nourse, Editor.

From *Poultry Husbandry*, Waterville, N. Y.

"The experience gained by Mr. Essex' intercourse with the farming community made him so conversant with their requirements that when he turned his attention to the incubator business he knew exactly what they wanted."—W. S. Hawkins, Editor.

Read About The Improvements

that have been made in this Leading Line of Essex-Model Incubators and Brooders before you buy. You will be surprised at their Low Prices and Quality. Ten sizes of Incubators and Five Brooders to choose from, ranging in price from \$7 to \$43, according to your requirements.

You Will Want Our Big Free Catalogue

Write for it to-day. In it Mr. Essex will tell how some people make money and are successful in the poultry business where with equal chances others lose. Besides, you need it in your business. You will save money by getting it, for it will illustrate and describe the most superior Incubators, Brooders and Poultry Equipment that have ever been placed on the market. Address

ROBERT ESSEX INCUBATOR CO., 3 Henry St., Buffalo, N. Y.

From *Commercial Poultry*, Marseilles, Ill.

"Mr. Essex is thoroughly posted in the building of Incubators and Brooders. He has a splendid machine, one that has become popular with poultrymen the country over."—J. J. Schureman, Editor.

From *Poultry*, Peotone, Ill.

"Robert H. Essex has always made good in every work he has undertaken. His reputation for making only promises which he can fulfill will follow him."—Miller Purvis, Editor.

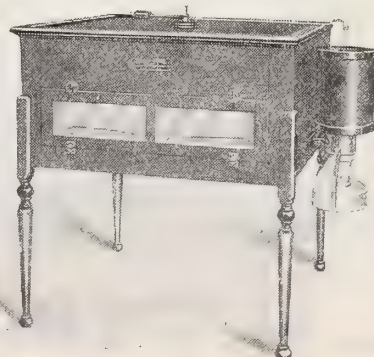

From *Reliable Poultry Journal*, Quincy, Ill.

"Mr. Essex has devoted practically all his time to the study of poultry problems and to practical everyday work in the industry. Few men have enjoyed equal opportunities. He is certain to stand for what is genuine and worth while in the poultry business."—Grant M. Curtis, Editor.

From *Canadian Poultry Review*, Toronto, Can.

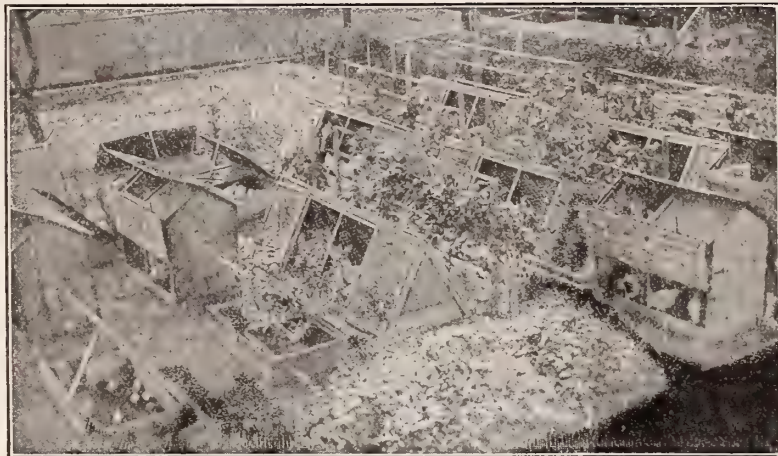

"His lengthy experience, added to the practical knowledge of poultryraising should make success. Mr. Essex' knowledge of 'chickens' is not theoretical, and we may look for a better Model than ever before."

—H. B. Donovan, Editor.

A LIVING FR

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

The Philo System Is Unlike All Other Ways of Keeping Poultry and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

In a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, **The Philo System of Poultry Keeping**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Three months' old pullets at the School Farm

TO the average poultry-man that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the

Philo System

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., April 19, 1909

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last December. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35¢ a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season.

Yours truly,

A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$960.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are,

Very truly yours,
(Mrs.) C. P. Goodrich.

Special Offer Send \$1.00 for one year's subscription to the **POULTRY REVIEW**, a monthly magazine devoted to progressive methods of poultry keeping, and we will include without charge, a copy of the latest revised edition of the Philo System Book.

E. R. PHILO — 14 LAKE S

M POULTRY

The Poultry Review

*A Monthly Magazine Devoted to Progressive Methods
of Poultry Keeping*

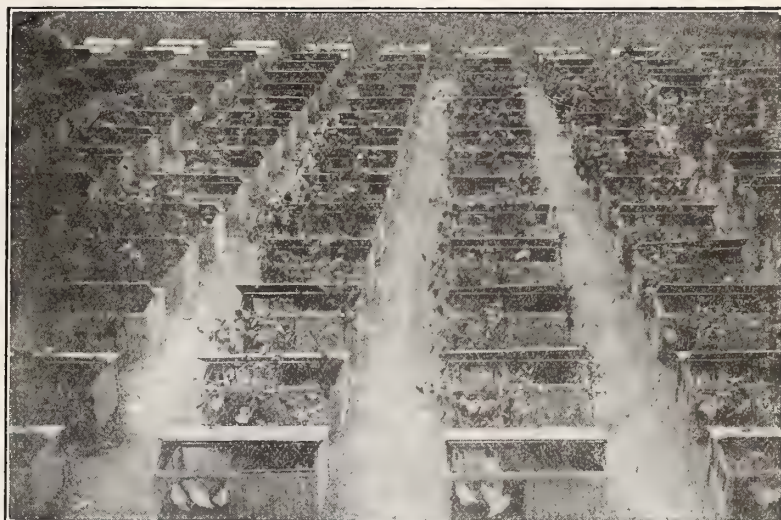

The POULTRY REVIEW is edited by E. W. Philo, author of the Philo System Book and founder of the Philo National Poultry Institute. It is edited and printed on a practical poultry farm, where experiments are being conducted and reported in full in the REVIEW. New discoveries and improvements are described and illustrated, and each issue contains a number of letters of experience and suggestion from followers of the Philo System.

Rev. W. W. Cox, our associate editor, is conducting a Philo System Plant, and his "Notes from a Six Hen Plant" in each issue have created considerable interest, and contain much valuable instruction. The first year's work on this plant netted over \$500.

In addition to the best original articles it is possible to obtain, a review of the best articles from over a hundred publications is made—the "cream" of the poultry press arranged for the busy reader.

Another thing that is proving of great value to our subscribers is our Information Department. Our editors are always ready to help subscribers. When any difficult problem arises and you see no way of solving it, write us, and we will give you a prompt personal reply. It is quite probable that we have had a similar experience and can help you. Although no charge is made for this service, it is worth many times the subscription price.

For 1911 the POULTRY REVIEW guarantees the largest circulation of any paper of its kind—over 100,000 copies monthly, reaching the best class or poultrymen in every state and over thirty foreign countries.

TESTIMONIALS

E. R. Philo, Publisher Poultry Review, Elmira, N. Y.

Dear Sir:—Of all the poultry journals I take, I would fail in all rather than in the Review, as I really like your paper the best of them all. Now I do not say this to curry favor, nor for any other purpose, because I really like your paper for the pithy and sound articles. There is no dry reading in it as there is in other poultry journals, such as accounts of poultry shows that do not really concern any one but those who are written about. I do not think that any one in any part of the country cares who wins and who does not. It is all right in a local show, written and published by a local paper. Well, success and great success for the Review, and I hope to receive it regularly in the future.

Very sincerely yours,

R. G. Wetmore.

905 Douglas St., Greensboro, N. C.

E. R. PHILO — 14 LAKE STREET

ELMIRA, NEW YORK

GOOD TO KNOW

By C.W. Zimmer

This department is open to all readers and advertisers in the central territory, and they are invited to send in all poultry news items that come to their attention

Merry Christmas.

* * *

A. H. Tryon, manager of Tannenbaum Farms, Willoughby, recently visited in New York city. Mr. Tryon reports a long list of winnings this fall on both their Barred Rocks and Columbian Wyandottes.

* * *

Our Lady of the Snows, the phenomenal White Orpington hen owned by Sunswick Poultry Farm, South Plainfield, N. J., was again crowned with victory by winning the sweepstakes cup at Hagerstown.

* * *

Words were invented for the purpose of transmitting our impressions to others. If you have the impression that you have good stock and that the price you ask for them is reasonable, why don't you use some words in a forceful ad and let our 65,000 readers know just how good your birds are, what you think of them, and what you want for them? Don't you believe if you told them this in a convincing way that you would make some sales? Well, why don't you try?

* * *

If we ask more, we give more.

* * *

A minute of judgment is worth a day of energy. Better use good judgment now and place your ad in A. P. J.

* * *

It is not the age of a man, it is the man.

* * *

Come in with a strong ad and let the world know about you.

* * *

A man who can find nothing to do generally hunts with great caution. The man who can't get results from advertising is likewise too cautious about the amount of space and force he puts into his advertising.

* * *

Don't make excuses—make good. That's what A. P. J. does. Be bigger than your troubles.

* * *

A good ad should do three things—inform the public who you are, where you are, and what you have for sale. An ad in A. P. J. does more—it gets results. See that your ad is definite, to the point, and convincing.

* * *

Our friend Theo Hewes in the October issue of the Inland has some flights of imagination that are truly remarkable. We wonder if it was a St. Louis balloon or a Curtis, Wright, Balfore aeroplane that did the stunts at Belmont park that assisted him. In any event, he has lost his title of "Gloomy Gus," for he was seeing, in imagination, Mr. Burbank's roses, as well as "prize winners" galore and a few other things. He saw some considerable, anyway. We trust he has landed safely and will remain with us ordinary mortals yet a while. Imagine Theodore with wings! Ha! Ha!

* * *

A new use for defunct roosters—

send them to the art department to be used as models for embroidery designs. All the rage now.

* * *

Chantier—just a fancy name for a darned old rooster.

* * *

"That poor little Jones boy must 'a' took after both his parents," said Aunt Samantha. "One was chicken-hearted and t'other was pigeon-toed."

* * *

Why should a favorite hen be called Macduff? Ans.—Because we wish her to lay on.

* * *

Why should cocks be the smoothest birds known? Ans.—Because they always have a comb about them.

* * *

What is the difference between a hen and an idle musician? Ans.—One lays at pleasure and the other plays at leisure.

* * *

How is a poultry dealer compelled to earn his living? Ans.—By fowl means.

* * *

What bird is in season all the year? Ans.—The weathercock.

* * *

Have you noticed our two-color ads this month? Don't they look fine? Do you want us to continue this two-colored section? If so, write in and get in line yourself. The A. P. J. is run in the interest of its readers and advertisers. Anything you want, you shall have. Let us hear from you.

* * *

The River Home Poultry Yards, Perrysburg, Ohio, have just received another car loaded with the Norwich automatic feeders and exercisers, for which they are the general distributors for the central part of the United States. They have been having a tremendous sale of these feeders during the past month and have had great difficulty in getting feeders from the factory fast enough to supply their demand. Orders have now been placed for another carload to be shipped about the first of December, in order to take care of the growing demand for these machines.

—o—

The hobo arrested for stealing chickens was pleading for pity.

"It's dis way, yer honor," he whined. "I don't git no chance. Everybody's again' me—dey're all conspirin' to keep me down."

The judge beamed benevolently. "Well, nobody shall say that I joined in that conspiracy," he said. "Trying to keep you down, are they? Well, they shan't do it. 'I'll send you up.'—A. B.

—o—

The annual meeting of the American Single Comb Brown Leghorn Club will be held at Buffalo, N. Y., Saturday, January 28, 1911, at 2 p. m., and members are requested to send in the names of their candidates for officers for the coming year. Address E. W. Staebler, secretary, West Park, Ohio.

C. W. SIXT REPLIES TO DR. BALLARD.

In the October number Dr. H. F. Ballard criticised my article on line-breeding in the September number. He says I made a very big mistake when I disposed of the male and all his chicks after discovering his poor breeding qualities. He says that if the man who "bought him and all of his chicks" had mated him back to his own pullets the next season he would have raised something that would have beaten my flock "all hollow." He says it ought to be known by all breeders that the first outcross in getting new blood is nearly always a seeming mistake. Now, Doctor, if you will read my article again you will see that I fully agree with you in regard to the first outcross in getting new blood being a disappointment, for I stated in this article that I believe it is a good idea to test the new blood three years instead of two. But that does not mean that if you discover something very bad the first year you should not discard the bird. Now I wish to say that the bird showed me something after he molted that convinced me that he was a very poor breeder, and I also wish to say that I sold him and his chicks to the butcher, as I would not be guilty of selling a bird like this one for breeding purposes; and that is just what learned me the lesson, viz., be sure to test the new blood for at least two years before introducing it into your whole flock.

Now, Doctor, I believe you will agree with me that it is possible for a bird to appear to be good in all sections and yet be a very bad breeder and one that would ruin your whole flock, for it may be a Wyandott pullet with a single comb and good enough in shape to pass as a Plymouth Rock and also good enough to win. Now do you really think this bird would be a good one to introduce new blood into a strain of Plymouth Rock? I think not.

SHE TOLD HIM ALL.

A good story is going the rounds about a drummer and a pretty waitress. Here is what happened, according to the report:

The pompous poultry editor glanced at the menu and then looked at the pretty waitress. "Nice day, little one," he began.

"Yes, it is," she answered; "and so was yesterday; and my name is Ella, and I know I'm a peach, and have pretty blue eyes, and I've been here quite a time and like the place, and I don't think I'm too nice a girl to be working in a hotel; if I did I'd quit my job; and my wages are satisfactory, and I don't know if there is a show or dance in town tonight, and if there is I shall not go with you; and I'm from the country, and I'm a respectable girl, and my brother is cook in this hotel, and he weighs two hundred pounds, and last week he wiped up this dining room floor with a fresh fifty-dollar-a-month traveling man who tried to make a date with me. Now, what'll you have?"

The pompous poultry editor said he was not very hungry and a cup of coffee and some hot cakes would do.

—o—

Why are fowls the most economical thing a farmer can keep? Ans.—Because for every grain they give a peck.

LETTERS from our SUBSCRIBERS

Editor American Poultry Journal.

Dear Sir: I have been very much interested in the articles written by the readers of your journal of their success as poultry raisers. I think I have accomplished quite a little in that line in the last two years, and think these writers and other poultrymen would like to know of the record I have made.

I have only a city lot thirty feet wide, and two years ago I bought seven pullets, and later two more pullets and one cockerel—Single-Comb Rhode Island Reds. I bought these of Willard I. Smith, of Detroit, and attribute a fair share of my success to getting good stock to start with. I bought just to get eggs for table use. I realized that good stock eat no more than mongrels, and the best would also make better layers. They began to lay in November. February 21, I hatched twenty-one chicks, which were some of the best I hatched that year.

In the fall—after selling, killing and taking out the culls—I had thirty-six hens and pullets left for the winter. In September I entered several in the Michigan State Fair, and the result was decidedly encouraging. I took the following premiums:

First premium on cockerel.

Second premium on breeding pen.

Third premium on cock.

The judging was by comparison, and under Judge Travers.

In January I entered several in the Detroit Poultry Show, and again won third on cock, under Judge McCord, by score card. I had a number of calls for stock, but decided to keep all I had for breeding purposes.

In January twenty-eight were laying and gave me 603 eggs. All were laying in February, and gave me as follows:

	Eggs.	Expense.	Income.
January	603	\$ 9.45	\$ 23.01
February ...	520	5.53	30.25
March	669	13.90	23.30
April	649	9.87	22.00
May	508	17.79	12.95
June	445	14.20	23.15
Total ..	3,394	\$70.74	\$134.66
			70.74

Profit \$ 63.92

This shows a profit of \$63.92, after raising nearly 400 chicks. Three thousand three hundred and ninety-four eggs in six months from thirty-six hens.

Eggs were selling for 50 cents per dozen in January and February, so I sold while getting my pens ready. I often gathered twenty-eight and thirty eggs per day, one pullet laid eighteen successive days, then skipped one day, then laid fourteen days again.

I did no advertising, having decided to hatch and sell chicks; only sold settings as called for; for these I received \$2 and \$3 per setting. I sold about

200 chicks at 30 cents each. At present I am selling broilers and culls; am getting \$1 each for cull pullets. I have on hand about 300.

I intend to winter 200 this year. I cull out any that does not give promise of becoming a good bird, and have a flock of fine birds.

I have one pullet that began to lay at 5 months and 4 days old; have several now laying that were hatched March 14.

I have built a new poultry house after the Corning plan. On the second floor I keep a litter six or eight inches deep. The house is 30x22, with runways. I have had no disease to contend with—due, I think, to cleanliness. The dropping boards are kept clean,

Third Pen Cock, Indianapolis, February, 1910. Quality White Wyandottes. Pangalow Farm, Indianapolis.

also drinking fountains. I use diluted carbolic acid for spraying, and keep no lice. I buy only the best grain for feed—wheat, oats, cracked corn—and mix as I require it. I also buy some mixed feed for variety. This feed is all thrown in the litter, to make them work. I also buy millet seed, as they greatly relish it. Bran mixed with grit, charcoal, gristle and linseed meal is always before them. Once a week green ground bone is mixed with the bran.

At night they have all they can eat, so they go to roost with full crops. I feed them sprouted oats at noon, hang up cabbages for them to jump for, thus giving them extra exercise. The drinking fountains are all removed at night to prevent them from drinking the tainted water in the morning. This I consider a good disease preventive. I have done so well and have such a good stock that I have decided to make a business of it, and shall soon begin to advertise.

If any of the readers have made any

better records with Single-Comb Rhode Island Reds (I know one cannot do any better with any other kind) I would be glad to hear from them.

Mrs. Henry Keenen.

Editor American Poultry Journal.

Dear Sir: In your issue of July, first page, appears an excellent article by Dr. H. F. Ballard of Illinois, wherein he takes occasion to poke a little fun at the "Common People," and rather seems to try to throw a scare into the buyer who wants something for his money.

While there seems no doubt but that occasionally the producer does have to overcome an attempt at imposition on the part of the buyer, yet I have a great deal of sympathy for the man who pays his good money for something he does not get.

Originally I felt that the custom "cash with order" and nothing sent c. o. d. was rather stiff and a little unreasonable, but since I have cut a few eye teeth I can see how it is the salvation of a great many shippers.

I have had some experience in buying eggs myself and I assure you, and incidentally the Doctor, that had I have had anything like the results that his man had, i. e., five good chicks from one hatch, I would have considered myself in luck; but with me, after sending a much advertised breeder five dollars for a setting of eggs I received fifteen nicely done up in cotton, ranging in size of less than one ounce to one weighing a little more than two ounces, some of them extremely dirty and one with red paint upon it. Out of this lot (it would be wrong to call it a setting) my hen hatched three, the others were infertile or stale. Two never lived to get out of the nest while the third lived only three or four days with the best of care.

Upon my reporting the matter to the gentleman (?) he did condescend to write upon the margin of my letter, which he returned without further answer, the statement that "every year one or two people try to beat us, etc.," and at that did not have nerve enough to sign his name.

When I protested the dirty condition of the eggs, all showing lack of care, he informed me that the eggs were from imported birds and that I would "have to blame the English." Do English birds lay dirty eggs as a rule, with a wide range of color and size?

Since then he does not give my letters any attention at all, although I know he received them, as they were registered and I have his receipts, with all correspondence intact.

In the September issue is practically the same complaint, providing always that the charge is true; and here the subscriber asks what he shall do. I suppose he will do as I did when I ordered a shipment of "day-old" Plymouth Rocks and got four or five varieties, mostly Leghorns, with some that should have been ashamed of the mix-up in their line of parentage. I kept still and ordered from another and apparently more reliable dealer, sending money in advance, of course, and he went broke, so I got nothing this time—probably a little better than the first, as I did not have the trouble raising a lot of scrubs.

I bought 100 incubator eggs, 11 per cent of which were fertile, while a lot of control eggs in the same machine hatched well, thus eliminating the ma-

chine as being at fault. Again, I bought a machine full of White Wyandottes and got a good hatch, but including two chicks having the appearance of being Barred Plymouth Rock crosses. True, these last two were not advertisers, and the gentleman who furnished the eggs which hatched 11 per cent offered to refund the price; but I accepted only half, as I was willing to stand for some of the risk myself. Again, in March I visited the plant of one of the largest breeders in his line—if not the largest, he certainly is one of the largest advertising breeders. At that time I had in my possession one of his catalogues, wherein he states that all his hens are trap-nested; and still, after looking in vain for such a nest, I asked the attendant who conducted us over the plant about the nests, and he assured me that none were used, and I most certainly saw hens laying in ordinary boxes. Since I

thirty pullets from an eastern firm. They are all anyone could expect, being good, healthy, vigorous youngsters.

In reply to the query as to what can or should be done to shippers who do not give one what he pays for, I believe that if the journals would take a decided stand against such frauds and those who practice them, it would help very much, although it would possibly cripple the finances of such journal for a short time, but at the same time would put the reputable man and the business on a more secure footing.

I believe that if the subscriber will look the matter up and get his material in shape, that an appeal to the postal department will have a salutary effect. I do not know whether it has ever been proposed or not, but I will be one of a number to organize an association to look after such affairs and to bring the guilty to task. In that way it would do away with the excessive cost

eggs, it has been my fortune, good, bad or otherwise, to have been brought in contact with a few people who were about to order from him, accepting his word at face, when a simple statement of facts that I can fully prove decided them to leave the money where it was safe from the inroads of such gentlemen, to whom a highwayman's method would be a credit, although a little crude.

I have heard the question asked as to the amount of heat an egg will stand and hatch. Allow me to relate an incident in the chicken raising experience of two friends. They had a bad case and bought a little round hatcher of metal—those of you who have one will recognize it, I suppose—and filled it with store eggs.

One afternoon, upon visiting the incubator "cellar" in the garret, they found the temperature 110 degrees, turned the lamp out for the machine to cool—forgot it, of course, till next morning. They broke a few eggs—some two or three—to see if there was any life left in them; found there was; transferred them to hens, and hatched thirteen chicks from an original total of fifty. The number thirteen was evidently lucky, as they lost none that I know of from any cause, except two or three from a cat. The time that the thermometer stood at 110 degrees was unknown, but it was supposed to have been for some time.

Evansville, Ind. J. R. Mitchell.

Editor American Poultry Journal.

Dear Sir: In reading different poultry papers I find a great many are losing young chicks from what appears to be an unknown cause. Perhaps my experience will benefit some readers.

I had a few that became afflicted and died before I knew it almost. They seemed all right one day, the next they were stupid, the next dead, with no apparent bowel trouble either. I caught one that was affected and found its crop filled to its full capacity with water and very little grain. It has been very hot this season, so I concluded the chick had become feverish from the intense heat and drank more water than it was able to take care of, causing the grain it had eaten to sour and ferment in its crop, forming a gas which soon put it down and out. I treated them by holding them up by the feet, letting its head hang down and gently forcing the overdose of water out of its mouth. After I had all the water out that was possible to get out, I gave it water in which I had previously dissolved common baking soda, about two or three teaspoonsful of the water, after which I gave a good dose of castor oil and took it away from the others to keep it from being jostled and trampled.

I also had a few that seemed crop-bound. Those I gave castor oil and gently worked the crop until soft, which usually remedied that. I also gave a solution of extract of logwood in the drinking water. It seemed to quench the undue thirst; it also acts as a disinfectant, preventing bowel trouble.

I dissolved about one-fourth of a 10c package in one quart of water against one teaspoonful to a quart of drinking water. Since using the above treatments I have scarcely lost a chick. The trouble with most people is they wait to see if the chick will get well of itself, which it seldom does, and then begin to doctor a chick past help. My experience is, don't

PRIDE OF MEMPHIS.

First S. C. Black Minorca Cockerel at Memphis. Bred and owned by Charles G. Pape, Ft. Wayne, Ind.

did not buy anything from him, and his little play does little actual harm, I feel that I have no case; but how about the fellow who pays him a good price for eggs which, while they may be from the pens he advertises, are not from trap-nested hens.

With it all I have had some very pleasant experience with egg sellers, as, for instance, the man who offered to refund. It was a pleasure to deal with him, as the poor quality of the eggs was due to unlooked-for circumstances; as soon as discovered, the mischief was corrected, so far as was within his power.

Again, I bought White Plymouth Rock eggs by the hundred all last spring, and got good hatches of strong, vigorous chicks.

Again, I received a shipment of

to one person but give all members the benefit of its prestige. Prosecution of a few, with the consequent exposure, would greatly help the morals of those needing it.

In my own case I have every reason to believe that the Journal has made heroic efforts to have the matter righted, but it seems that there is nothing more to do but use drastic measures. I have all of my evidence in documentary form and in such shape that it can be readily presented to the postal authorities, should the gentleman from Ohio force me to do so.

I dislike a knocker at any time or place, but I suppose one who helps along the legitimate should be called a benefactor by all but the man whose methods are, to say the least, questionable; but in my case, with the \$5

wait, but go after them as soon as you see they are not right and you will save most of them.

C. F. Hunt.

San Antonio, Texas.

Editor American Poultry Journal:

Dear Sir: I have read much where people talk of their spring chickens laying at 6 months old. Well, I can beat that. I had a hatch come off March 9, 1910, and they commenced laying July 21, 1910. Do you think that is good? I do; and they are laying right along.

Mrs. S. Hampson.

Zion City, Ill.

Editor American Poultry Journal:

Dear Sir:—I do not wish to condemn any breeder nor any variety of fowls, but whenever they talk the (300-egg-per-year) hen to me I simply ask them to prove their statement. I do not claim the 300-egg-per-year hen, but I do claim that, under the same conditions the White Plymouth Rock will produce as many eggs as any strain of fowls in the world, and to prove my statement I am going to suggest that we hold a contest in Chicago from January 1, 1912, to April 1, 1912, (open to the world) for the purpose of determining which fowls are our greatest egg producers.

Let each breeder who wishes to compete deposit \$25.00 with the president of the American Poultry Association, same to be used for carrying on the contest and defraying expenses. Each breeder to pay all express charges on their birds to and from Chicago. Each breeder to send six females and some one to care for them and to see that he gets fair play. A record shall be kept for each pen and at the end of the three months the pen showing the greatest average egg yield shall be awarded the prize, and what money is left after paying keeping expenses of the birds, shall go to the owner of the winning hen.

Let us hear from some live ones who are willing to compete and demonstrate the ability of their birds as egg producers. As for me I do not think some people realize the importance of having good egg producers, as too often this most important point is overlooked in our effort to breed for form and feathers. I think this can be made a most interesting contest, so let us hear from all breeders who are interested in egg production as well as fancy points.

C. M. Reynolds.

Fullerton, Neb.

Editor American Poultry Journal:

Dear Sir: I read your interesting paper every month and notice you print experiences of your subscribers, therefore I offer mine. I breed Rhode Island Reds, and took off my first hatch April 15. They have had thirty-two acres range, shaded by orchards, and were fed mostly wheat. A week ago the pullets were placed in a new curtain front scratching shed house and four days ago one of them laid a small brown egg. August 5 two others started laying.

I have bred poultry for a number of years and never knew anything before so remarkable as pullets laying at an age of three months and three weeks. I had been planning to hatch my pullets so they would commence to lay about October or November, and now I am afraid they will moult when I need the eggs.

They have never been sick a day, have grown rapidly and are very tame.

I fed bread crumbs for the first meal

and then alternated pin-head oatmeal. I fed five times a day and never fed the same feed twice a day until they were four weeks out, then it was mostly wheat. I also used a prepared chick food, oat flakes and cracked wheat.

My pullets can be seen on my farm at North Coshocton, N. Y., (Steuben county) and I would be pleased to show them to any of your readers who may be in this vicinity. They are certainly a wonderful breed.

E. L. Kimball.

Rochester, N. Y.

Editor American Poultry Journal:

Dear Sir: As a subscriber to your magazine I am taking the liberty of addressing you regarding a matter which has long been on my mind, but in which I have always felt that I had

iously awaited the coming of the next number, that I might learn of the latest thought in the world of poultry. And now I am about to reach the point which first brought me to take up the subject with you and assume to ease my mind as to a very distressing condition of affairs among the apparent friends of the "feathered tribe."

In the anglicized words of the immortal Burns,

"Oh, that someone the power would give us

To see ourselves as others see us."

As mudslingers and muckrakers, it seems to me the poultrymen are in a class of their own; the least fervid among them has the wielder of the "big stick" "backed off the boards."

LITTLE BOY BLUE.

Winner of first cockerel at Polo, Ill., 1909. Bred and owned by W. H. Hoover, Polo, Ill.

no concern, as I am what might be termed a "rank outsider" and one meddling in that which did not concern him.

For many years I have longed to join the ranks of the poultry raiser, but it has been but recently that I have found my way clear to purchase a small place and put it in the hands of a manager to take care of and thus be considered one of the rank in the great army of poultry lovers. As a preliminary to doing a good job of it, I subscribed to several of what I considered the foremost poultry and farm papers, this after perusing a great many publications. Many an evening have I spent pouring over the pages of these various periodicals, and I always anx-

First, the editors take a gentle poke at one another, and for fear the intended "target" might be deaf, dumb and blind, his name gets a sufficiently prominent place in the article to prevent any misunderstanding as to whom the "load" is intended for. No "fuel" is spared, and the victim gets finished to a "frazzle." All the words in the vocabulary fit to appear in public print are called to his command, and the iconoclast is "teddized" to a finish. The editors may be occupying the center of the stage in this give-and-take game, but they have not entirely excluded others from the "show." Next we find the members of some specialty club going it "tooth and nail," each bent on carrying off the other's scalp

after the warfare has ceased. These likewise are not less "gentle" than their worthy "teachers," and so they lambast one another until it ought to make any sensitive person heart-sick.

Articles have appeared in the various magazines which come before me which I am actually ashamed to have other members of our family read—not, of course, because of any indecency in language, but rather the evidence of the smallness of spirit which would cause one to so appear in public print regarding another. It is my privilege in the line of business in which I am engaged to read a great number of trade publications, and I have yet to find one line in which the antagonistic spirit prevails as it does among the raisers of the great "American bird."

Must these things be?

Wishing your magazine continued success and begging the privilege of suggesting that you can, if you will, join with that deservedly famous American in saying "Let us have peace."

St. Louis, Mo.

L. W. Flint.

Editor American Poultry Journal.

Dear Sir: In the question and an-

night for three days; then miss three or four days; then give them a few more doses and mark them so they can be given some once a week for a while.

I have been using a special worm remedy sold by the G. E. Conkey Company, Cleveland, O. W. S. A. is a white crystal power in capsules. This is fine, but is more expensive than home remedies.

I have D. E. Salmon's, D.V.N., "Diseases of Poultry." He says one of the best methods of treating tapeworms in fowls is to mix in the feed a teaspoonful of powdered pomegranate root-bark for every fifty head of birds. I also have seen it recommended in other magazines, and have tried it myself. They should be raised on new ground, and the old quarters should be well cleaned, thoroughly disinfected, and all droppings and filth burned. This is one reason I have to contend with it every year, as I have to raise them on the same ground.

I think the young ones sometimes get them when a few days old. I would like to hear the experience of others. Why do not some of the experiment stations send in articles on this sub-

something wrong, or he would defend himself. But he is quiet on that subject, and so is Mr. Cleveland. Can't you get them to speak up? Just think of it!—last year you had \$10 at Chicago and \$20 at Boston, and you had \$122 in the treasury. Why didn't you put up more at Chicago and see that there was some at New York? Did you depend on the members to do it for you? The members paid their dues and fees for you to make use of, didn't they? Mr. Orr says, "No one ever knew the old club was alive until I started the ball a-rolling." Well, I tell you, this is pretty rich! To how many poultry journals did you send notice of club meeting and of club catalogue last year? I understand, to one. And in how many journals do you see it this year? The club catalogue was sent to members in June, after the breeding season was over. I wonder how many eggs the members sold through the catalogue? I suppose the members were at fault—yes, the printer was a member. Why don't you ask Mr. Campbell and Mr. Parrish whether they joined us? I am here to say that they did, and each one of them gave a \$5 cash special for Chicago. Mr. Eastman, I will leave it to anyone that the Columbian Wyandotte Breeders' Association has accomplished more since we started six months ago than the old club did in all its time—and you know it. Just put in your little note book that the Columbian Wyandotte Breeders' Association is going to live, and we are going to issue a quarterly and put the Columbian Wyandottes where they belong. Can you help?

Well, Mr. E., here is hoping that we will see the largest bunch of Columbian Wyandottes at Chicago ever exhibited at any show in the United States.

Philip Koehlinger,
Acting Secretary and Treasurer, Colum-
bian Wyandotte Breeders' Assn.

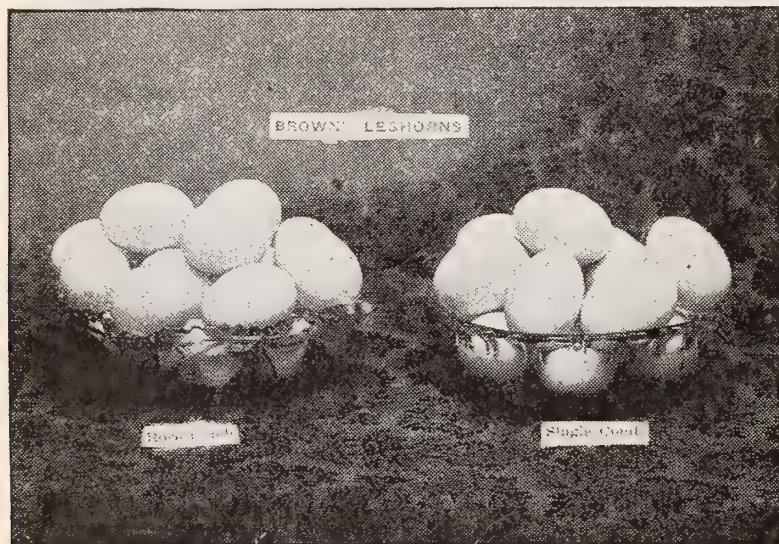

Editor American Poultry Journal.

Dear Sir: In some of my poultry papers lately I have read different articles on the question of the two systems of judging, score card vs. comparison. If all our largest shows use the comparison system, surely that is proof enough which is best. The more experience I gain every year exhibiting under both systems, the more convinced I am that in comparison judging the best bird wins, and is the only system exhibitors can get justice and fair play. In comparison judging the judge handles and examines each specimen thoroughly, the same as in score card judging, and can get finished in good time for the placing of awards. Score cards are of no value nor are they a guide. A standard of perfection is all the guide a fancier requires. In score card judging it's the lucky numbers that win. The score card system is a farce and a hindrance to a show. Judges are delayed and exhibitors are at the mercy of very often inexperienced clerks.

Butte, Mont. Mrs. James Niven.

Editor American Poultry Journal.

Dear Sir: I note Mr. Fenton's letter in answer to Mr. Orr's. As to that Keating cup, there must be something wrong, or Mr. K. would defend himself; but he is quiet. I would like to hear from Mr. Keating and Mr. Cleveland. He did not join us and did not give \$5 special for Chicago; no one ever said so. I have been after him time and again,

Rose and Single Comb Brown Leghorn eggs from pens of W. W. Kulp, Box 70, Pottstown, Pa. These eggs are from his large Leghorns, and from his 242 and 240 egg strains. Two pens of these Single Comb Browns were bought by Japan this fall, personally selected by a representative from Japan because of great laying ability.

swer department of the November number of the American Poultry Journal I saw a question asked about tapeworms in turkeys.

I have been raising turkeys for four years, and they have had tapeworms three summers. The young stock seem to have them worse, and are soon down; those that have numerous tapeworms lose their appetites; are weak, droppings thin dark brown color, very offensive; later have diarrhea, droppings thin yellowish white; their feathers are ruffled, they lag behind the flock; often they pass living tapeworms and numbers of small white flat worms; sometimes have staggers; heads are very dark.

The best thing I have tried is castor oil, one teaspoonful, turpentine, one teaspoonful mixed in a little shorts, with just enough water to make it stick together; this amount for each turkey. I squeeze it in a long, round wad and open the turkeys mouth, putting it well down the throat, so it will have to swallow; repeating every morning and

ject? They are always talking about blackhead. I never have seen a case of blackhead or cholera, though many confuse tapeworms with these two ailments; while if they are doctored for them the color soon returns and they gain very rapidly. Miss V. Roller.

Mechanicsburg, Ind.

Editor American Poultry Journal.

Dear Sir: May I ask a little space for a few words in regard to Mr. Eastman's letter. As to there being no ribbons at the New York show of the National Columbian Wyandotte Club, this was a bad stunt, I am sure. I think, Mr. E., if the members did not take enough interest in their favorite breed it showed pretty plainly the club was a dead one. Now, then, Mr. E., why didn't you go ahead? Why did you depend on the members? In my opinion, you, as secretary, should have taken a hold. But you seem to have been overcome with a "sleeping sickness" yourself, and didn't care a rap. As to that Keating cup, there must be

but he doesn't even answer my letters. I will endeavor to give you a reason why you should join the Columbian Wyandotte Breeders' Association. In the first place, the old club is in a bad rut on account of its being so slow; and there is no one there to pull it out. The club is over 200 strong, and, as old as they are, no one ever made a motion to issue a quarterly, and not issue a club catalogue when the breeding season is over. We are going to issue a quarterly and put the Columbian Wyandottes where they belong. Mr. F., you know, as well as many others, that we have accomplished more since we started the ball a-rolling six months ago than the old club did in all their time. They have been overcome with a sleeping sickness. If you don't believe it, just write to every member of the old club, and see how many are live ones. I know what it is. I went through the mill. Mr. Parrish wrote to me he would try to put some life in the old club, and for that reason would not join; but later on he joined us and also gave a \$5 cash special for Chicago. Mr. Fenton, I have been after you not only once but a number of times to join, because I consider you a good, honest, fair-thinking friend, and I know you are going to help our quarterly and boom the Columbian Wyandotte. In conclusion, I will say the Columbian Wyandotte Breeders' Association is going to and will live. We are hard workers and are everlastingly going to keep things alive. Mr. Fenton, don't call us "deserters." Call us "insurgents"—it sounds better. Always keep abreast of the times, otherwise we will not stand pat with you. Hope to meet you in Chicago and have a good handshake with you.

I am, Yours truly,
Philip Koehlinger,
Acting Secretary and Treasurer Columbian Wyandotte Breeders' Assn.

Editor American Poultry Journal.

Dear Sir: In reply to Mr. Fenton and Mr. Eastman, I am going to be very brief. I had decided to say nothing. I have letters that convince me their club was about worthless. I am positive I cannot convince them of that fact, because they won't; so "what is the use?" After the Chicago meeting we will have a full set of officers that I am sure will be able to hold up their end, good and plenty. I am satisfied with our progress now—nearly fifty members. They can travel along as they wish. We will continue to boom the Columbian Wyandotte. If Mr. Fenton thinks it proper to donate a cup two weeks after a show is held, he has that right, but I do not. That, however, is not my reason for leaving the old club—not as a deserter, but as a member who paid up and honorably withdrew. I feel that it was wrong to give Mr. Keating that cup, and I also feel it was given him to keep him quiet. I have a letter signed by him "that some of the first prizes were awarded to the owners and not to the qualities of the birds at the last New York show." I have asked him in public to give me the proofs. The officers of the old club have seen that public letter of mine to Mr. Keating—at least some of them. Will they ask Mr. Keating for his proofs; and if it can be proved the judges did award prizes that way, let them get rid of the judge. It does not make any difference

to me who made the motion; I think it was wrong, was a very bad precedent to establish. It's class legislation. Would someone have made a motion to donate the cup to me if Mr. Keating and myself had changed places as regards awards? You can bet your old boots—no. Why? Because I would not have gone around accusing the judge of "awarding prizes to the owners and not to the quality of the birds." I hereby challenge the N. C. Wy. Club to investigate Mr. Keating's charges. I will furnish his letter. Don't let one member stab another in the back. •

D. Lincoln Orr.

Editor American Poultry Journal.

Dear Sir: In order to have the Columbian Wyandotte Breeders' Association put aright before the readers of

organization is very thankful), nevertheless, if Mr. Eastman and Mr. Fenton will make inquiries they will find that the greater part of its membership is made up of breeders who could not see where they would benefit themselves by affiliating themselves with the old club (as the old club's efforts have always been concentrated on the "eastern shows"); and no one will become a member of any organization if they cannot see where they are to derive some benefit for their money.

Last year the old club did make a feeble effort to do something for the Chicago show, and I doubt very much if they would have done anything this year if it had not been for the reason that they were forced to do so by the Columbian Wyandotte Breeders' Association coming into the field; and as

First Cockerel at Boston, 1910. Winner of Shape Special. Bred and Shown by J. W. Andrews, Dighton, Mass.

your valuable journal, as one of the officers and organizers of this association I would kindly request that you publish this letter in your December issue.

Judging from the contents of Mr. Eastman's and Mr. Fenton's letters in the November Journal, addressed to Mr. D. Lincoln Orr, one would form the opinion that Mr. Orr was the entire Columbian Wyandotte Breeders' Association, which is far from the true case.

Although Mr. Orr has taken a very prominent part in bringing this organization into existence by giving a great deal of his time as well as spending his money very liberally (for which the

this organization is largely made up of breeders in this section, it was simply up to the old club to do something, or lose what members they still have in the middle West.

As to Mr. Orr's leaving the old club, that is entirely his own personal affair, and no doubt he gave the matter full consideration before resigning, and we all know that if he had seen a way by which things could have been changed in a peaceable way, there is no doubt that he would have stayed by them; for we all know that Mr. Orr is a fighter when he thinks he is in the right. Therefore I will say this for Mr. Orr, that instead of staying by them

and trying to remedy a thing which he thought beyond remedying, he did the next best thing by withdrawing instead of staying and living in constant strife.

While I have never been a member of the old club, I wish to say to Mr. Eastman and Mr. Fenton that the Columbian Wyandotte Breeders' Association is here to stay, and if they will turn their efforts towards the pushing of the Columbian Wyandottes in place of knocking the new organization or its members, they will accomplish more for themselves and cause less hard feelings.

George A. Kersten.

THE DEMAND FOR QUALITY.

The demand for extra choice stock never was so great as it is at the present,

is greater than the supply, and it will be for some time to come, or until a greater number of breeders adopt a new system in their breeding system.

It is not the poultry breeder who produces hundreds of birds each year that coins all the money and wins the blue in the show-room, but he who understands the mating of his birds, to produce some excellent specimens of the variety of fowls that he breeds, and try to procure higher scoring birds than his last year's winners, that he may win in his competition, as it is our aim to raise better birds each season, once in a while we make a failure, but don't get discouraged, or throw up the job, but when another year rolls around, try again.

There is a good market for the breeder who raises annually large numbers of fowls that they sell to the farmers to

they won't win should they buy, and where is the breeder that can guarantee such when they sell a bird?

The old fowls begin to lose their feathers quite rapidly at this time of the year, plenty of loose feathers in the chicken houses—brooders, as well as the runs, except the interest taken in the young stock the place don't look very inviting to those that don't keep their chicken quarters in a sanitary condition, all the old feathers cleaned up or burned, the droppings hauled out for fertilizer, henhouse renovated, nests cleaned, sprayed and new straw to replace the old feathers, etc., that probably has been in the nest since last spring.

And again the egg basket will cease to fill as rapidly as it did during April and May, as the majority of the hens are taking their vacation, as they have been working overtime for the past six months to keep down that grocery bill and to keep that old wooden hen busy to keep her out of mischief.

It is necessary to pay attention to the birds that are going through the moulting season that you intend to keep for next year's breeders, those that have large runs or on free range over the farm and are well fed usually go through the moult all right, and if you have a warm house for them to roost in, will generally moult sooner than those that roost in open air, setting hens can have the moult hastened by allowing them to set on artificial eggs for some time and then shut them up in a small pen will cause them to shed their feathers and grow a new coat soon. Feed them well during the moulting if you wish them to be in the prime when the shows begin, as they can't grow a brilliant plumage on a starvation diet. Epsom Salts added to their drinking water, just enough to taste, is an excellent tonic; also a little flour of sulphur mixed with their mash once or twice a week is good. The stock should be provided with shelter of some kind during moulting, as cold, chilly rains may bring on a cold which, if neglected, would develop in a case of roup, one of our worst enemies.

Male birds should be separated from the females as soon as the breeding season is over, if possible, as the hens do so much better and eggs will keep much longer if they are not fertile.

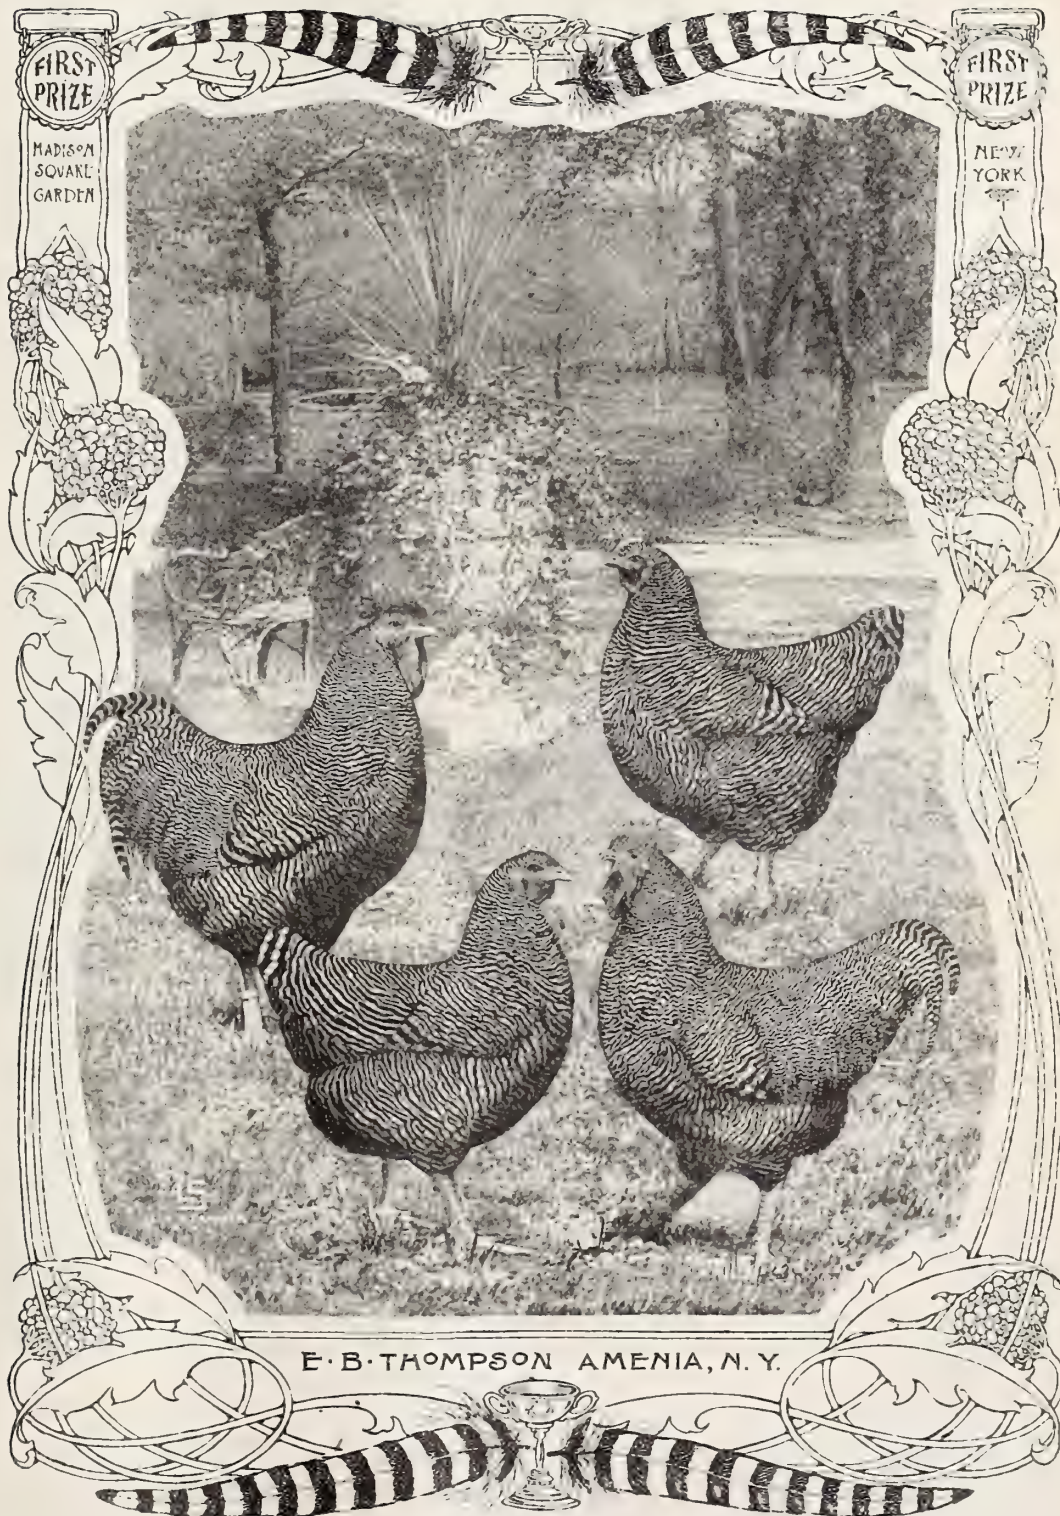

Poultry exhibit at Wood County Fair, conducted by Wood County Poultry Association at Bowling Green, Ky., September 19-24. The quantity is not so large as formerly, but quality the best ever. This is a county fair in name only, as all departments are open to the world. Over 2,000 entries in the single classes and 300 entries in pens. This is by far the best fall poultry exhibit in the state. The liberal prizes given by the association and with the best of management brings out the special breeders from far and near. After the ribbons were placed by the able judge, E. G. Case, the exhibitors one and all wore the life-size smile that don't come off. All had a jolly good time. The Wood County Poultry Association has brought its exhibit up from a few hundred of the most common birds to an exhibit of more than 3,000, and quality that can not be outclassed anywhere. For our 1911 exhibit the association extends a cordial invitation to all breeders to come and bring their favorite fowls along and spend a week with the Wood county boys. A good time and an honest deal is assured.—Dad.

and the demand seems to be increasing daily. Why is it? In the first place, there is getting to be more poultry shows for us poultry fanciers to attend. Second, there are more birds on exhibition and of better quality than there were ten years ago. Third, the last but not the least, the offerings by the association (both money and ribbons) are more enticing to the exhibitors each year, and it seems to put new blood into our veins to produce the stock that will win over our opponent, as we are all in the show-ring for the crown and honor. The quality of stock that is raised and exhibited each year and the demand for winners

improve their common flock of chickens found almost on every farm. Selling good stock at fair prices is a profitable business, both to the seller as well as to the buyer, but on the other hand it is a business apart from that of the fancier who is breeding to supply the demand for exhibitors, and exhibition stock that wouldn't look out of their place if they were ushered into a show-room at Boston, Madison Square Garden, or any of the best shows in the land.

Price for such stock are advancing rapidly and it seems to be that such stock is scarce or the breeders don't know where to find them, possibly afraid

E. B. THOMPSON AMENIA, N. Y.

"THE BEGINNER."

There have been so many articles written on this subject that I should not wonder at your getting confused and passing this article by. I have recently experienced the "beginning," and feel fully capable of writing on this subject.

The man on his way home from work saunters up the street and is met by a friend who says, "Have you seen the chicken show?" "No," says he; "let's go in." They walk in and go all through the show, admiring the different breeds, but without the least intention of becoming poultrymen. Finally they run across a poultry journal solicitor, who immediately sets to talking. They at first shake their heads "No," but upon his continual insurgent talk they at last decide to subscribe, "just for fun."

The subscriber goes home and eagerly waits for his first copy. When it is received he immediately tears the wrapper and runs through the pages, searching for something that interests him. What is the first thing he notices? It is the illustrations. He doesn't look at the common breed cuts; neither do the poor photographs interest him. He likes the best photographs or the artists' illustrations. He gets the hen fever at once and determines to start on a small scale. The question arises, what breed? He wants the best and is often misled by glowing advertisements of the "biggest layers." And yet he finds there are so many of the biggest layers that he is again confused. He then seeks personal advice. He is advised to take up whichever breed he likes best and give it the proper attention, and it will do as good as any. Now, this may be true, in a sense, but I will assure you that there is just as much difference between breeds of chickens as there is between breeds of cattle or horses. We have the Shorthorns for beef, the Jerseys for milk, and the Holsteins for a general purpose or a both beef and milk breed. Thus we have the Asiatics for meat breeds, the Mediterranean fowl for eggs, and the American breeds for egg and table fowl combined.

Now, let him pick his necessary class, which is undoubtedly the American. But what breed? There is the breed that is inclined to be lazy and take on fat when not forced to exercise. Then the breed of a little lighter weight, which is a good forager. After he has decided what breed, then what variety? He may take the color that he fancies, although I believe there is a difference in varieties caused by different crosses in the origination. He may select the one that interests him, as generally he will succeed best with that in which he is interested. He can largely judge the most popular variety as shown by the numbers in the show room.

Now, how is he to start—by buying eggs or by buying stock? I would advise the buying of stock. He may hatch and rear from a setting of eggs a bird that the breeder would not part with. He can invest his money in a good pen (one male and four females) and have a pretty sure start, and in a few years, by survival of the fittest, he will have a nice flock.

I would advise, by all means, to line-breed. Even if you want utility products, I believe you will get more uniform and better results by having the

blood to nick well. I don't mean to inbreed on and on, but systematized inbreeding. After a few generations it may be well to add new blood by getting a new hen and crossing with a cock of your strain; and then, if the results are good in both utility and standard qualities, you may select your best cockerels to use on your own females.

All in all, you will find this "chicken business" a very interesting thing. The farther you go the deeper you get. Bruce McDonald.

"THE MARK OF QUALITY."**A. P. J.**

As the brand on the hip of cattle marks the year and the name of the ranch, so does the above "Mark of Quality" indicate the place where the fine engravings are made that bear the above mark. Never has there been such a demand for high-class engravings of poultry as this year and our Art Department has been working under a "full head of steam" for the last few months, and turned out some of the finest work in the engraving line that has appeared in the poultry papers and catalogues of the breeders to date.

Our artist, Mr. Louis A. Stahmer, will visit nearly all the prominent shows and if any of the readers desire to have some work done by him, either in poultry illustrations or special catalog cover and letterhead designs, it will be to advantage to look over his samples. He is making the engravings for the foremost breeders in the country and will absolutely please you.

PEKIN DUCKS FOR PROFIT.

As the season for mating of ducks will soon be here I have arranged to write an article about them.

A very profitable branch of the poultry business is raising Pekin ducks for market, and well thought of as a money making establishment. I breed nothing but the Imperial Pekin duck, therefore I am prepared to write about them.

The Pekin duck is considered by far

the best market duck. They are very hardy and at the age of 8 to 10 weeks they reach maturity. It is comparatively easy to raise them.

Birds intended for breeding purposes should be selected as soon as it can be determined which are most suitable for that purpose. Select only those that promise to mature and be large, vigorous specimens, with broad, deep breasts and keels, wide, square bodies on short necks and fairly small heads.

After the breeding birds have been carefully selected, give them as much free, green range as possible, water range, if it can be obtained. Feed a growing and strengthening ration composed of two-thirds wheat bran, one-third corn meal and about 10 per cent beef scrap. Birds of good parentage will begin laying at about five months of age and with a little encouragement will stick to it with a praiseworthy determination.

After mating in November feed the breeders twice daily all they will clean up. Within a few minutes after feeding give a mash of the following proportions: Four parts wheat bran, three parts corn meal, one part low grade flour, 1 part beef scrap to a measure and one-third cut clover and steamed or vegetables. Salt slightly and mix to a moist but not pasty mash. Mix with hot water in cold weather and cold water in warm weather. At noon feed of cut rye or cabbage or any green food may be given.

After the breeding season is over the bird may be turned out to pasture and beef scraps fed often and a large proportion of bran added.

In cold weather the eggs should be frequently gathered to avoid chilling. They should be kept as clean as possible. In many cases washing may be necessary. Do it in lukewarm water and with a coarse sponge.

Cover the house floor with a layer of sawdust. No nest boxes are needed, as the layers will scoop out a hole in the bedding and lay there regularly. Keep plenty of grit near them at all times. R. K. L.

SINGLE COMB BLACK MINORCAS.

In the following sketch I shall not try to raise the Black Minorca above any other thoroughbred breed of poultry, for I am convinced that any breed of poultry, if properly cared for, will pay its owner with large interest. Some people will say, "I don't like them for these reasons: 1. Their combs freeze in winter. 2. Their black color is not pretty. 3. They are so wild a person cannot get near them. 4. They never set."

Now, leave me tell you that if properly cared for their combs will not freeze; neither is their color black, but is a green or sheen color. Any breed of chickens can be made tame if they are petted and carefully handled. And now about them setting. Do you want a hen that will lay fifteen or twenty eggs and then set a couple of weeks, or a hen that will lay 200 or more a year and still be full of eggs? I prefer the latter.

The Black Minorca cock should weigh seven pounds; hen, six to seven pounds; cockerel, seven to eight pounds; pullet, five to six pounds. Still some people will say they are so small. I will admit they do look small, but this is the reason: their feathers lay close to

the body like that of the game. They are also a fine eating fowl. Their shanks should be of a slate color. The comb should be as straight as an arrow. Their carriage should be erect.

Feed.

"How much shall I feed my chickens?" is the question often asked. I find that the average man's hand (not stretched to its limit or clinched) full of feed three times a day is sufficient for two average fowls. I have found this to be a good measure. I will try to illustrate a good feed hopper which you can have your tinner make for a small cost. Have a small tin trough made; have bottom round and a top that will fasten over it but can be unfastened easily. This top should have a top like this:

The points should be from 4 to 5 inches high and from 1 to 2 inches apart. The fowls cannot scratch the feed out or dirty the trough. This trough can be easily cleaned by taking it apart. So much for the feed.

As Show Birds.

When you want a bird that is easily prepared for the show, the Single Comb Black Minorca just fills the bill. No washing to make them look nice; just wipe their feathers off good with a damp rag and they are ready for the large shows, the kind that makes a reputation for a man if he does any winning.

Moulting.

This is the time of the year when old biddy starts to make a new coat for herself. She finds that after her last year's work of raising chickens and filling the egg basket, her coat has become soiled and ragged; but now her chicks are hardy young fellows, some ready or almost ready to help her fill the egg basket, while the rest are ready

for the market, which means more profit to the owner. She will now stop laying, for the food she eats is all taken up by the feathers. Now, be careful not to overfeed her, for she will begin to pick up fat and will not start to lay very soon. The average hen begins to lay from one to three months after she is through moulting. I don't say starve the hen, but make her work for all she gets. If you take good care of your fowls through the moulting season you shall have plenty of eggs this winter.

If you want to begin poultry raising, give the Black Minorca a test.

Russell Clark.

SOLVING THE WINTER EGG QUESTION.

The question of a well-filled egg basket during this time of year, when fresh eggs bring such an enormous sum, has been a matter of long discussion, and not easily solved by many of our poultry farmers of today. With the careful and daily attention of the feeder there is no reason under the sun to prevent a flock from laying during the winter months.

There are many conditions which affect this question. These are, namely:

First—The Flock:

In order to obtain results the farmer should strictly settle down to one or two good breeds of pure bred stock instead of wasting his time and energy in improving his dunghill stock.

Second—Housing:

Houses for poultry should be dry, tight and warm. No draughts of air should penetrate on fowls. Houses should be so constructed as to allow plenty of light and fresh air. Take out the windows and replace them by a frame covered with ordinary burlap. This can be so arranged on hinges as to be out of the way during the day. In the evening this should be closed, thus allowing a free circulation of pure, fresh air all the time. The houses should be sprinkled or

sprayed once a week with a weak solution of creolin—2 per cent. This will make the house both sweet and hygienic for the fowls.

"Cleanliness is Godliness," so should it be with the fowls' quarters and yards.

Do not allow dirt and rubbish or surplus manure to accumulate in houses or yards. It spreads disease.

Third—Feeds and Feeding:

The question of feeding and various feeds has been sadly neglected by many

of our poultry raisers, and with just a little amount of extra thought and study on their part could remedy this easily.

Egg production can only be sustained by the food in excess of that required by the fowl to support life, although egg production can temporarily occur at partial expense of the body. There are many methods of feeding, but to my satisfaction a warm, wet mash, followed by a little grain has proven to be most successful during the cold winter months. A good system as followed by myself with great success is as follows. In the morning feed a good hot wet mash of the following mixture:

	Pounds.
Bran	200
Cornmeal	150
Beef scraps	50
Ground alfalfa or clover.....	40
Cottonseed meal	20
Oil meal	20

At noon feed two pounds of wheat per 30 birds in deep litter, at least eight to ten inches deep. These keeps birds busy all day scratching for food.

At night feed two and one-half pounds of the following ration in litter:

	Pounds.
Cracked corn	100
Wheat	50
Buckwheat	25

(If buckwheat is not obtainable omit and substitute oats.)

This last feed will send the birds to bed with a full crop of food, which has a high heating value. At the present prices of grain this system of feeding will cost no more than 10 cents per day for 30 birds.

Another system is the dry hopper system. This keeps a dry mash before the birds all the time. This method, although a labor-saver, does not insure so good results as the wet mash.

A good dry mash mixture is as follows:

	Pounds.
Bran	300
Cornmeal	100
Gluten meal	100
Oil meal	100
Meat scraps	100

This is followed at noon and evening with whole grains, as in the wet system. Water is one of the greatest essential factors in egg production. It is a known fact that one dozen eggs contain one pint of water, hence we see the absolute necessity of furnishing a constant supply of pure fresh water before the fowls. The neglect to supply a sufficient amount of water is often the cause of ill success.

Fourth—Supply Green Food:

This item is absolutely necessary if we expect winter eggs; in fact it is considered the key to securing winter eggs. We must present to the bird those conditions which are present in warm weather but absent in winter. This is done by supplying green vegetable food, such as cabbages, beets, wurtzels, etc. This can be very handily supplied to them by driving nails in wall of house about three inches above hen's head and place vegetables on it, thus forcing the hen to jump for it.

Last to be considered is exercise. Keep the birds outdoors as much of the day as

You Can Build This Best Incubator Yourself and Save Money

30,000 intelligent poultry men and women have proven that my way of securing the best Incubators is the most profitable. Do it yourself. It's as easy as A B C. I will save you the extras, the freight, the cost of high priced labor and finishing, and give you the best Incubator that money can buy, and a big saving in cost over all high grade machines. You can do it with your own hands. Just my parts and simple directions, which anyone can understand—a saw and a hammer—these are all you need. For 25 years my way has been followed by good poultrymen. They know I have overcome the imperfections and drawbacks in other machines. My plans and parts will give you absolutely the latest and best.

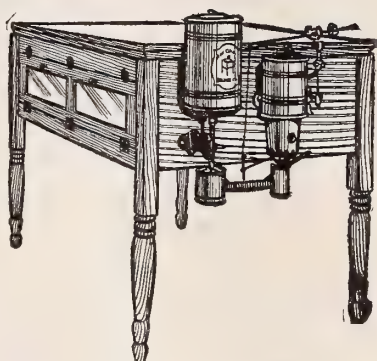

SEND FOR FREE INCUBATOR BOOK

This tells the big facts about Incubators. It tells why my combined damper and flame regulation, tandem thermostat, heat distributing bars, and automatic ventilation should be in every incubator. These are the vital parts of an Incubator—the greatest inventions that have been made since the discovery of artificial hatching. A boy of twelve can build an incubator with my plans and parts. I'll show you the way to more money and better chicks. Just sit down and drop me a line. Say "Send me your Incubator Book"—It's FREE.

H. M. Sheer Co.

Dept. 13

Quincy, Ill.

To owners of other makes of Incubators—do not put up with inferior fixtures. My lamps, regulators, burners, tanks, heaters, thermostats and other appliances are adaptable to all makes of Incubators and Brooders. If I have not what you need, I will build it for you. This is good news to thousands who do not wish to purchase a brand new Incubator, and yet who realize they can get better results from Sheer's appliances. When making repairs, use Sheer's lamps, regulators, etc., and note the great improvement in efficiency. I will supply the appliances you need. Write me personally.

Feed 30% Less Grain—Get More Eggs—and Save Big Money

It is the assimilated nutrients that make eggs, bone, muscle and feathers. But nutrients cannot be assimilated without phosphorus. The proof is the fact that whenever the feed contains insufficient phosphorus, at least two-fifths of all protein fed is lost in the voidings. Two-fifths of the valuable protein passes through the fowls without doing them a particle of good—without adding to your profits.

Wheat bran is richest of all grains in phosphorus. Yet it contains less than enough to put its 15% of protein in the right condition for body building and egg making.

"HEN-E-TA" Bone Grits

contain seven times more phosphorus than the average grains. It enables poultry to get all the good out of every bit of protein fed to them. There is no waste. Thus your poultry do much better—on one-third less grain, when fed HEN-E-TA.

But "HEN-E-TA" does more than to save one-third of your grain bill—more than to increase the egg production—more than to rush pullets to early maturity. Its absolute dryness and spongelike absorbing qualities eliminate the need of charcoal. As "HEN-E-TA" contains 30% pure digestible Bone Ash, it is preferable to all other Bone. It also produces a more nutritious and more palatable egg, and chicks hatched from such eggs are much larger and stronger than usual. The sharp, brittle condition of "HEN-E-TA" eliminates the need of all other grit or oyster shells. Its property of largely increasing the effectiveness of vegetable protein makes the use of unwholesome, disease-laden and expensive beef protein unnecessary. Its cleanliness and absolute purity make "HEN-E-TA" the only Bone product fit to feed.

The New Globe Incubator No. 10

THE GREAT MERIT of the Globe Incubators has been so well known to the poultry raisers of this country for the past 15 years that we feel the only introduction that the NEW GLOBE INCUBATOR "No. 10" needs, is a plain statement of the fact, that in this machine we offer to the public an Incubator of GLOBE MERIT built on plans that greatly lessen cost of production, so that we are able to offer a

200-Egg New Globe "No. 10" at \$13.50
Positively the Best in the World for the Money

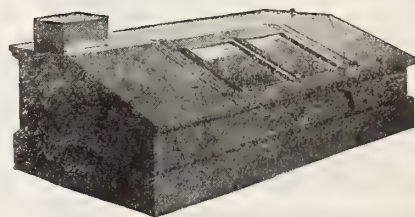

This machine is fitted with the best double compound water regulator, the same as used on all higher priced machines, and is honestly and substantially made throughout and will render efficient service and produce the best possible percentage of strong, livable chicks that will GROW AND MATURE when placed in our famous

Globe Brooders

200-Chick Size \$11.75

A brooder built on scientific principles that have been proven correct by actual practical use.

Globe Brooder

FREE \$100 PENS \$50 TRIOS \$25 PAIRS FREE

Nearly \$3,000 worth of fowls from the cream of some of the best flocks in America will be distributed among the agents securing subscriptions for Successful Poultry Journal. These prizes are given in addition to liberal cash commissions, and every one gets well paid for his time.

Three Prizes in Each Class

First prize—A \$100 pen consisting of one male and four females.

Second prize—A \$50 trio consisting of one male and two females.

Third prize—A \$25 pair consisting of one male and one female.

These three prizes are offered in every one of the twelve different breeds.

These Are the 12 Classes

Barred Plymouth Rocks, White Plymouth Rocks, Buff Plymouth Rocks, White Wyandottes, Columbian Wyandottes, S. C. Rhode Island Reds, R. C. Rhode Island Reds, S. C. Buff Orpingtons, S. C. White Orpingtons, S. C. Black Minorcas, S. C. White Leghorns, S. C. Brown Leghorns.

A \$100 pen, a \$50 trio and a \$25 pair of each of the above twelve breeds will be awarded.

\$500 in Cash and High-Grade Fowls

In order to interest those who desire to compete in a contest where the principal prizes are cash ones we have inaugurated a supplementary contest which will be conducted separately and without any connection whatever with our other contest where the \$100 Pens, \$50 Trios and \$25 Pairs are offered. The prizes in this contest are as follows:

1st prize, \$100 in gold.

2nd prize, \$50 in gold.

3rd prize, \$25 in gold.

4th prize, \$25 pen of fowls.

5th prize, \$25 pen of fowls.

6th prize, \$25 pen of fowls.

7th prize, \$25 pen of fowls.

8th prize, \$25 pen of fowls.

9th prize, \$25 pen of fowls.

10th prize, \$25 pen of fowls.

11th prize, \$15 trio of fowls.

12th prize, \$15 trio of fowls.

13th prize, \$15 trio of fowls.

14th prize, \$15 trio of fowls.

15th prize, \$15 trio of fowls.

16th prize, \$15 trio of fowls.

17th prize, \$15 trio of fowls.

18th prize, \$15 trio of fowls.

19th prize, \$15 trio of fowls.

20th prize, \$15 trio of fowls.

Some of the breeders from whose yards these birds will come are E. B. Thompson, Barred Rocks; Wm. Cook & Sons, Buff Orpingtons; Ernest Kellerstrass, White Orpingtons; Milton W. Brown, Cheviot Farms, Black Orpingtons; S. D. Lapham, Buff Rocks; Irving A. Sibley, R. C. Reds; Geo. H. Rudy, White Orpingtons; Wm. F. Brace, Brown Leghorns. These breeders are among America's leaders and their stock is the highest quality possible to be bred. Many other equally prominent breeders will furnish stock in this contest.

Drop us a card saying that you wish to secure subscriptions in our General Contest. We will then send you sample copies, receipt books and other necessary supplies. This is your opportunity. Don't let it slip. Subscriptions are easy to get. The paper is worth many times the price and poultrymen realize this as soon as they see a copy. Address

Successful Poultry Journal FRANK HECK Editor **355 Dearborn St., Chicago, Illinois**

possible. Keep a good quantity of dry litter for birds to work in and throw grain in litter, and birds will feel contented no matter how cold the weather be.

Concluding, we will soon see the absolute necessity of paying attention to our fowls if we expect them to repay us, and just a little here and there will soon lend a helping hand in filling the egg basket when eggs are at top notch prices and almost worth their weight in gold.

Morris Mayerson.

OLD AND NEW BREEDS.

This is a day of something new and still they say there is nothing new under the sun. This surely does not apply to breeds or varieties of poultry, as we have them springing up continually. To me it looks very foolish to keep trying to make new varieties all the time when we have dozens of varieties now that are "dead to the world."

Why is it that so many of the old-time

Crown Bone Cutter
Hens fed cut green bone lay more eggs. Get a Crown Bone Cutter. Send to-day for catalogue. Wilson Bros., Box 501, Easton, Pa.

**BEST MADE
Lowest
in Price**

EGGS

To make your hens lay, day in and day out all winter, feed them fresh cut bone.

Without this egg-making food hens will not lay during cold weather. The reason they don't lay now when eggs are high in price is this—grass-hoppers, worms and bugs, their natural live-meat, egg-forming diet, have gone. Worm and bug meat contains protein, and protein makes eggs. Fresh bone contains a large quantity of this wonderful egg-producing material. When cut into small flaky particles, fresh bone is not only the cheapest and best egg-making food known for poultry but it is easier for fowls to digest than food in any other form. Nothing can equal it to bring your hens in line to lay every day during winter. Feeding fresh cut bone is the one way to make your poultry profitable.

Humphrey
ALWAYS OPEN HOPPER.
BONE CUTTER

—cuts any fresh bone, however big or hard. It will cut all kinds of green poultry food. It is the only bone cutter that has an always open hopper. No digging bone out of the cylinder. The special construction of the hopper wing gives a feed entirely under your own control. It cuts rapidly and easily. If left in the poultry yard the hens will keep it clean for you. By simply unscrewing one nut you can take out the working parts easily to sharpen the knives. This perfected bone cutter will operate with one-half the power required by any other. A test will tell its story. Send for a Humphrey on Free Trial. If you are not satisfied, we take it back.

Let us send you instructive booklet, "Making The Golden Egg." Gives prices and tells how to make your flock pay biggest profits.

HUMPHREY,
White St. Factory,
JOLIET, ILL.

breeders have taken a back seat? In my judgment it is simply because they have been crowded down and out by some new varieties that were being boomed and turned out in the long run to be of less value than the old timers.

Don't think that because the Brahmas are not bred as much as some varieties that they have no good qualities. Just ask a man who breeds them. The Light Brahma is more extensively bred than the dark variety, and if the breeders of Dark Brahmas don't waken up and push their variety to the front they are going to be lost. They are a good fowl and far too beautiful to let slide. We now hear talk of Barred Wyandottes. The question arises, do we need them? I for one say we do not. We have the Barred Rock and if people want to do anything toward a Rose Comb Barred bird it is up to them to revive the old reliable American Dominique. The Dominiques are a grand old fowl, and I truly believe that they are as good a utility fowl as ever existed, and if given an equal chance would hold their own with any of the newer varieties. It is simply a shame that the Dominiques have dropped to where they are today. They are as beautiful an illustration as we have in the Standard, and all they need is for some one to take hold of them that will push them to the front. It's a pity that Hawkins, Thompson, Fishel or Kellerstrass did not take up Dominiques. They would have been in a far different light today. They are of the general purpose fowl type, and if any one wants to take up one of the old reliables the Dominiques will make him a good choice.

The Langshans are not as popular as they should be. They are a grand old breed and should not be so neglected by fanciers and breeders. Javas are another of the has beens, but if you think they are not a good fowl you are badly off. To my mind the Black Langshans and Black Javas ought to hold a place much higher than the Black Orpington today. They have been crowded down by new varieties just because people were crazy to try something new. Then we come to that large family of Hamburgs, six varieties. Those beautiful Hamburgs! Surely there is no more graceful or beautiful variety than those Hamburgs. They lay like slot machines, and if breeders would waken up to the fact they would find that the Hamburgs are one of the best varieties of domestic poultry. But why are they not bred? The answer is the same, because people are crazy over new breeds.

The Red Caps are a very handsome variety and excellent layers, but very seldom do we see them at shows or advertised in the journals. Among some of the other breeds that are very seldom seen at our shows are the Dorkings, the Jersey Blues, the Blue Andalusians, and truly it is seldom we find a large class of Cochins. It would be a disgrace to the poultry business to let these great kinds of fancy poultry drop in the rear. Yet this is just what they are doing. The Silver Penciled Wyandottes, which were talked about so much a few years ago, are little heard of now, and it looks as if there were others to follow if we don't find some way to rescue them.

Now, friends and poultry fanciers, what are we going to do with this great army of old breeds? Let them drop from the fancy? I for one yell no. It is up to the breeders of these varieties to get together and boom their favorites. Advertise them. Write about them. Get pictures taken of them and get cuts pub-

lished in the poultry journals far and wide. Let people know that you have a good thing and are willing to stand back of it. Then, too, I think it would be much better to keep a lot of these new varieties out of the Standard till they have proven their worth. Build up some of the varieties we now have and we will be busy for some time.

If you are thinking of taking up another variety just try one of these old timers and put the care and money in them that you would a new variety, and I would risk a new hat that they will do just as well and make you just as much money as some of the newer varieties. Can't we and won't we give a little more time and attention to the old breeds that were the joy of our father's heart? Will we stand with our hands folded and let them drop out of existence? We hope not. It is up to the breeders of these old favorites to speak their piece, and I sincerely hope they will speak it soon and often.

Plummer McCullough.

SYMMETRY IN CONNECTION WITH POULTRY.

The poultry papers of today contain much valuable information covering all branches of poultry keeping, and there are also many valuable books published touching on the subject, but very little has been said or written concerning the general appearance of poultry houses, yards, coops, etc. This is a matter that should receive its share of attention, and if one expects to obtain the very best results financially it must be considered seriously.

One of the best advertisements a breeder could possibly obtain is a neat coop or building in which to house his stock. A pen of first-class breeders will appear to much better advantage if the birds are confined in a well-built house with a neat yard adjoining, and it would be the means of attracting visitors, which is one of the best methods of advertising his stock.

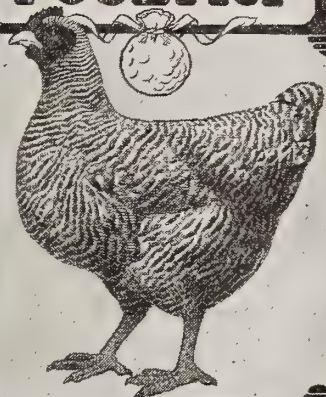

It is sometimes necessary for one just starting in the business to cut expenses wherever possible, but even he, with a little forethought, could improve the general appearance of his place by artistically arranging his coops and yards.

The first problem to be considered in the poultry business is shelter. If the house is to be built in an open field adjoining the other buildings it should be so built that it will harmonize with the trees, fences, slope, etc. Have the roof of the proper pitch and if the door is to be in the end of the building so locate it as to not give it the appearance of being "all door" or "no door," which is very often the case. This also applies to the windows, which should be arranged with about equal space on each side and a trifle more space at the bottom than at the top.

Paint is an article very seldom used by the average poultryman. Too many poultrymen build good houses and then stop. Paint looks like a luxury to them, but after the buildings have been in use a few years and the defective boards begin to show signs of decay, we then see where the use of a little paint at the beginning would have lengthened the life of our buildings. It does not require much paint to cover a poultry house, and when it is painted dark body and light trim I know of no other farm building that can be compared with it.

MONEY MAKING POULTRY

Pittsfield Poultry Farm
PITTSFIELD, MAINE

This Free Book Tells You How to Make Money From Poultry

If you own hens, many or few, you ought to write to-day for "Money Making Poultry." It is a book of wonderful poultry information and facts, giving details on how to make money out of your poultry. Even if you are doing "pretty well" "Money Making Poultry" will tell you how to do still better—how to get more eggs—how to get better quality hens—how to get more money.

If you are just starting your poultry yard, it tells you the breed to select for egg-laying and market profit, and tells why. It points the way for the experienced poultryman to improve his stock at least cost. Read

"The Breed That Pays"

Our manager, a poultry man of wide experience, has written a specially valuable article for "Money Making Poultry," on "The Breed that Pays." And lastly, the book gives the whole interesting story of poultry life on the Pittsfield Poultry Farm, where the marvelous "bred in Maine" Pittsfield Strain of Barred Plymouth Rocks have been developed. It gives you the results of our methods of handling and feeding. Tells you what feed we use, how it is prepared, when we feed and how much. It explains how we maintain the money-making qualities that have made Pittsfield Strain the leaders among Barred Rocks.

In fact, every needful help to make you succeed better in poultry raising will be found in this handsome book, it matters not whether you number your flocks by thousands or by tens. "Money Making Poultry" is illustrated with full page copper-plate engravings of drawings by well-known poultry artists and from photographs, showing prize winners as well as utility birds. These show the great perfection attained by Pittsfield Strain. Yet a copy of this exceptional book is yours for the asking.

If It Is a Barred Rock, Ask If It Is Pittsfield Strain

Do you know that at the big 1910 Boston Show Pittsfield Strain won more prizes than the birds shown by any other exhibitor. Here is a partial list of our winnings—1st Cock, 2d Hen, 1st Exhibition Pen of Chicks, Special for best Cock and Four Hens and Six other big Prizes; and this is only one show. The show season is now on. If you want birds that are ribbon winners or ribbon-winning breeders, let us send you single birds or a pen. All our stock is mated with scientific care to breed true to the Barred Rock standard, and the result is finely barred, splendidly shaped birds that score exceptionally high. Our 1910 stock is the best we have ever produced. You will say they are the best you have ever seen.

Our Birds Are Maine Bred

The Pittsfield strain—bred in Maine—are bred to the highest egg production possible for maintained bodily vigor, hardy reproducing powers and strong constitution.

It is important to you to get "bred in Maine" stock. All our birds are raised and kept under the most approved sanitary conditions, in open houses, and handled with keen attention so as to develop constitutions able to withstand the vigorous conditions of Maine weather and climate. And they do. If you would be a successful poultryman, let Pittsfield Strain be the foundation of your stock. We are offering selections from our choice breeding pens at reasonable prices—a splendid chance to put your yards in shape for next season. Pittsfield stock probably owes its enviable reputation to its superb utility qualities more than to any other thing. It is hardy, reproduces with the minimum loss and lays eggs prolifically. You need this blood in your stock.

We have splendid values to offer in utility cockerels, early hatched and the kind that make sure breeders. We can furnish you eggs for hatching every month in the year. Day-old chicks for Spring delivery. Be forehanded and book your order early because everyone is buying Pittsfield Stock.

BEGINNING TO KEEP FOWLS.

Though the ranks of poultry keepers are constantly being added to, there are still many who might keep a few fowls easily but fail to do so. Residents in large towns such as New York or Chicago, who find it so difficult to procure new-laid eggs, are not readily persuaded that poultry in a small yard will, as a rule, lay more eggs than those having an unlimited range. But, provided there is a corner of a yard or garden in which a small house can be put up, and a few feet of wired in run joined to it, a few hens should prove very profitable.

The fall is a very good time of year for making a start. Pullets hatched in March or April ought to begin to lay now. They can be purchased at moderate prices and it is much easier now to distinguish a young bird of this year from an old hen than it will be after Christmas. There are many good breeds of fowl for the beginner to select from. If the birds are to be kept in a small space it will be better to start with a non-setting variety.

It is seldom advisable to hatch and

not more than three feet from the ground.

If the intending beginner has plenty of space and means to go in for fowls on a larger scale, he ought first of all to ascertain the local requirements; whether there is a demand for eggs or table poultry or both. If it is decided to rear table poultry, as well as to provide eggs for sale, it is better to have two separate sets of fowls; the stock bird from which to obtain chickens for eating can be an Indian Game, or one of these males running with Dorking hens, or Brahma hens with a Houdan cock.

Either of these matings will result in large, meaty chickens, the cross between the Indian Game and the Dorking, perhaps, being the most satisfactory. A pen of six hens and a cock of either of these can be placed in an enclosed run, and there should be enough eggs from these from which to hatch plenty of chickens to begin with. Movable poultry houses are now made so well and so cheaply that it is better to buy them from some well-known maker.

For egg production the fowls recommended for small runs will do well. As brown eggs are preferred by some peo-

pairs went to the Franklin County Fair at Sheldon, winning beautifully.

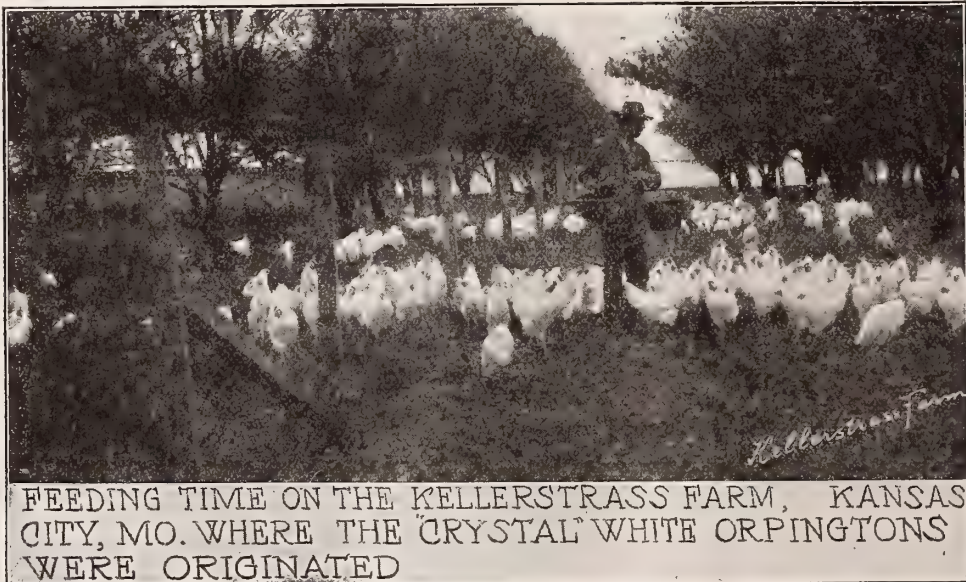

Incubating capacity bothered me, but I managed to set 160 eggs, securing 130 chickens.

I now have 100 beauties, and a good bunch of them are marked for ribbon eaters.

Mr. Rat, the midnight marauder, forced an entrance into one of my coops one night and started a bank account of seven nice Columbian chicks. One of my good steel traps closed on his locomotive gear and put a stop to his banking propensities in a very few hours.

White diarrhoea made a sudden charge on my little flock. A liberal spray of carbonol solution (three table-spoonsful to a quart of water) in the coops to kill the germs, boiled milk with four drops of carbolic acid to the pint to drink, and white diarrhoea disappeared like prize ribbons before Prouty, of Swanton.

Old king louse tried his luck. Again the carbonol solution worked wonders. That and a little Empire lice killer gave them their comeuppance in a hurry. Disadvantages and chick enemies have assailed me on every side, but I am in this game to stay and I

FEEDING TIME ON THE KELLERSTRASS FARM, KANSAS CITY, MO. WHERE THE "CRYSTAL" WHITE ORPINGTONS WERE ORIGINATED

rear chickens in a confined run, and hens that become broody are more trouble than those that do not sit. Some arrangements have to be made for confining the former when they desire to incubate. Extra room, which can ill be spared, is then required. Minorcas, Leghorns, Andalusians and Houdans will all suit a small run as non-setters, as they do not get broody and lay a number of eggs. They do well in confinement and with the exception of White Leghorns do not show smoke or dirt.

It is not necessary to have a male bird, as a hen will lay equally well without one. There is then no cock crowing nuisance and no annoyance to the neighbors. Young hens, moderate feeding with a breakfast of soft food early in the morning, cleanliness in the house and run and no overcrowding are the chief factors in satisfactory poultry keeping in small runs. The house must be water-tight with ventilation arranged for by a small opening near the roof. The perches must be placed

ple and as the breeds mentioned all lay white eggs, some White Wyandottes, Buff and Black Orpingtons will be useful. However large may be the space available, the beginner ought to start only on a small scale, adding to his stock later on if he finds that he is doing well.

A. V. Meersch.

AN AMATEUR'S EXPERIENCE.

A family of seven, small means and a hearty disgust for mongrels is a bad combination for the amateur.

By dint of hard work and close calculations I managed to purchase a sterling trio of Rose Comb Brown Leghorns, Rose Comb White Leghorns, and Columbian Wyandottes last January. Having purchased the Brown Leghorns just before the state show at St. Albans, I exhibited the same, winning some nice ribbons and a small prize. A desire for chicks was then strong within me. Securing two broody biddies, I had the good luck to hatch twenty-two fine chicks from them. Eighteen of these I now have. Six

calculate to be on the warpath all the time.

Now the summary of this humble account is this: Standard bred stock is the stock to raise; courage, perseverance and a constant lookout for breakers necessary; scrupulous cleanliness and untiring diligence coupled with good judgment spells success to the poultry man. My method in caring for my poultry house, colony houses and brood coops is to clean them of all droppings and dirt three times a week. Spray them with the above mentioned carbonol solution three times; and with gasoline twice a week. This treatment keeps all lice and disease germs away.

In conclusion, would like to say a word for the Columbian. One of those pullets has hatched me two fine broods of chicks and laid lots of eggs. The other has laid right through without going broody. I call them a most excellent breed. As for the Leghorns, the way they will lay is simply astonishing. Columbian Wyandotte and Leghorns for mine always.

H. B. Greene.

FANCY AND UTILITY.

BELIEVE it possible to combine the utility with the fancy points to make an all-round useful bird and a prize-winner, and if I cannot have both then give me the utility bird every time.

Some poultrymen think that they ought not to let their hens lay in the winter time if they are wanted for breeders, as that will detract from the egg's fertility in the spring when they want them for setting.

Now, then, how are they going to breed a 200-egg strain if their hens do not lay in the winter, or how are they going to breed that strong point into their chickens if they do not have their hens laying in the winter time, the most important time of all when eggs are at the highest price? You may not think that you want that kind of fowl, but your buyers are looking for that kind because eggs are a sure thing, but prizes are not always sure, and therefore if you want a strong selling point you want hens that lay in winter.

You have to watch all the points to make a profit. I do not believe in feeding too much, for you can feed too much. You will get no more eggs when you are feeding them so much as when you feed sparingly and let them scratch for a living. I have only a few White Wyandottes on a city lot. I feed twice a day and my chickens will dress nicely for the table any time I want to kill them, though they are not fat, and I get eggs from them all year, or at least ten months, from January to the end of October. Let them look for their feed and eat up clean all that you give them. I do not think it necessary to be always giving them some kind of forcing food. Feed judiciously, with variety. They should always have a run on some grass plot or garden, even if for only an hour or two a day. In the winter time they should always have a covered run or open scratching shed, and they should have green cut bone and clover meal or other grass.

Another important point in winter is that their sheds and roosting house be free from draughts, though there should be ventilation, and I find the muslin curtain the best yet. Then feed them regularly and give them water and grit.

They must also be kept clean and free from lice, or else they do not get the benefit of the best of feed.

—o—
We lead; others follow.

INCUBATORS AND BROODERS.

As the fall months are here and the fairs and poultry shows begin to come it is common to hear one say, "I am going to buy an incubator and brooder at this or that show this winter so I can get some early chicks next year." If so, now is the time before you buy to think it over what kind of an incubator or brooder to buy. Some will say, "I don't care what kind or make, so long as I get good hatches." So, for the benefit of American Poultry Journal readers, that it might save some one a poor hatch, I will write you my experience on this subject. As all my hatching has been done by hens, and that next year I must increase my stock, I decided to buy my first incubator at the

Poultry Show. I spent most of the day looking at this and that make of an incubator and brooder and I found that they all seemed to have had good hatches at the show, so I thought it was then a matter of choice on the looks of the machine, so I bought an 100-egg machine, hot air. I got it home all safe, unpacked and set up in the cellar and lit the lamp and got the heat up to 103 very slowly. Then I thought to run it empty for a few days, but every time I would open the door it would never come back to 103 degrees. It would be anywhere within 5 degrees above or under 103 degrees, but my courage was good, so I put 100 eggs in the machine, and I followed the directions as close as possible because I wanted my first venture to be successful and I wanted early chicks also. Well, I was up at all hours of the night trying to keep the heat at 103 degrees. After testing out I found my fertility 78 per cent, but on the twenty-first day I got seven chicks, weak and hardly able to come out of the shell, all dying in three days. It made me feel for the man that sold me the incubator. Then it started me to think that my incubator was fit for nothing but kindling wood, but how was I to know what was the matter with the machine. So in the summer in my spare time, with what experience I had and the aid of some good books, I found that an incubator must have a sensitive thermostat and must be properly ventilated, and that a machine which is properly ventilated in 99 cases out of 100 has self-supplied moisture. Of course, if you run your machine in a very dry room, then there will be lack of moisture in the air and some moisture must be supplied in the incubator, but these cases are very few. By proper ventilation I mean that fresh air coming in contact with a heated surface, but must not come in contact with

the fumes of the lamp; is taken into the incubator and drawn down through the egg chamber and then allowed to pass out of the machine. This being done, you have at all times a slow current of fresh air, containing its natural proportions of nitrogen, hydrogen, oxygen, etc., and warmed to 103 degrees, passing through your machine. But if your machine is not properly ventilated the deathly gases, which are thrown off from bad eggs or dead germs, make it impossible to hatch many chicks, and if a few hatch they are not worth raising, always being poor and never fit to breed from. This was the trouble with my first incubator—very poor circulation of air. Then, too, we must have a very sensitive thermostat, one that will expand and contract to the slightest fraction of a degree. Having these good qualities in an incubator, and good eggs, with proper care you will have good hatches.

Then comes the brooder question—just as important as the incubator, as it is no good hatching chicks only to die in the brooder. I have seen many brooders made by men that never thought it was necessary to study the proper construction of a brooder or the natural requirements of a chick's life, but in each case it has proved a costly experience. They thought that all that was necessary was to keep a house in which the chicks live warm. Under this treatment the chicks would soon die, and then they would say all brooders were no good. But I find by experience that a brooder must be supplied with fresh air containing its natural proportion of oxygen, hydrogen, nitrogen, etc. This is done by the fresh air being heated to a degree and taken direct into the hover, the chicks are allowed to breathe it, and then it passes out of the brooder. Therefore, it is as with an incubator—a slow current of pure air is at all times passing through your brooder. Of course the heat must be supplied from the top, as bottom heat causes leg weakness and other trouble. You may have heard your mother say to you, Keep your feet warm and your head cool, boy, but it is the other way with chicks. Keep the head warm and feet cool. I write on this subject for those who are intending to buy a machine at some show, believing it to be a seasonable subject, as a stitch in time saves nine.

HOUDANS

Houdans are fast taking the place of other breeds as winter egg producers. For centuries past they have been the leading egg producing breed of France. We raise Houdans by the thousands and always have for sale choice breeding and exhibition stock. Our new Houdan Book will soon be ready; send 10c for a copy. It will tell you all about Houdans and how to make money out of them. It tells the story of our success with Houdans. It cost hundreds of dollars. Send 10c for postage and if not satisfied you can keep it and we will refund the 10c.

Book January, 1911, egg orders now. 200 fine breeding and exhibition cockerels for sale at \$3, \$5, \$10 and \$25 each.

ORPINGTONS

BUFF
BLACK
WHITE

Are bred from the best strains in America. Our Houdan book tells about our Orpingtons.

DR. G. W. TAYLOR - Box A - ORLEANS, IND.

WHAT CONSTITUTES A GOOD POULTRY HOUSE.

GOOD hen houses are one of the most important items in successful poultry keeping. No matter what stock we have and what food we feed our birds, as long as they are poorly housed our success in poultry will be very doubtful. A poorly located and badly built house not only injures the productiveness of the birds but is a constant source of disease as well.

In order to get the best results we must bear in mind the following points when building a poultry house:

1. Good location.
2. Type of the house.

3. Amount of floor space for each bird.

4. Good ventilation.
5. Abundance of light.

1. Location.

In locating a poultry house three important points are to be considered:

(1) It should face south or southeast.

(2) It should stand on elevated and well drained land.

(3) It should be protected from prevailing winds by a hill, trees or other buildings.

2. Type of the house.

There are as many types of poultry houses as there are poultry keepers. Each type of a house is designed to meet certain conditions and has its advantages and disadvantages.

A single or double pen poultry house with an open front scratching shed I consider the most suitable under all conditions. The house must not be too high, as it is more expensive, has too much dead air space to be warmed up by the fowls; six and a half feet high in front and five feet in the rear is high enough. By having a shed roof we cut down the expenses and do away with the dead air space.

Whether to have the walls single or double boarded depends entirely on the climatic condition, while having the north side double boarded is always advisable.

The best and cheapest floor is the earthen one, specially when the soil is sandy. It also provides a place in which the birds like to wallow. By removing the top soil about 6 or 8 inches deep once or twice a year and replacing it with fresh soil, we keep the house in healthy condition.

To make the house rat-proof, dig a ditch around the house close to the walls, insert in the ground 1/2-inch mesh wire fencing, 12 to 18 inches deep and 18 inches above the surface, and staple it to the walls.

3. Floor surface.

In building a hen house we must remember that overcrowding is never economical. We must allow to each bird at least 4 square feet of floor space, for the light, active breeds, as the Leghorns, much more. In colder climates, where birds must spend much of the time inside the house, 10 square feet for each bird is not too much. A house 10x20 feet divided into two parts; a roosting place 10x8, with a window in front and an open front scratching shed 10x12, will comfortably accommodate from 25 to 30 birds.

4. Ventilation.

Ventilation is the main requirement in keeping the house in sanitary condition. No special means need be installed to secure ventilation. Keeping the window wide open during the day and also during the night, provided the window is protected with a muslin curtain, is all we need to provide thorough ventilation. In ventilating the house avoid draughts, as they are the main cause of many diseases, as colds, roup, etc.

5. Light.

Plenty of light is also very essential for the health of the birds. It makes the house cheerful and comfortable. The sun is the best germicide known, therefore in placing the windows we must see that the sun's rays should strike every spot in the house at some time during the day. But this does not mean to have too many windows. An ordinary window in the front of the roosting place and the open front of the scratching shed will fully answer the purpose.

B. Rabkin.

ANOTHER NEW ONE.

Profitable Poultry is the name given to a new poultry magazine, published at Boston, Mass., first issue of which made its appearance November 1. The editor is A. F. Hunter, the well known writer. The publishers claim that this magazine is going to be different, inasmuch as it will be published in the interest of its subscribers. We wonder if this is the same old story. We hope not. There is, however, a good field for a magazine of this kind and we wish them every success.

"ROYAL BLUE" BARRED PLYMOUTH ROCKS

The Greatest Prize Winning Strain in America—We have some very choice standard bred cockerels at very low prices and also a few very large Imperial Pekin Drakes, Rankin's strain direct. Our aim is please everybody and we can please you. Write for price list.

Sweet's Hill Poultry Yards : E. B. Sweet, Proprietor : R. F. D. 1, East Holden, Maine

S.C.W. Leghorns : S.C.R.I. Reds

We have 200 very choice utility and exhibition grand cockerels for sale. These are large fine colored birds. Also a few very fine females to spare. Now is the time to have us book your order for baby chicks for future delivery and eggs for hatching. We have the quality. Send for prices. See our advertisement in January number. Mention American Poultry Journal.

Greystone Poultry Farm, L. A. Dowing, Proprietor, Main St., Enfield, Mass.

"Evergold" Buff Wyandottes

are going to capture first money at some of the good shows this winter. Why not for you. Cockerels that will win and breed good ones are what you want. Write your needs to Gerald Williams originator of the Evergolds.

Feather Fine Farm - Wellington, Ohio

SKINNER'S STANDARD

WHITE WYANDOTTES

Special for December. Large, blocky snow-white cockerels; good comb; bay eyes; good enough to head any one breeding pen. \$5 each. Mention American Poultry Journal.

F. E. Skinner - Sandwich, Illinois

56 PRIZES ON BUFF, WHITE AND BLACK ORPINGTONS

At the Poughkeepsie, N. Y. Fair, Sept., 1910, where a total of 3900 birds of all breeds were exhibited, we won 25 prizes out of a possible 30. At the Brockton, Mass. Fair, Oct. 1910, usually conceded to be one of the two best if not the best of the fall Shows, we won 31 prizes, including a grand special for best display of Orpingtons. This year's show was the largest ever held at Brockton. The total number of birds of all breeds on exhibition was nearly 5000. We have the quality that will produce winners for any show. A few Buff and Black yearling cocks, and White and Buff cockerels for sale at low prices to make room. Eggs after January 1st. Day old chicks about March 1st. Send for day-old chick and egg circular.

Grannis Bros., R. F. D. 12, LaGrangeville, Dutchess County, New York

Barred Ply. Rocks

"Hoosier Strain"

One of the oldest and most popular strains. Winners at Chicago, Kansas City, Indianapolis, Fort Wayne and numerous other big shows.

For Sale: Show birds, both old and young, fit to win in any contest. Fancy breeders and utility birds that can be depended upon for first class results. 250 big, vigorous cockerels at \$2.50 to \$5 each. Write today. Satisfaction always guaranteed.

G. Earl Hoover, R. 24, Matthews, Ind.

AUTUMN REVERIES.

AUTUMN is here and the time for a general clean-up is at hand. It makes no difference if you are in the habit of cleaning your poultry houses twice a week; they should be given a good, thorough overhauling and cleaning before winter sets in.

Remove all nest boxes and white-wash or use some other good disinfectant back of them, for the favorite breeding place for mites is in darkness. They shun daylight as a cat shuns water.

some of the surface and replace with fresh earth.

The rainy season is here (I am speaking of central New York) and continual dampness prevails about the poultry yards, even if they are well drained, and some preparation must be made for a dust bath.

A box three feet square, twelve inches deep, placed on short legs and partially filled with road dirt or loam, will be duly appreciated with a full egg basket.

If you use round poles for roosts, be sure and remove the bark, for if this is not done they form one of the most

Finally I tried kerosene and carbolic acid, mixed, one ounce to the gallon, and sprayed on with a brush broom, in quantities sufficient to run down the wall.

This seemed to work first-rate, for I had the satisfaction of seeing several thousand turn on their backs and with feet waving in the air and other signs of distress, glorious for me to witness, pass to the great unknown, where lice lose their appetite for hen flesh.

It was immediately after this that I discovered the real cause of this great superabundance of lice, for in looking over the roosts to see if I had done a

Look carefully about the ends of the roost poles, if any are visible. It is because the cracks and seams in the woodwork are overpopulated and should have immediate attention.

Paint the under side of the roosts where they rest on whatever kind of support you may have for them with a preparation made by mixing kerosene and coal tar in equal parts, but do not get it where the fowls will get their feet in it, or sore feet may result.

No louse of bad character has ever been known to cross this 'paint' when he could possibly go around.

If you have a ground floor, remove

improved and up-to-date mite incubators I have ever had the misfortune to see.

Once while working about the yards I chanced upon a round, smooth, soft maple pole, and being in need of an extra roost, I placed it in a house where I had about sixty head of old fowls undergoing the process of fattening for market. In less than a week I noticed that this house seemed to be overrun with mites, although I had used the sprayer with kerosene about the roosts every other day. But kerosene seemed to be fattening to this particular strain of mites.

good job I chanced to put my hand on the end of this pole. What was my horror on taking it away to find it perfectly covered with mites as fresh and lively as ever. After killing what did not escape up my sleeve, in their mad rush to reach my head where they could ramble about in my hair, I lit a match and soon saw where the trouble was. Mites were pouring from beneath the bark on that pole in numbers that would probably have caused another rise in the price of kerosene before I could have purchased enough to have exterminated them in the way I was applying it. I immediately removed

LIGHT BRAHMAS—BARRED ROCKS

Our breeding yards this season contained our New York, Chicago, Detroit, Indianapolis and Toledo winners. No higher class breeding pens were ever mated. The result is we have young stock that is unsurpassed. If you want the best utility or exhibition birds, either Light Brahmas or Barred Plymouth Rocks, tell us just what you want, and we will quote you reasonable prices for stock of high quality. You had better purchase a few birds of high quality at a fair price than to get a lot of scrubs or market poultry for nothing. The older breeders know this. Some of the largest breeders in this country are our customers.

Our plant is modern and is kept in proper sanitary condition. Our stock is free from vermin, roup, tuberculosis and other diseases which result from filthy and insanitary quarters. Our stock is healthy and vigorous, and are great layers. Instead of buying medicines to dope sickly and weak stock, start with healthy birds that do not need doping. We want to hear from those breeders, either amateurs or professionals, who want the best, whether for utility or show purposes. We have published two catalogs, one on Light Brahmas, and one on Barred Plymouth Rocks. Send ten cents in silver or stamps and tell which variety you want, and we will mail you the handsomest illustrated poultry catalog you ever saw, describing our stock and plant, and giving prices.

We are also distributors for the NORWICH AUTOMATIC EXERCISERS and FEEDERS, and we ask you to turn back to the back cover and read the "ad" for these machines, which you will find there.

River Home Poultry Yards : Box B : Perrysburg, Ohio

the pole to the yard, chopped some holes in the bark, poured the interior full of kerosene and in five minutes, with the help of a lighted match, I was rid of the mite hatchery that had caused me days of hard work and worry.

Moral—Be thorough in what you do.
Arthur Hoatland.

TRAP NESTS.

It has been thoroughly demonstrated to the satisfaction of all thinking people that to obtain from a flock of hens more than the ordinary number of eggs something more than the mere breed is necessary. Housing, feeding and care are very essential, but

even the best housing, the most careful feeding, and the most excellent, expert, painstaking care will not produce the desired results without previous preparation, either directly or indirectly. You must have either prepared your flock for the emergency yourself, or some other person performed the duty for you.

Many farmers throughout these United States of America plant their corn crop from year to year without any definite aim or particular thought as to what will be the result. They plant whatever they find to be sound grain without due regard to its past production and in the harvest time are astonished at the light yield. They

may plant the crop in proper season, it may have all the providential assistance necessary, it may be cultivated to a "queen's taste," but without previous preparations the result will be disappointing if anything beyond the ordinary is expected.

In every community there are a few persons who wish to excel. Be they farmers, merchants, stockraisers, manufacturers or poultrymen. Each are endeavoring along legitimate lines to produce more satisfactory results than his neighbor. This has been especially true of the manufacturers and stockraisers, but not until the last quarter of a century was the poultry business considered of sufficient importance, save by an exceptional few, as to even suggest a scientific investigation. People who owned chickens were content with what eggs they obtained without any special effort, and consequently but few eggs were obtained, comparatively speaking, except at certain seasons of the year. But in these latter years of high prices it has been found that by the employment of proper methods the production of eggs can be made a profitable industry, and consequently greater efforts have been made to obtain more eggs from fewer hens. And as the breed, feed nor management alone would produce the desired result it was found necessary to begin the breeding from the healthiest, strongest, best layers obtainable, year after year, until a "laying strain" has been produced. To do this it is necessary to keep a correct record of each hen's production, and no better method has been found than the use of trap nests and leg bands. Anyone desiring to use trap nests without going to the expense of buying may construct same from any ordinary boxes as described below, which will be found to work excellently.

While it is not necessary to have nest boxes of any special dimensions, it is best to have them of uniform size if many are to be used, as it will add greatly to their appearance. The nest boxes here described were made by the writer for his own use and are twelve inches high, twelve inches wide and seventeen inches long. The door is hinged to a large wire, crossing the top at the front end of nest box and when raised to receive the hen is secured by thumb-latch. The box, of course, is covered, either with a lid or rests beneath the dropping board, and when the hen walks into the nest she is compelled to raise door, which releases thumb-latch, and when the hen passes in door, being released by thumb-latch, drops down behind the hen and she must there remain until taken out and the number recorded by the keeper. Geo. R. Cowan.

The New American Standard of Perfection is promised us this month. Send your order now and avoid the rush. Full particulars on inside back cover.

"Ignorance is bliss; 'tis folly to be wise." This may be in some cases, but not in the poultry business. Get wise and advertise.

Tell your friends about the good things in American Poultry Journal.

More people are starting in the poultry business this year than ever before. Is the business booming?

A FEW HINTS ON PREPARING BIRDS FOR THE SHOW ROOM.

AS the show season is here, I think quite a number of breeders who are amateurs in exhibiting poultry would like to know something about the same.

The first thing you must have is good stock, and if you want your birds to win you must fix them up according to the variety you have. Don't think for a minute that if you have good birds that you can pick them right from your yards and send them to the shows and expect them to win, for you will be greatly mistaken.

The main thing is, if you get good stock is to get your birds into first-class condition. This can be done by selecting the best birds and penning them up. Birds that are clean legged must be made to scratch as much as possible for about a month before showing them, and those that have feathers on feet must be fed from a trough so as not to let them scratch and break their toe feathers. Also pluck all broken off feathers that have been broken while they were in the run.

By letting the clean legged varieties scratch, it gives the legs a nice, glossy appearance and puts the birds in good condition, and by not letting the feather footed varieties scratch it gives the feathers a chance to grow, which adds much beauty to the bird.

All birds, especially white birds, ought to be washed. This should be done at least one month before the show, because it takes quite a while for the feathers to straighten out and go back to their natural form. Some breeders wash their birds about a week before the show, and when showing time comes they look more like the frizzle varieties than anything else.

When washing your birds select a nice warm, sunny room, take water that is just about warm, wash the comb, head, beak and lobes good, then get at the feathers and soap them up good, then rinse them off and then get at the legs and wash same thoroughly. After this is done take the birds and place them near a good warm stove for at least half a day, until the feathers get good and dry. Then take them out and rub the feathers the way they run, to get them back in their natural position. Do this at least once a day until the show.

When showing the Cochine varieties, great care should be taken to get the feathers nice and soft as possible. The feathers on the hocks and the fluff should be combed just the opposite way they run, so as to make them fluffy and to make them extend outward as much as possible.

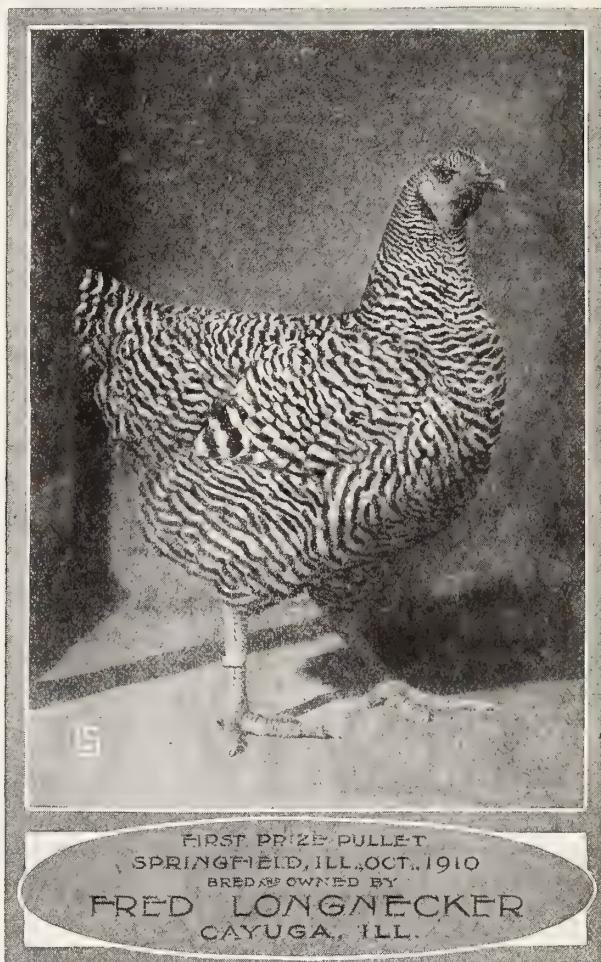

Always try to tame the birds by handling them quite often and feed them from your hands, so that when the judge starts to handle them they will not try to get away. Always try to have them stand to the best advantage of their shape.

Before shipping feed them a pinch of onions, which gives the comb a nice red appearance.

As the weather is not very nice at this time of the year, great care must

DRY FEED FORMULA AND DESCRIPTIONS OF FEED BOXES FOR SAME.

DRY feed method for fowls appeals to me because of its seeming good common sense. We all know hens lay best usually when out on the range in summer. We know also that here their food consists of whole dry grains, instead of mashes, and insects, grasses, etc.

be taken when shipping to have the birds comfortable, so as to prevent roup, and so as not to have the birds freeze their combs. Advertise your birds at the show, and if you prepare your birds as above stated you will win your share of prizes, and will be well paid for the work done.

H. J. Weiss.

We lead; others follow.

This article must be too short to go into details, therefore I will briefly give you the formula for a dry meal mixture which I prefer to any other I have tried:

200 pounds wheat bran.
100 pounds cornmeal.
100 pounds middlings.
100 pounds gluten meal or brewer's grain.
100 pounds linseed meal.

Big Money in Rhode Island Reds!

No breed excels the REDS for laying, beauty, general purposes, or show room. No strain of Reds excel

Buschmann's Non-Fading Rose Comb Rhode Island Reds

Our show record in NINE different states during the past seven years stands unequalled. **THREE GREAT RECORDS THIS FALL.** Indiana State Fair, Tennessee State Fair, and Illinois State Fair. **FIFTY-ONE OUT OF A POSSIBLE FIFTY-FIVE PRIZES.** Our other records in 1909 and 1910 stand out above any other breeder at such shows as Cincinnati, Ohio, Indiana State Fair, Illinois State Fair, Chicago, Kansas City, and Fanciers' Association Show, Indianapolis. Four different cock birds took four first prizes at four of these shows. Our sales list and show records will be sent if interested.

2,500 Young Birds to Sell. 50 Cocks and 100 Hens to Sell

Have you seen my "Origin and History of Rhode Island Reds," also how to mate, line breed and judge them. Send ten two-cent stamps.

C. L. Buschmann, Non-Fading R. C. Rhode Island Reds, 4939 N. Meridian St., Indianapolis, Ind.

100 pounds beef scrap.

These materials are emptied on the floor in layers and shoveled over until thoroughly mixed, then stored in some clean, mouse-proof place.

This is the same mixture as used at our experiment station at Orono, Me. I also feed the same kind and quantity of whole grains as is used there, namely, 4 quarts cracked corn for one of the feeds (I feed this at night) and 2 quarts wheat and 2 quarts oats per day for 100 fowls.

The meal mixture is kept by them all the time, as is charcoal, grit, oyster shells and dry cracked bone.

When possible vegetables of some kind are provided, also cut clover.

The best thing to feed the meal mixture in is the feed boxes manufactured by the Orono plans. They use two kinds, one for the houses and another style is for outdoor use, for fowls or growing stock on the range. As there will be no better time than the present winter to prepare for next summer's work, I will tell you how to build these feed troughs.

A board 7 inches wide and as long as you desire your box to be is used for the bottom; the ends should be the same width and 18 inches high. Board the back up and use a board on top for a cover, sloping it forward enough so

the fowls cannot stay on it. Nail a strip 5 inches wide along the front edge of the bottom for the side of the trough. Pieces of lath are nailed upright on the front 2 inches apart between which the hens reach through for the food. A thin strip is fastened to the front of the trough at an angle of 45 degrees to catch the meal pulled out by the birds and would otherwise be wasted.

The outdoor feed trough is made nearly like No. 1, except the ends are cut gable and 16 inches high. There are laths on both front and back. The box is 6 to 10 feet long and covered by a roof which projects 2 inches at the sides, to keep out the rain.

By lifting one end of the roof (it is not fastened) and sliding it endwise on the opposite gable the trough may be filled without lifting. Place this in a sheltered position and its contents will remain dry unless during a heavy rain and wind storm. D. M. Grover.

THE GREAT ILLINOIS STATE SHOW.

The officials in charge of the Illinois State Poultry Show, which will be held in the State Arsenal, Springfield, Ill., January 2 to 7, 1911, are making a strenuous effort to put the seventeenth annual

exhibition ahead of all former exhibitions, and to make it the biggest and best poultry show in the West; and there is no reason why it should not be accomplished.

The city of Springfield is located in the center of the greatest agricultural district in the world, while the railroad and inter-urban conditions are among the best.

The Illinois State Arsenal, where the show will be held, has the largest ground floor space of any building in the United States. The show will be cooped with the beautiful new Empire coops and the prizes offered are most liberal.

Besides the remarkable cash prizes offered, over one hundred silver cups will be given. The congressmen and senators of each congressional and senatorial district are offering a silver cup. Five hundred dollars in cash specials will be offered by the Sangamon County Poultry Association and a \$5 gold special will be offered on the best ten females in each variety.

One of the special features of the exhibition will be the new classification of display yards. These yards will be displayed on the floor around the outer wall of the room. Every evening during the show a pair of some variety of fowls will be given away, which will no doubt be a great attraction to the public.

Another prominent feature of the show this year will be the dressed poultry and egg exhibit. Liberal prizes will be offered and a number of specials will be awarded to exhibitors in these classes.

The poultry institute will be interesting as well as attractive. Sessions of the institute will be held Wednesday and Thursday afternoon and night and Friday afternoon. A large part of the program will be given over to the judges of the show, who will explain the good and bad points of the winners of the different classes.

The judges selected to place the awards are Theo. Hewes, W. C. Pierce, A. F. Kummer, Charles V. Keeler, D. T. Heimlich, J. A. Johnston and Robert Joos. Frank C. Hare will place the awards in the eggs and dressed poultry department.

The premium list is ready for distribution. Send for one.

For further information address
O. L. McCord, Secretary,
Danville, Ill.

Boston Show premium lists will be out about December 1. From present indications there will be more new exhibitors than ever before. The following judges have been engaged: C. M. Bryant, Rhode Island Reds; C. A. Ballou, Partridge and Silver Laced Wyandottes; W. H. Card, Brown Leghorns; J. M. Cutting, water fowl and turkeys; J. H. Drevenstedt, Houdans, Golden Wyandottes and Ornamental Bantams, except Cochins; F. P. Magoun, Games and Game Bantams; E. H. George, White Plymouth Rocks; H. B. Gleezen, Pit Games; Horace Havemyer, White Wyandottes; Henry R. Ingalls, Buff Wyandottes and Buff Plymouth Rocks; A. Mowll, Dorkings; Wm. G. Minich, Polands; Wm. McNeill, Hamburgs; R. Oke, Langshans, Orpingtons, Cochin Bantams and Spanish; F. W. Rogers, Columbian Wyandottes and Dark Brahmas; H. N. Rollins, Light Brahmas; H. P. Schwab, Columbian, Silver Penciled and Partridge Plymouth Rocks; W. F. Fotteral, Buff Leghorns and Minorcas; D. P. Shove, American Dominiques and Andalusians; C. A. Wheeler, Silver Penciled and Black Wyandottes; George W. Weed, White Leghorns and Buckeyes.

THE WIZARD BROODER-INCUBATOR

A Remarkable Invention

For the first time in all history, a Machine that duplicates the natural processes of incubating and brooding. In reality

A NATURE HEN

sitting upon her nest of eggs directly upon the ground, or in a box of SAND or SOIL. Develops embryos wonderfully stimulated and SUSTAINED by

ELECTRICITY FROM MOTHER EARTH

"Electricity is Life". Necessary MOISTURE and CARBON DI-OXIDE AUTOMATICALLY DRAWN FROM THE GROUND, BY WARMTH OF NEST. No more wondering if chicks are being "dried out" and killed in the shells. "MOIST DIRT" under the eggs tells the whole story. So-called "Moisture Indicators" fade before this simple TEST OF NATURE. A WIZARD BROODER-INCUBATOR IS A REACH OF 50 YEARS INTO THE FUTURE. It is the first real back-to-nature hatcher and mother ever produced. It will succeed in altitudes where the ordinary incubator CAN NOT. Wherever a hen will bring off a brood, there a Wizard will also, and just as MANY and just as NATURALLY, as it employs THE SAME AGENCIES.

We want you to KNOW this wonderfully SIMPLE, SAFE and DEPENDABLE MOTHER-HEN HATCHER. Send for our free literature. It will tell you a few things about incubators not generally known, and will PUT YOU TO THINKING. If you will say on card "Send Booklet A we will show you a Wizard in colors. Don't forget to specify Booklet A if you want to see this wonderful little NATURE-HEN in true-to-life colors. Send along the card and let us get acquainted. Address

WIZARD MANUFACTURING CO. - - MORROW, OHIO

CARE OF POULTRY.

WHILE the time consumed in caring for a small flock of poultry is small, amounting to very little, yet when the number of fowls kept reaches into the hundreds caring for them is quite an item, and, whether the flock is large or small, economy of time adds to the profits of the yard.

I will give in the following lines my method of caring for the poultry on our farm.

The first trip of the day is made as early in the morning as possible after light. The grain, which consists of wheat, barley or oats (alternating them for the sake of giving the birds a variety), is scattered widely over the run, which keeps the birds busy picking up their breakfast, but if the weather is stormy or the ground wet, the grain is scattered in the house, the dirt floor

of which is covered with about three inches of leaves or litter.

The drinking fountains are filled at this time, and this is an important part of the care of poultry and should not be overlooked, as it is estimated that the egg is composed of 74 per cent of water, it is as essential as the feed.

At noon the drinking fountains are again filled, and the birds fed with table scraps and vegetables. At this time all eggs in the nests are collected, and as most hens lay between the hours of seven and one, there will be few eggs left in the nests during the afternoon. About one hour before sunset the evening meal is fed, which is cracked corn or (in very cold weather) whole corn. This is thrown on the ground in the yards or in V-shaped troughs in the houses, so that the birds can eat what they want quickly and go to bed. The fountains are refilled at this time and you will notice, if you watch them closely, that each bird as she finishes eating will take a few swallows of water and then proceed to the roost. What eggs are laid late in the day are now collected, and by that time the fowls are for the most part gone to roost.

Now the drinking fountains are emptied out and rinsed and are ready for use in the morning, and will not be broken or have to be thawed out before they can be used in the morning.

Thus can be done in three trips what usually takes as many more. Once a week the roosts and houses are thoroughly cleaned, litter changed and grit and charcoal boxes are refilled.

Lewis Hale.

"KEMPTON" RECIPE.

Double the following recipe is sufficient to feed 123 hens each morning: Four quarts of cut clover, 1 quart meat scraps, 2 quarts Indian meal, 2 quarts H. O. poultry flesh, 1 tablespoon salt, 1 large iron spoonful of air-slacked lime.

I take a large iron dishpan, put all in this pan and mix to a crumbling mash, wetting it with hot water, and I mix with my hands till every part of it looks alike and the lime has sweetened and killed all the germs in the clover or grain; this gives lime for shells and keeps the bowels in fine condition. This I give just warm each morning. Noon meal just this amount.

I give about the same amount, but of grain which makes a deep baking pan full of: Wheat, 3 quarts; crack corn, 1 quart; buckwheat, 2 quarts; oats, 3 quarts. This sits on the back of my stove to warm from morning till noon, and the same about 5:30 now every night that has been also warmed. No cold grain is fed to my flock in any way from early fall till warm weather. Fresh cold water, changed three times daily, is before them all the time. I have never heard of any person feeding in this way. We have kept White Rocks—Fishel's strain—for ten years, breeding no other kind. I now have 123 birds, from which I get from 70 to 80 eggs daily, and they have had this special feeding, and they are fine, handsome birds, white as snow, with heads a healthy red, and the song is deafening as you go to them in the morning. We have burlap to half of the upper windows, so the houses are always fresh, and the drop-board, which runs the whole length of the house is cleaned every morning before

any food is taken into the house. All water is emptied every night and the dishes turned to drain. The dressing we put in barrels and sell to greenhouse men. I box my eggs every night, cleaning every soiled one and saving all the small ones for home use. I have regular customers, who take so many eggs at different days in the week, so my eggs are up to a fine state of freshness and size all the time. I sell no eggs to stores, so I save on each dozen what the store man would put in his pocket. Our hens have always paid all expenses and a handsome nest egg every year. Last year I hatched and sold over 600 chickens with one incubator, and in September 20 of the best pullets brought me \$40

AGENTS WANTED

Save Your Fowls By Inoculation

Cholera, Roup and White Diarrhea can not exist in the poultry yard if your fowls have been inoculated with Oculum.

The most fatal germ diseases known have been conquered by means of inoculation. Cholera, Croup and White Diarrhea are germ diseases. Inoculation with Oculum kills the germ, thus cures the disease. Oculum is also a sure preventive.

"OCULUM"

Registered Trade Mark

Oculum is a wonderful new discovery that is saving thousands of valuable fowls every day. Poultrymen say it is successful beyond belief. Even the most advanced cases of Cholera, Roup and White Diarrhea have been cured with Oculum.

If you want healthy poultry, turkeys, pigeons, or other fowls, send for a bottle of Oculum and inoculate the whole flock as a preventive. Insures health in the poultry yard. Increases egg yield. Saves money and makes money for you.

Means Millions of Dollars to Poultry Men

Hancock Inoculum Co., Inc.,
Salem, Va.

Gentlemen:—Last June our grown fowls were dying rapidly from cholera, and our chicks (1200) were nearly all dead, when we inoculated all the poultry on the farm with Oculum. In a short time the poultry were free from disease, and we have hatched this year from these cholera infected hens and cocks (Young's strain) 2,000 chicks, and have inoculated them all with Oculum. Our loss this year has been less than 3 per cent. We can not praise Oculum too highly. By its use poultry, turkeys and ducks can be made to pay handsomely, as from 80 to 90 per cent of all chicks hatched can be reared. Oculum means millions of dollars to the poultry world. SPEDWELL POULTRY FARM.

A. Kinnicutt, West Albany, New York
Makes Cheap Feed That Makes Hens Lay

make sales after advertisers receive inquiries from their advertisements are due, in no small degree, to their inability to write a good business letter.

Letter-writing has become an art, and many schools throughout the country are today making a specialty of this branch in their commercial courses. A great many books have been written on the subject also and it would be of exceptional benefit to many of the readers of this publication if they could read one of these books. Following the object of this article as set forth in the first paragraph the writer will give some points which it will be well worth remembering.

Neatness is one of the essentials of business correspondence. Don't have cheap paper that blurs when you write on it, and don't have flashy letter-heads. If your present letter paper is blazoned with a half dozen illustrations of hens and cocks and some printing which was done in the backwoods, consign it to the scrap basket. Have new printed—it will more than pay for itself. Don't look on an expenditure of money for such an improvement as an expense—it is not—it is an investment.

There was a time when upon going into business a man hung out a shingle, but nowadays he hangs out a gold-lettered sign which is truly a work of art.

Have your letters typewritten if possible. A fairly good second-hand typewriter can be bought for a very small sum or a good machine may be hired for \$3 a month. If you prefer to have them written in long-hand, let the best writer in your family write them, and be sure that plain (unruled) paper is used.

Always be extremely courteous in the tone of your letters and let your prospective customer understand that you will be pleased to do business with him, and that, should he purchase and be dissatisfied you will be not only willing but glad to have him return his purchase and have you refill his order or refund his money as he chooses. It is strange what a remarkably good impression this offer of returning money has on the public and how few ever return their purchases and ask for the return of their money. There is a lot of good advice in the quotation, "There's almost as much in the way you treat customers as there is in the goods you give them."

In these days of higher education there are few who are unable to spell correctly, and such a letter as the first one, received by an intelligent person, is enough to kill almost any prospective sale.

Try in your letters to give all the information possible, being particular to answer all questions asked and telling some additional good features of the goods you are offering so that it will be unnecessary for your inquirer to write an additional letter before purchasing, as that is often the means of losing a sale.

Be prompt in your replies and courteous in all of your correspondence, but do not make your letters too long, as they become tiresome. Enclose with each reply an envelope of fair quality and with your name and address and the name of your particular breed of fowls printed thereon. This will be good advertising for you and may, if not used by the recipient at the time, result in a sale at some future time.

In a future article I expect to give

you some information and advice in relation to the preparation of your advertisements and advertising literature.

A PRACTICAL EXPERIMENT WITH LICE AND MITES.

The most effective and sneaking enemies of the poultryman are the lice and mites, yet many breeders fail to keep on the lookout for their approach, and never stop to give the matter a second thought. He might be a successful poultryman, yet neglect the important fact that they must be kept absent. No less than 10 per cent of the diseases of poultry is caused by these flesh-loving pests. It is plain to be seen that a fowl invested with this form of insect life cannot be profitable under the best of conditions. She is bothered night and day with them, her food goes to their support instead of her own, therefore she becomes weak and cannot withstand the most common diseases, while the lice and their helpers multiply rapidly and soon claim their victim entirely. However, the trouble cannot be considered over, after the one dies and the lice destroyed that caused her loss. This is not the only one of the flock that is infested by them; without a doubt each and every bird of the house contains more or less.

More fowls are devoted to this disastrous cause than many suspect. Some wonder why he does not secure more profit by his manner of keeping his fowls. He purchases books of all subjects, hoping to find out his error, if there is one. Usually the last and important thing he thinks of is "the lice." He picks up one of his flock and finds it covered from head to tail. The next thing taken into consideration is "how to destroy them." He tries a way that is to his knowledge best; he manages to destroy a part of their number, and thinks it almost impossible to destroy every one, and is forced to leave it go at that. His fowls are soon infested as bad as ever, and the result is that he gets discouraged, becomes indifferent in his feeding and other matters that require attention, then a complete failure follows.

There are right and wrong ways to get at everything, also most difficult and less difficult ways to exterminate these almost invisible enemies that work so hard against the profits. When these pests were introduced into my coop I started out with the most difficult way to get rid of them, and did not succeed. I next took what may be termed as the less difficult way and succeeded entirely.

There are many ways in which the lice get their start. I will not give these, because common sense teaches this to almost every man. After once cleared of these tortures, they can easily be kept away by a good white-washing twice a year and a little carbon oil sprinkled around about the house once a week, but not too much, because the strong odor will not be any too healthy for the fowls. A good dust bath should also be in their reach at all times.

In October I purchased a bunch of fine pullets and put them into my coop without thinking that they might have a few of these sneaking enemies among their feathers. And not until a few weeks later did I think of it. I realized that they were not as healthy as they ought to be, and noticing their combs to be white at different times, and knowing of nothing else to cause this but the lice, I looked over a few of them and found that they had got a start on every bird. They proved to

J. V. ROHAN, Pres.

Mrs. M. J. Clifton of Quinlan, Oklahoma, settled the world's championship by winning the Successful Farming Hatching Contest against all other machines, March 29, 1910, by hatching 140 chickens—the full capacity of her machine—a 140-egg Belle City Incubator.

Many other machines were in the contest—other machines had high scores—but no

And Now You Can Buy The World's Champion 140-Egg Incubator Complete for Only \$7.55

WHY buy any other incubator at any price? Why not own a World's Champion Belle City? Yet, my price is only \$7.55 and remember, I furnish you a big, full size 140-egg machine at that figure.

other machine hatched its full capacity—140-egg size—140 eggs set—140 chicks hatched.

Why pay much more than my price for as large a capacity as the Belle City, or the same price for a much smaller machine, and yet get an unknown hatchery? I take great pride in the fact that I have started thousands and thousands of people in the money-making, poultry raising business, at small expense, for their complete outfit. What you want is a hatching outfit that is right in every detail—that's known to be perfect, yet simple in its operation—that will make a success from the very start, out of your very first hatch.

Freight Paid E. of Rockies

Complete Hatching Outfit—My \$7.55 Belle City Incubator and \$4.85 Brooder, Ordered Together Only \$11.50—Freight Prepaid East of Rockies

Let me ship you one of these complete outfits, all freight charges prepaid, to your station, on 90 days' free trial. The Belle City Incubator is an old, tried, tested, proven machine. I have been in the incubator business and my machines have been on the market for 28 years. I print thousands of testimonials and photographs of people who are using my machines in my printed matter. My plan is quick sales and a lot of them at a low price.

A brief description of the Championship Belle City Incubator is as follows:

Double walls—dead air space all over—copper tank and boiler—hot-water heater—best regulator—deep, roomy nursery—strong egg tray—high legs—double door—and everything that's any good on an incubator—all in the Belle City. "Tyco's" thermometer—egg

tester—burner and safety lamp included. The Belle City 140-chick Brooder is the only one having double walls and dead air spaces. I guarantee it to raise more healthy chicks than any other brooder made. Hot-water top heat—large, roomy, wire runway yard, with platform—metal safety lamp and burner.

I will be glad to send my literature of this complete hatching outfit free, giving you all the information you may want. I advise you to get your outfit early. Have it on hand all ready to run when your eggs are ready.

I have sold thousands of machines direct from my advertisement. Everyone that reads farm papers knows that I am responsible. If you want to, you take no risk in ordering direct from this advertisement.

Thousands Order Direct From This Advertisement and Save Money. Why Not You?

By ordering my Championship Belle City Incubator and Brooder together, you get the complete outfit for \$11.50—freight charges prepaid—(E. of Rockies.) This saves you 90 cents on the regular price of the incubator and brooder and gets the outfit delivered to you at your station, all freight charges prepaid—be ready to run when your eggs are ready to set.

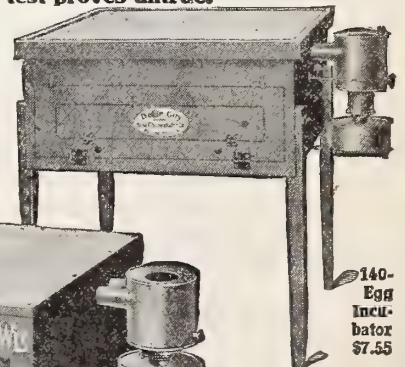

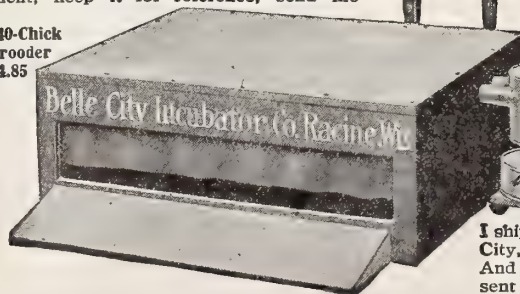

By ordering from this advertisement, you save time, save money, do away with possible delay in getting your machine and take no risk, because I guarantee to refund your money at the end of 90 days' free test if everything about my complete hatching outfit is not exactly as represented in this advertisement.

You can hold me to every claim made here. The editors of this paper protect your interests and stand back of me and my factory in guaranteeing to do as represented. Why not cut out this advertisement, keep it for reference, send me

your order, get your outfit at once, and be ready for the season.

I Guarantee the Belle City Incubator to out hatch any machine made—when operated under like conditions—no matter what kind or what the price. Your money back if this test proves untrue.

140-Chick Brooder \$4.85

I ship quick from Buffalo, Kansas City, St. Paul or Racine—And I Guarantee to ship all orders sent from this ad on day received.

The Largest Manufacturer in the World of 140-Egg Incubators—the Best Size Under All Conditions.

J. V. ROHAN, President

Belle City Incubator Co., Box 27

Racine, Wis.

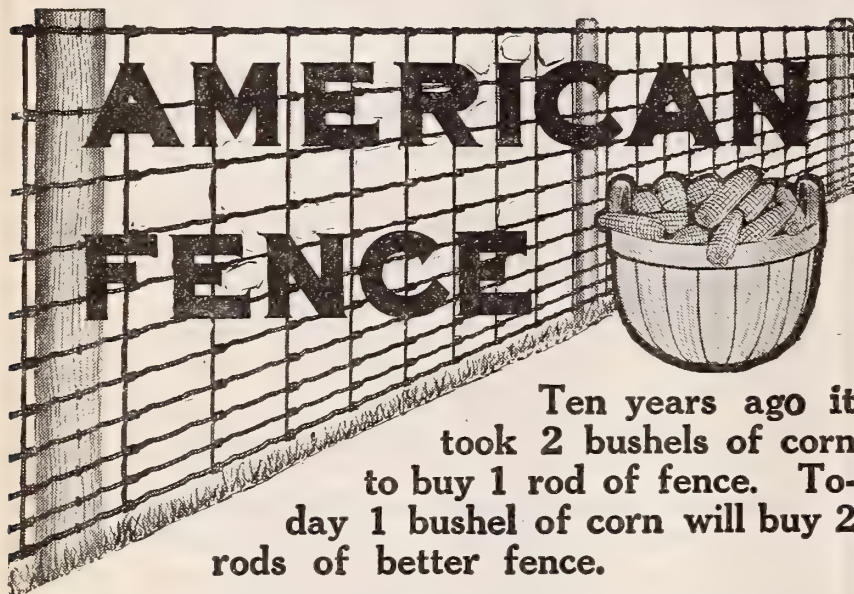

be worse on the ones I bought than the ones I had before. I did not get discouraged, but became very anxious to destroy them. I at once began using lice killer, first by taking each one of my forty hens separate, catching it off the roost at night and turning it downward (by holding it by the legs) to loosen the feathers. I then began sifting the powder from out of the holes of the box, dusting each one as thoroughly as I could. Four days later I repeated this, thinking it would kill the new ones and taking the old ones as all being destroyed. This method, though it is said to do its work, did not for me. I worked with them as patiently as could be done. I did not

make it a hurry-up job. But I still found the lice on them; the powder had been sifted in small piles here and there on the body, killing some in different parts, but always leaving a certain per cent of their number. I next purchased a small powder gun at the drug store, filling it about one-half full to keep it from getting stuffed up. I began dusting with it, putting the spout of the gun down in through the feathers, working it rapidly and shooting the dust all over their bodies. The lice killer came from the gun with such force in the form of dust (not piles) that it did not stop at one spot, but traveled all through the feathers; it could be smelled very strong. It took

an average of about four minutes per hen, but I certainly was astonished at the results. I have been unable to see lice of any description from then on, and I have looked thoroughly over about one-half of my flock. The next day I fumigated my house with sulphur to kill all lice that inhabited it. One week later I repeated the dusting again in the same manner to make sure to kill all new ones. I helped this along by putting a big handful of sulphur and lice killer to about every square foot of dust bath. My dust bath was made under roof, where my fowls started one themselves by scratching a hole in the ground, and when I seen they were all trying to use the one hole for their bathing, I dug seven or eight more for them, an average of about one foot square and about five inches deep; ashes was then put into the holes about one-half full, together with a large handful of the above named. They finished the holes themselves by picking and scratching at the sides to make it more round as they desired. All of this was completed in one week from the start, and now I have a bunch of as healthy and strong Single Comb White Leghorns as can be had; their combs certainly did brighten up again after the battle was over and the enemies annihilated.

Robert B. Ford.

Higher Cost of Living Does not Include Fence

Ten years ago it took 2 bushels of corn to buy 1 rod of fence. Today 1 bushel of corn will buy 2 rods of better fence.

Price Low—Quality Better Than Ever

Within ten years farm products have greatly advanced in market value while the price of woven wire fence has been reduced. These are the reasons: Newer and improved methods of digging the ore, shipping to the furnaces, melting into steel and making into finished products are in force. Ten years ago operations were on a small scale. Today the plan of operation is vast. The manufacturer is able to deliver the finished goods quickly, of better quality and at a lower price.

American fence is made better than ever. It is a thoroughly galvanized square mesh fence of weight, strength and durability. Large wires are used and the whole fabric is woven together with the American hinged joint (patented)—the most substantial and flexible union possible. Both wires are positively locked and firmly held against side slip and yet are free to act like a hinge in yielding to pressure, returning quickly to place without bending or injuring the metal.

Dealers Everywhere

Stocks of American Fence are carried in every place where farm supplies are sold. The Fence is shipped to these points in carload lots, thereby securing the cheapest transportation, and the saving in freight thus made enables it to be sold at the lowest prices. Look for the American Fence dealer and get the substantial advantages he is enabled to offer. He is there to serve the purchaser in person, offer the variety of selection and save the buyer money in many ways.

ROOSTS AND DROPPING BOARDS.

Most of our houses are fitted with double roosts and dropping boards about two and one-half feet wide, with nests underneath. But we find the one described below much superior in ease in cleaning and also less expensive.

On the studding nail cleats or a piece of scantling so the top is 9 inches from top of sill, place one edge of a 12-inch board on this and nail. Now take pieces of 1x2-inch scantling 24 inches long and nail one end of this in corner formed by sill and studding, and holding 12-inch board level, nail to that. Use as many of these as necessary for strength, according to length of house. These pieces of scantling project about 7 inches above bottom board on a slant. Place a 7-inch board on inside of these and nail. On opposite side place a 6-inch board and nail to studding, round corner of the slanting board at front. For roosts use any length desired—7 or 8 feet is about right. Take 1x2-inch pieces 14 inches long and round corners on one end and bore ¼-inch hole 1 inch from end and fasten to studding with a large spike about 12 inches from dropping board. These act as hinges, allowing roosts to be raised out of the way when cleaning dropping boards. Fasten roost to these 2 inches from the end and nail cleat on studding so as to hold roost level when down.

While these are simple fixtures, they are the most convenient and easily cleaned of any we have ever used. Furthermore, they take up but little room, giving the fowls all the floor space.

We have given up the practice of placing nests under dropping boards, as we find it hard to keep them free from lice or mites, but use boxes fastened to walls instead.

The house in which these fixtures are used proved our dryest and warmest house last winter. Dimensions are 9 feet wide, 30 feet long, 7 feet high in front and 5 feet high in rear.

This house has four windows in front, door in end and dirt floor. Ventilation was effected by lowering one or two windows at top.

House was clapboarded on front and cleated on end and back. Ends and back were also lined inside with tarred paper. In growing chicks on range we find a feeder as described below for feeding beef scrap very convenient. The base should be 2 feet long and 1 foot wide. Set lath on edge and nail about 2 inches from outside edges, which forms receptacle for scraps.

The roof should be somewhat wider and longer. On the under side of this nail cleats to correspond to size of bottom board and nail lath about 2 inches apart, having one end 6 inches higher than the other to give pitch to the roof. Pieces of board are fitted in ends, the one on the high end having only one nail on each side at bottom, which lets board drop down for convenience in filling. This can be held in place by boring small hole in top and pushing a nail through. In case of rain this prevents waste by keeping scrap dry and also prevents prowling animals from eating scrap during the night.

G. D. Clark.

HOW TO MAKE POULTRY RAISING A SUCCESS.

The first thing to be considered in poultry raising is the selection of one's breeding pen. Pick out not more than eight of your best hens, preferably those from two to three years old, such as are strong, stocky and well shaped. Mate them with a fine young cockerel, well formed and with a lot of vitality. The pen should be made up not later than February 1. Give your feathered friends a nice dry house with a good scratching shed in which the litter is from six to ten inches deep, composed either of dry leaves, hay or straw. Always keep a plentiful supply of charcoal, grit and shell before them. I consider charcoal most necessary for poultry. They should be fed in the morning in the scratching sheds, not quite a quart of scratch-food, composed of wheat, barley, buckwheat, cracked corn, oats and a trace of sunflower seed. Some feed men carry a good selection of scratch-food, but I prefer to feed my own mixture. About 9 o'clock fill their drinking vessels, which have been emptied out the night before, with a plentiful supply of hot water, for experience has taught me that cold water in the morning chills the system and reduces the vitality of the birds. At noon feed a hot crumbly mash composed of table scraps, cornmeal and beef scraps (prepared), pepper and a little salt. In the evening as long as the cold weather lasts feed them, about

dusk, as much hot corn as they can eat, which has previously been steamed in boiling water about five minutes. This is by far the easiest and surest way to heat the corn, as each kernel becomes heated separately. Never close a chicken house up tight unless the weather is below zero. I believe in plenty of fresh air, but no drafts. Hens generally do not begin to set before the middle of March, so I start to collect my eggs about the first and only keep well-shaped and good-sized eggs. These I place in receptacles filled with bran in the cellar and turn them twice daily. In preparing nests for the setting hens I prefer to use barrels with the open end placed downward, a hole a foot square cut in the middle of the side, about ten inches of damp soil or sod put in the bottom of the barrel with a layer of hay on top, well hollowed in the center to prevent the eggs

for 36 hours. As soon as the whole brood has been hatched I place the hen and chicks in a brood coop and let their first meal be chopped eggs and dry bread crumbs, and feed every three hours for the first few days. Keep a supply of fine grit, keep scraps and charcoal before them constantly and give only boiled milk to drink until two or three weeks old. Whole corn is the best food for the old hen, as the chicks are unable to swallow it. I keep the hen confined in the coop and allow the chicks free range where the grass is short. After the first few days feed Cypher's chick food exclusively, excepting at noon, when a mash is fed consisting of hominy or oatmeal, soaked bread, cornmeal, beef scraps and fine table scraps. When five weeks old I substitute cracked corn in place of chick food, for their evening feed, and put it in shallow dishes so that they

One of the many poultry buildings on Oak Hill Farm, Red Bank, N. J., breeders of White and Columbian Wyandottes and R. I. Reds.

from rolling. Before setting the hen, hold her by the feet and dust her thoroughly with a good, reliable lice powder, place her on the nest gently and keep a plentiful supply of whole corn, grit and fresh water before her all the time, not forgetting a dust bath, consisting either of fine sifted ashes or dry soil. If the weather continues cool one moistening of the eggs with tepid water during incubation will prove sufficient, otherwise oftener. I consider the natural method of hatching best of laying stock; for market purposes the incubator is the more profitable. I remove the chicks, as well as broken shells, as soon as dry, put them near the kitchen range in a basket wrapped and covered in flannel, and don't feed

can fill themselves full. I don't allow my chicks to roost in trees, etc., before they are four to five months old. Roosting too early gives them a crooked breast-bone, which spoils their appearance in general. Purify the ground on which the chicks are running at least every ten days with slacked lime and also keep their drinking and eating vessels scrupulously clean. Chicks must be kept growing continually.

C. Louis Rubsamen.

Everything comes to him who waits. Even the New Standard is ready for distribution this month. See inside back cover page for the welcome news.

We lead; others follow.

White Wyandottes

OF THE BETTER KIND. They have won for me and my customers the highest honors at the leading shows. 800 BIRDS FOR SALE of correct Standard type, white as snow and good size. I guarantee absolute satisfaction. My handsome new 32-page catalog is just off the press. Send for it and let me convince you that I have the quality you are looking for. My prices are very reasonable, considering the high quality of goods I send out.

Henry C. Dippel

Box A, Indianapolis, Indiana

A MILLIONAIRE

might corner wheat, but I have what might be termed a corner on the Dry Feed Box. I have made a discovery that surprised me, and so simple, I wonder why it has not been in use a long time. The hen will pick over feed for pieces of beef scrap and waste so much in the old self-feeding hoppers that they have proven very unsatisfactory. I have fooled the hen in the Economy Dry Feed Hopper, champion of the United States. I am going to let you convince yourself of this, and if you don't find it self-feeding, absolutely no waste, and the best hopper you ever saw, or heard of, I will return the 50 cents you paid for plans and right to make as many as you need. Descriptive circular free.

Teddy II, our Chicago winner

Barred Rocks

Prize Winners Bred From Chicago Winners—We can supply you with exhibition cocks, cockerels, hens, pullets and pens that will surely win for you at any show. Have raised more and better birds than we ever had. All judges pronounce our Rocks as having the best barring, shape, color and undercolor of any they ever handled. Our Chicago winners created a sensation by winning more prizes on cockerels than all competitors combined. Have many exhibition cockerels of the grandest breed on earth now ready for the early shows. Also pairs, trios and pens, carefully mated for either exhibition or breeding. Have a fine lot of pure Bradley Bros. and Latham pullet-bred cockerels at \$3.50 to \$5 and \$7 each. Don't fail to get some of our chickens. They are the best strain of winter layers in the world. Circular free. Satisfaction guaranteed.

Standard Rock Farm
Truckenbrod Bros. Mendota, Ill.

Victor stands for Quality in Incubators and Brooders. No others show such care in design and making. No others show such careful selection of materials. Our new models give a clear top, a bigger lamp, a heavier, stronger case. These mean convenience and increased profit to the owner. A cheap machine may waste for you in eggs, oil and time much more than you saved in the first cost. Get a Victor and get satisfaction. Write us today for our free catalog. We pay freight. Our prices are low.

Send 10 cents for our 32-page "Poultry Diary" account book.
100-Egg Hatching Wonder Incubator, delivered \$10.

This triple wall, copper tank, clear top, full height incubator is the most wonderful value ever offered. If you are thinking of starting with a small machine, you had better spend a dollar or two more and get this one. It has a dependable regulator, nursery, chick drawers and double glass in door. It is 26 inches long, 21 inches wide and 31 inches high. The \$10 price includes complete incubator, thermometer, funnel and book of instructions, all delivered at any R. R. station east of the Rocky Mountains. With Brooder, \$15.

GEO. ETEL CO., 102 Kentucky St., Quincy, Ill. Estab. 1867.

THE EVILS OF OVERSHOWING.

In exhibiting fowls one of the greatest mistakes which poultry-keepers are guilty of, and especially beginners, is overshadowing. It is quite a common thing to exhibit a fowl which has proved successful early in the season, at show after show, without any consideration for the effects which this unnatural strain will have on the constitution of the bird. Many a valuable fowl or promising youngster has been completely ruined by overshadowing, the owner's greed for prizes absolutely blinding him to the folly and inhumanity of such a course. It must be remembered that whereas the occasional exhibition of a fowl will, provided proper care is taken, have no injurious effect, continual subjection to the weakening influence of exhibiting will, notwithstanding the greatest possible care and attention, slowly but surely sap the constitution of the strongest bird and render it useless for either breeding or exhibition purposes. After a fowl has been shown once, it should be allowed to rest for some time before going through the ordeal of exhibition again.

After all, the real purpose of the exhibitor, if he be a fancier in the true sense of the word, is not so much the mere winning of prizes as the founding of a strain of birds as near to perfection as it is possible to attain; and in order to accomplish this end it is necessary, nay, it is absolutely essential, that he should breed from the best birds, and these may not always be the ones that have taken the highest honors in the show pen. As in the perfecting of a strain, strength and vigor must be kept at all costs, it is a mistake to tax the constitutions of the birds used as breeders by exhibiting them, and only under very exceptional circumstances indeed should a fowl be removed from the breeding pen in order to show it, for although one such procedure might be productive of no serious results, a repetition would surely affect the strength and vigor of the progeny.

Thus, if it is desired to show birds during the breeding season, certain of the stock must be selected and reserved for this purpose. But when birds are specially reserved for showing, it must not be thought that they can be exhibited time after time without any evil effects, for even if the bird is never intended for breeding purposes, the confined quarters and unnatural atmosphere of the exhibition room will in time so injure the fowl that its chances of winning will be seriously jeopardized. Thus, rest after exhibition is in every case essential, and should a fowl show any signs of weakness it should not again be shown until perfectly recovered. Many exhibitors are in the habit of sending their birds direct from one show to another. This practice cannot be too severely condemned, for it must and can only result in the fowl's constitution being utterly and irretrievably ruined. Moreover, this practice has nothing to commend it. What if the bird does win prizes in quicker succession! As a natural consequence, it has a shorter reign in the exhibition pen, and the gain in the one case in no sense counterbalances the loss in the other. George Scott.

Eggs, eggs, eggs! That's what the people will be calling for all winter. Better get a good-laying strain of birds when starting in the poultry business. Dughills will not do the work.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

One thousand dollars in cash prizes will be given at the Madison Square Garden Show, December 27 to 31, 1910. Hon. H. V. Crawford, secretary of the Madison Square Garden Show this year, has decided to cut out all silver cups at the Garden and to give the poultrymen actual cash prizes, and \$1,000 will be distributed in sums of \$10 to \$25 on the different varieties. The premium list is about completed and will be ready for mailing by the time the journal reaches you. The entries absolutely close December 10. You should write Mr. Crawford at once for catalog and entry blanks. Address H. V. Crawford, secretary, Montclair, N. J.

The annual show of the Edgerton Poultry, Pet Stock and Corn Show Association will be held at Edgerton, Ohio, January 10-14, 1911. A. E. Hamlin, judge; W. F. Nihart, Sec.

We recently met with the Morristown Poultry Show Association and they certainly have the breeders around Morristown, N. J., interested, for there was a large attendance. About 75 attended the meeting and they have over 100 members in the association. They are all pulling together and are going to have a big show December 5, 1910. Lloyd B. Tredway is secretary.

The Great Southwestern Poultry Show will be held at Dallas, Texas, January 9 to 13. This is probably the largest

poultry show in the Southwest, and the show where you get your birds before the buying public, which means a great deal. Write for premium list, entry blanks, etc., to C. P. Van Winkle, secretary, Box 281, Dallas, Texas.

The Franklin County Poultry Association will hold its annual show in Chambersburg, Pa., January 18-21, 1911. This show will be conducted in accordance with the rules and regulations of the American Poultry Association. E. E. Eckel, secretary, Chambersburg, Pa.

The Muncie Poultry and Pet Stock Association will hold its big annual exhibition at Muncie, Ind., January 23-28, 1911. George E. Heyl and H. A. Prickett, judges. A. C. Thornburg, secretary.

The fourth annual show of the Pana Poultry Association will be held at Pana, Ill., January 18-24, 1911. J. A. Bickerdike, secretary, Millersville, Ill. Write him for catalogue and don't forget the date.

The poultrymen of Racine, Wis., of which there are seventy-five in number, have organized what is known as the Racine Feathered and Pet Stock Association, and will hold their first annual show January 16-21, 1911, in the Lakeside Auditorium, Racine, Wis. They have secured the services of W. S. Russel, the well-known judge, which assures all ex-

hibitors a square deal. It is needless to say that the organization will be a success in every way, as the men who are back of it are determined to make it the leading show of Wisconsin. For particulars address D. J. Kennedy, secretary, Racine, Wis.

Good treatment and square dealing is what has made such a phenomenal success of the Cleveland Poultry Show. Their next annual show will be held January 23-28, 1911. If you are planning to exhibit at the Cleveland show take our advice and get your entry in early as the man who waits till the last day may find he is too late and crowded out. The judges are some of the best in the country and include Drevensedt, Faulkner, Hawkins, King, McClave and Oke. Get your premium list from J. T. Conkey, secretary, Cleveland, Ohio.

The Northern Illinois Poultry Association will hold its twenty-second annual exhibit at Belvidere, Ill., December 19-22, 1910. H. P. Schwab, judge. S. U. Teeple, secretary, Belvidere, Ill.

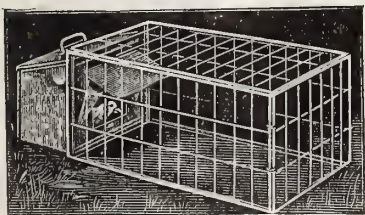

The seventeenth annual exhibition of the Illinois State Poultry Association will be held in the arsenal in Springfield, Ill., January 2-7, 1911, and everything points to an entry of more than 5,000 birds. The judges will be Theo. Hewes, D. T. Heimlich, Chas. V. Keeler, W. C. Pierce, J. C. Johnson, A. F. Kummer, F. C. Hare and Robt. Joos. For premium list and other information write to O. L. McCord, Danville, Ill., secretary.

The Ontario Poultry Association will hold its second annual exhibition at Canandaigua, N. Y., January 17-21, 1911. The New York state exhibit in charge of Prof. James E. Rice, chief of the department of poultry husbandry at Cornell University, will be one of the features.

White Rocks Exclusively

100 large early hatched cockerels, 100 pullets and 75 yearling hens for sale Prices and stock that can't be beat. My birds have always won more prizes than any other exhibitor. If you want a good show bird or good breeders, write me.

Model Setting Coop

Model Brood Coop

Model Colony Coop

Economy Trap Nest

Model Portable Hennery, an ideal contrivance for keeping fowls in small flocks. It is just what you want if you have but little room, yet would like to keep a good many chickens. Nearly 500 layers can be comfortably kept on a city lot 50x150, allowing 100 square feet to each flock. In our Model Hennery we have perfect sanitation, pure fresh air at all times and many other features make it indispensable to the breeder. Our **Setting Coop** prevents the setting hens from coming in contact with the other fowls. It is light, durable and practically lice proof. Our **Brood Coop** is made of heavy galvanized iron, is rat and vermin proof and weighs about 15 pounds. The **Colony Coop** is also made of galvanized iron, easily cleaned and perfectly sanitary. Our practical **Economy Trap Nests**, fine, light, roomy nest that cost but little more than a common nest. Space does not permit a detailed description of our goods in this ad and if you are interested and want to know about these appliances write for our descriptive catalogue.

hold its annual show, January 17-21,
1911. Write for premium list to Wm.
Grace, Jr., secretary, Logansport, Ind.

FEEDING QUESTIONS.

"For the good of the order," I will
ask a few more questions, this time in
regard to feed. Why is it that every
formula for dry mash names so many
parts beef scraps? If I had not proved
to the contrary, should think dry mash
worthless without scrap. In fact, I
commenced feeding a very small per-
cent in mash twice last winter and
lost a fine pullet both times. I con-
cluded that there must be some "pre-
servative" in the scrap that saved the
meat, but killed the pullets. I con-
tinued the mash without the scrap and
the hens continued to lay until nearly
bare of feathers, and are still laying
a few eggs Oct. 19, and new feathers
growing nicely. The pen is made up
of eight R. C. Black Minorca pullets
and two 2-year-old hens, one of which
won the blue at Ashtabula a year ago
last December. This proves that a
good show bird can also be a good lay-
er, although many think otherwise. Be-
fore giving formula for mash will say
that these birds have been confined in
a pen about 18 feet by 25 feet, never
having been out once for more than a
year. As there have been chickens in
this little yard for more than six years
you can judge how much insect life
there would be about it. As for green
feed they have had lawn clippings oc-
casional and later some Swiss chard
and cabbage leaves. I generally mix
the mash by guess, but here are the
proportions as near as I can get it.
Take 20 pounds wheat bran and an
equal bulk of alfalfa meal, 10 pounds
middlings, 10 pounds gluten and 5
pounds oilmeal. I generally put in a
pound or two of fine charcoal.

I don't believe the hens would have
laid a dozen more eggs if the feed had
been half meat. Did you ever keep
two pens and feed one meal and the
other oilmeal? Some years ago I read
of a man "down East" who tried it
and found the oil meal the best. I
believe my hens have averaged way
above the 200 mark as they have layed
almost constantly since last winter.
Could they have done any better with

a hopper of meat before them all the
time? Would you like to hear from
others in regard to meat scrap? I would.
Ashtabula, O. C. E. Goodwin.

Poultry Knowledge that Brings Profits

If there's any one business that demands
expert knowledge to bring the greatest
success, it is *Poultry Raising*. You may
know a little about it—enough to get a few
eggs—but the big money-making end of it
is in knowing *ALL* about it—in having the
individual advice and help of experts who
have made their name and fortune raising
poultry for profit.

The help of these experts is at your com-
mand in the home Course of Poultry Rais-
ing of the International Correspondence
Schools. This is not a book scheme. *You
cannot learn from a book.* But it is just what
we say it is—a course conducted by ex-
perts, and by which you can make every
minute and dollar pay handsome profits.

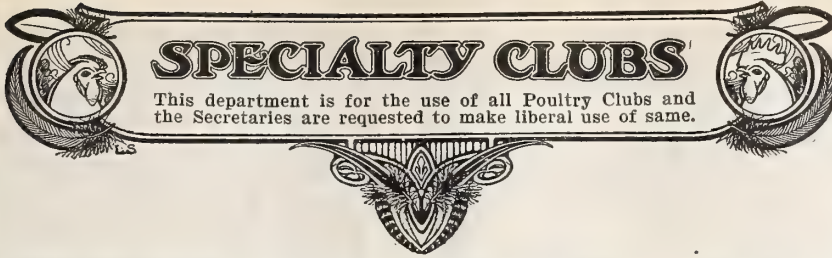

No book could give you such personal
help as this course offers on so many
poultry subjects, such as

How to select most profitable breeds; feed-
ing; marketing eggs and poultry for profit;
natural and artificial brooding; natural and
artificial incubation; laying hens; combina-
tion plant; poultry appliances; enemies of
poultry; poultry houses and management;
turkeys; water fowls, squabs, etc.

Hundreds have turned failure into suc-
cess through the help of this course, the
great value of which is shown by the fact
that the I. C. S. is associated with the
largest and most successful poultry farms
in the world—Ranococas Poultry Farms—
which serves as its experimental plant.

In the money and time it saves, and in
the sure profits it brings, the I. C. S. Poultry
Course pays for itself many, many times
over. To learn all about it write to-day to

INTERNATIONAL CORRESPONDENCE SCHOOLS
Box 1004 Scranton, Pa.

This department is for the use of all Poultry Clubs and the Secretaries are requested to make liberal use of same.

Though the affairs of the American Plymouth Rock Club have not appeared very frequently in the papers during the past few months, the club has still been active in promoting the interest of this variety. Last season we put out 400 ribbons for shape and color throughout the United States. These were of handsome design and pleased the winners, as they were made of the best material. The state cups are getting more popular, and they are a great deal above the average of any cups offered at the poultry shows, and are the equals of any \$25 cups. The club is very fortunate in obtaining these through a manufacturer who is very much interested in poultry. What the officials of the club really desire is that one or more of these cups be offered in every state in the Union, and in every province in Canada. It requires twenty members in good standing to secure one of these cups, and a cup is also offered for every additional twenty members in a state. We ask every exhibitor to interest himself in the affairs of the club, and in these cups and ribbons particularly. Fittingly recognizing the work done for the breed by so eminent and successful a breeder as the late M. S. Gardner proved himself to be was thought to be very appropriate by the executive committee. This is not a club fund, however, but is open to all Barred Plymouth Rock breeders in general. It is thought that nearly everyone that is interested

in Barred Plymouth Rocks would be glad to subscribe their mite toward this object, which is that the children of the late Mr. Gardner may be so educated that they will be able to pursue with success their life's career, whatever it may be. His one son inherits his father's taste for poultry, though yet in his early teens, and it is hoped that a sufficient sum will be raised that this young man may be well enough educated to pursue this calling with success if he should so elect. Only those who have visited in this family can appreciate the splendid qualities of Mrs. Gardner and her three children. Mr. Gardner spent his life working for Barred Plymouth Rocks rather than for himself. If he had seen that reversed procedure it would be entirely unnecessary to make this appeal. Every Barred Plymouth Rock breeder is invited to subscribe, whether a member of the club or not, but it is not desired that anyone personally subscribe enough to pinch his own resources. The idea is that many would be glad to avail themselves of the opportunity to subscribe from \$1 to \$5 each. Very generous subscriptions have been received from Bradley Bros., Lee, Mass.; C. H. Latham, Lancaster, Mass.; W. E. Bright, Waltham, Mass., and many others have sent in smaller amounts which are equally as well appreciated. At the proper time this fund will be turned over to a trustee selected for

the purpose. Those interested are requested to correspond with A. C. Smith, Waltham, Mass. It is desired to make this particularly a testimonial from a great number of Barred Plymouth Rock breeders. At the last annual meeting of the club Mr. C. H. Welles, Stratford, Conn., was reelected president, and A. C. Smith, Waltham, Mass., was reelected secretary. Both were elected unanimously.

National Black Orpington Club national meeting will be held in Philadelphia this year. Every member is urged to attend if possible and send an exhibit in any event. Many specials will be offered, including the club gold medals for every win made. Fifty dollars in cash specials offered by the show in addition to the regular awards, and the Cheviot Farms Cup and many other specials to be announced later. Medals will be offered to club members in every show in America this year, open only to members. The club is in a highly prosperous condition, and practically every breeder of blacks reports the demand greater than the supply. This in face of the fact that no great specialty breeder is booming the breed. Dues are \$1 per year and should be sent to the national secretary before the date of the show you expect to enter.

The club catalog is now being prepared and will contain the names of all members in good standing in the club. The book will sell for ten cents. Milton W. Brown, secretary-treasurer, Sta. L, Cincinnati, Ohio.

The big January show of all the central western states this year will be the big Topeka, Kansas, show, held in the big new auditorium which is the largest in Kansas and perhaps the largest in the whole West, outside of Convention Hall. This is the first time the American Plymouth Rock Club has ever went so far

MANATEE FLORIDA

The Handy Hatcher

The Price of a Good Hen Will
Buy the Handy Hatcher

YET notwithstanding its extreme low cost, it is the most practical and successful small incubator on the market. Place it in the house. In any room. It weighs less than 6 lbs. Occupies no more room than a typewriter and holds 25 eggs.

The HANDY HATCHER is not a plaything but a perfect incubator that does its work day and night unflinching. It is the invention of Mr. H. E. Moss, a poultryman of international fame and originator of the Moss Method of incubating duck eggs. It is the only incubator, large or small, in which the principles of the hen's nest are duplicated. The HANDY HATCHER is heated with a lamp, the heat being radiated downward just as nature intended. The temperature is controlled automatically. An improved method of ventilation affords the exact amount of ventilation and moisture necessary to bring the chicks to exclusion.

The HANDY HATCHER is equally valuable to the large or small poultryman and to the city man who desires to raise but a few chickens for his own use. With every HANDY HATCHER we furnish free

A Valuable Book—The Moss Method of Brooding, Feeding and Raising Chicks.

The most practical and labor-saving known. Also working plans showing how to make a

Fireless Brooder

and chick shelter. The HANDY HATCHER with above book and plans is \$3.50. One active agent wanted in every town and city and at every poultry show. Send for catalog.

The Handy Hatcher Co.

Dept. 1, Kansas City, Mo.

west to hold its meeting. In fact, the meetings of this club have most always been held at New York or Boston. This year the officers decided to go west. Topeka won the meeting over Chicago and Philadelphia by a three to one vote. A large number of silver cups, silver trophies, handsome ribbons and from \$200 to \$500 in cash specials will be given to the Barred Rocks at Topeka, besides the regular cash premiums which go to \$15 for first pen and \$10 for first prize in the single. The show will be cooped with fine uniform cooping, so you don't need to ship your birds in exhibition coops. Just send them in shipping coops and save express charges. As the secretary of the club, I have been engaged to judge the Barred Rocks at Topeka. I want you to show so that I may see your birds and best of all, attend yourself. Send me \$1.00 today and join the club and be allowed to compete for club ribbons and cash specials at all shows. Attend the meeting at Topeka and help elect a good bunch of officers. Mr. E. W. Rankin, of Topeka, is secretary, and will send you a premium list.

The Partridge Plymouth Rock Club will hold their fifth annual meeting at Madison Square Garden during the New York show. A large number of members have signified their intention to showing at America's greatest show, as a win here means America's Champions, and will undoubtedly be the greatest show of Partridge Rocks ever held this side of the Atlantic; besides the usual club ribbons the club will offer handsome silver cups to members for best display of Partridge Plymouth Rocks—second best display and third best display. Special cup for best cockerel. Special cup for best pullet. If you are not a member, send \$2.00 annual dues to the secretary on or before the opening of the show and compete for the handsomest cups ever offered by a specialty club. M. Harvey Ivins, secretary and treasurer, Langhorne, Pa.

The Ancona Club of America will hold its next annual meeting during the international show at Buffalo, January 23-29, 1911. The club will place on exhibition the largest string of Anconas that has ever been shown, the cream of Anconas will be seen during this show. The international is offering good cash specials to clubs. The club will offer several silver cups as well as handsome ribbons. Breeders will profit by joining the club, as we will give handsome ribbons at all shows to members. Send one dollar to Geo. Johnston, secretary-treasurer, 377 South Detroit Ave., Toledo, Ohio.

You are hereby notified that the annual meeting of the National S. C. Buff Orpington Club will take place on Saturday, December 10, 1910, at Chicago, Ill. Every member is invited to be there personally and take part in the important business that will come before the members at this meeting. The meeting is held in connection with the Chicago show, and the club is going to give away some of the handsomest cups at this show that the club has ever given. Come to the meeting and bring some of your birds along to the show. The meeting will be called to order at 2 o'clock p. m. December 10, 1910, and don't forget the dates. V. O. Hobbs, secretary-treasurer.

"On to Topeka" January 2 to 7, is now the war cry, writes Waldo H. Dunn, the hustling secretary of the Silver

J-M ASBESTOS ROOFING FIRE PROOF

MADE of indestructible Asbestos (Rock) Fibre and Trinidad Lake Asphalt, the great weather-proofer, J-M Asbestos Ready roofing is literally a *pliable stone*. Fire, acids, gases, chemical fumes, heat or cold have no effect upon it. It is therefore practically *indestructible*.

And because of its stone nature, J-M Asbestos Roofing never needs painting or graveling. Its first cost is its only cost.

Asbestos being a non-conductor of heat and cold, this roofing keeps a building warm in winter and cool in summer, and is adapted for any building, anywhere.

Most hardware and lumber dealers sell J-M Asbestos Roofing. If your dealer doesn't keep it, write our nearest branch for Samples and Booklet E26.

Wyandotte Club of America. In the final vote for choice of shows with which to hold the national meeting of the club, Topeka received forty-two votes, Philadelphia thirty-seven, and Buffalo ten. The club is offering \$50.00 in cash specials besides an elegant bunch of silk specials. The Topeka Show Association is also offering \$50.00 in cash specials. Numerous trophies, etc., besides the largest regular cash premiums ever offered at a central western show, i. e.—\$15.00 for first pen, \$8.00 and \$5.00 for second and third, while handsome silk ribbons will be awarded on down to seventh place. On single entries they pay \$4.00, \$2.50 and \$1.00 with silk ribbons on down to seventh. President Henry Steinmesch, of the Silver Club, is offering a grand \$50.00 (actual cost) silver loving cup, which is known as the "President's Cup." The real reason why every silver breeder should show at least one or two birds is to make this, our national show, a great success, and thus do our variety a world of good. The American Plymouth Rock Club meets at the Topeka show also. Let us get busy and have more silvers and a greater attendance of silver men at Topeka than the Barred Rock men. E. W. Rankin, of Topeka, Kans., is the secretary and will mail you a premium list if you will write him.

The annual meeting of the American Cornish Club will be held with the Missouri state show at Kansas City, November 29 to December 3, 1910. An invitation is extended to all members to attend this meeting. Consolidation with the Pacific Cornish Fowl Club will be considered. H. C. Hayes, secretary, Eureka, Ill.

The annual meeting of the Buff Leghorn Club will be held at the Coliseum building, Chicago, Friday evening, December 9, at 7:30 p. m. Many matters of importance will come before the same, and the election of officers will take place. All members and persons interested in Buff Leghorns are requested to be present. F. A. Tecktonius, president, Racine, Wis. Geo. S. Barnes, secretary, Battle Creek, Mich.

The first annual meeting of the Columbian Wyandotte Breeders' Association will be held December 12, 1910, during the Chicago show. Better join, \$1.00 does it. Come to the meeting, good things are in store for you. Special prizes are placed that are the best on earth. Send in your name and \$1.00 and I will send you receipt for same. Come to Chicago and shake hands with us. Address Philip Koehlinger, acting secretary-treasurer, Fort Wayne, Ind.

Editor American Poultry Journal.

Dear Sir: I read in your paper articles by various breeders, in which one states White Orpingtons won in the Australian egg-laying contest, another says Black Orpingtons won, some claim that honor for Buffs. Won't you kindly state the facts in the case?

Harry Sturges.

Independence, Mo.

In explanation to above: There have been held, during the past few years, a great many egg-laying contests in Australia, which has made it possible for the breeders of different varieties to claim that their particular variety won highest honors.—Ed.

WINTERING CHICKENS IN TOWN.

MY object is to try and give an idea to those who are willing, and kind of shake up those who are negligent.

Because you live in town you don't want to commence to think that you can't take as good care of your fowls as the man who lives on the farm. If he makes his poultry pay in the cold months of the year, he must keep them up in good, comfortable quarters.

Experience has taught me and, no doubt, has taught a great many others, that it is not necessary that good poultry should come from the rural districts. I have stepped from my back door into the chicken lot the greater part of my life, and I have recently been convinced that a good, warm chicken house means a full dinner pail.

By this time your houses should have all the necessary repairs complete, so that you can keep your stock up when the occasion requires it. You are liable to get up most any morning and find the ground covered with snow, and I hope you will not be foolish enough to turn your chickens out in it, or have to keep them confined in a little old stingy coop, to stand around and chill. Listen to me; if you live in a city, raising chickens in the back yard and have a scratching shed sufficient for your fowls, no difference how many you have, with the proper feed and care the results will more than pay you for your time and trouble, and your fowls will do as well as any man's fowls in the country. If you haven't made suitable provisions for your fowls, take a day off and get busy. Start the saw and hatchet going; do it now—the sooner the better, and when the eggs commence rolling in and you see the difference in the plumage and health of your birds, the only thing left for you to do is to get the fever. The thing to guard against in the winter time is colds, developing into roup, caused from dampness and a poor system of ventilation. About every chicken man you talk to will say he has built all kinds of houses, but the last one is the best. On account of not having a whole lot of ground space in my back yard I am compelled to tear down and build up again. Here is one I have decided on to accommodate ninety fowls through the winter, and don't intend to let them out at all if the weather doesn't permit.

The size of this house proper is eight feet wide, fourteen feet long and eight feet high, with portable roosts and dropping boards. The scratching shed is fourteen feet square, built entirely separate from the house, with a hole for the fowls to pass through, using the space under the dropping boards for scratching also.

The house has a window in front, twenty-eight inches wide by eight feet long, made to swing from the top. Also small windows on the east and west sides. The ventilators are up next to the roof in opposite ends and can be opened and closed with a slide. The scratching shed has all the light possible; nests are placed around in this shed and under the dropping boards can be kept in semi-darkness, making it ideal for that purpose. Of course, there are hoppers with charcoal and grit, and a stand eighteen inches high made in shape of a pyramid to set the drinking vessel on. This can not be turned over and keeps the water clean at all times. In all, I have 308 square

feet of scratching space. My fowls are going to do some business this winter, and sometime near the first of next April I will tell you all about it.

THE ADVANTAGES OF A SMALL INCUBATOR.

It is a common practice for the beginner to buy an incubator that is much too large—too large for his needs and considerably larger than he can handle to advantage.

Very few persons stop to consider the size of the incubator that would be most advisable for their particular needs; they buy either the largest they can get for the price or the largest their pocket-book affords.

The first question that confronts the owner of a large incubator is the necessity of procuring 100, 200 or 300 fresh eggs—eggs that were produced by birds properly mated so that their fertility is assured. Of course, if we simply wanted fresh eggs, it wouldn't be so difficult, but for incubator work we must have "hatchable" eggs. Those who have tried to procure a large number of such eggs will realize only too well what a difficult problem this is. After failing to procure the full number of fresh eggs, it is a common practice to "fill in" with the next best one can get—hoping they will hatch.

The result is invariably failure—either a small percentage of chicks and a large number of eggs wasted or a lot of poor, weakening chicks that are not worth hatching.

Let us compare this condition with the small incubator—a machine holding 50 eggs.

To begin with, the operator can always procure 50 fresh, hatchable eggs, and the fact that those eggs are fresh means a larger percentage of strong, sturdy chicks. It is quite a common thing to hatch 50 chicks from 50 eggs, but one seldom hears of 100 chicks from 100 eggs or 200 chicks from 200 eggs. The failure of the large machine can often be traced directly to "stale eggs."

Next comes the operation of the incubator.

It has been frequently demonstrated and is freely admitted by both manufacturers and consumers that a small incubator is more easily regulated and operated than those of a larger size. The success or failure of an incubator largely depends on the ability to maintain an absolutely even temperature in all parts of the egg chamber because it is necessary that each egg should receive the same amount of heat. In addition to that we must maintain a temperature of 103 degrees all the time and provide for perfect ventilation.

This problem is easily solved in the 50-egg incubator, because the egg chamber is so small that it can't go wrong—but try to do the same thing in a large incubator! Some manufacturers have spent half a lifetime and a fortune on this problem and haven't solved it yet.

On account of their size, the construction of 50-egg incubators is so simple that anyone can understand and operate them—they can't go wrong.

To the beginner who has no incubator cellar the 50-egg incubator should appeal very strongly because it can be operated in any room in the house without the slightest annoyance. It occupies a very small space and can be operated with oil or gas.

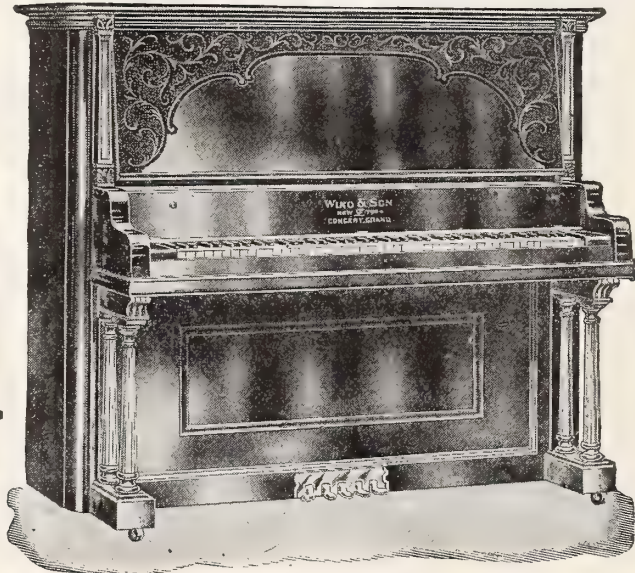

The 50-egg incubator permits the beginner to start small and grow big.

When one machine is not large enough to hatch enough chicks another and another can be added as the demand for chicks increases. It certainly is much more advisable to use several

Rock-Bottom!

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

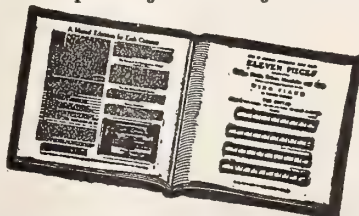

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. Remember: all freight charges prepaid, no matter whether you keep the piano or not.

Send for the best, safest, most instructive book of piano-buying information ever compiled; the

Book of Information FREE!

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

small incubators in preference to one of a larger size.

To begin with we are all human and can make mistakes. If a mistake is made with a large incubator a large number of eggs may be ruined and a month's time is lost. By placing the same number of eggs in the small machines, we not only suffer a smaller loss in case of accident, but we also save the loss of time by saving the balance of the chicks which are hatched by the other machines.

It is a well-established fact that chicks thrive best when kept in small colonies. Most authorities place the maximum number that should be kept in one brooder at 50.

To properly care for the output of a large incubator—granting that it was successful—we must have a brooder for every 50 chicks. Each brood must remain in the brooders at least six weeks. Now, if we are hatching 200 chicks at a time we will need four brooders for the first brood and if we operate the incubator continuously we will need four more brooders for the second brood. That means eight brooders to care for one incubator!

How many of us are willing to provide those brooders? That's where so many beginners make the mistake when they buy an incubator entirely too large for their needs.

One 50-egg incubator can be operated successfully with the aid of two brooders, and between January and June one can easily hatch 250 chicks.

Two hundred and fifty chicks in one season would satisfy about 90 per cent of the readers of this article, and if they could hatch and raise that number with the aid of one 50-egg incubator and two 50-chick brooders it will spell "Economy" for many in both money and labor. An equipment like this means a small investment to begin with and better chicks at a small cost on every hatch.

It is not to be taken for granted that 50-egg incubators are made exclusively for beginners as such is not the case. Lots of breeders operate them in lots of twenty-one, so they can have a hatch come off every day. The breeder of pedigreed fowls find them most advantageous in keeping records of their several pens. By placing the eggs from each pen in a separate machine there is no possibility of mistakes.

It is impossible to even touch upon all of the advantages of the 50-egg incubator in this limited space, but the fact that both manufacturer and consumer have awakened to its desirability is sufficiently good proof of its merits.

The demand for 50-egg machines has grown to enormous proportions, and to meet this demand one of the large incubator firms recently built a factory of enormous proportions for the exclusive manufacture of 50-egg incubators and 50-chick brooders. This firm alone has an output of over 100,000 incubators and 50,000 brooders annually which is only another evidence of the immense proportions to which the poultry industry is growing in America.

A MODEL POULTRY FARM.

Consisting of 15 Acres—Houses Built for Convenience—Feeding and Care of Chicks—Line-Breeding.

A very neat and attractive poultry farm and one that most every lover of fowls dreams of owning some day is the Whitecrest farm, owned by H. C. and C. W. Sixt, West Park, Ohio, breeders of S. C. W. Leghorns and W. Wyandottes. This farm consists of 15 acres. The main building on this farm is very nicely arranged. It consists of feed room, conditioning room, incubator cellar, brooder house and laying pens. Mr. Sixt says that if he was to build again he would certainly build the same style house, as it is a very convenient house, and the writer agrees with him. Mr. Sixt says that in the busy time of the year he can care for his breeding stock, young stock incubators and brooders in a very short time without going outside of the building. There is no running around in the rain and storm with a building of this kind. The conditioning room is 14x28 feet and contains 40 coops, in which all show birds are conditioned before being placed in the show room. In this room the birds are washed and

dried. Mr. Sixt says that he can dry 50 birds at one time in this room without removing a bird from the coop or moving a coop. If the washing is done in the morning, by 8 o'clock in the evening every bird is perfectly dry and in first-class condition. Beneath the condition room is the incubator cellar. Their machines are 250 egg size. To the east of the incubator cellar in the same building is the brooder house, with individual brooders. Each brooder has a pen five feet wide by eight feet deep and each pen has a large window facing the south. The west wing of this house is the breeding pens, each 10x10 feet with an alley way along the north wall.

Mr. Sixt says that he has been able to raise 90 per cent of all chicks hatched. His method of feeding chicks is as follows: The chicks have water, grit and charcoal before them from the beginning, but are allowed no food until they are 48 hours old. They have experimented at different times as to which is the proper time to feed chicks after hatching, and have come to the conclusion that 48 hours is about right. One experiment, in which 100 chicks were taken from the incubator and placed in two brooders, 50 chicks in each brooder. Chicks in brooder No. 1 were fed after being in the brooder

There is But ONE
PEARL GRIT

There are a lot of our regular customers who have tried other preparations that were supposed to do what Pearl Grit DOES, and they give us but one verdict—THERE IS BUT ONE PEARL GRIT. They tell us these things because of their enthusiasm and confidence in something that actually DOES what we claim for it. We don't claim it is a world wonder, but it does provide poultry with nature's need. It provides it so well that our regular

customers buy Pearl Grit as they buy groceries—it's a poultry expenditure that is a sure investment through extra egg production. There are a lot of poultry yards that would pay expenses without, that pay a profit, a handsome profit, too, with Pearl Grit. That's exactly what Pearl Grit is for. We want you to share in the benefits it brings to others. Our FREE Pearl Grit Booklet gives you detailed information. It's worth having. Will you write to-day?

Poultry Post, Box 6, Goshen, Indiana

20 hours. Chicks in brooder No. 2 were fed after being in the brooder 48 hours. Eight chicks in brooder No. 1 showed a slight diarrhea when ten days old. Not one of the chicks in brooder No. 2 showed any sign of diarrhea at any time, and they were much livelier and grew better. They have made the same experiment a number of times with about the same results. After the chicks are 48 hours old they are fed rolled oats every four hours for five days and after that they are fed four times a day a prepared chick food, which is scattered in a deep litter of sweepings from the hay-loft. They also have a box of beefscraps and one of dry mash before them at all times.

The mash is made as follows: Equal parts bran, middlings and cornmeal, and to every ten pounds of the mixture add one pound of linseed meal. After the chicks are eight weeks old use cracked corn and wheat in place of chick food.

If the weather is stormy so that the chicks cannot get out in the yards to get green food they are given mangel wurzels or sprouted oats.

As soon as the chicks are old enough to leave the brooders they are given free range among fruit trees, berry bushes and corn fields until October, when the pullets are removed to winter quarters and the cockerels are brought back to the brooder house and are kept there until sold.

With this method of feeding they have pullets laying at six months old. The birds that we intend to use as breeders are not forced for winter laying. They do not like to have them lay until they are fully matured as immature pullets will produce eggs that are not as fertile as eggs laid by pullets that have not been forced for winter laying. And the chicks from these immature pullets very seldom develop into good size birds.

They believe in line-breeding, and do not believe, as some breeders say, that line breeding lowers the vitality of the bird. The fault is with the breeder himself. Too many times the breeder fails to throw out a weak and undersize bird just because it is a good shaped or good colored bird, and that is where the trouble begins.

THIS STRAY HEN WAS VERY CON- SIDERATE.

A stray hen of the Rhode Island Red variety, rain bedraggled and forlorn looking, wandered into Smith's garage on Commerce street this morning, and going aimlessly about amid the cars and mechanical appliances, presently became entangled in some machinery and was so nearly put out of business that a sympathetic workman, to put an end to the creature's suffering, politely chopped off its head and placed the carcass in a corner, nursing meantime visions of a chicken dinner.

A little while later the workman discovered that the hen, doubtless with a due appreciation of the kindness of its merciful executioner, had, even after its sudden demise, been thoughtful enough to lay two good sized eggs, its evident purpose being to lend its help by providing one of the needed ingredients for a swell roast chicken stuffing.—New Haven Evening Register.

The new edition of the Standard of Perfection will be ready about December first

THE REAL HEN FEVER.

I VERILY believe that if one truly gets the hen fever there is absolutely no cure. When I was a boy 12 years old I could make chickens pay so well that I was never wanting for spending money. At 15 years of age I raised a thousand chickens, and I doubt if there was ever a finer lot of youngsters. At this time farmer after farmer came to me asking why their chickens were dying, why the incubator did not work, and why the hens refused to lay. I was known far and wide as a real poultry boy.

It is wonderful what a boy between the ages of twelve and fifteen can learn and do in the poultry business if the fever once gets hold of him. This is the age when boys learn never to forget, and a boy that learns to love the cackle of the hen and the crow of the rooster at this age can hardly forget them. I know of no better way to teach our boys business methods than to have them keep books in a little business of their own. Again, as a study in natural history, I know of no better way to make the lasting impressions than through the poultry business. At 15 I knew more embryology than I ever expect to know again.

What an education it is for a boy to show fancy poultry in the leading poultry shows, to advertise in poultry magazines, to carry on a business correspondence of his own, and to learn to breed animals for a specific result.

To revert to my own boyhood. I should hate to tell the readers of this paper how many times the teacher caught me reading a poultry magazine behind a large-sized volume of geography. Personally I look back honestly believing that my poultry interests and little poultry business was more of an education to me and more of an inspiration than the school or teacher herself. I can say this with some understanding, as I am a teacher myself.

In these days we are hearing a great deal about Industrial Education, and I myself am facing an industrial education problem, as a teacher in Science and Agriculture in a high school designed for country boys and girls. Let me say that I believe in giving a boy a dozen good hens, an incubator and brooder and also a book to keep a cash account in, and letting the boy work out his own salvation.

I went to the Rhode Island State College Poultry School as the youngest member of the class and there received a wealth of inspiration and knowledge that would do any boy good.

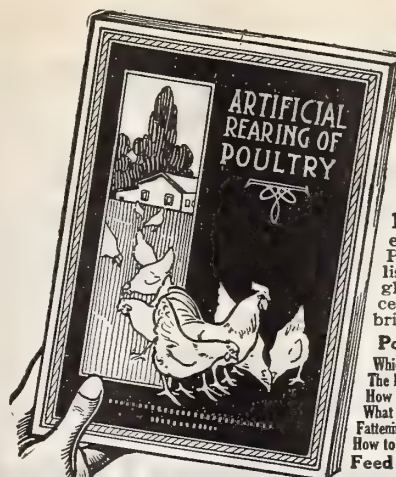

The time had come when I must enter college for a four-year academic course. In other words, the time had come when the biddies must go. And, by the way, let me say in passing, the biddies had a great deal to do in making it possible for me to go to college. Was I to lose the hen fever for good and all? Let this answer the question. When college exercises were suspended I was quite frequently at a good poultry show or talking with some breeder.

Now that college is over and I am at the serious business of earning a livelihood the biddies are not forgotten and I am hard at it again.

I believe there is no finer business in the world than breeding poultry, either for pleasure or profit, and there surely is both pleasure and profit in the business, at least I have found it so.

Dexter E. Coggeshall.

POULTRY ON THE FARM.

THE natural place for poultry is on the farm, but a great many times they are neglected. The average thriving farmer will keep good horses, fine cattle, hogs and sheep, but what kind of poultry? Ask them, they will say chickens. There is no place poultry can be raised to better advantage than on the farm. They have full range the most of the year, they can keep all the different kinds of grain picked up around the barnyard and are willing to pay you for same with eggs, while otherwise the grain would go to waste.

Farmers should wake up and realize the profit there is in keeping thoroughbred chickens. They look better, mature better, lay better, taste better, and in fact are better than the scrub chicken that so many farmers still cling to. The main thing is to get the breed that suits your fancy, as you will give them better care than the one you dislike, and mate your birds with care so they will produce the kind of stock that is always in demand, and you can always find a ready sale.

Poultry raising of today offers excellent capital for the hustling farmer. He must make a study of his flock the same as of his other stock on the farm. He can make poultry raising a pleasure or he can make it a drudgery; it depends upon how he takes hold of it, and how he handles it.

Experience teaches us that prevention of troubles are better than cures, whether it is diseases, lice, or mites. There are farmers' wives who raise poultry by the hundreds and make money out of them, and there are others who work their heads off and are a total failure at the business. The most essential things are: proper feeding, good houses and sanitary conditions.

Too many of the farmers' wives make the mistake of selling all their early hatched pullets on the market when they weigh a few pounds, because prices are good, the early-hatched pullet is the one they should keep for the next year's breeders, as good results cannot be obtained from immatured stock; for your foundation stock use nothing but the best, it matters not what breed you handle, as there is no such thing as the "best breed on earth." It depends upon how the stock is handled, that makes the chickens and gets the profit out of it; this same rule applies to all kinds of stock.

There is money in the poultry business, but you will have to make up your mind to work, as it is a great mistake to think that the chicken business is dead easy. All you have to do is to try it, and the poultry business will soon find you out and how much sand you carry in your gizzard.

Food has a great deal to do with the production of eggs. A hen is only a machine for turning various kinds of food into eggs, and unless we furnish this kind of material we need not expect to get many eggs, for it is from this that eggs are manufactured.

To those poultry breeders who have their fowls yarded, supply your fowls with food furnishing the elements needed for egg production and developing purposes. Keep them warm, dry and out of drafts, then you will have no cause to complain about the number of eggs you get during the coming winter months. See that they are supplied with pure drinking water, as most dis-

eases come from stagnated water. Now is a good time to store away dust for the bath box for the coming winter months, before the fall rains began. I gather the fine dust from off the road and store it away in barrels in my henhouses for future use, and when winter comes I supply my chickens with a bath box, where they can use it at their leisure, to rid themselves of lice. I mix a little carbolic acid in the dust for a disinfecting powder.

Anna M. Lembke.

Griswold, Iowa.

HOW TO OBTAIN GREEN FEED IN WINTER.

MANY poultry keepers do not realize what an important factor the green feed plays in the egg yield.

Just now most of the biddies are and have been getting their new feathers, and a little later they should begin to lay. But do they? Some do and more do not. If you have a good laying strain (no matter what the breed) and will supply your birds with plenty of green feed, besides the other feed, you will get eggs.

From now on it will be hard to get green feed, you say—yes, but you

A Prize Winning S. C. Black Minorca. Bred and Owned by F. C. Wing, Wayland, Mich.

won't get eggs unless you have it; you may get an egg, but you won't get eggs and it is eggs that count at this time of high prices, and when you look into your pocketbook at the end of the month you will see that a little trouble and a few dollars spent for green feed was worth while.

And now, for the benefit of those who have not thought seriously of green feed, I will go into detail.

In the first place, let me say right here that different breeds have different tastes as much as different nationalities of men have different tastes. For instance, the Frenchman's tastes are not like the Englishman's, neither is the Houdan like the Rhode Island Red, etc. If you study your own breed you will soon learn their tastes. Now, a Rhode Island Red will fill up on cabbage with a relish, while a Houdan prefers many times over the clover, but a cabbage now and then is relished, too. With a little pains, plenty of green feed can be given in winter.

Sprouted oats are grand things for layers.

Take a pan half full of oats, cover well with cold or luke warm water and let stand in a warm room for twenty-four hours, now strain off all the water and leave the oats for forty-eight hours

S. C. WHITE ORPINGTONS

Kellerstrass strain. Won again at the big Butler Fair, Pa., August, 1910, 1st cock, 1st and 2d cockerel, 1st and 2d hen, 1st and 2d pullet, 1st and 2d pen. June hatched cockerels, \$3 and up. No hens or pullets for sale. Eggs and baby chicks after January 1st. Mating list free.

L. A. Glessman, Member American White Orpington Club, Box A, Conneautville, Penna.

1st Prize Pullet
Springfield, Illinois
Sept. 1910

Barred Plymouth Rocks

Thompson "Ringlet" strain direct. I have 100 cks. and pullets, as fine a quality as you could wish for. They have that fine type and the snappy, ringy, barring, for which the strain is noted. Many of these will be winners and every one of them will be a fine breeder. I sell them reasonable and they won't last long, so write your wants quick. I guarantee satisfaction. Have just won 1st and 3d pullet at Springfield, Ill., in the largest class got together.

Ringlet Hill Poultry Farm, Fred Longnecker, Prop., Cayuga, Ill.

"Ondawa Farm White Leghorns"

Are no experiment, but have won silver cups, sweepstakes, 1st and special prizes at the leading eastern shows for the last ten years.

Fifty choice breeding or exhibition cockerels sired by the 1st prize cockerel at Cleveland, 1909, for sale. These fifty birds were left after culling out my flock of over 200, and such culling means nothing but birds of highest quality left.

Have a few nice females yet to dispose of at reasonable prices. I sell nothing but strictly high-class stock, and guarantee every shipment to be entirely satisfactory or money refunded, and solicit your order under this guarantee. Write today for circular describing this heavy egg productive strain. Address

Make and keep your fowls healthy. Give them good appetites, good digestion, good feeling, by regular use of

GERMOZONE

You will seldom be troubled with contagion in your flock if you give Germozone in the drinking water twice a week. It is unquestionably the world's greatest poultry medicine; the best bowel regulator, conditioner and tonic.

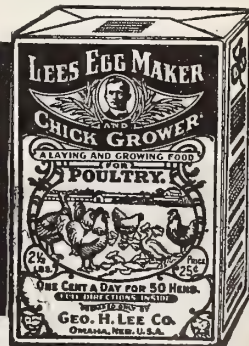

It prevents and Cures Roup, Cholera, Bowel Troubles and all Common Poultry Diseases.

Thousands have tested and proven the great value of Germozone. You cannot afford to be without it. Cost is nothing compared with having all healthy, vigorous fowls. Leading poultry supply dealers everywhere sell it. Liquid or tablet form.

Price 50c

Give
Your
Hens a
Chance

Make heavy layers of
your hens by feeding,

Lee's Egg Maker

Don't depend alone on the grains you are feeding. They are ideal for growing and fattening, but they are not egg makers. Lee's Egg Maker is the best form of meat food; a clean wholesome product; a preparation that is cheaper and contains more digestible protein—and that's what counts. Hens crave it because it is the most perfect substitute for the bugs, worms and grasshoppers which they devour so greedily. And you know that bugs and worms are nature's way of supplying protein to hens to make eggs.

25c and 50c Pkgs. 25 lb. Pails \$2.00. 100 lb. Drum \$7.00. Special prices on larger lots.

"Lee's Chicken Talk," a practical poultry book for all poultrymen, is free to you. Write for copy.

WHITE AND BLACK ORPINGTONS

200 fine of the low-down stay-white kind for sale very reasonable, fit to win in any company. My Whites are white to the skin. A fine line of both Black and Buff of No. 1 quality at a low figure.

E. R. Bradley : Hillsdale, Michigan

more. If these are kept in a warm room they will be nicely sprouted at the end of this time, and the hens will relish them hugely. This fed once a day will help fill the egg basket and you need not be afraid to feed a good many of them as they will not fatten your hens as some other things will, like corn, for instance.

Another green feed, as before mentioned, is the cabbage. These can be kept all winter by packing good sound heads on shelves in the cellar and covering with papers. Leave the root on and when ready to feed tie a strong cord to the root and hang it up against the wall for your hens to pick at.

Of course, the number of cabbage to feed will depend upon the size of your flock, the breed of birds you have and whether or not they are laying, for a laying hen eats more than one that is not laying.

And then there are other green feeds. The clover hay can be used. Of this get only the best. Musty clover will not do; it is not only bad for cows and horses, but for Mrs. Biddy as well.

Steam this clover and let it stand over night or until it looks as near fresh picked as you can make it.

To steam it, you put some in a large pan or pail, cover with warm water, put a cover over the pan or pail and let stand until cold. Now add more water if necessary and let stand until morning. Next, strain off the water and, unless the clover is very old, it ought now to be ready to feed.

Anything else in the green feed line that you can get will help along the good work. The big beets called mangels (or mangel wurzels) will help out if fed once in a while.

Once for all—green feed and plenty of it will give better results than any other way of feeding where the green feed is left out. And it costs no more in the end. Thomas Ray.

STANDARD MAKING.

No Standard Is Perfect That Does Not Produce Both Male and Female Like the Pair, and a Flock of Progeny to Secure 60 Per Cent for Scoring 92½ to 96½.

We are running away from nature's plan in our Standard making. The Standard for Brahmas adopted for 1883 and 1889 enabled the breeder to produce both sex to fill the bill and the specimens then were more beautiful as specimens than are the winners in our exhibitions today. I say this fearlessly. The Plymouth Rocks accepted as standard and scoring in 1889 93 to 96 were to my mind more beautiful as specimens in their pure bluish gray barred with a darker blue than the black barred specimens judges now are placing to the front. I am glad, however, to see the breeders coming back to nature's demand for this breed and accept the one color in both sex as the demand of the Standard.

When we demand pure blueish gray barred in a darker blue (say what our women folks call stone blue) and demand five bars to the smooth web of the feather, leaving the under fluff to be bluish gray or the same lightly barred to the skin, then one can breed both sex from the same pair and have far more even shade of color to one's flock, a more beautiful attraction to our farm, lawn and fields. That is nature's demands when she will yield you a more generous

Genasco Ready Roofing

Put it on the roof of all your buildings, and you'll have peace of mind, comfort, satisfaction, and economy; you'll have absolute and lasting weather-protection.

Genasco is made of Trinidad Lake asphalt—the natural and only perfect waterproof.

The Kant-leak Kleet keeps seams waterproof without cement. Supplied with Genasco, when specified.

Ask your dealer for Genasco, and be sure to look for the trademark. Mineral or smooth surface. A written guarantee, if you want it. Write for samples and the Good Roof Guide Book.

number of eggs—increasing the money value of the breed.

Double mating to cater to the whims of judges, instead of to demands of the Standard. There has been no improvement in the Standard making since 1889. There have been more blunders than benefit in what we have termed the perfection of the Standard.

It cannot be said to be an improvement to alter standard descriptions or to establish unjust handicaps that cut down the score or record for a breed one to one and one-half points or to virtually disqualify a breed from competing for the sweep-stake prizes, as has been done in the last revision.

Injustice to a breed is a long way from improvement in Standard making. No judge has yet seen seven specimens to score more than 96½ and to say the average highest score of one exhibitor exceeds 96; yet in the face of these facts we see the handicap of 1 point for Buff, 1½ for Black and 2 points for White breeds when competing for sweepstake prizes.

Two White Wyandottes have reached 97, one light Brahma has reached 97; at even these phenomenal scores, handicap the Wyandotte two points and they will never win a prize—the law virtually disqualifies them.

No man has seen but one black specimen reach 97, and 96½ the highest, with the above exception, handicap the black 1½, and what right have they to compete with Brahmas or Leghorns (brown)? None whatever. One point handicap for black or white is the most they can stand without virtually disqualifying them for sweepstakes prizes. We had 1½ points

for five years not to see a white or black breed win a prize. We then reduced it to one point, and now see a more severe handicap established and unjust discrimination. Has there been any honor in such legislation? The Standard is supposed to protect all breeds in their just and equal rights of competing and any legislation that destroys the equity would be declared in our national independence as unconstitutional—and in this case should be also.

This unfair and injurious item in our standard should be repealed wherever found. There is no law or equity whereby they may remain till another revision, for we may repeal at all times, if we may not revise oftener than once in five years.

The question is, will the next meeting of the American Poultry Association right the above wrong? It strikes me we can do much good by exercising the right of repeal. Felch.

GETTING READY FOR WINTER.

IN writing on the above subject I take for granted that most poultrymen have their houses in good repair and their pullets off the range in winter quarters. If not this should be attended to at once, for most pullets should be in laying condition by this time, and should be in permanent quarters before beginning to lay, as moving them after this time usually checks egg production.

Never place pullets with old hens, as they usually require different feeding methods, the pullets standing more forcing than the hens, and especially so in the heavy breeds.

Of course, you have yards nicely seeded to rape, rye, wheat or some other grain some time before moving in winter quarters and in consequence quite a difference will be noticed, especially in the hens just coming out of the moult, and in a short while an increase in egg production will be noticed as a result, as nothing is more invigorating to a rundown hen than something green to pick at.

In the hoppers are placed a dry mash consisting of the following: Bran, 3 parts; cornmeal, 3 parts; middlings, 3 parts; beef-scrap, 1 part; to this add 2 parts clover or alfalfa meal, if no green stuff is provided.

In case of old hens, especially heavy breeds, would advise cutting down cornmeal to 2 parts, and if still making new feathers increase cottonseed meal according to their condition. Also feed a little suflower seed if handy.

If weather has been unfavorable for sowing grain for green food, oats can be sprouted easily and quickly, the process of which everyone is familiar with.

For the morning feed, equal parts of wheat and oats are scattered in deep litter, either after going to roost or early in the morning.

We do not consider it advisable to feed wet mash to breeding stock, so the noon meal is left off.

The evening feed consists of corn, caffir corn or milo-maize, as their analysis is comparatively the same. This is scattered in deep litter about an hour before sundown, thus allowing them ample time to work it out before dark. In case of old hens it may be advisable

White and Columbian Wyandottes, White Ply. Rocks and S. C. Rhode Island Reds

We have carefully bred up our birds until they filled the standard requirements before offering them to you. That we now have this quality is proven by the fact that we won 19 silver cups, 6 gold specials and 200 regular prizes. Also many club ribbons and special prizes. These prizes we all won in 1909 and 1910, so you see we have the stock right now. We are offering you our last year's breeders, birds that won the above prizes, and that produced the prize winners that did the winning this year. In buying these birds, you are buying tested breeders, birds that are known to be producers. We are overstocked with young birds which were hatched late, and we need to grow them to saleable size, hence our prices are very low for quick sales. Trios and pens, some grand cockerels, now ready. Tell us your wants and let us quote you prices, they will please you, as will our birds, which are guaranteed as represented. Mention American Poultry Journal.

POST CARD BRINGS our free 56-page book, "The Why and How of the Miller System." Test our ideas far enough to form an opinion. If not satisfied, notify us in 30 days and we will provide return postage. Address Miller System Company, 14 7th, Binghamton, New York

to cut down proportion of corn and add a little wheat for night feed.

Of course it is supposed fresh water, grit, charcoal and oyster shell are kept constantly before them and also a good dust bath consisting of fine dirt—not sand—or ashes mixed with lice powder.

It is often advisable to catch up male birds and give them a good dusting occasionally, as they do not take advantage of dust bath as readily as hens.

As for houses, we would not think of using any other kind but open front and drop curtains, as we consider fresh air as necessary as wholesome food.

With the above care and attention, varied somewhat according to locality and circumstances, we believe anyone can succeed with poultry, regardless of breed or locality.

Gus B. Moore.

Sunset, Tex.

PRACTICE, NOT THEORY, IN POULTRY RAISING.

MANY things have been said, pro and con, about the most successful way to raise poultry. Every one has his own opinions—and that is perfectly right, as this is a free country in some things.

I have never considered myself a "professional" poultry raiser in one sense of the word, but have had just a few years' experience with only four breeds of chickens. I love everything that "grows a feather," and while I have never attempted to grow fancy fowls, yet have had some good enough to take first premiums at the county fairs and poultry shows. For my first investment I secured chickens from the largest breeders in the United States; as to cost, shall say nothing about that. They were beauties and as I had read and read a great many poultry journals I had a very exalted idea how they should be cared for. I fed them by rule, in fact each day's ration was measured and each chicken got its required proportion. I followed to the very "letter of the law" the best articles I could find on feeding and housing. This was kept up for at least ten years on three different varieties. But I could see no extra supply of eggs, and they got sick and died just the same as "any old chickens." One day my mother, who, in her early years, raised as many chickens as any one need want, said to me: "I think you had better lay aside all your theories about raising chickens and go back to the old-fashioned way." I took her advice, sold off all I had and invested in the fourth breed, which are the Barred Rocks, and, I must confess, in the two years I have had these fowls and followed some of the "old ways," I have never had such splendid results. I do not wish to be understood as crying down all the new methods; some of them are very good. But I do say, where one does not want to raise the "fancy fowls" for show purposes, it is best to follow nature as closely as possible. Nature never intended for the feathered tribe to be fed warm food or given warm water. Neither did nature intend for them to be deprived of their freedom. I know feeding warm mash and giving warm water in cold weather may cause egg production a little earlier. Yet, while the production may be greater at this end of the line, I believe it will be lessened at the other end of the line. Forced growth in a pullet may produce eggs earlier, but it will destroy the usefulness of the

bird later on. I believe in keeping the fowls healthy and varying the food and keeping their quarters clean. I never close the doors of the hen house in cold weather unless the thermometer gets to zero or below, and I only do it then to keep the combs from freezing. I notice the open-front houses are being advocated, and I think it will finally be the only house used. When I built my hen house I had a furnace built in it; my theories were very extensive then. So I have had experience by the "heat route." Now I am going along the "cold route." Chickens should hustle for their living. I do not mean by this that they should never be fed. But I do say the chickens, young and old, that get out early in the morning and you find them scratching and working hard for something to eat, are the healthiest and develop most rapidly. I have cockerels I have scarcely seen for two months. They get out by daylight and follow the hogs. I "rounded them up" a few days ago and I never saw finer birds. I feed my young chickens meal. Have spent hours and days baking bread for them, and have tried all kinds of "chick feed," but find nothing so satisfactory as meal. Barely wet it enough to hold together, and about twice a week mix equal proportions of cayenne pepper and blood-root with it. There will never be any bowel trouble with the chicks if they are fed in this way. I continue this feeding until they are large enough to eat cracked corn and wheat. In fact, I have fed it with good results until

they were nearly frying size. Theories are all very nice, but one has to use common sense in all things, and one has to learn the best ways from actual experience.

Mrs. R. L. Pollard.

Bowling Green, Mo.

KEEPING ACCOUNT OF THE FLOCK.

YEAR 1910 is drawing to a close and with the end of the year comes the time for balancing up the account books. It is taken for granted that you keep books with your flock, for only by keeping strict account of the money paid out and cash received can we tell exactly whether our poultry pays or not, and furthermore, we can tell just where our greatest profit or worst loss occurs. Perhaps, for the year, we can show a balance on the right side of the ledger, but it may be that some months were more profitable than others and also if we run our poultry at a loss for the year we can tell exactly where the loss is and remedy it.

If you haven't kept accounts in 1910, start to do so with the new year, and keep strict account of the outgo and receipts. Take stock of your flock the first of the year and place a value on the flock. Keep strict account of all feed consumed and eggs sold or used at home. For the man who is just starting into the business the keeping of accounts will prove of the greatest value to him. It will enable him to tell

what it costs to produce a dozen eggs, to feed the hen for a year or to raise a broiler to a marketable age. And so, as he increases his flock, he will know where (in his case) the greatest profit is made and so he can develop his business along this particular line, whether it be eggs or broilers.

This keeping of accounts with the backyard flock places the keeping of poultry on a business basis, and it should be run on strictly business lines. The man who is content to buy feed and sell what eggs that are not wanted for home consumption, without knowing whether he is producing them at a profit or loss, will never make a success of the business. For poultry raising is a business and not simply a hobby, whether your flock numbers ten or one thousand.

For the man who decides to go into poultry, and pays, say, \$50 for a pen to start with, will find the account book of special value. By it he can tell what interest he is making on his investment, for, when he has so much invested, he wants to be able to show a balance on the right side of the ledger, if for no other reason than to convince the "unbelievers" that there is money in poultry.

Often one is asked the question "Is there any money in poultry?" If you do not keep accounts you may say "Yes;" but you haven't the figures to prove it. When, on the other hand, if you can turn to your books and prove by the figures that there is money to be made out of chickens, whether they

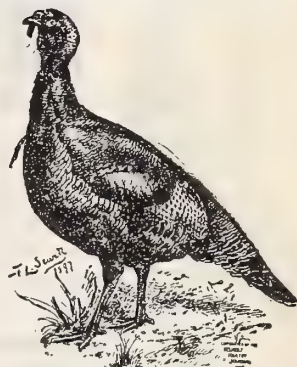

Bronze Turkeys and Partridge Wyandottes

America's Best

At the great Madison Square Garden shows of 1907-8-9-10 our Bronze Turkeys and Partridge Wyandottes won a total of twice as many premiums and twice as many points as any competitor. At the above 1910 show our birds won more premiums and more points than all competitors combined. The choicest Turkeys and Wyandottes we ever raised for sale now. Remember, all stock found not as represented may be returned at our expense and your money will be cheerfully refunded. All birds farm raised; vigorous and unexcelled for utility purposes. Write what you want; we'll try to please you.

Bird Bros., Box C, Meyersdale, Pennsylvania

DUSTON'S AMBITIONS

Have No Limit

Having in the Madison Square Show proved his stock without equal. Sighs for more worlds to conquer. Already his stock has been winning Canadian and United States shows all the fall. "There's a reason." He's got the "sweetest" bunch of young you ever saw, and no competition is too hot for his best. He'll sell without limit if a fair price is paid. Buy of a specialist, he knows little enough about the breed. Read a little history and see if the man who claims twenty years as a breeder can prove it! If he claims the "World's Best," if he has "made good" anywhere, but at a fall fair! Find out if he ever won anything with his own breeding! Had I the money I could buy whole flocks, and I'll bet I could win. Poor judgment, if I could not. Don't you think so? It takes brains to breed them! It beats me how a man can furnish winners for all these big shows throughout the country and cannot win prizes himself. Don't you wonder? Davey judged New York 1908-9 and it was acknowledged the best and finest judged show in years. I won first, fourth and fifth cockerel; first and third pullets; second hen, (considered by many unequaled as a Wyandotte); second pen, (considered by judge and fanciers superior to first, but told me "had to punish" on account of poor, broken, condition of cock's tail); fourth cock; first display; best shaped male in show and best colored male in show. The New York show has stood head and shoulders above anything held in the East. Any one not getting placed there usually enters for Boston, and WINS. Don't be wizardized, get the facts of who is who, and who can start you right. Remember I breed utility and laying stock as well as fancy, and can quote on breeders of all qualities. Write for just what you want. Send 10c for catalogue and learn about the breeder that has made possible the world's best flocks.

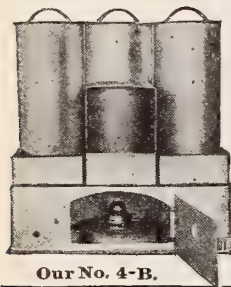

Arthur G. Duston, Box 1020, So. Framingham, Mass.

Mrs. U. R. Fishel :- Box A, Hope, Indiana

Money in Orpingtons

OR

THE SENSATIONS OF THE POULTRY YARD

Is the title of our New Book including all Standard Varieties, Buff, White and Black. The breed that has made money for all who have bred them.

The author of this book, Mr. Will H. Schadt, was one of the first breeders to recognize the wonderful merits of Orpingtons and has probably done more than any individual to bring them to their present stage of popularity. As organizer of the National S. C. Buff Orpington Club and Secretary for the first five successive years he raised the membership from 4 to 1500. During all this period much valuable data was gathered which is now being published for the first time. Besides ideal cuts of Orpingtons many articles will be published telling just how to intelligently mate and breed this popular fowl. It is impossible to even begin to enumerate the information given in this book, but whether you are breeding Orpingtons or not, you want to know why they will continue in favor so long as fowls are bred. We are going to sell this book in connection with a subscription to Poultry Post, one of the best 25c poultry journals published, giving all the latest and best news to poultrymen. A sample copy free. For 50c we will send you our book entitled "Money in Orpingtons" and Poultry Post 2 full years. If you are not fully satisfied with the book your money will be refunded. Send Silver, Stamps or Money Order. Address

POULTRY POST, Dept. 31, Goshen, Indiana.

be Bantams or big fowl, new recruits could often be added to the fancy. And it is by reason of the new fanciers that the demand for stock and eggs is kept up and goes on increasing year by year.

Keep an account with your fowls. Don't keep them; make them keep you. Be an up-to-date fancier and be able to show a goodly balance on the right side of the ledger at the close of 1911.

R. H. Crosby.

Markham, Ont., Can.

WHY IT PAYS TO RAISE THOROUGHBRED POULTRY.

THE average farmer or poultry keeper realizes but little of the valuation of a flock of thoroughbred poultry, as he has the conception to believe they are for the purpose of having show and fancy stock. If he knew that the qualities of thoroughbreds and mongrels equaled the flow of milk from high-bred Jersey cows and the native variety he would lose no time for the adoption of thoroughbred poultry.

Also, in certain localities the incubator is not as well established as it should be, but, however, this project is spreading faster than the former. The chief advantages for keeping thoroughbreds are: increased egg yield, heavier market fowls, and fowls that are more uniform in size, color and weight, which bring better prices than the mixed varieties, with quick sales.

The increased production of eggs from thoroughbreds is marvelous. An experiment on our farm was made two years ago with a pen of White Wyandottes and a pen of the ordinary mongrels. The test showed that the thoroughbreds not only produced a larger amount of eggs than the mongrels, but also consumed less feed than the mongrels. Each pen was housed, fed and cared for the same. Mongrels well cared for will lay annually on an average from 60 to 90 eggs, while with the same care and less feed the thoroughbreds will produce from 125 to 150 eggs annually and this number can be increased from 25 per cent to 40 per cent where trap-nested birds are only bred. But we obtain good results without their use, although I would recommend their use where the stock can be penned in for breeders during the breeding season, which recorded the largest number of eggs during the winter. The thoroughbreds also command a higher price on the market, as they are more uniform in size, weight and color and attract a far neater appearance. The Wyandottes and Plymouth Rocks are excellent fowls for market purposes. The additional weight and higher price that is secured makes quite an extra item at marketing time. The extra profits from a thoroughbred is about \$1.25 per hen, annually.

For instance, a thoroughbred Wyandotte will lay from fifty to seventy-five eggs more than the common varieties, and same will, in the present year, sell on an average of twenty-five cents per dozen. These extra eggs would sell for one dollar to one and a half dollars. Now, place one dollar for a safe estimate. These fowls should be sold the following year, in the summer or fall (to make room for young stock). They will bring on any market one cent more per pound. At this age they will average six pounds each, which is two pounds heavier than the dunghills will average. Thus, an additional quarter of a dollar profit is secured. This makes

\$1.25, a very low estimate. The above is not figured out of any books or reading matter, but is a tested fact of merit, as experiments prove. Where heavy laying strains are kept, such as Leghorns, Orpingtons and others, no extra profit can be expected at marketing time, but the large increase in egg yield will bring out the same amount as above mentioned. The Leghorns, Orpingtons and others that belong to this class consume less feed than the heavy market fowls.

As pullets are the best winter layers, the old stock should be disposed of in the fall. Here is where the average farmer makes an error, as he shovels the young stock among the old, regardless of the age of other fowls. The fowls that are three, four or five years old are unprofitable. When reaching this age they are easily subjected to death during the moulting season.

Our thoroughbred toulouse geese yield 300 per cent more profit than our neighbors', who are keeping the common variety. The thoroughbreds lay from 40 to 45 eggs per annum, while the latter mentioned average from 15 to 20 eggs, and, moreover, the standard bred goose will weigh from five to six pounds more at marketing time, which always command a better price. The cost of raising both is the same. The cost to commence with thoroughbred stock is comparatively small, considering the profits that are obtained. He may purchase either eggs or stock to commence with and should look for quality, not quantity. I consider this the best investment that can be made in this branch of industry. It is just as essential to have good stock as it is to have a good incubator, or anything else of this nature, as the best is always the cheapest. Wm. Katt.

Oak Lawn, Ill.

HOW TO OBTAIN WINTER EGGS.

A SUBJECT, concerning which much has been written and, I believe it is safe to say, much more will be written. How to get winter eggs? That is the question which all poultry men are pondering over at this time of the year, and for the benefit of those who have had little or no experience along this line the following general rules, which surely can be followed with success, are intended.

In the first place, let us take into consideration the stock from which we wish to obtain our winter eggs. It is my opinion that for this purpose April hatched pullets are the best, and they should be fed with this end in view from the time they are first hatched until matured. Their ration should be such as will develop bone and muscle so that they may have physical stamina enough to withstand the strain of heavy laying.

The pullets should be placed in winter quarters in September, as they begin laying much earlier if they are housed in sufficient time for them to become accustomed to their quarters before cold weather sets in. The methods of poultry housing have been so freely discussed in the poultry journals that I will leave the reader free to use his own judgment in this matter, only be sure that you provide plenty of fresh air both day and night.

Now comes the all-important problem of feeding. It is the opinion of the writer that a warm, wet but crumbly mash fed once a day is of great benefit both in securing eggs and in keeping

the fowls in good condition. The mash may be given either in the morning, at noon or at night and the results will generally be the same, although personally I prefer giving it in the morning. The following is a ration that I have used with success for some time.

At night a feed of mixed grain, consisting of wheat, cracked corn, buckwheat and oats or any good scratch grain, is thrown in a deep litter of straw, which covers the floor of the coop. A sufficient quantity of this is given so that the fowls always go to roost with full crops and with enough grain left in the litter to induce them to exercise for it early in the morning, thus warming them up. In the morning a warm, crumbly mash is given, consisting of equal parts by measure of ground oats, ground corn and wheat bran, with half of the bulk being either finely cut clover, which has been covered with boiling water and allowed to

steam over night, or beets, potatoes and turnips cooked and mashed. To this is added a small quantity of commercial beef scrap or cooked lean beef, a pinch of salt and red pepper and the whole thoroughly mixed and covered with boiling water or, better, scalded skim-milk if it can be obtained. At noon a light feed of oats or wheat is thrown in the litter to keep them exercising and some green food given, the best of which is sprouted oats. If you have not the sprouted oats on hand, cabbage, beets or turnips hung on nails for them to peck at are good.

Last of all, do not forget that fresh water, slightly warmed in zero weather, should be given them three times a day. This, with wheat bran, grit, oyster shells and charcoal constantly before them in hoppers makes a well-balanced ration and one that should bring the best of results. Fay W. Stevens.

Secures a copy of "Why Poultry Pays and How to Make it Pay." A 64-page book for the amateur and experienced fancier, and American Poultry Journal for one year.

A LETTER TO MY AMATEUR FRIENDS.

ADVICE to the new beginner often is misunderstood, especially advice about buying stock to stock their amateur plant. It is too often received as an ad for the writer. It may benefit all first-class breeders, to be sure, of which the writer may be, and often is, among that class, but, my friend, no matter of whom you buy, remember that the male is half of the breeding pen, even if 10 females are to be mated to him, and often is worth ten times that of any one female mated to him. No seller has any excuse to sell a male unfit for a breeder for anything but for poultry meat. Therefore, should you when you have made up your mind what you are going to invest in, a trio, pen, or double pen, at least pay half you have decided on for a trio or pen for the male bird, for he enters into every chicken you raise.

Yet there is reason for you not to be too wild and extravagant in what you buy. Above a reasonable price for breeding stock, the price has been too much governed by the wealthy in their pride of possession. This demand becomes a godsend for you, my amateur friend; your position for a time is to raise strictly nice stock for this demand.

My experience will demonstrate that it is not absolutely necessary for you to go into expensive showing, so long as you can breed stock that will win. You may sell a trio of birds for \$25 to \$30, a pen for \$35 to \$65, and your patron shows them and wins, which is often the case, first on cockerel, first and second on pullet, and sells the birds for twice what you received, or even he may have sold one pullet out of the breeding pen for \$100. This should please you, not make you jealous and foolish in your increasing the price on your general flock, for unless your patron can make a profit by patronizing you he will go elsewhere.

Better make your first sale secure to you a lifelong patron. The first \$1,000 worth you sell of strictly first-class birds will become a living ad for you.

Speaking of advertising, that is just as much an item as the grain you buy for your flock. Put in your ad no larger than you can afford and make it a yearly ad. Journals like the American Poultry Journal will bring you more orders in proportion to the calls for your circular than many others. The worth of such ads are in the orders they bring, not in the number of calls you get from circular sharks, like one I know of who asked me for a circular saying he now had over 1,000; he even failed to send stamp. I got no order from him, but for all that send a courteous answer to any letter you get and send stock well worth the price you receive, and in time your trade will grow. It takes times to establish yourself. The patient waiter is not a loser. State in your ad the plain and simple fact as regards your stock, a fact clearly stated is the strongest and most far-reaching. The human mind detects a lie very quick. To cheat a patron drives ten away from you. To please a patron will often add another patron to your list.

Even the express agents become your friends, they detect quickly whether your stock is first-class. Often an inquirer writes, "My express agent says you are sending out fine stock," and calls for your circular. It does not stop here, your name goes abroad and you are

selling stock to cross the water. All this is secured by your being interested in your business and doing business on the square.

Strictly first-class breeding stock is worth \$5 to \$10 per female and \$7 to \$20 per male—no matter what breed. You have made up your mind what breed you have decided to be identified with, let the speculator and show men have the higher prices, they need them. It cost them as much to show and advertise as it does you to feed and raise them, and these high prices you hear of are no higher for them than yours are for you. Don't be jealous and try to rob your patron, who has been to that expense by saying in your ad that your stock won at these shows. It will hurt you more than you will gain.

The owner of a bird is entitled to the credit of its merit. Be a man in all things generous and honest, and in poultry culture you will succeed.

I. K. Felch.

HINTS FOR THE BEGINNER.

THIS article is not intended for the experienced poultry man, but for those desiring to embark in the poultry business either for profit or pleasure. I have been raising poultry for the past five years, but gave it very little attention until the spring of 1909, but after studying the question more deeply I came to the conclusion that there was both pleasure and money to be had from our old friend, the hen. Having become interested, I naturally decided in favor of the pure bred fowl and as my stock consisted mostly of

cross-bred barred plymouth rocks, I sold them so as to begin with a pure bred strain of poultry. I tore down the old buildings, etc., and plowed and limed the land thoroughly so as to have it in the best of condition for my hen birds. Now, the question arose, shall I start with matured hens or give the baby chicks a chance? After studying the matter thoroughly, I purchased 100 day-old chicks from a well-known breeder of pure bred Barred Plymouth Rocks.

Having studied several systems and all the literature on poultry keeping I could secure, and using common sense, I decided on the following plan for a brooder, and am glad to say it has proved successful.

I made two of these brooders exactly alike, using dressed tongue and groove lumber, and placed them in yards of the same size, as I wished to study the different systems of feeding them from babyhood to maturity.

The baby chicks arrived on May 2d in fine condition after their long journey of three hundred miles. I placed fifty in each yard, No. 1 and No. 2. I fed the chicks in No. 1 pen the following ration: 1 pound of cornmeal, 1 pound of stale bread, 2 hard-boiled eggs, made into a dough, dried and ground fine.

I fed them this ration four times a day for the first four days. Grit, sand and a little charcoal were scattered about the brooder from the start. Beginning with the second week I gave them a ration consisting of fine ground corn and wheat three times a day, as much as they would eat up clean. This third week I allowed them to run about

the yard, which had been sown with grass, this furnishing them with plenty of green food. After five weeks I removed the brooder and placed them in colony coops. I keep before them in hoppers a dry mash consisting of two parts of alfalfa meal, one part of corn meal, beef scraps, oyster shells, charcoal and grit. Beginning with the seventh week I began to feed them cracked corn and whole wheat and continued to feed them this ration until November, when I received my first egg. The average weight of pullets at seven months was six pounds, cockerels seven and one-half pounds. I have successfully raised forty-four chickens. All of them are fine healthy stock and give promise of being fine hens.

The chicks in pen No. 2 were fed the same as the ones in pen No. 1, only the feed was moistened instead of dry. Up to November 25th they had not begun to lay. The average weight of the pullets in pen No. 2 was four pounds, cockerels five and one-fourth pounds. They are fine lookers, but nothing to compare with the ones raised in pen No. 1. This experiment has proved to me that to successfully raise young chicks one must feed nothing but dry foods.

Joseph O'Grady.

Baltimore, Md.

Fresh green feed will be scarce during the winter months. Better turn to page 1338 and see what we have to say about scientific feeding. It's a good book.

There are many poultry journals, but only one American Poultry Journal. Readers, please advertise.

"RINGLETS" ARE MONEY-MAKERS

E. B. Thompson's Barred Plymouth Rocks are Making Money for Customers Everywhere

A breed that is in such great demand as the "Ringlets," and sell as they do, must have a world-wide popularity and be great layers, breeders and show birds.

"Ringlets" are the choice of thousands, they sell when no others will by reason of their matchless quality. Their prize record at the Imperial Show of all America—New York—is unexampled.

CANNOT SUPPLY DEMAND FOR "RINGLETS"

Mr. E. B. Thompson:

Dear Sir:—Please send me one of your latest catalogues with prices. I cannot supply the demand for "Ringlets" and will have to send you my orders soon. I have raised about 150.

Yours truly,

J. M. CULPEPPER.

CRAZY OVER "RINGLETS"

Mr. E. B. Thompson:

Dear Sir:—I have your Bargain Catalogue before me and I have looked over same several times. I want some of your stock. My trade demands "Ringlets" as Texas is crazy over the "Ringlets" and no other Barred Rocks are very saleable. I have been to some of the shows near here this year and the "Ringlets" were all the rage and I want to get a pen of each cockerel and pullet mating. I have been beaten two years by "Ringlets" and am tired of it. Yours truly, JARVIS M. LIPSCOMB.

FIRST PRIZE "RINGLET" COCKEREL

Mr. E. B. Thompson:

Dear Sir:—I write to inform you of my success with the "Ringlet" eggs last purchased from you. I had good hatches and raised some fine specimens; have one of the finest chks. I have ever seen. He has just taken first prize here in Burlington and also at Greensboro in strong competition open to the world, eight car loads of birds there from northern cities. The judge declared him one of the finest birds he had ever seen. With thanks for honest dealings and kind wishes, I remain,

Yours truly,

JNO. W. LASLEY.

"RINGLETS" ARE WINNERS

Mr. E. B. Thompson:

Dear Sir:—You remember sending me 100 eggs for \$50 last spring. I showed at Three Rivers, Mich., two cockerels and four pullets and won 1st and 2d full line of birds, old and young, while I did it ALL on young stock.

Yours truly,

Union City, Mich., March 3, 1910.

If you desire to win, I can help you; if you want to breed winners, I can sell you the birds correctly mated to produce high scorers. 1000 grand breeding and exhibition cockerels for sale—one of them will improve your stock. Elegant hens and pullets in any number. Show birds fit to win in any competition. New richly illustrated catalogue mailed upon request. It is full of pictures of New York Winners from life.

FEEDING LAYING HENS FOR EGG PRODUCTION.

THE idea of this article is to help prospective poultry raisers, although space compels me to be brief.

We have demonstrated the fact that the American egg is the gold of the farmers' products.

The principles upon which feeding for winter eggs are based are a variety of opinions rather than a restricted science.

In order to reach a high state of productiveness, we must make our winter conditions comply with the summer ones as much as possible.

I find the majority of hen houses have small, dark windows. This is one great mistake. Keep your windows clean and free from dust or cobwebs. Remember the lines of one of our old hymns—open up your darkened windows and let a little sunshine in. Sunshine purifies the blood and insures strength and vigor.

The most essential food is a variety of vegetables, with good, sound grain.

At the present time the high price of cereals is an important factor in favor of root crops as a feed for laying hens. Mangel roots are the best root crop for feeding. "Although any root has a certain amount of nutriment," they contain the largest amount of dry matter of any vegetables and the yield per acre is the largest of any variety. An experiment some few years ago proves to us the value of mangel roots as a food. It was found that a larger per cent of dry matter could be found per acre in mangel roots than in a large yield of corn.

In the selection of green foods for laying hens, the cabbage should not be overlooked for this purpose. The cabbage is next to mangels in value as a nutritive food.

Clover and alfalfa cut fine and placed in a tub with boiling water and al-

lowed to steam, are greatly relished by hens.

You should provide your hens with a cheap litter of straw or chaff, the latter being preferred. In this litter mix your morning grain ration, which should be composed of a variety of grains. This form of feeding compels the hens to work for their living. Again at three o'clock in the afternoon feed your hens the same way. This will give them ample time to fill their crops before going to roost.

Exercise care not to overfeed. Overfeeding will fatten your hens and stop egg production. I find a good grain ration is two parts wheat or buckwheat, two parts cracked corn and one part oats. I recommend the use of cracked corn; it is harder to find in the litter and easier to digest.

You will find by carefully reading the different articles on feeding that there are a good many opinions on the subject: "How should ground grain be fed?" We find in the past the majority of poultry raisers practiced the feeding of a mash in the morning. This method is conducted at the present time with good results. Again we have the hopper system of feeding ground grain dry. I think this method is followed by the majority of successful poultry men. Where ground food is a part of their ration, when using the hopper system, allow the fowls free access at all times. A good ration is equal parts of bran and ground oats.

C. J. Parkhurst.

Schenectady, N. Y.

Editor American Poultry Journal.

Dear Sir: Being a constant reader of your valuable publication, I am very much surprised to find so little said concerning water fowls by its many readers. It seems to me that the raising of water fowls is a branch of the industry that in the past has been much neglected, but since the introduction into this country of the Indian Runner duck the

lovers of water fowls have taken new courage, as we find in them a fowl very valuable from several points of view. First and most important is their remarkable egg production. I believe under ordinary care they will run a close second to the Brown Leghorn hen, and if weight of eggs were taken into consideration I believe they would stand alone as the champion egg-producing fowl of America. They are easily raised and easy to handle and pen, a 2-foot netting turning them nicely. They are great foragers when let run at large, but the damage done by them to growing crops is not so large as that done by the same number of chickens, and if necessary they stand confinement well. They are great homers, always coming up and going into their pen about the same time each evening, so making the collecting of eggs an easy task.

I find that there are at least three distinct breeds, the Fawn and White, Brown and White Penciled and White. I have no doubt but one breed is as good as another, but the Brown and White Penciled being the only breed that I have had any experience with, I can only speak for them. Would like to hear from some of the breeders of other varieties as to their good qualities.

Charles S. Macy.

Arlington, Ind.

If you have failed in other business owing to your own neglect, don't start in the poultry business and expect to make good; but if you want a good-paying business, one that will bring big returns with reasonable amount of care, start in the poultry business today.

This is not a political paper, but, really, what do you think about the Democratic landslide? How much more will chickens and eggs cost next year? Better get in on the poultry ticket and be elected with the poultry landslide. It's the one safe bet.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—Would like to have information in regard to chickens with sore eyes. Eyes slightly swollen, watery and have the appearance of being blind.

Toledo, Ohio.

C. C. J.

Answer.—This is roup in the first stage. Procure some one of the various roup cures advertised in these columns and give as directed.

Question.—(1) Do you consider roup a contagious disease? (2) Will hens that have ever been affected with roup ever be fit for breeding purposes? (3) Should chickens be fed pounded glass for grit? (4) I need some Single Comb Brown Leghorn cockerels for next season from a good laying strain; can they be procured for 75c, as advertised in your paper?

Lodge, Mo.

R. C. A.

Answer.—(1) Yes. (2) No. (3) This may be used, but any of the commercial grits are far better. (4) 75c is a very small price to pay for cockerels of any variety and you could not expect to get much of a bird for this price.

Question.—(1) What is the best and cheapest thing to put in a hen house for hens to scratch in and shall I use the same for old and young chickens? (2) What shall I use in the dust box and shall I use the dust box for small chickens? (3) Have you a book concerning domestic rabbits, and if not, where shall I find one? (4) Have you a market for feathers? (5) Is a place with a temperature of 60 degrees too warm for young chicks from one day to eight weeks?

Barrington, R. I.

G. F.

Answer.—(1) Oat straw makes the best scratching material for old fowls, cut clover hay for young chickens. (2) Common road dust. It is not necessary to furnish dust box for small chickens. (3) We can furnish you with a book on rabbits, price of which is 25c. (4) No. (5) Day old chicks should have a temperature of 95 degrees and as they grow older temperature should be reduced until

they are eight weeks old, when it should be between 60 and 70 degrees.

Question.—(1) Which is the best breed of poultry to raise for broilers to get the best prices? (2) Which is the best egg producer, the Single Comb White Leghorn or the Brown Leghorn? (3) Will Leghorns produce as many eggs and do as well that are kept by the Philo System as if they have free range? (4) What is the average egg yield of the White Plymouth Rock, of the White Wyandotte and the White Orpington? (5) Which of the last three named lays white eggs?

Kerstetter, W. Va.

W. P. S.

Answer.—(1) There is really no best breed of poultry for broilers. Any of the American varieties, such as Rocks, Wyandottes and Rhode Island Reds make excellent broilers. (2) There is nothing to choose between these two varieties so far as egg production is concerned. (3) It is so claimed. (4) About 150 eggs. (5) None of them.

Question.—Please let me know in your Question and Answer column what kind of a chicken-food will ground peanuts make.

T. W. W.

Westernport, Md.

Answer.—We have never had any experience with this feed, therefore not in a position to state.

Question.—About the middle of October my young chickens became sick. Their combs and wattles were black, they would not eat and their feet were cold. Found the crops when opened very offensive and full of corn and those little black bugs that hatch out after the first good frost, and live off the filth of barnyards. Took a tablespoon Powdered Gentian to 1 pint of water and gave from a few drops to a half teaspoonful to each fowl two or three times and never lost another chicken. All the chickens in the neighborhood had the same thing. Will you please tell me in

your Question and Answer column the cause of the trouble?

D. W.

Stanton, Mich.

Answer.—This was liver trouble and sour crop, caused no doubt from what the fowls had been eating, and as your remedy was effective there is no need of giving another remedy here.

Question.—(1) Would poultry pay in a small town forty miles from Evansville, Ind., on a lot 50x100? (2) What breed would you raise for layers? (3) What should be the cost for the first ten weeks of raising a Barred Rock chick hatched the first of March and what should be the weight? (4) Are there any of your advertisers that can furnish me with day-old chicks of different varieties?

I. L. H.

Slaughtersville, Ky.

Answer.—(1) Yes. (2) Any of the Standard varieties. (3) About 15c. Weight should be 24 to 30 ounces. (4) Yes, see our advertising columns.

Question.—Will you tell me what is the trouble, cause and cure of my chickens? They have a sort of rattling in their throat, a white bubbly substance gathers around the eyes of some of them. Others have the rattling of the throat and run at the nostrils. They appear to eat well, but seems to be very light in weight and all breathe very hard. I noticed some of the pullets, when roosting at night, set with their heads raised very high and when breathing appear to keep bulging out at the neck and making a noise as though sneezing or coughing. I steamed them with hot water and carbolic acid and am now using Conkey's Roup Cure but without avail.

W. F. H.

Youngstown, Ohio.

Answer.—Your fowls have a complication of diseases, including roup and bronchitis and probably canker. They are in a very bad shape and it is almost impossible to doctor them successfully. The trouble may have been caused by breeding from diseased stock and they have therefore inherited it from their parents. It would be better for you to dispose of these birds at once and thoroughly disinfect your premises with some good disinfectant and procure some new stock. Our Poultry Doctor Book will give you full information about this and other diseases of poultry, price of which is only 50c.

CRUSADER III—A BOSTON WINNER

REGAL FACTS

Are you a breeder of White Wyandottes or are you thinking of taking up this splendid variety? Let me present a few facts for your consideration.

I—Regal White Wyandottes being bred in a northern climate have always been noted for size and vigor and beautiful silvery plumage.

II—Eggs hatch phenomenally well and the big plump chicks grow like weeds.

III—Regal White Wyandottes in the past ten years have won more prizes than any other strain. New York State Fair, Boston, Toronto and Guelph, Canada's two greatest shows; 218 regular prizes, not counting specials.

IV—In the past three months Regal White Wyandottes won important prizes at twenty-one state fairs.

V—While some breeders and judges in the past have made a hobby of color and ignored shape, Regal White Wyandottes have always been noted for shape and there are none any whiter.

To quote Judge Drevenstedt, the greatest living authority on Wyandottes, your birds have been bred to the Wyandotte type most consistently ever since I first handled and judged them at Toronto many years ago. They are true Wyandottes in shape and have the color to go with it. All over America my customers are winning the blue ribbons, so if "the proof of the pudding is the eating," why not send me a trial order and be convinced.

1,500 Cocks, Hens, Cockerels and Pullets for sale. Send for illustrated catalogue giving price and description of stock.

John S. Martin, Box 51, Port Dover, Can.

Question.—Will you kindly answer in your December number of the journal the following? I am an amateur fancier, but think I have some very fine stock and show birds, some imported ones that I would like to show at large shows this year. Being a business man, I cannot get away to attend the shows and look after the birds. Is it safe to send them without any one being present at the show who is an acquaintance? How would you go about it? Do your birds get just as good attention and is the judging done impartially? Are your premiums sent to you, ribbons and money, as soon as the show is over? Is there any danger of fraud or losing birds? A. H. Louisville, Ky.

Answer.—Thousands of birds are sent each year to poultry shows unaccompanied by their owners or manager. The birds get just as good attention as they would if the owner was in attendance. Premiums are sent as soon as the secretary of the show can get to it after the show closes. The danger of fraud or of losing birds is indeed very slight and the judging is or should be done impartially.

Question.—(1) How many chickens can be kept on a lot 65x168? (2) One of my pullets was found dead in hen house. There was a yellow-looking oil running from eyes and nose. She was all right the night before. (3) Young chicks have a continual opening and shutting of mouth and the crop is full of wind. What is the cause of this? G. F. W. Ensley, Ala.

Answer.—(1) About 400. (2) Probably caused by an over-fat condition. (3) This is probably sour crop caused by improper feeding. Give powdered charcoal in soft food and a tablespoonful of common baking soda to each quart of drinking water.

Question.—(1) My turkeys get droopy, do not care to eat. Their heads turn dark, red or purple and their droppings are thin and yellow. They live about a week and die. Please give cause and cure. (2) Do turkeys have tape worms? If so, what is the cause and cure? (3) Will acorns make turkeys poor or hurt them in any way? (4) Have noticed in the droppings of my turkeys a small worm. Please give remedy. (5) Where can I get a book on diseases of turkeys? Lixville, Mo. H. F. F.

Answer.—(1) This may be black head or it may be caused by worms. See article in this issue for cure. (2) Yes. (3) No. (4) See article in this issue. (5) Our Poultry Doctor Book will give you full information about diseases of turkeys and all other fowls; price of this book is only 50c.

Question.—From what have the Black Leghorns originated and what do you think would be their future if they had a few men to put their best efforts into their improvement? Could they be made to equal the whites of today? If not, what is against them? R. B. F. Homestead, Pa.

Answer.—The Black Leghorns originated in England and are a cross of Brown Leghorn and Minorca. They have never been very popular in this country, but no doubt could be made so if the proper effort was put forth.

Question.—(1) Is it a good plan to have a platform covered with about six inches of straw for Single Comb White Leghorns to sleep on during the winter instead of roosting? (2) To whom do you apply to join the Boys' National Poultry Club? (3) What will be the cost to enter a chicken in the show at the Coliseum on December 8th? (4) Do you have to belong to a poultry club in order to exhibit at a poultry show? L. J. Jr. Chicago, Ill.

Answer.—(1) No. (2) The secretary, Mr. E. Lawton Moore, Jr., Wyncote, Pa. (3) \$2.00, but you cannot now enter, as entries closed November 22. (4) No.

Question.—(1) Must Rouen ducks have water to swim about in, if you give them plenty to drink? (2) If I hatch Rouen ducklings, will they die for want of a place to swim in? (3) What is a good feed to give Rouen ducks? G. B. New York City.

Answer.—(1) No. (2) No. (3) Young ducks should be fed with corn meal and middlings moistened with warm water. Old ducks may be fed corn, wheat or any good grain.

J. D. B., Tyler, Tex.—Chickens are troubled with what is known as jiggers in the South, which is a small flea. They lay their eggs around the heads and when hatched are a solid mass, but easy to get rid of. Any soft grease or oil rubbed on

them will eradicate them at once. If one dose does not do the work, make the second application. Your chickens are running under an old building where the earth is very dry and fine, which is one of the best breeding places for fleas. It is a very common trouble here in the dry South. If you give the place a thorough wetting you will have no more trouble. Beaufort, S. C. Dr. J. A. Whitman.

Question.—(1) Should chicks be fed during the first 48 hours? (2) When should water be given? (3) What feed is best for first day and time to feed it? (4) How long should above feed be given? (5) When should chick food be first placed in litter? (6) What feed for chicks one to 10 weeks old? (7) When should raw bone be first given, and how much? (8) How should green food or sprouted oats be first given? R. C. M. Kansas City, Mo.

Answer.—(1) No. (2) When they are taken out of the incubator. (3) Hard boiled eggs and cracker crumbs after they are 48 hours old. (4) For the first four or five days. (5) Any time after they are three days old. (6) Any of the commercial chick feeds now on the market. (7) After they are six weeks old a very small portion of raw bone may be fed, but this is not necessary. After they are three months old they can be allowed one ounce three times a week. (8) Green food can be fed any time after the chicks are a week old.

Question.—I have blooded pullets of a good strain and have procured a cock of a still better but a different strain than my pullets. Would it be better to mate pullets with this cock, or to get a cock of the same strain? E. M. Delaware, Ohio.

Answer.—It is better whenever possible to procure a male bird of the same strain to mate with the pullets.

Question.—What is the matter with my eight-weeks-old chickens? Their face and around their combs get raw and later their eyes swell on the left side? Mt. Gilead, Ohio. Mrs. T. M. M.

Answer.—Your fowls have caught a severe cold, due probably to a draught. Take a lump of lard the size of an egg, melt it, after which add two tablespoonfuls of kerosene oil. Rub this warm mixture on the head and throat of the fowls;

POULTRY SUCCESS IN THE BACK YARD.

HOW often have we heard it said that poultry could not be successfully reared or profitably kept in close confinement or under conditions such as city or town people have afforded them. To such statements I cannot agree. In fact, my own experience teaches me altogether different. While only an amateur in the business perhaps it will not be amiss to tell the readers of these columns just what my success has been, or, rather, what I have accomplished in my "back yard." About the middle of January last I was seized with what is commonly called or known as the "chicken fever." The only remedy I could find for this malady was to purchase a trio of White Orpingtons from a western fancier and impatiently wait results, which I did much to my delight and satisfaction. I must not get ahead of my story, for in the meantime I had taken advantage of the combination offer on poultry journals and subscribed for four of them at the very low rate of \$1 for all four of them for one year. And I wish to say right here that I don't know how or where I could have invested a dollar to better advantage than I did by subscribing for these valuable papers. I read them carefully, and they have been my guide and have proven to be, as it were, stepping stones to whatever success I have achieved. It is my candid opinion that no one should attempt to raise poultry without first subscribing for several good poultry papers, of which there are a number, and peruse them carefully and learn just how the big fellows have achieved their success. Forget that old haphazard way which has so often resulted in complete failure, and sit up and take notice of the methods that the fellows with plenty of gray matter have worked out from practical knowledge and a scientific standpoint. In addition to my trio of White Orpingtons I also purchased a Cycle hatcher. I had never seen an incubator before, and knew nothing about them beyond what I had read in catalogues sent out by the manufacturers. However, I looked it over and soon constructed a small wooden frame, and with a piece of hose connected it to a gas bracket in an unused sleeping room, rigged up the hatcher and began operations with gas, and it worked O. K. I succeeded in getting a 75 per cent hatch throughout the season. Taking into consideration that a large percentage of the eggs incubated were taken at random from a grocery store, I deem it a fair hatch. At this writing I have in my back yards, which is 20x80 feet, 200 young chickens, all strong and hearty, ranging in different sizes and ages, the smallest six weeks old and the largest weighing three pounds each, 62 of these being White Orpingtons hatched from eggs of the trio I first purchased, and the breed I propose to bestow my best efforts upon. I have a great many visitors to see my birds, among whom are chicken raisers, and all compliment me on my success, or rather, as they term it, good luck. I usually reply that I think it not so much good luck as good attention. In addition to the above I neglected saying that I sold four weeks ago eight nice broilers at a good figure. During business hours my

wife looks after all the little details, and they are many indeed, yet of the greatest importance, for they contribute very largely to good health and profitable flocks. My coops, of which I have three, are built of matched lumber and colony style, have open screened fronts and equipped with drinking fountains and dropping boards which are convenient to keep clean, and the open front affords plenty of fresh air, which is absolutely necessary to produce good results. I am a strong believer in plenty of good fresh air and clean water and cleanliness throughout the entire system. Our loss by death has not averaged above 4 per cent, and for this amount of chickens to be kept in close confinement in small yards not over 8x10 feet square I consider pretty strong evidence that chickens can be successfully raised in the back yard. I expect to market enough of these fowls to more than pay my entire expenses of coops and feed and still have remaining thirty-five or forty White Orpington pullets which at this time are very promising and bid fair to supply us with fresh eggs for the winter. Just one more item and I will not weary you further. About eight weeks ago I procured from a friend in the country six turkey eggs which I incubated in my Cycle hatcher and brought out six strong, hearty turkeys. They are now four weeks old, running at liberty in the back yard and doing fine. I am living in hopes of enjoying both a Thanksgiving and Christmas turkey dinner. And again let me emphasize that what I know about raising poultry I have gained by reading the columns of the poultry journals.

P. W. Wenk.

PROTECTION AGAINST THIEVES.

A chicken worth hatching is worth saving. Every paper is full of timely articles on all manner of evils that beset chicks, but in all my readings have not seen an article on protection against thieves.

A thief can undo the work of a season in one night, and they are doing it all over our country. Why? Either because of carelessness or not knowing how to protect properly.

Am a breeder of White Wyandottes exclusively, and have my houses protected by both the open and closed circuit systems, making it impossible for a thief to enter without turning in an alarm.

My houses are of the open front type,

making protection a hard proposition. Each house has two windows 2½ feet by 6 feet, covered with 1-inch wire netting.

Following is one of the systems I use:

The open circuit system needs an electric bell, with 2½-inch gong, enough annunciator or bell wire to make a metallic circuit from your residence to your poultry house (a heavier wire for outside purposes is preferable, about a No. 12 Kerite rubber-covered wire will stand the weather), all wires must be insulated from the ground by placing on wooden posts, or buried in the ground in tile or wooden boxing. Two cells of dry battery should operate 200 feet of wire. On the sill of each opening tack a piece of copper or tin, 2 inches by 4 inches every 2 feet, under this contact, coil the end of a piece of small wire bared of insulation about 2 inches, leaving 2 feet loose; now saw a board the width of your sill and the length of each window, cutting it shorter by at least an inch, to fit over the sill, mark on the board where the lower contacts will strike and place some tin or copper with wire under on the board. Now get a No. 12 spring brass wire and make three or four springs about 1 inch high when opened enough to spring good, bore a hole in the sill and one in the upper board opposite each other about ¼ inch in depth, place springs in sockets. They should keep the contacts about ¼ inch apart. Bore four holes through top board size of a large round spike and set the board correctly, driving the spikes down until the heads leave about ¼ inch play above the board, this allows the board to work up and down if pressure is made on board at any point. The two wires brought from residence are carried along under the windows and past your door, each wire of the upper board is connected to one wire from the residence and each wire from the sill contacts to the other wire from your residence, the wires being bared for the contacts.

On the door tack a piece of tin or copper about 2 inches square, tack it on back edge of door with wire under same as windows; on weatherboarding place a piece of your spring wire about 2 inches long with an eye for a large screw, fasten a short wire through board to your screw, fasten both wires from this contact to residence wires same as windows. Leave both residence wires open at end.

When you lock your house at night

turn the spring on door over contact just so it will not touch unless door opens, your windows are always set. Now screw your bell where desired, running one poultry house wire to one binding post of bell, other poultry house wire to zinc of battery carbon of same battery to zinc of other cell and carbon of this cell to other binding post of bell.

A Large Egg Yield

A hen—any hen—will lay a great number of eggs (some more than others) if conditions and surroundings are such as meet the requirements of hen nature. Here is where *your* part comes in. Give the hen a regular daily portion (a penny's worth is enough for 30 hens) of Dr. Hess Poultry Pan-a-ce-a, and she will do the rest.

DR. HESS POULTRY PAN-A-CE-A

is not a food—it is a tonic, specially prepared to give tone to the digestive and reproductive organs, so that the maximum of food, over and above the maintenance ration, is used to make eggs. It has also a property foreign to a so-called poultry food. It is a germicide, that is, it destroys bacteria, the cause of nearly all poultry ailments. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M.D., D.V.S.), is endorsed by the leading poultry associations in United States and Canada, and is sold on a written guarantee.

1½ lbs. 25c., mail or express, 40c.

5 lbs. 60c.

12 lbs., \$1.25.

25 lb. pail, \$2.50.

Except in Canada and extreme West and South.

chickens—Get our Free Book

The least pressure on window sills or contact at door will ring your bell as long as contact is made, which should be enough to waken you. Then get busy.

Houses equipped with both closed and open circuit system are practically burglar proof.

L. L. Potter.

ROSE AND SINGLE COMBS—NEW VARIETIES—AMATEURS AND VETERANS.

Dr. H. F. Ballard.

A writer in the Feathered World objects to the manufacture of so many varieties, with no distinguishing characteristic except comb. He says: "I think it is high time fanciers insisted on the comb being the one great point in any breed, and treat as mongrels (which, of course, they are) any which have not a comb characteristic of the breed. We have Minorcas and rose comb Minorcas, Leghorns and rose comb Leghorns, Rocks and rose comb Rocks, Rhode Island Reds and rose comb Reds, and we are being threatened with ever so many more. * * * These mongrel classes will in time ruin most shows, as few fanciers care to compete in 'Any Other Variety' classes. If the Poultry Club accepts standards for any new variety of a breed, they should insist on the main characteristics being preserved, and in no case allow both kinds of combs in the same breed."

How does that strike you American breeders? My opinion is that if carried out it would necessitate a big lot of culling in some flocks. You could not go unconcerned along your way, producing two kinds of combs from the same mating and calling them two distinct varieties. It's a money proposition, pure and simple. I am inclined to think the Englishman is right, or half right.

The Rose Comb Leghorn has never been able to keep up with its older brother, the S. C.

Another writer in the same journal is objecting to the Single Comb Wyandotte. That is a new one on me, and if there is such a misnomer it is about time somebody was objecting.

Well, I am thankful that we don't have any Rose Comb Cochins, and

don't want any. We don't want anything but Cochins blood in them and it would surely mean a mixture if we had them. We have so many mixed up varieties now that it takes an expert to define them, and it keeps the breeder in a continual wrangle fussing about shape. A Wyandotte with Rock shape and an Orpington with Wyandotte shape, yes, and even a Leghorn with Dotte shape and vice versa, I have seen mentioned.

An eastern breeder tried for years to introduce a pea-combed Plymouth Rock, and I have an idea that the knowledge that they contained Brahma blood deterred many breeders from taking them up. We get tired of a variety that is continually reverting back to an impure ancestry, and that is what these mixed up combs and things are forever doing. If we must have new varieties let us have some other distinguishing marks besides merely comb.

Here is another pretty good squib by an English writer; I wonder if it would hit anybody in the United States: "An experienced fancier or so-called professional is one who can win at the big shows. A novice is one who breeds the birds and sells them, to go eventually to the experienced fancier for the latter to scoop the pool with. A judge is one who, acting as middleman, buys the birds bred by the novice and sells them to the experienced fancier to win under him (the judge) at the next show at which he is officiating." He then goes on to say: "I back the novice who gets a good price for his birds, without the trouble and worry of exhibiting them." A few years ago I knew an Illinois breeder of White Plymouth Rocks, a lady, who sold regularly all her birds to a big breeder to fill his sale order with. There is probably a good deal of that kind of business done, though I think perhaps not quite so much as formerly, because most of the large breeders have enlarged their plants, so that, with incubators and brooders, they now raise more of their birds than formerly. It is perhaps only in exceptional cases where many birds are bought to be resold under the name of a breeder of reputation. Then, too, many of these smaller breeders had first purchased

their stock of the larger one, so there was really no deception in the matter, the birds all being of the same strain. It is all right to buy birds to be resold, the same as in any other kind of stock, providing the purchaser knows the stock and the pedigree back of it.

AN INCUBATOR HOUSE.

It is an open question as to where is the best place to run an incubator, in a cellar, house or in an unused room in dwelling house. Many are used in each.

Any place that has an even temperature and is well ventilated is all right for an incubator.

Have an incubator house 10x12 feet dug down 3 feet in ground and built 3 feet above. Walls and overhead ceiled with 1/2-inch pine ceiling, outside walls and roof boarded up tightly and covered with ruberoid roofing, both roof and walls. Floor is covered with 3 inches of gravel, walls are cemented up to the sills, steps covered with concrete.

Outside storm door in the south side fits tightly, the inside door a frame covered with domestic.

A half window in the east and west sides are hinged on the inside, on the outside they are covered with poultry netting first and then with domestic.

Ventilation is by the door and windows, which will have just the cloth covering except in severe stormy weather, when storm door or window can be closed as needed. The cloth covered door and windows will admit plenty of air and will still prevent a draft striking the incubators.

If the air becomes too dry the gravel floor can be sprinkled to supply needed moisture. Shall keep floor damp while machines are hatching. Have four incubators in house and still have plenty of room. If ground is not well drained it will be necessary to cover the floor with concrete, but where water does not seep in too much I would prefer the gravel floor.

Pleasant McBride.

Editor American Poultry Journal.

Dear Sir: In your October issue, "C. W." Montavilla, Ore., asks the quantity of water a laying hen will consume in a year. Due to the fact that you are unable to give him the desired information in any definite degree, I take the liberty of advising you that "50 laying hens in good condition require 4 to 6 quarts of water a day." I quote from page 24, Farmers' Bulletin, United States Department of Agriculture, No. 287. I trust you will impart this information to the gentlemen after you verify same, should you deem it necessary.

C. B. Woolverton.

WE CHALLENGE

any person in the world to hatch one egg the Magic Egg Tester registers unhatchable. This device is used before you incubate. 22,000 in use!! Unimpeachable Testimonials. MAGIC EGG TESTER WORKS, Station B, Buffalo, N. Y.

SEE THAT "XX"?

POINTS THE WAY
START RIGHT
YOU END RIGHT

Here's The Hatcher That Is Constructed On The Right Mechanical Principle

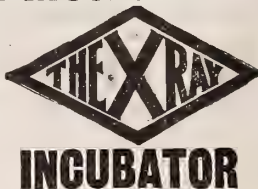

Other incubators may be as well made as the X-Ray but they don't hatch like the X-Ray because they're not made on the same principle. Here's an example. All other incubators burn the lamp high all the time—and let the excess heat escape when the egg-chamber gets too hot. We control the heat by cutting the flame down at the burner. That saves your oil. That's why

One Gallon of Oil

is enough for a hatch with the X-Ray.

We place the lamp underneath, in the center.

That's why we get absolutely uniform heat throughout the egg-chamber. And our lamp holds 4 to 8 quarts of oil. Fill it once and you never need touch it till the chicks are hatched out.

But those are not all the X-Ray advantages—although you will admit of their importance. Not alone do you save two-thirds of your oil and

Fill the Lamp Once

—but the X-Ray is also the easiest incubator to operate and turn the eggs in. The door is on top and has glass panels. Simply raise the lid. You can always see the thermometer without opening any door. Get all the facts. X-Ray Incubators are made of all genuine California redwood. Legs galvanized steel, strongly braced. See how the X-Ray works—how it hatches. We'll send it out freight prepaid on liberal free trial. Now send your name and ask for our interesting Free Book No. 10. Also tells about the X-Ray Brooders—just as superior as X-Ray Incubators.

X-RAY INCUBATOR COMPANY, Wayne, Nebraska.

STARTING A SMALL POULTRY BUSINESS.

In going into the poultry business, it is very important to start right. Many times persons have lost money the first year by not starting right, and then have grown disgusted with the business. This article is written for people who have the time for about fifty birds and want to keep them both for pleasure and profit.

I do not believe that the proper way is to spend any great amount of money at the first unless the person has had experience. This, by many trials, has been found to be the main factor in the poultry business.

Now the first year the man without experience should follow this idea. Build a house suitable for the number of birds desired. This house should be very plain, costing as little as possible, but strong and comfortable. Then some dollar birds should be bought. In obtaining experience it is better to keep perhaps one or two dozen. These birds should be kept merely for the eggs and raising broilers and roasters. By keeping these birds a year there should be a profit of twice the original cost, and what is still more valuable, experience. Then with the profit realized on these birds, some high-class stock or eggs should be purchased. In case eggs are bought, the hens can be used as mothers, and after the chicks are old enough, the common stock sold, and then keep nothing but high-class stock in the yards. Also with the profit of the first year it is often possible to build an addition to the original house, and soon there is a small but profitable business, founded on solid rock.

As a proof of this let me tell you of a friend of mine who wished to start the business. He had never kept hens before, but thought by reading all the books and magazines he could make a success of it. Of advice, he had a plenty,

and at last thought he was prepared to start out on his business venture, so he sent to a large breeder of his favorite class of fowl and bought twelve chicks at 50 cents apiece. He spent more on "the best colony house on the market," "the world's best chick feed," etc., and finally found he had laid out a good deal of money and only had his chicks, a pretty looking house, the practical use of which was doubtful, and a good amount of chick medicine and feed. He kept changing the variety of food for his chicks, but somehow could not seem to get the right article.

In the fall he had eight of the chicks left and the pullets refused to lay until some time in February, when they commenced a very scanty supply. During the spring he tried several hatches from his birds, but they were very poor, as his birds lacked the necessary vigor. At last he grew disgusted with them and sold them all at the highest price he could get, which happened to be a very low one.

So this unexperienced person lost a large sum considering his amount of stock, and decided that the poultry business was not for him. After all, it was his own lack of experience which caused the failure. If he had kept a few birds for a year or so he would undoubtedly have made a success of it when he started out with high-class birds, but it is too risky to attempt to breed such costly birds when there is any doubt as to the ability of the person, and ability means experience in the poultry business.

Now here is an experiment made by myself the first year I ever kept poultry, which was not so long ago. My plan was to prove that a profitable business could be built up with no capital and with no experience. I had never kept birds before and all I had in the line of poultry fittings was a small house. I went through the formality of bor-

rowing the original cost from myself and immediately bought twelve \$1 hens, which happened to be Rhode Island Reds. This was the 1st of October, and the hens began to lay at once. For feed I gave them a compounded scratch grain and plenty of green food, with beef scraps. By Christmas I had paid back to myself the original cost, and from then on they were a continual profit. I kept them about a year and then had a very nice profit, with which I purchased some fine eggs and set them under some of the hens. When the chicks were old enough I began selling the common stock and bought a pen of good birds, at the same time putting a small addition on my house. At last I had a yard of good birds and also had my experience, all of which had been started from nothing.

Although a year spent on common fowls appears to be a long time, this will always be found to be the best plan for success with poultry.

P. W. Harris.

You will never regret buying the best bird in a good breeder's flock if you can get him to sell it to you. If he won't sell his best, insist on his second best. Above all, deal with a responsible man; don't try to cut him down on his price, as he knows the value of his birds better than you do.

Cold storage men are making money these days. So are the poultrymen who have laying biddies at home.

Don't fail to have a look at the inside back cover page of the Journal. It's for everybody.

WHITE ORPINGTONS

Hagerstown Winners We won every first we competed for, 1st, 2d and 3d cockerel; 1st and 3d pullet; 1st pen. No cocks or hens shown. This remarkable winning at a show of 7,000 birds like Hagerstown stamps our birds as real champions. We now own "Champion of England," the great sensational cockerel that won first and grand challenge trophy of England of \$250 cash prize for best bird in the show; also own the sensational pullets of Crystal Palace, 1910. Only the best good enough for us. 100 grand cockerels, show and breeding birds at special low prices. Trios and pens mated by us for best results. We will please you. Write us today.

Burhans' Pure Bred Prize Winning Fowls

MY SPECIALTIES;

All Breeds Plymouth Rocks All the Orpingtons
All Varieties Wyandottes All the R. I. Reds

I breed all varieties of birds as above and breed them in their highest excellence. The newer varieties, such as Silver Pencilled Plymouth Rocks, Partridge Rocks, Columbian Rocks, Columbian 'Dottes, are here in my yards in all their gorgeousness. I have one thousand head to offer to the trade, all bred from my choicest pedigree matings and direct from the yards of the originators and winners at Chicago, Boston, New York, Buffalo, and the big state shows. My big annual poultry book filled with practical matter and full of the secrets of success for two red stamps.

Also breed Cornish, Buckeyes, Pit Games and Bantams. My yards are the most complete in the northwest. I make a specialty of breeding trios at ten and fifteen dollars. Every bird banded with my name on sealed band to insure quality. I bear in mind that you want something better than you have. Let me know what you want.

CARE OF THE FLOCK.

A QUESTION frequently put to me at this season of the year is: "Why is it that your hens are laying when I am not able to secure any eggs from my flock?"

There's a reason in most cases and the questions I generally ask are: "What care are you giving your flock? What are you feeding them now, and have they good winter quarters, free from draughts, thereby escaping colds?"

In most cases the reason is apparent why no eggs are forthcoming. The first thing to investigate, then, is the condition of the hen house, its location such that the sun shines through the windows part of the day at least, how about ventilation without draughts coming on the fowls, all of which is essential to the well being of the flock if eggs are to be secured. Again, are the fowls overcrowded, which is an essential point and one which must be reckoned with accordingly. The amateur should remember that a small number of choice fowls well cared for will repay amply better than a large flock which is neglected. What is worth doing at all is worth doing well. The next thing to be considered is the feed. A warm mash is excellent for the morning meal, consisting of corn meal, ground oats, bran, with table scraps. This might be fed to advantage at noon as well, and in the morning give cracked corn and make them hunt for it by scattering it about in the leaves that you have gathered in during the

ideal Indian summer weather; also warm the corn a little, both morning and again at night, just enough to take the chill off, and the results will be soon forthcoming.

But this is not all. How about the drinking water? It should be given twice a day, clear, fresh water that is made warm during the winter months, as it soon cools in the drinking trough. Place it where no litter can get into it, that it may be kept pure, and notice how the poultry drink. At night I would feed them a mixture of grain consisting of wheat, which is excellent for laying fowls, buckwheat and corn, which is fattening and wholesome. This also can be scattered among the leaves, which will keep the flock at work until night.

Keep the fowls also supplied with vegetables. Have a cabbage hung up by the roots where the fowls will have to jump for it for exercise, and keep the hens off from the roost during the day, and keep them busy, as exercise is vitally important to the laying hen or pullet. Grit, charcoal, ashes should be kept before them at all times; also remember there must be a substitute for bugs and worms which poultry pick up during the summer months, therefore feed them crushed bone occasionally. Then keep account of the cost of feed and the number of eggs you receive and you will notice that your flock has amply repaid you for all the trouble and labor you put upon them and getting a little fresh air and exercise yourself. Try it and see if there is not both pleasure and profit in poultry culture. Rev. Louis A. Pearson.

Mr. J. P. Gisleson, Red Bank, N. J., is one of our new advertisers whose ad appears in this issue. Mr. Gisleson is making a specialty of breeding high quality Col. Wyandottes, which his winning at Hagerstown, 1910, will prove. On four entries he won first cock, second hen, third pullet. At Trenton State Fair he won first cock, second hen, first, second cockerel, second, third pullet, third pen. The silver cup for best display of Wyandottes, all varieties competing, was also won by Mr. Gisleson. He has a long line of prizes to his credit for the short time he has been showing, which include specials, club ribbons for best shape and color and many other prizes too numerous to mention. You will find his ad elsewhere in this issue.

Mr. A. Schroeder, Red Bank, N. J., is not the largest breeder of Barred Rocks in the country, but he is a breeder of quality. Having won five blues three times in succession at Orange and Red Bank shows. Also won at the Hagerstown and Poughkeepsie and many other shows. Having won in all some ten silver cups, many gold specials and other prizes. He has both cockerel and pullet lines and is prepared to supply your wants if you are looking for quality. You will find his ad elsewhere in this issue.

In another part of this issue will be found four illustrations of noted Barred Plymouth Rocks, namely: Teddy I, Teddy II, Teddy III and Teddy V, winners of first, three seconds and third prizes at Chicago show; also winners of special prizes given by the Barred Plymouth Rock Club of America. The best colored cockerels ever produced. These birds were bred and exhibited by Truckenbrod Bros., Mendota, Ill.

In our November issue an error was made in the advertisement of S. R. Harrison, Shelby, Ohio. In the ad the claim was made that his White Plymouth Rocks, in competition, scored to 94½. This should have read 96½. Mr. Harrison has produced some of the very highest scoring birds in the country and is certainly entitled to have his records published correctly. Write him for what you want and mention American Poultry Journal.

Matt Bradley, Tioga, Kan., starts a yearly ad with us this month. Mr. Bradley comes to us very highly recommended. He breeds Crystal White Orpingtons exclusively, and has some very high class stock in his yards. His No. 1 pen is headed by the first prize cockerel at the late Texas State Fair. If you want eggs that will hatch prize-winners, write him and mention American Poultry Journal.

Sweet Hill Poultry Yards, E. B. Sweet, proprietor, East Holden, Me., reports a fine lot of breeding males in Barred Plymouth Rocks and Imperial Pekin ducks. He secured his foundation stock of Barred Plymouth Rocks direct from A. C. Hawkins and has been working his strain up until he feels confident to advertise it. His Pekin Duck stock came direct from Rankin and cannot be surpassed. His ad can be found elsewhere in this issue.

Conner's Automatic Feeder and Exerciser is an invention which will save the cost of itself many times over every year in the grain which it saves, which would ordinarily be eaten by sparrows, rats and mice. Besides this feeder will feed your chickens for you when you are not at home, and they get a little feed at a time, always having to exercise for it. Their ad appears on our two colored section in this issue.

We wish to call your attention to the ad of J. G. Budde & Co., Oak Park, Ill., which appears in our two colored section in this issue. We call this good advertising. Perhaps it will give you some idea for getting up your own copy another month, even if you are not interested in R. I. Reds. If you are you will surely want to read it.

A. B. C. Poultry Yards, Hettick, Ill., breeders of White Orpingtons, are offering some bargains in early hatched cockerels; also in pairs, trios and pens. They guarantee satisfaction. Write today and mention American Poultry Journal.

Maple-Dell Poultry, F. Gage Cutter, prop., Carthage, Ill., have just issued their fall sale catalogue. Better send for one today. There are some bargains in it for you.

Frank Schellang, Prop., R. F. D. 2, Erie, Pa., is a breeder of S. C. Brown Leghorns

exclusively, and has been winning at some of the largest shows in the country since 1903. Not only has he produced winners for himself, but also many winners have been hatched by his customers from eggs purchased from him, and when a breeder has quality in Brown Leghorns, to win in such shows as Cleveland and Toledo, Chicago, Pittsburg, Erie, Detroit and many

others too numerous to mention, not only one year, but year after year, he certainly is a breeder of quality. Mr. Schellang has not won a few minor prizes in these shows, but many special prizes and silver cups, which further stamps his birds among the best. He has a fine lot of stock for sale at this time, and you will do well to look up his ad elsewhere in this issue.

BRED TO LAY, BARRED PLYMOUTH ROCKS

Large and prolific laying strain. 250 hens averaged 219 eggs in 1 year. Bred for eggs, size and perfection for 16 years. 500 extra fine cockerels bred from my best layers and 200 pullets for sale. Circular free.

WM. J. DAVIS

R. R. 1, EATON, INDIANA

SPROUTED OATS, WINTER EGGS

Sprouted oats is conceded the greatest egg food known. Experiment stations and winter egg producers all recommend it. The trouble always has been to have the grain easily and quickly sprouted. This is now perfectly accomplished, Winter or Summer, by the **Double Quick Grain Sprouter**. Sprouted in 24 hours and four to five inches in four to five days. A nice piece of furniture and may be used in the kitchen, cellar, hen house, feed house or any kind of shelter. Makes two to three bushels of feed from one of grain, the cheap feed secret often advertised for \$1. Will quickly pay for itself in the increased egg yield and the increased feed it grows. Five minutes or less time each day. The most useful invention in years for the poultryman. Sizes from 50 to 500 hens.

Close-To-Nature Company : 38 Front Street : Colfax, Iowa

GOLDEN ROD STRAIN Single Comb Buff Leghorns

Choice females and males from this year's breeding yards at reasonable prices. Only a few choice pullets and cockerels left. The demand has been the greatest in our experience as breeders. Write before too late.

H. Cregar and Sons, 7329 Jackson Blvd., Forest Park, Ill.

WHITE ROCKS AND WHITE WYANDOTTES

Winners at two of the South's greatest shows. Winners of the **gold engraved leg bands**, Nashville, Tenn., September, 1910, **eight firsts**. Memphis, Tenn., September-October, 1910, **ten firsts, thirty ribbons on thirty birds**. First Madison Square Garden cockerel was bred by us three consecutive years, 1908-9-10. Also the first Boston cockerel and color special and \$100 challenge cup for **champion male**. Just a few of our winnings to show you we have the stock. You have read an honest advertisement of honest breeders (who try to give satisfaction), but not all we could truthfully tell you. You must be interested and want to know more. Just a two-cent stamp will bring you any information you desire to know about our stock. **Remember we are breeders.** Just give us a trial. Our motto is, "Promptness, Fidelity, Quality and Satisfaction." Write today, mentioning American Poultry Journal.

Rockandotte Farm : W. R. Graves : Mrs. S. H. Graves : R. 3, Southboro, Massachusetts

We are offering this stock at about one-third regular prices for this month only. Score card furnished if requested. Every bird sent subject to approval. Write us your wants. We can and will please you.

Goshen Poultry Yards :: Goshen, Indiana

CYPHERS MAMMOTH INCUBATORS.

Compartment Hot-Water Hatching Machines That Hold 4,000 to 60,000 Hen Eggs At One Filling.

On this page is shown an 18,000 hen-egg capacity Cyphers Mammoth Incubator—a hot-water compartment hatcher built in double rows, two tiers high and heated by one hard coal boiler.

Cyphers Incubator Company, Buffalo, N. Y., has installed these big incubators on large practical poultry plants from Massachusetts and Long Island, N. Y., on the east, to California and British Columbia on the west.

This company has been favored with several repeat orders for Mammoth incubators from customers who first tried a Cyphers mammoth during one, two or three seasons, then bought again. (See sample cases of this kind in advertisement on another page of this issue of American Poultry Journal.)

Custom hatching and the day-old chick business are here to stay and no doubt the same is true of Mammoth Incubators. The Cyphers Company began its experiments in the construction of Mammoth Incubators

cially. Orpingtons now seem second nature to me, for I have been breeding, showing, exporting and judging them for the past twelve years. My record in the show room has few if any equals, having won the coveted prizes at six consecutive Chicago shows, as well as elsewhere. My customers' winning alone with 'Byers Strain Orpingtons' would fill the American Poultry Journal. My services as judge of Orpington at the largest shows of the country are in constant demand, but my business on the plant will not permit of my absence more than a few weeks in the year. I wish to add that there are few, if any, vocations so attractive, pleasant or remunerative to the fellow who works with untiring energy and sincerity of purpose, than the breeding of domestic fancy fowl. The indispensable prerequisites for a successful career as a poultry fancier are untiring energy, the use of practical common sense, and the strict adherence to the principle of a 'square deal.'

The evolution of manufacturing industries has resulted, among other things, in there being a special product for every special purpose. And the manufacturer who has been able to make his product in different kinds for the different purposes

either of these varieties that you write Mr. Fox, as he informs us he has a fine flock of birds coming on, that are superior to any he has produced heretofore, and his birds have won in many a hot class the past several years. He particularly mentions a fine bunch of silver cockerels which are now ready for the show room. In Golden he has some 12 fine cock birds. We are satisfied that Mr. Fox has the quality, and will please you in any order that you may entrust to his care. His address is to be found in each issue of A. P. J.

The Co-Operative Breeding and Hatching Co., of Tiro, Ohio, have their new baby chick book off the press and are ready to supply the thousands of eager poultry raisers that desire information on the newest and most wonderful phase of the poultry industry, the shipping of little chicks thousands of miles before they are fed. This industry is surely revolutionizing the poultry business, as this company is able to hatch and deliver thousands of chicks from sixteen varieties each week. Our representative noted the quality of their different varieties of Orpingtons and Wyandottes at the Ohio State Fair, where they were heavy winners, and found them to be birds of exceptional merit. Their book

18,000 Hen Egg Capacity Cyphers Mammoth Incubator.—Photographic view of one of the large number of "Big Hatching Machines" built and installed during the last two years by Cyphers Incubator Company, Buffalo, N. Y.

twelve years ago. During the last seven years these experiments have been carried on every season without interruption on the Cyphers Company's \$40,000.00 commercial and demonstration poultry farm, Buffalo, N. Y., and with very satisfactory results.

Cyphers Incubator Company has just issued a well-printed, 20-page two-color circular that illustrates and fully describes the two types of Mammoth Incubators manufactured by them, one for hatching hen eggs, the other for duck eggs. A copy of this circular will be sent free to any reader of A. P. J. who will write for it. Address Cyphers Incubator Company, Buffalo, N. Y., and please mention this journal.

During a conversation with Mr. Carl S. Byers, Hazelrigg, Ind., he said: "I commenced the fancy poultry business with only a few dollars when a boy on the farm. My father was a breeder of fancy cattle and horses and it was quite natural, being interested in fancy stock, that I chose to be a poultry fancier. Admiring the majestic Orpington (which was at that time a new breed) I unhesitatingly decided to make Buff, Black and White Orpingtons my spe-

cially. A very good example of this is afforded in the case of F. W. Bird & Son, who make different roofings for the different types of buildings and waterproof building papers for every purpose. In the early stages and in fact at present in the case of most ready roofings the great obstacle in the way of success has been the impossibility of use for more than one class of building. No matter what the building, however, among the Neponset roofings will be found one that will just meet the purposes. These include Neponset Proslate for residences; Neponset Paroid for barns and industrial buildings, and Neponset Red Rope for smaller and more temporary structures. F. W. Bird & Son have been in the one business for one hundred and fifteen years, and were, indeed, the originators of the ready roofing idea and waterproof building papers.

Wm. J. Fox, R. F. D. 17, Cabot, Pa., is a specialist in breeding high class exhibition birds, in both Golden and Silver Wyandottes, and we suggest if you are in need of exhibition or breeding specimens in

gives a complete history of the chick business; also tells how to care for chicks and mature them, gives valuable feed formulas, tells how to sprout oats and a host of other information. Their ad will be found in this issue. Look for the stork. This company is incorporated under the Ohio state laws and its officers are men of high business qualifications and standing.

The Newtown Producing Co., at Newtown, Pa., have thousands of Single Comb White Leghorns that are marvelous egg machines, at the same time are show birds and go out and win, not only for them, but for their customers. They are offering the public a mammoth incubator that contains many simple, yet new features for this style incubator. All users of mammoth machines should have their catalogue.

G. A. Roberts, Warren, Ind., the old and well known breeder of Partridge Wyandottes, is advertising some choice stock for sale in this issue. See his list of winnings in his ad this month and write him for what you want. Mention American Poultry Journal.

Fresh cut bone, with adhering meat and gristle, contains a great quantity of protein. In fact, one ounce of such bone contains more protein than four ounces of grain. Protein is what makes eggs. In summer your hens get protein in the worms, bugs and insects. That's why you get so many eggs in summer. In winter you must feed protein—if you want the summer quantity of eggs. The best way to feed protein in winter is to feed fresh cut bone. Raw bone costs you practically nothing. Your butcher will supply you with fresh raw bone from the block. Cut this bone in one of the many bone cutters advertised in our columns. Take Mann's latest model bone cutter for example. There's a low priced machine that enables you to double your poultry profits. It is made of the finest materials and is built on the right principle. Thousands of progressive poultrymen are using this machine with most profitable results and there is good reason why you should use it. Send your name to the F. W. Mann Co., Box 56, Milford, Mass., and they will tell you about their liberal plan to let you try the machine ten days free, without a penny in advance and without a cent of deposit. Return the machine at their expense if unsatisfactory. If you will write them a postal they will also send you their interesting booklet, "Worms, Bugs and Your Poultry Profits"—and their large catalog of bone cutters, etc.

At two recent shows, Poughkeepsie, N. Y., September, 1910, and Brockton, Mass., October, 1910, Messrs. Grannis Brothers, of LaGrangeville, Dutchess Co., N. Y., had exhibits of Orpingtons, and won at the two

A prize-winning Barred Plymouth Rock. Property of H. Burkholder, Clyde, Ohio.

shows a total of 56 prizes. At Poughkeepsie, their winnings were as follows: White Orpingtons, 1st, 2d cock; 2d hen; 1st, 2d cockerel; 1st, 2d pullet; 1st, 2d pen. Buff Orpingtons, 1st, 2d cock; 1st, 2d hen; 1st, 2d cockerel; 1st, 2d pen. Black Orpingtons, 2d cock; 1st, 2d hen; 2d cockerel, 2d pullet, 2d pen; a total of 25 prizes out of a possible 30. At Brockton, White Orpingtons, 2d, 3d cock; 1st, 2d hen; 1st, 2d, 4th cockerel; 2d, 3d, 4th pullet; special for best display in White Orpington class; special for best shaped White Orpington male; special for best shaped White Orpington female. Buff Orpingtons, 4th cock; 3d hen; 3d, 5th pen; special for best shaped Buff Orpington female. Black Orpingtons, 1st, 2d cock; 1st, 2d, 3d hen; 2d cockerel; 1st, 2d pen; special for best display in Black Orpington class; special for best shaped Black Orpington female. To top off the list of prizes they won the grand special for best display of Orpingtons, all classes, a total of 31 prizes. Having just installed a Hall Mammoth Incubator, Messrs. Grannis Bros. will be perfectly equipped, the coming season, to furnish healthy, sturdy day-old chicks from their superb stock. Send them your name and receive their egg and day-old chick circular, to be issued soon. Address Grannis Bros., LaGrangeville, Dutchess Co., N. Y.

Simmons Bros., Stockton, Ill., breeders of Golden Wyandottes, have just issued a special sale list in which they are offering some exceptional bargains. Better send for this list today and secure one or more of these bargains.

I Have a Message for You

Lovers of poultry, fanciers, chicken raising friends of mine, wherever you are, I want you to send for my free book. I have been a poultry man myself so long, and have spent so many days and nights working out the best way to hatch and raise chickens that I feel I must tell you my story.

Friends, you will be interested in the record of success as I have written it in the latest Queen Incubator catalog. Over 61,000 people operating Queen Incubators when the catalog was printed. The number is greatly increased now. They are the most prosperous and the most enthusiastic army of poultry raisers in the world. You want to know these people.

The Queen for 1911 is a better machine than ever. The improvements are on things that count. Easier to operate by people who don't know how. Surer, takes less oil, saves the heat better—everything that goes to make better hatches at less cost. It makes the poultry business a *real* business.

My friends, I can't tell the whole story here. It takes a good big book to hold it, and that book is yours for the asking. Write me; I'll get it off to you by return mail. Use the coupon or send a postal. Address

There is no need to tell you how necessary green feed is to the greatest egg production in winter. All summer the hens have free run of the yard and eat much of succulent roots and vegetables. In the winter they want such food, but do not get it. So the number of eggs you get in winter is far less than in summer. Feed cut roots and vegetables to your hens in winter and watch your poultry profits increase. A small patch planted to beets, turnips, carrots or other roots is one of the best investments a poultryman can make. Grain in the morning, shredded roots mixed with corn meal or middlings at noon, and cooked food, not hot, at night—is a good ration that will keep the flock in a healthy condition during the winter months and keep the egg supply at the summer average. The Banner Root Cutter, made by O. E. Thompson & Sons, Ypsilanti, Mich., is just the machine that cuts fast and in worm-like strips, which prevent choking. Has adjustable knives of tempered steel and is self-feeding. It is thoroughly well made—yet low priced. We suggest that you write to the above company for their new folders. Send them a postal card, mentioning this paper and requesting "Banner Root Cutter Free Folders."

The process of manufacture of some of our most useful and important articles of every-day life and work, makes a most interesting story, largely because we grow accustomed to the use and reliance upon that article without giving a thought to the painstaking, careful performance of a multitude of little details in its making, but each one of which is necessary to the reliability, permanency and accuracy of the instrument. For illustration, if we could go through the factory where the famous "Tycos" Incubator Thermometer is made, and could see the operators at work, in one process after another, from the selection of the glass to the final shipping of the finished, guaranteed instrument, including filling of the tube, "pointing," graduating the scale, testing, etc., many of us who incubate poultry would have an increased respect for this little "heart of the thermometer" upon whose truthfulness the success of our hatch depends. After the little tube has been filled with mercury, sealed and laid away to "season," so that it may become permanently accurate; after it is taken out of its many, many months of "ageing" in the big vaults, and the scale has been fitted and it has been assembled for packing and shipping; after being tested through all these processes of actual manufacture to make sure of accuracy, it would seem that it might be a perfectly safe instrument to intrust one's eggs to, but even there the manufacturers of "Tycos" Thermometers will not allow their instruments to go out upon the market without one final test to determine if each and every thermometer for incubator use will perform exactly as it should when put to actual incubation use.

To make the final test, the Taylor Instrument Companies have made at great expense an air-tight, electrical testing apparatus, capable of maintaining an even temperature for an indefinite period of time.

It is arranged with a double deck for holding a quantity of "Tycos" Incubator Thermometers, and is fitted with glass doors

and windows, for the careful observation of all stages of the test, as any draft of outside air would disturb the temperature of the inside chamber. A standard "Tycos" Thermometer is located in the chamber, and as the heat of the chamber increases, this instrument is closely watched until the temperature is shown to be 105° Fahrenheit; or HIGH incubating temperature.

The temperature is held at this degree for a short period while the registration of the thermometers to be tested is observed, after which it is reduced to 103° Fahrenheit, or correct incubation temperature. This is continued until all the thermometers in the case have had ample time to register and demonstrate their accuracy under actual incubating conditions. This testing machine is in line with the policy of the TAYLOR INSTRUMENT COMPANIES, that their instruments must show efficiency under actual working conditions. An interesting booklet on the making of "TYCOS" Thermometers for incubators, "TYCOS" Incubator Thermometer Facts Worth Knowing," may be had from the TAYLOR INSTRUMENT COMPANIES, Rochester, N. Y., upon request.

Away back in 1894 a new and strong champion of White Wyandottes came to the front and in 1896-97 winning at Boston, while in 1898 won three firsts, including first pen. This was Arthur G. Duston, now of South Framingham, Mass., formerly of Marlboro, Mass. It is recognized by all that Mr. Duston has done more for the advancement of the White Wyandotte than any other man. Showing to the world the wonderful laying and market qualities as well as their possibilities of being the peer of all breeds as regards beauty. For many years the two names, the breed and breeder, has been almost synonymous. Probably no man in the world has sold and shown as many winners in hot competition as has Mr. Duston. Last year, owing to a physical injury, he did not show at New York, but his winnings for three years back of that is a wonderful record. Twice winning first display and the other time second display. In considering this, one must remember that the whole country and Canada is scoured for winners to go to Madison Square. We understand he has something up his sleeve this year that pleases him. That all his mating proved far superior to any he ever had. His sales on winners this year began in August and took the cream wherever shown. The low, blocky type of the Duston Wyandotte is always recognized. Mr. Duston writes he can furnish winners for any show in the world, Madison Square not excepted. He has several hundred birds to dispose of and it is our advice that you write for his prices and catalog, which he sends out for a dime. It will repay you.

Observant readers of recent advertising have doubtless noticed the many claims put forward by certain advertisers of new systems for poultry culture which pay enormous profits.

There is no disposition on the part of any one to dispute these claims. In fact, it is only reasonable to suppose that the steady onward march of wider knowledge regarding poultry culture, as of other things, is bearing its logical fruit in larger results.

But one fact must not be lost sight of. New systems—valuable as they undoubtedly are—do not, necessarily, contain the sum and substance of all poultry knowledge; nor is success entirely dependent on close observance of their teaching. Old ways have brought good profit to hosts of veterans in the poultry business; and it's a safe prediction that they will continue to do so. Old ways are the crystallization of well proven practice and are never based on theory alone.

Take that now popular idea of feeding, originated and practiced by Dr. Hess—the giving of a tonic in the soft feed. It has done more to make a nation-wide business of poultry culture than any other one thing. Actual statistics are, of course, not available; but it is within the bounds of probability that egg production in the United States has increased 50 per cent since Dr. Hess Poultry Pan-a-ce-a was placed on the market.

Those seeking the reason back of this statement have but to remember that this preparation, by increasing digestion and assimilation, increases the amount of food devoted to egg production.

Once that fact is thoroughly understood, it is a simple matter, indeed, to understand why Dr. Hess Poultry Pan-a-ce-a has built up the poultry business.

Just as a mill, run at high speed and forced with grain, turns out more grist, so the hen, getting all the meal and meat and grain she will eat—and digest—turns out more eggs. Simple, isn't it? and just as reasonable as anything can be.

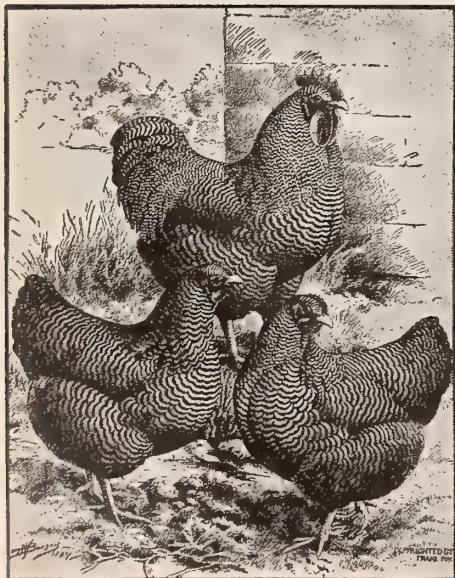

Dr. Hess Poultry Pan-a-ce-a is said, too, to prevent poultry disease. This seems a reasonable claim, because anything tending to build up bodily vigor, as Pan-a-ce-a does, fortifies against disease to just that extent.

So, taking all the testimony at hand for what it's evidently worth, it seems a fact beyond dispute that Dr. Hess Poultry Pan-a-ce-a is a very good thing for the poultry man, either novice or breeder of long experience, to tie to if he is really out after the best results.

We call attention to the advertisement of C. M. Reynolds, of Fullerton, Neb., in this issue. Mr. Reynolds purchased some of the best stock and eggs in the United States when starting his flock of White Plymouth Rocks and now has some of the finest birds as well as one of the finest equipped poultry farms in the west. He owns a cock bird that took first prize at Cleveland in 1908 and also first at Ohio State Fair in 1909. He ships everything on approval, and guarantees to please. Write for his catalogue and mention American Poultry Journal.

G. F. Stewart, Coshocton, Ohio, starts a yearly ad with us this month. Mr. Stewart comes to us very highly recommended as a breeder of Silver Wyandottes. In 1910 he made a grand record in the show room. Look up his ad and write him for what you want and mention American Poultry Journal.

Have you seen a copy of the new Mandy Lee incubator and brooder catalogue? If not you should send for one at once. It is chock full of things you ought to know. Send for one to Geo. H. Lee Co., Omaha, Neb.

Money in Poultry and Squabs

Is the title of my new 100-page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed, grow and market your poultry for best results. Plans for houses, diseases and cures. This book probably gives more reliable information about the poultry business drawn from actual experience than any book of the kind published. It tells you how to start raising poultry in a small way and grow big. It contains many illustrations, tells all about raising poultry for profit, feeding for eggs, broiler raising, artificial incubation and contains many valuable and interesting articles. Illustrates and describes the largest pure-bred poultry farm in the country. It also describes and illustrates all leading varieties of pure-bred fowls, and the Frank Foy incubators and brooders, and quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed to any address for 4c in stamps.

ADDRESS

Frank Foy, Box B, Des Moines, Iowa

EXHIBITION BARRED ROCKS.

Wm. H. Hoover, Polo, Ill., who breeds Barred Rocks exclusively, has produced a large number of excellent specimens from his last season's matings. An experienced poultryman recently visited Mr. Hoover's place and has the following to say: "That like produces like, even in exhibition Barred Rocks, was amply proved to us on the occasion of our visit to the Barred Rock farm of Wm. H. Hoover, Polo, Ill., October 20. We found here scores of young birds rounding up into show shape and of the type and quality that will win at almost any show. And remember that these youngsters are sired by such males as Bismark, winner of first as cock at both Rockford and Polo in 1909; Little Boy Blue, winner of first cockerel at Polo, 1909 (and he in turn sired by Bismark); Blue Bird, winner of first cockerel at Oregon (also sired by Bismark) Victor, winner of first cockerel at Polo, Rockford and Delavan, 1910 (another son of Bismark); True Blue, first cock at Polo, 1910, etc.

"Mr. Hoover is to be congratulated on the success of his matings this season in producing so large a per cent of show type youngsters both in cockerels and pullets and in being able to offer to our readers such an excellent line of both exhibition and breeding birds."

Oak Hill Farm, J. A. Haskell, proprietor; I. M. Elston, manager, Red Bank, N. J., is located two and one-half miles from Red

Bank in a pretty rolling country. The farm consists of 386 acres, is handsomely laid out with winding drives and has many large farm buildings, all built of the best material, and the poultry department is equally well equipped, no expense being spared to make it complete in every detail. The breeding and laying houses, brooder house and incubator cellar, with large feed room, are all equipped with the most modern improvements, including a gas engine for the grinding of feed and bone. The main breeder house is 14x170 feet; besides this there are 18 colony houses and 16 brooder coops for young stock, and are used to house and rear the birds at Oak Hill Farm, Columbia and White Wyandottes, White Rocks and S. C. R. I. Reds. Mr. I. M. Elston took charge of the poultry department some two years ago and has been carefully culling and mating the birds since that time, setting his aim very high for exhibition quality, and that he has succeeded is proven by the following show records: In 1909 they won 8 silver cups, 3 gold specials, a large number of club ribbons and other special prizes. In 1910 they won 10 silver cups, 3 gold specials, club ribbons and other special prizes, including silver vase for best bird in American class at Monmouth County Fair. Many of these prizes were won in keen competition at such shows as Hagerstown, Red Bank, Trenton, etc., some being won for best bird in the class, others for the whitest bird in the show and again others for the best bird in the entire show. They have also won over 200 regular prizes, so you

can readily see that they have a long string of prize winning specimens at Oak Hill. Each of the several breeds has shared about equally in these winnings. They were unfortunate in getting out the usual number of early birds, but have a large flock of late hatched youngsters coming on a little later. In order to make room for these young birds that they may be properly cared for and matured into breeding and exhibition specimens they are making a special offer on the birds used in their breeding pens this year, which include the birds which won many of the prizes above named. If in need of stock in any of these varieties you will do well to look up their ad, which appears elsewhere in this issue.

Edw. R. Cornish, Ann Arbor, Mich., the well-known breeder of Rhode Island Reds, informs us that owing to his other business he is compelled to part with all his splendid birds that many judges say cannot be duplicated at any price. Among these are all his prize winners at the leading shows in the country. He is prepared to dispose of these in pairs, trios or pens and at a price that will move them quickly. Write him for further information and mention American Poultry Journal.

Goose Lake Poultry Farm, Morris, Ill., breeders of Barred Rocks, Rhode Island Reds and Buff Turkeys, have a large two-colored ad in this issue. Better look it up and write them for catalogue, which gives prices and other information about their stock.

Make Your Hens Lay

When Eggs Are Worth Most

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

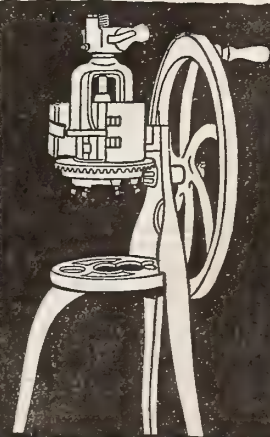

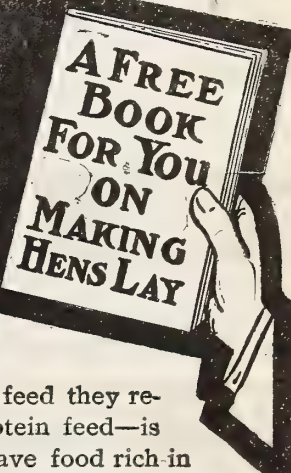

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on 10 Days' Free Trial—no money down. If satisfied after the trial, buy it. If not, return it at our expense.

You want our good books, at any rate, send for them. We'll forward by return mail.

F. W. Mann Co., Box 56, Milford, Mass.

Cream Separator Buyers TAKE NOTICE

You know that the Babcock tester—used the world over for testing skimmed milk—contains neither disks nor other contraptions. Since the Babcock tester does not need inside contraptions, it is plain that a properly built cream separator does not need them.

Sharples Dairy Tubular Cream Separators

are the only separators free from disks and other contraptions. The only simple—the only properly built separators. The World's Best. Produce twice the skimming force of common separators, and proved by the Babcock tester to skim twice as clean. The saving Tubulars thus make you is clear profit you cannot get any other way.

Guaranteed forever. A free trial for the asking. Send no money to anyone. Pay no freight. Risk nothing. Tubulars are made in the world's biggest separator works by America's oldest separator concern. We made the first separators manufactured on this continent and have been at the business 30 years. Illustrated catalog No. 205 tells all about Tubulars. Write for it and ask for free trial.

CALDWELL'S "BABY CHICKS OF QUALITY."

The name "Baby Chicks of Quality" is a synonym for the ideal of perfection as found in day old chicks. Mr. Caldwell is a specialist in White Plymouth Rocks and for the last few years as opportunity afforded has been improving by purchasing and producing his flock of pure Fishel strain White Plymouth Rocks from which he now supplies his chicks.

He is located not far from Lyndon, Ross Co., Ohio, on a beautiful little farm of forty-six acres naturally adapted to the rearing of high grade birds. There is no other variety on the farm or near by. This insures absolute purity of the chicks sent out.

Upon this farm during the past summer have been built a number of excellent buildings especially designed for the purpose of taking care of his chick trade, which has grown wonderfully. The start having been made a few years ago with one small sized machine. The principal building is the large three-story combination house. In this is located the basement, 66 ft. long by 18 ft. wide and 8 ft. high, which contains the large Cyphers Mammoth Incubator. The cellar is large enough to double the present capacity, which will be done before spring. The floor above the incubator cellar is entirely taken up by the brooder system, having a capacity of fifteen hundred chicks at one time. Here are started the chicks from which come the breeders to be used in producing the eggs for the chicks trade. If a customer wishes to hold back a shipment, or the weather is too bad to make a shipment, the chicks are easily and safely cared for in the well equipped plant. The third floor is occupied by the store room, containing supplies of all kinds, and the condition for preparing grown fowls for the show room. The large laying house is 20x100 feet, constructed on the Maine Station plan. Here is housed a large flock of select breeders, having free range of the pasture and woods and access to a fine never failing spring. In this addition there are some thirty colony houses, scattered over the field. In the orchard are eight breeding pens, each with an ample grassy run. The entire equipment has been carefully planned with the thought of producing the best chicks possible. Realizing that it is the small details that make success or failure of any undertaking, all of these are looked after on this farm with scrupulous care.

The only stock kept on the farm is pure Fishel strain White Plymouth Rocks. These produce the eggs for hatching the White Rock chicks sent out. The utility flocks are carefully selected for the purpose of producing the very best birds for those who wish to keep fowls for recreation or amusement or for revenue producers, whether on a large farm or merely for family use. Chicks from this class will be a good investment. For the man who wishes to keep birds with not only utility purposes in view but to win in the show room will find that chicks from exhibition pens will turn the trick. All of Mr. C.'s time is devoted to the rearing of his breeders and hatching and shipping the chicks, which go out under the "Baby Chicks of Quality" label. He is a specialist in this business and like all other specialists is in a position to give the best service. All S. C. White Leghorn chicks sent out from Caldwell farm are hatched from eggs produced by a well known breeder's successful experience with this one breed. No other variety is allowed on his place, so that purity of strain is absolutely guaranteed. The Barred Plymouth Rocks and the Single Comb Rhode Island Reds are each produced on separate plants and by men who are devoting their entire time and attention to these particular breeds. This method of procuring eggs makes it possible to get the best that money and high grade skill can produce. This is one more reason why Caldwell can send out "Baby Chicks of Quality."

In order to safely carry the chicks to their destination a light, very strong corrugated paper board box has been adopted. This box safely carries the little fellows to their destination, yet by reason of the small weight the express charges are low. This is just one little thing more that shows the care that is taken on this plant. One man after his chicks have been on the road three days and nights and having been transferred seven times reported that every chick was alive and well when he opened the box. A number of one hundred per cent shipments have been made. As a rule one or two from every shipment will die on the road. In order to overcome this extras are always included; in this way the customer always gets full count and his money's worth. In fact, no detail is overlooked which would improve the quality of the chicks or the right treatment of the customer.

Mr. C. issues a handsome twenty-four page catalogue which fully describes his chicks. It will more than pay you to send six cents in stamps for it. It will come to you on return mail.

Orders are already being booked for early spring delivery. In fact, being in very easy access to the south orders are being sent out now. Especial attention is being given to orders for early spring delivery to southern states, so that any one in these states can get early chicks, which are so desirable in that climate.

Good healthy breeders, only one breed in a place, an expert in charge of each variety, absolutely pure strains, expert incubation in the best equipment possible, carefully packed shipments guaranteed to reach destination in good condition, produce "Baby Chicks of Quality and Satisfaction." Yet with all of this care the prices of each grade are very moderate.

His ad appears elsewhere in this issue on page —, will be run regularly. By addressing your inquiry to R. C. Caldwell, Box 1021, Lyndon, Ross Co., Ohio, you will receive a prompt reply to the same.

BILLION-DOLLAR INDUSTRY.

Cyphers Incubator Company's Catalogue and Poultryman's Guide for 1911
Now Being Mailed Free to All Who Ask for It.

The New Year Book and Complete Catalogue of Cyphers Incubator Company, Buffalo, N. Y., entitled "Profitable Poultry Raising," is now being mailed at the rate of more than one thousand copies per day to interested persons who have asked for it. This is to be kept up until the demand is supplied. Will be sent free to readers of this paper who would like to receive a copy postpaid.

Grant M. Curtis, president of Cyphers Incubator Company, says that he wants every poultryman and poultrywoman who believes in the poultry business as a big and growing industry, to send for a free copy of this new catalogue and guide. It is the fifteenth annual catalogue of the Cyphers Company, and Mr. Curtis has made it a celebration edition. In it he tells of the "Billion Dollar Poultry Industry" for 1911, describes what the poultry industry is and gives new and interesting facts and figures about the remarkable growth of Cyphers Incubator Company during the last twelve years—a business that for 1911 bids fair to exceed \$1,250,000 in actual sales of incubators, brooders, poultry foods and standard poultry supplies.

Says Mr. Curtis: "We have worked hard to have this celebration catalogue the most complete, the most helpful, the most inspiring of any year book we have ever published—and we have had a reputation for putting out interesting and instructive reading matter."

"Profitable Poultry Raising" consists of 212 pages 7½x12 inches in size, contains a great many illustrations and should be in the hands of every earnest and progressive poultryman and poultrywoman who is endeavoring to get out of the poultry business all the pleasure and all the profit there is in it. Free, postpaid, to any address if you will mention American Poultry Journal. Address Cyphers Incubator Company, Buffalo, N. Y., or their branch house nearest you, viz.: 23 Barclay Street, New York City; 12-14 Canal Street, Boston, Mass.; 1569 Broadway, Oakland, Cal.; 340-344 North Clark Street, Chicago, Ill.; 317 S. W. Boulevard, Kansas City, Mo.; or 121-123 Finsbury Pavement, London, England.

The Galesburg Fancy Table-Egg Plant of Galesburg, Ill., breeders of Single Comb White Leghorns, are crowded for house room and must dispose of their surplus cockerels within the next 30 days, and they are offering \$10 birds for \$5, and \$25 birds for \$10. The foundation stock of this flock is from the best strains in the country, including Wyckoff and D. W. Young, and if you want a winner or a breeder you cannot do better than take advantage of these cut prices and secure one of these choice cockerels. Remember these birds must be sold within the next 30 days. First come first served. They guarantee all their stock and will ship birds on approval.

All leg band troubles are overcome if you use the bands made by A. E. Wagler, of Marshall, Mo. They have big bright numbers, are made adjustable and nonadjustable, of good heavy aluminum. They go on easily and stay on and never come off until removed by human hands. See ad of Gibraltar Bands in another part of this issue. Send a stamp for sample.

ONLYA FARMS, MORRISTOWN, N. J.

We recently visited Onlya Farms, owned by Philip Kearney and managed by Chas. Staaff, and will endeavor to tell you what we saw and their method of housing, mating and rearing their White Wyandottes and Barred Rocks.

Onlya Farm is the home of Philip Kearney. The grounds around the house are beautifully laid out, consisting of walks and drives, ornamental shrubs and trees of every variety and beautiful beds of flowers, being located on high ground with a rolling country around it, having a grand view to the south over the valley, with the foothills in the distance. Besides Mr. Kearney's residence, which is a very large and handsome structure, there are several tenement houses in which the help live.

The poultry houses are large and of the best quality of material; being well painted they certainly present a handsome appearance. The breeding houses and yards are located in a large grove of oak and chestnut trees, which affords ample shade for the birds at all times. Each pen has a large run which is well fenced to prevent any mixing of the birds, and they are always under the constant eye of Mr. Staaff and his assistants. Particular attention is paid to culling the flock very carefully and to mating up the pens in such a manner that they are well balanced, so that better stock is always produced from year to year.

Everything is kept scrupulously clean and sanitary conditions are given particular attention. Mr. Staaff, the manager, is a very enthusiastic fancier and can talk "chicken" all day and never tire. He breeds chickens because he likes them and knows every chicken on the place and how it is bred. Therefore you can rest assured that he is producing the best White Wyandottes and Barred Rocks that he knows how to do. With the careful culling that he does and the careful mating, and the close attention which he gives to the birds at all times to insure the best possible fertility, the growing young stock which, given free range in colony coops out in the cornfield after they are big enough to be removed to this location, you can rest assured that the fertility of their eggs is of the highest and that the young birds are exceptionally strong, vigorous and a healthy lot.

We will not repeat the recent winnings here which have been made by this farm this fall, as they are already well known, and certainly are a credit to any farm. This is especially true when we tell you that these winnings were not all made on the same string of birds, as Mr. Staaff does not believe in exhibiting a good bird too often and they have many younger birds now coming in, to take the place of these winners, which will be used in their breeding pens.

Onlya Farm originally bred White Wyandottes exclusively, but when Mr. Staaff came there to accept the position as manager he had some fine cockerel bred barred Rocks which he had perfected after many, many years of careful breeding, and he brought one pen of very fine specimens with him, and therefore they now have a nice little flock of this variety, and that they have good birds in this variety is proved by the fact that on three birds shown at Syracuse they carried home three prizes.

After the birds are brought up from the cornfield they have several large runs in the grove before mentioned, in which they are placed. The cockerels and pullets always being separated from the time it is possible to determine the sexes. The plant

is also equipped with a large number of pens with individual coops for the purpose of confining the cock birds after the pens are broken up. Here we found a fine string of male birds coming through the moult in nice shape.

In another yard was a fine bunch of Barred Rock cockerels, and some two or three yards contained White Wyandotte cockerels, many of which were show specimens of high quality. They also have a cockerel house fitted with stationery coops having Empire fronts to the pens, where the birds are cooped before they are shipped, and where their show birds are trained and fitted for the show room.

This year Onlya Farm tried out the baby chick business in a small way and could not supply one-half the demand which they received for baby chicks. They are making plans, however, to be better equipped for this business another year, and intend to mate at least 9 pens of White Wyandottes, which they will use wholly for this purpose, also a number of pens of cockerel bred Barred Rocks.

Mr. Kearney made it very plain to the writer that he was not in the poultry business to beat anybody but to give everybody a fair deal and full value for every dollar which they spend with him, and all birds were shipped with the strict understanding that they could be returned if not satisfactory and the money will be cheerfully refunded.

C. W. Zimmer.

A Collie dog is a dog you will bless long after he is laid to rest. As he lives a life of usefulness and pays you back one hundredfold for every dollar he may cost in gold. But the first cost is not the thought. You have a friend that cannot be bought.

And if misfortune overtakes you, and the old homestead must be sold. But when it comes to the collie, you would say: Keep your gold. Why? Because it would be like parting with one of the family.

Bloomington, Ill. F. R. Clark.

Illustration: Four-year-old boy and four-months-old Collie pup. What could you buy that would please a child any better for a Christmas present?

A DAY WITH THE LARGEST BUFF LEGHORN BREEDER IN THE WORLD.

The writer recently spent a day with F. S. Smith, Hamilton, Ohio, who at this time is the largest exclusive breeder of Buff Leghorns in the world. Mr. Smith gave us the pleasure of riding from farm to farm in his Red Devil auto and he tries to do everything in the same way as he breeds Leghorns and that is on a fast or large scale, and you can imagine how fast we went from farm to farm under these circumstances.

Mr. Smith this year raised over 8,000 birds from 500 breeders which were selected from 4,000 birds raised last year. Now besides the amount that he raised from the 500 he has shipped eggs into every state in the Union, also Mexico and some other foreign countries. He has also shipped birds to a number of foreign countries this year. Mr. Smith informed us that he intended to mate up 540 pens for this season's egg and day old chick trade. His capacity for day old chicks the coming season will be 11,000 chicks every three weeks. He recently received one carload of incubators, which is an addition to his 1910 capacity.

There is no question but what Mr. Smith is now the Buff Leghorn king of the world, and he is also taking steps to become the Indian Runner duck king of the United States, as he is figuring on raising from four to ten thousand ducks next spring. During the last show season, Mr. Smith exhibited at nine of the largest shows and he intends to be in them again this season; also most all of the other large shows.

He informed us that of all the birds he has shipped out he has never had one returned to him; this speaks very highly of the class of stock he has and sends out. He is certainly giving the people the value for their money or they would send them back.

We have seen a great many Buff Leghorns in our travels but we have not seen anything that excels Mr. Smith's and we do not believe that there are many if any that can do so. His birds are bred to lay and win. He does not push all points at one time, but keeps strengthening the weak ones and he now has them where they are second to none in egg productions and show qualities. He has some of the largest Buff Leghorns we have ever seen and his birds are exceptionally strong in eye and head points.

Mr. Smith has thousands of birds to dispose of and if you are intending to buy Buff Leghorns we would suggest that you try him; he has the quantity to fill your order from as well as the quality; he has the laying quality in his birds and the size and general make-up and just what you want, regardless of what you want it for.

F. C. Wing, Wayland, Mich., breeder of Single Comb Black Minorcas, reports over 800 birds hatched and matured this season and he has already sold over 200 pullets from this season's stock. Mr. Wing informs us that he has turned away more orders than he could fill for pullets. His Minorcas have been first prize winners wherever shown and he expects to be at the leading shows in the middle west this season. Write him for what you want.

Jackson Poultry and Pigeon Association will hold its annual show Dec. 31, 1910, to Jan. 5, 1911, at Jackson, Mich. Judges, Schwab, Traviss and Gibson. For premium list address the secretary, W. O. Wellman, Jackson, Mich.

Here's the 120 egg Ideal sold for \$10 with the 120 Chick Ideal Brooder shown opposite. The biggest value ever offered. Write for my book first—see how they're made before you decide on any. Send me a postal now.

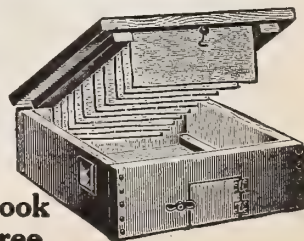

\$10 FOR BOTH—Freight Prepaid
120-Egg Ideal Incubator and 120-Chick Ideal Brooder

The record of the Ideal speaks for its quality. No other incubator has given such universal satisfaction among the experienced and inexperienced alike. And the price speaks for the greatest incubator and brooder value on the market. Ideal Incubators are made right—of the best materials; three thicknesses of wall and dead air space between; covered all over, top, bottom, sides and all, with 28-gauge galvanized iron. Perfect heating and ventilating system. Automatic regulating. This combination—at \$10—makes this offer

The Most You Can Get For Any Money

in this size. No higher quality anywhere at any price. I'll even pay the freight if you live east of the Missouri River and North of Tennessee. If you live beyond, or if you want larger size Ideals, write for delivered price to your R. R. station. Send me a postal now anyway for my big Free Book. Don't buy any incubator or brooder till you see what I offer. My big book is the best ever published on the subject of incubators, brooders and poultry. Write me now.

A LEAP FOR THE PENNANT.

In Which Your Friend "Bob" Essex Puts One Over and Gets a Grasp On the Leadership.

"Bob Essex is making a winner out of the 'Model,' and I guess we are all glad to see him doing it."—J. W. Bell in American Poultry Journal.

It will be no surprise to our readers to hear that the Robert Essex Incubator Company's bid for the leadership in the incubator and poultry supply line is assuming a most interesting phase.

Bob Essex has the reputation of being conservative; and he is; but it is that brand of conservatism that causes him to look

The consummation of this transaction, with the others mentioned herewith, is certainly going some. It is a record at which the poultry fraternity may well feel gratified; and it has been accomplished by one of us in the quiet unassuming style that poultrymen possess. It could not have been better managed by one of the professional "big" men of the business world. How does it read to you?

Let us see what has been done in a few months:

On February 21 Robert H. Essex decided to sever his connection with Cyphers Incubator Company, notwithstanding his large financial interest in that firm—representing his savings of over 15 years.

By March 4, with the aid of some good friends, he had purchased the business of the Model Incubator Company, and entered

ning of this article states, secured at a single leap a grasp on the leadership.

The above is a tale of accomplishment in this industry of ours. The final step in reorganization was taken on October 31—only eight months and one week from the date that Mr. Essex handed in his resignation as assistant general manager of Cyphers Company.

Are things prospering still?

Look at the illustrations of a couple of departments in the Robert Essex Incubator factory—the metal shop, and the incubator joining room; and take note that the photographs were made in October. Nearly a full force was working in the factory at that early date. Generally speaking, incubator companies do not begin manufacturing in earnest until November, but the popularity of the "Essex-Model" Incubators and Brooders (as they are now called) is such as caused Mr. Essex to remark at the time: "I never before experienced anything like it at this season of the year; and I've been in touch with the incubator business a long time."

(We believe readers will do well to get the 1911 catalogue of the Robert Essex Company, No. 3 Henry St., Buffalo, N. Y. The one chapter in which Mr. Essex tells from his long experience "How some people make money and are successful in the poultry business where with equal chances others lose," will we feel sure be read with interest by experts as well as by beginners. It is free.)

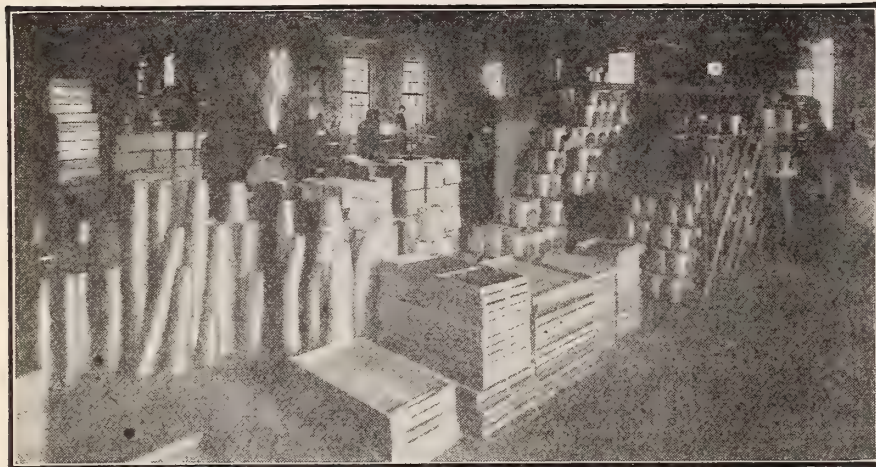

The above tells one of the most extraordinary tales of business acumen it has been our lot to relate. It would be hard to beat it in any line of industry. It is one more feather in the caps of the poultry-keeping fraternity; and we believe readers will be with us if we say, as Theo. Hewes, of the Inland Poultry Journal did when Mr. Essex started out on this undertaking:

"Here's to you Bob! May your shadow never grow less!"

Mr. M. M. Baker has turned all his Orpingtons, together with cups, medals and the good will of the business over to Milton W. Brown, proprietor of the famous Cheviot Farms, Cincinnati, Ohio. This includes the birds that won the famous Stanfield Trophy for the best Buffs shown in 1908 at Chicago, National Club meet at Cleveland, Madison Square Garden, New York, and other places of importance, and also includes Mr. Baker's sensational imported birds. The last of these birds were turned over November 4 and Mr. Baker retires from the fancy.

The White Feather Poultry Farm, formerly of Rocky River, Ohio, is now located at Olmstead Falls, Ohio; Mr. H. T. Whitney, proprietor of this farm, recently purchased 17 acres of fine land well adapted to poultry and fruit and on this farm will continue to breed his Snow-Fluff strain of Single Comb White Leghorns and White Wyandottes.

J. C. Fishel & Son, Hope, Ind., have just gotten out one of the neatest and most attractive booklets that has come to our desk

A section in the metal department of Robert Essex Incubator Company, Buffalo, N. Y., where the wall founts, food hoppers, etc., etc., are made. (Photo taken in October.)

before he leaps; to think before he promises; and then to do things without making a fuss about it. Any one of our readers who gets a promise from "Bob" may lie down in his little cot and sleep contentedly so far as the fulfillment of that promise is concerned. We believe he carries out the practice of "making good" purely because he wants to. It's a habit he has.

But we were speaking of his grasp on the title of "leader" in the manufacturing business.

What do you suppose his latest step upward consists of? Nothing less than the purchase of the business of the well-known Cornell Incubator Company, of Ithaca, N. Y.

Remember! He already had selected what he considered the best incubator on the market when he bought the Model Incubator Company's business last spring. Then his thoughts naturally turned to brooders; and what was more probable than that he should recall the popular "Peep o' Day" and the "Old Homestead" brooders, the patents on which the Cornell Incubator Company owned?

Conservatism didn't stop Mr. Essex from quickly making up his mind that he wanted those patents, even if he had to buy out the Cornell Incubator Company to get them.

And that's just what happened!

It happened like this:

The Cornell Incubator Company was approached with an offer for the patents.

"No, Mr. Essex," said the owner of the business. "I'll acknowledge that my time is very much taken up with other things, and for that reason I might perhaps be willing to dispose of this business, but as for selling the patents alone, I couldn't do it. They are the soul of the business. It would be of little utility without them. Why, I gave \$12,000 cash for the 'Peep o' Day' patent alone, and \$2,000 for one of the others. The patents we own have cost us in actual cash far more than the amounts named, not including a cent for time spent on inventing, experimenting, material, construction—simply cash paid out for patents, and applications for patents. Why not buy the whole business? Then you'd have the patents."

As we remarked above—Mr. Essex wanted those patents.

A little reflection; a rapid figuring of values; and he replied: "How much do you want for the business—stock-in-trade, patents and all?"

The price was named.

Our friend Robert said, "I'll take it." And that settled it.

upon its management and reorganization. Some time ago he wrote that the way his numerous acquaintances were flocking to him with orders was a caution to beholders, and he wants to thank them all for it—sincerely; "for," said he, "it is their confidence in us and in our goods that has enabled us to take another step up the ladder."

To proceed with our little tale:

Under high-pressure endeavor, business began to look up. Within a couple of months it increased 20 per cent. By June it had increased 150 per cent. By September it registered 360 per cent over September, 1909; and we understand it is now approaching the 500 per cent mark.

Having accomplished so much it did not take Mr. Essex long to decide that he

A busy corner in the incubator joining room of Robert Essex Incubator Company, Buffalo, N. Y. (Photo taken in October.)

ought to organize a company to take over the entire businesses of the Model and the Cornell. To think was to act; and the outcome was the incorporation of the Robert Essex Incubator Company; an organization to be proud of, and one that, as the begin-

ning of this season. This booklet is original and carries their idea of having the best in printed matter as well as the best in White Wyandottes. Don't fail to send for a copy of this booklet, as it will interest you. Please mention American Poultry Journal

First Hen, Chicago, 1909

Chicago Winnings

At the last great show, December 7-12, 1909, in the largest entry and the strongest competition ever shown at Chicago, 1st, 2d, 3d cock; 1st, 2d, 3d hen; 1st, 2d, 3d pullet; 2d, 3d, 4th, 5th cockerel; 1st, pen. Exhibition birds of the highest quality will be ready for the fall and early winter shows. My stock in customers' hands won firsts in most of the leading shows last winter and will do it again.

Do You Want the Winners in Your Show?

If so, get in touch with me and state your wants. Beautiful trios, pens and single birds in either breeding or exhibition stock, sired by my Chicago winners, now ready. I can please you and will ship on approval. What more could you ask?

My matings were right this year as usual, and I have thousands of young stock better than ever before. To save time in ordering exhibition birds, either state the amount you would care to spend for same, and I can describe what I can furnish for the price, or you can describe what you want and I will tell you what I can furnish them for.

Inclose 10c in stamps or coin for the finest S. C. W. Leghorn catalogue published. Every inquiry or order has my personal, prompt and careful attention. Prices low considering quality.

MONEY SAVED

By Learning How to Operate Any Incubator Before Purchasing Your Machines

In order to pull off a successful hatch you must know all the details of incubation. Everybody can run an incubator, but few can operate one to the degree of accuracy necessary to obtain a 90 per cent hatch. Realizing this fact and knowing that at the present time there is no book published which gives the beginner all the information necessary to enable him to pull off such a hatch, we have published a new book.

"How to Operate Incubators and Brooders Successfully"

This book contains 84 pages of solid reading matter; it tells you how to operate all standard makes of incubators successfully, how to select your eggs, how to care for your little chicks after they are hatched; in short, it tells you everything you ought to know in order to pull off a successful hatch. Although the information contained in this book is worth a fortune to the beginner, we have fixed the price at 50 cents per copy. Send your order today to

Incubator Exchange : Dealers in New and Used Incubators and Brooders : Brookfield, Illinois

Proof Positive!

HARRIES' WHITE ORPINGTONS STILL LEAD THE WORLD

New York, November 18-24, 1910—In competition with the leading Eastern breeders, we won first cock (9 in class), first and second hens (14 in class), first pullet (14 in class), first and second pens (10 in class), Silver Cup best display Orpington any variety, Silver Cup best display White Orpingtons, Club Cup best display White Orpingtons, Silver Cup best White Orpington pen and five other specials.

This, with our win of first pen at Madison Square, 1910, the record win at Philadelphia, 1910, is proof positive that our White Orpingtons are the leaders. Our hen, "The Lily," was pronounced by the judges present to be the best Orpington type ever shown.

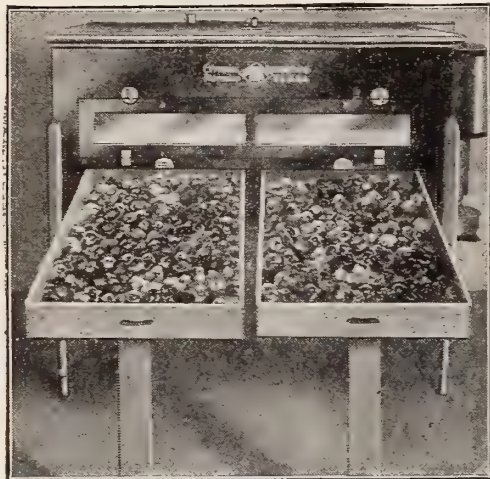

Some winning cockerels for sale.

Let These Owners Tell You How The Cyphers Keeps On Hatching

LET US look at this chicken-raising question from the standpoints of *good business—permanency*. On these points we are offering something stronger than *our words and claims* for Cyphers Incubators and Brooders.

325 Barred Plymouth Rock Chicks

Picture—made from photograph—shows 325 Barred Plymouth Rock Chicks hatched in a No. 3 Cyphers Incubator by D. W. Tobey, manager for G. M. D. Legg, Sterling, Ill.

We submit the simple, truthful testimony of actual users of Cyphers machines—located in different parts of the country—meeting different difficulties, and overcoming them—*succeeding* with the Cyphers.

They have tried it out—not for *one* hatch, or a *single* season—but for year after year—hatch after hatch.

They tell how they have found Cyphers Incubators the world's greatest *continuous* hatchers—the most *reliable* and *profitable*.

And you can safely believe that they did not write these letters till time made *absolutely* sure of the *facts*.

Strong Proof from the Coast

Every poultryman knows or has heard about Petaluma, California, the hen metropolis of the Golden West. Read this about the Cyphers *continuous* hatching quality from one of the most successful Petaluma poultry raisers. It is dated Sept. 29, 1910.

This Shows an Average "Fair Hatch"

Fig. 1.—63 chicks from 120 fertile eggs. This would be called a good hatch from a cheaply-built incubator.

"It is with pleasure I recommend the Cyphers Incubators. They transform all the hatchable eggs into lusty, livable chicks, which it is a pleasure to care for with a minimum of care, worry and expense. During the past season I have operated four large size, 390-egg Cyphers machines, and for the season took an average of 323 chicks per machine per hatch to the brooders. Two machines are old style and two your latest Insurable pattern. These last run with practically no variation of temperature."

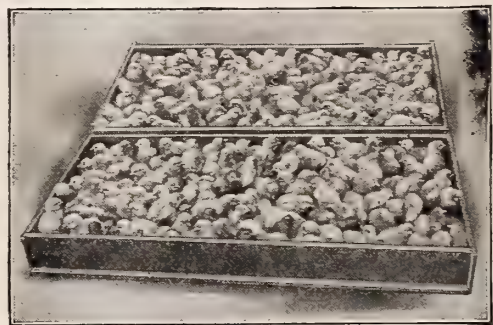

Wayside Yards. Yours truly, **CARL GREGORY.**

And just bear in mind that this isn't the report of a single hatch *accidentally* good—but of a steady whole season's average. 323 chicks from a 390-egg Cyphers—from all eggs set.

A. G. Lord, of Higganum, Conn., writes us under date of July 30th, 1910: "As a result of 21 consecutive hatches held by me the past winter and spring with No. 3 and No. 2 Incubators of your manufacture, I secured 5,523 chicks from 5,914 fertile eggs.

"My first hatch with the No. 3 machines was Feb. 1, 1910, my last was June 1st. I set in all 3,902 eggs. I tested out 345 infertile eggs and hatched 3,304 chicks.

"With No. 2 Cyphers machines my first hatch was Feb. 13, 1910, my last May 24th. I set 2,640 eggs, tested out 263 and hatched 2,219 chicks.

Single Hatch from a No. 3 Cyphers

326 White Leghorn and Rhode Island Red Chicks hatched on Avondale Poultry Farm, Hayden, Idaho. Said H. F. Rau, Manager "There are 326 chicks in the trays. This good hatch speaks for itself, and is only one of the large number of similar hatches we have had."

Read This from a Beginner

Here's another strong letter. This one is from a beginner. He's mighty enthusiastic. And rightly so. It's written by Theodore R. Brown, 333 Hinkley Ave., Rockford, Ill., and dated June 25, 1910.

"No doubt you think I am lost—but I am here, and so are the chicks! I am glad to report my first five hatches:

"First hatch, 346 chicks from 350 fertile eggs; second hatch, 226 chicks from 294 fertile eggs; third hatch, 288 chicks from 330 fertile eggs; fourth hatch, 260 chicks from 287 fertile eggs; fifth hatch, 300 chicks from 325 fertile eggs.

"That makes in all, 1,454 chicks from 1,586 fertile eggs.

"Remember, I am a beginner, and that's going some!"

A "Good" Hatch—the Cyphers Kind

Fig. 2.—104 chicks from 120 fertile eggs. It is from the number of chicks between 63 and 112 that the profits are to be made.

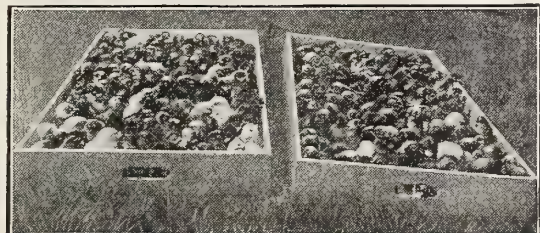

A Billion Dollar Industry Is Told About In Our 1911 Book

What other poultry raisers are doing in every part of the country—you can do—on whatever scale you desire.

Half the battle in poultry raising is starting right—with a real incubator. Deal fairly with yourself! Get a genuine Cyphers and be rid of risks—be sure of continuous service—big percentage hatches right along.

You cut out moisture-troubles—heat-troubles and uncertain regulation and ventilation when you get a Cyphers. You *save eggs, oil, temper, time*—and you *make money*.

You will have the *same equipment* that the most successful people in the business use for best results, for Cyphers Incubators and Brooders are used by more Government Experiment Stations—by more large poultrymen—by more big breeders of national reputation and by more successful duck raisers *than all other makes combined*.

A Beginner's First Hatch

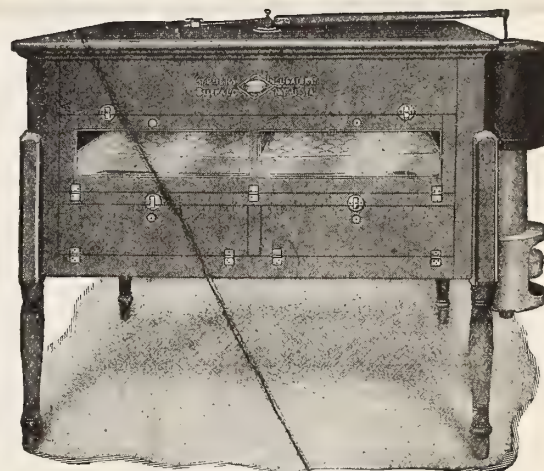

Picture (from photograph) shows hatch of 340 Chicks from 350 eggs in No. 3 Cyphers made by Theo. R. Brown, Rockford, Ill. Said Mr. Brown, June 25, 1910: "I am sending picture of my first hatch—346 big, lively 'peeps' from 350 eggs. Not bad for a beginner!"

We want your name so that we can send free—with *Our compliments*—our big, handsome year book—"Profitable Poultry Raising," our complete 1911 catalog of Cyphers Incubators and Brooders, Poultry Foods and Supplies. It contains

Ricksecker's Reds

Royal Winners Win more firsts, shape and color specials and sweepstakes than any other Red breeder in the West. Write for record of our Reds. American Royal Stock Show and Mo. Valley Fair, both held in Kansas City, we won 9 firsts, 6 seconds, 7 thirds and sweepstakes on cockerel at both shows; also R. I. Red Club specials for shape and color and A. P. A. silver medal. If you want quality book an order early from one of my best pens. Mating list free.

T. L. Ricksecker : R. R. 5, Box 119 : Rosedale, Kansas

Brookdale Orpington Farm

White and Buff Orpingtons

The Brookdale strain of White Orpingtons has been line bred more years than any strain of White Orpingtons in America and has attained quality to the highest degree; large size, vitality, pure white color and especially heavy egg production. In Buffs we were among the first to import and breed them, and the Brookdale Buffs combine every desired feature of highest quality, massive size and rich, even color. Breeding and show birds for any competition at "let live prices." I advertised in the October issue of American Poultry Journal a special six weeks' sale, as a result over 250 birds were sold and in not one instance did I have a dissatisfied buyer. To the contrary I have dozens of letters from my customers that it will do you good to read from my catalogue which will be ready January 15. Send for one, it's free, Brookdale's guarantee backs every sale or stock may be returned at our expense.

W. E. STANFIELD, Prop. : HILLSDALE, MICHIGAN

READ Poultry Truths

S. B. TWINING, Author

Mr. Twining has written in an honest comprehensive manner the truths that have come to light during his many years successfully spent in poultry culture. A book from one so well versed in all branches of the business cannot help but be a benefit to the poultry industry. A novice can easily comprehend its sayings.

Copies are obtained by sending \$1 to

"Afton Farm," Yardley, Pa.

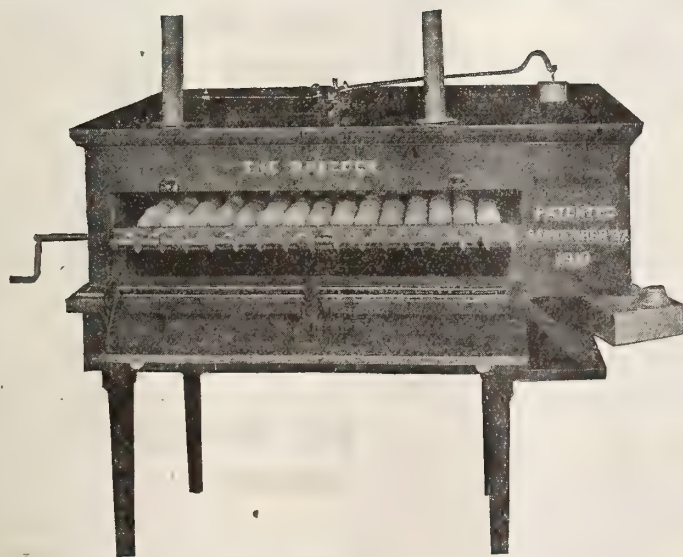

C. M. REYNOLDS' WHITE PLYMOUTH ROCKS

The Best in the West

Everything shipped on approval, satisfaction guaranteed. Largest exclusive breeder of White Rocks in the west. Eggs from best matings, \$5 per 15, \$25 per 100. Express paid on baby chicks, safe arrival guaranteed. If you want exhibition, breeders or utility birds, write me your wants. I guarantee to please you. Write for catalogue.

C. M. Reynolds :- Fullerton, Nebraska

The "Breeder"

Those chimneys insure perfect circulation. That handle turns the eggs in three seconds. Eggs or tray need not be touched after once being put in.

**Is the only Machine which
has real circulation of
air throughout**

THIS represents the greatest improvement made in incubators in forty years. Fresh air continually circulates through every portion, driving out foul air and keeping the machine fresh and sweet without reducing the temperature.

Think what that means to you, Mr. Poultryman. Think of the undesirable condition of the old-style incubators, of the thousands of chicks which succumb to bad air or become afflicted with tuberculosis. Buy the Breeder and every chick will be hatched in fresh air, breathe fresh air, live in fresh air—and without being chilled.

Investigate this point—it sounds like an impossibility—but we can prove it. And it is but one of many good things in this incubator.

You do not have to handle the eggs to turn them as in all other machines, but they are all turned by our patent roller tray; lamp has to be filled but once a week.

When you buy an incubator, buy real improvements—and that means "Buy a Breeder." Send for our catalogue and post yourself on "the newest and best thing in incubators."

The Breeder Incubator Co., Norristown, Penna.

Illustrated Breeders' Cards

RATES for Illustrated Breeders' Cards: 40-word card, with small sized illustration (to be furnished by us), \$2.50 per month for less than one year; \$24 per year, payable quarterly in advance. GROTON, NEW YORK

S. C. Black Minorcas

I want my customers to know that I have young stock that will be hard to beat. At the West Michigan State Fair at Grand Rapids, September 12 to 16, we carried away all the blue ribbons on cockerels and pullets. We expect to be at the leading shows this coming season. **Cockerels**—We have a few utility cockerels at \$2 each. There are 25 grand prize winners. They have firm, well shaped combs, low tails, good shape and color all through. They have had free range and perfect in condition, \$5 each for these splendid birds. **Hens**—About 75 utility, mostly one year old, at \$1 each; 25 that will produce prize winners, good size and shape, \$1.50 each. **Pullets**—Can spare about 25 June hatched utility pullets at \$1 each. Write me your needs and you will get a square deal.

F. C. Wing, **Box 154, Wayland, Michigan**

Riley's Barred Rocks

If you want winners for your coming show, don't forget that I have the finest lot of young birds that I ever owned. Healthy, vigorous, big boned, cockerels and pullets with bright, snappy barring to the skin. The kind that win prizes in the hottest competition.

For years **Riley's Barred Rocks** have been winners at leading Eastern shows. They have established a reputation for consistent winning. The young stock offered for sale are of the blood of this long line of winners. Every order has my personal attention and I guarantee satisfaction.

HENRY D. RILEY, BOX B, STRAFFORD, CHESTER CO., PA.

Johnson's First Old Trusty Message For 1911

Subject: Why I can sell you the best incubator, freight prepaid, for less than \$10—that will last more than 10 years

THERE's only one answer—it's because I make and sell so many of them.

For the season of 1910, I made and sold over 42 solid miles of Old Trusty Incubators and Brooders.

I sold over 75,000 machines—put them end to end and they would make a solid sidewalk over 42 miles long.

From my St. Joe, Missouri, transfer station alone, I distributed 113 big 50-foot furniture car loads.

This is a tremendous amount of business for any one incubator maker to do—there must be a reason for it.

The reason is simple and quite old fashioned, yet true.

It's just because Old Trusty Incubators and Brooders are now recognized everywhere—by everybody who knows anything about incubators and brooders—to be the best machines on the American market—and sold for the least money.

Several years ago I adopted a policy of selling incubators and brooders on an 8 per cent profit plan.

Competitors said it could not be done—that I'd "go broke" and go out of business on such a policy.

But they didn't guess right on the sentiment of the people.

I haven't "gone broke"—on the contrary, I've built up the biggest business in the world in my line. I'm selling more machines now than any five of my next nearest competitors put together.

My 8 per cent profit plan meant that I'd rather get a little profit on each machine on a big volume than a big profit on each machine on a small volume.

And now I'm at it again for 1911 with a factory output of 100,000 machines—and a lower profit plan—7%—or less than 70 cents on a machine.

I didn't have enough to go around for 1910—maybe I won't have enough to go around in 1911.

Now, I believe there are other good incubators and brooders on the market, but I don't believe there's one that is as good as the Old Trusty—and 75,000 people last year agreed with me—agreed to the extent of sending me their money for machines.

Every year I am adding expensive machinery to my factory, which enables me to cut down the cost of building incubators.

This year I've just installed two high pressure boilers, 175 horse power each; one 175 horse power Corliss Engine; one 135 horse power Four Valve Erie Engine and two new generators, an 80 horse power and one 175. Each individual piece of machinery in my factory is now run with an individual electric motor, yet it all started with that one man power. And it's all been made possible with my policy of small profits on a big volume.

And the credit (thank you, one and all) is all due to my chicken raising friends, who found out that Johnson made the best incubator on earth and that he sold it on a live-and-let-live price.

All I ask at this time is the privilege of explaining this proposition to you in my big free incubator and poultry book.

I take a lot of pride and get a lot of pleasure out of writing that poultry book every year, because what I put into it is the result of actual experience, gathered by myself and by my poultry raising customers. There's no "hyfalutin" language in the book, no dreams of art as illustrations, but just plain, right-down-to-the-ground facts on poultry raising for people who want to make money with an incubator. And every illustration is an actual photograph. This book is not leather bound, nor hand illuminated, nor is it a de luxe edition. It isn't intended to be an ornament to your library shelf, it is just a big book of actual facts on incubators and brooders, written for people who want to know how to make real money out of their poultry—and make it quick with the least possible expenditure and outlay for the proper equipment to do it with.

There are hundreds of photographs in my big book and a lot of testimonials, a lot of poultry information, a lot of feeding information, incubator experience from customers throughout the world—and a full description of Old Trusty Incubators and Brooders and how to use them.

With the book, I quote you my price on these machines delivered at your railroad station—freight charges prepaid, east of the Rockies, and all ready to run.

Poultry raising is growing more profitable every year. Eggs and poultry are increasing in price every month, yet chickens are no harder to raise and don't cost any more to feed than they ever did. So higher prices for eggs and poultry mean increased profits for the producer.

The poultry business is going to be better for the producer every year. Are you getting your share—either in country, or small towns or city back yards?

Let me mail you my book at once. Fill out the coupon printed below, or send me a postal. Just say, "Johnson, I want the book." I'll do the rest.

You won't need a dictionary to read my book.

**TOO LATE!****Why Didn't I Get****CONKEY'S ROUP REMEDY!**

That's what you'll be saying some of these days if you put it off too long and lose part or all of your flock in an epidemic of ROUP. When you see chickens moping, sneezing, coughing, watering at the eyes, heads swollen and fighting for breath, LOOK OUT! These are sure symptoms of the deadly Roup. One sick bird will infect the whole flock! Don't wait—keep Conkey's Roup Remedy always on hand!

"CONKEY'S" DOES THE WORK

Conkey's Roup Remedy comes in powder form. Put a thimbleful in a gallon of water and the fowls will drink it eagerly. A 50-cent box makes 25 gallons of medicine.

We will pay 50 cents for the empty box if it fails to satisfy you, but it will not fail!

OUR REMEDIES NOT "CURE-ALLS"

WE MAKE ONE REMEDY FOR EACH DISEASE. Conkey's Poultry Remedies are endorsed by thousands of successful poultry raisers. One remedy for each disease. Every remedy guaranteed. Don't put faith in "shotgun" remedies. Every disease has a different cause and demands a special remedy.

Conkey's Poultry Remedies are standard preparations with a world-wide reputation. On sale everywhere. Prices, Conkey's Roup Remedies, 50 cents and \$1.00 postpaid.

CONKEY'S POULTRY BOOK FREE

IT'S THE RECOGNIZED AUTHORITY

Over two million copies in daily use. Answers 125 vital important questions. Tells all about Housing, Feeding, Egg Production, Breeding, etc. Tells How to Know and How to Cure all manner of Poultry Diseases.

Send name of your poultry supply dealer and 4c in stamps for this great 50-cent poultry book NOW. Follow its plain teachings and double your poultry profit. Send at once.

is neither above nor below but at the eggs. We found it—have it in use. Other incubators will be copying our plan next year just as they have tried to copy our Hygrometer. But this year the only way you can get absolutely perfect ventilation and free oxygen supply is with a

**MANDY LEE INCUBATOR**

Look at the picture at the top. It is the Mandy Lee door. Six openings right into the egg chamber, covered only with fine mesh wire gauze and cloth. This means free circulation of air at all times, and no drafts. Carbonic-acid gas passes out and the life-giving oxygen passes in. This is the boldest and most important step ever taken in incubator building. And we have the proof that it is right. It is the long sought "turn" that places one incubator—The Mandy Lee Incubator—above all others and above the hen as a hatcher. We want to send the proof to you. We measure and control everything—heat, ventilation and moisture. No other incubator regulates anything but heat. If you follow simple directions, you can't fail with a Mandy Lee. New catalog explains everything fully; also tells about our new outdoor lamp-heated and regulated brooder—just what you want. Write today for catalog and full information, and for "Lee's Chicken Talk" or "Mandy's Poultry School"—all free.

GEO. H. LEE CO., 1101 Harney Street, Omaha, Neb.

THE FAMOUS **Rayo** Lamp

The Rayo Lamp is a high-grade lamp, sold at a low price.

It gives the white, soft, mellow, diffused light, which is easiest on the eye, and you can use your eyes for hours under Rayo light without eye strain because there is no flicker. The Rayo lamp may be lighted without removing shade or chimney. You may pay \$5, \$10, or \$20 for lamps other than the Rayo and get more costly decorations, but you cannot get a better light than the low-priced Rayo gives.

Standard Oil Company
(Incorporated)

Let Me Save You 50% Of Your Incubator Expense

I WANT to Give You All the Money I can save on my selling expense. Read my proposition carefully.

You know Chas. A. Cyphers; you have heard of the Standard Buffalo Incubator, famous the world over as a wonderful achievement in Incubator building.

The New Buffalo Equipment

combines **Low Cost** with **Quality**. I have stopped manufacturing a high priced machine because I have found a way to make as good a machine as has always been associated with my name and sell it at a low price. You get all the quality of the original Cyphers. New materials, new methods of manufacture, and a fraction of the original selling cost have made the **New Low Cost Buffalo** a possibility. I have cut out the old mammoth catalog that cost me over \$25,000. I have cut out follow-up, printing, postage, expensive branch houses and managers. In planning the New Buffalo Equipment and selling method I eliminate all the old policy selling expense.

I have not saved on the cost of manufacture, but on the selling cost I have trimmed to the quick.

I give you the chance to save the one half that I save, I give you a standard high percentage hatch—made of the best material and workmanship at the lowest possible price. I haven't any fancy catalogs to make you pay for besides the Incubator. That's why you save one-half on a standard "Buffalo."

The New Buffalo Incubator

is constructed with casing of open hearth iron, galvanized and can never rust. It is lined with fibre board, which eliminates any loss of heat by radiation. The walls are double, spaces between being well packed, which makes a substantial and well insulated incubator. The front is made of hard wood. In addition to a glass door, it has an outer hard-wood paneled door to darken the hatching chamber and to preserve the heat.

No Change In Principle

In the New Buffalo the pure air is heated in a three-compartment heater, is conducted into a separate compartment above the egg chamber where it is evenly diffused over and through a porous diaphragm and into the hatching chamber. It is then carried downward, and around the eggs and through a porous diaphragm in the bottom case. This system combines **Perfect Ventilation with Perfect Heating**. In its many years of use, owing to the more successful results obtained it has almost supplanted the hot water system, with its cheap and leaking radiator and limited ventilation.

Accurate Heat Regulation has been a strong feature of my hatches, and the new regulator is more perfect than any of the others. The present design strengthens the leaves of the thermostat, making them more rigid and "Commercially Perfect."

The Egg Trays are strongly made, are now covered with **Galvanized Wire Cloth**, and will last for all time.

The Legs on the Incubator are made out of heavy metal, are strong and nicely shaped. (See illustration.)

Double Door and Nursery. My experiments have proven that the chicks should be left on the tray until the hatch is over. Dropping off the tray before the hatch is cleaned up lowers the temperature on the tray, and injures the chances of the chicks that are late coming out, while the wet chicks get chilled in the lower temperature of the nursery and bowel trouble sets in early after hatching. The double door makes a dark hatching chamber, in which the chicks do not pile up. They will stay where they hatch until all are dry, when the outer door may be lowered, the guard removed from the tray, and the chicks allowed to work forward to the light and drop into the nursery. The double door also makes a warmer front. All these perfect features are found only in the New Buffalo.

I am offering all these new improvements in the Standard Buffalo Incubator at half-price—a saving of 50% to you. It means dollars in your pocket, a chance to make money in the future, saving you a lot of time and trouble if you order from this ad. Why should you pay twice my price for an incubator not up to the New Buffalo Standard?

You Get These Low Prices:

Offer No. 0—50 to 60 Egg Size, Shipping Weight 65 lbs. \$ 9.50
Offer No. 1—110 to 120 Egg Size, Shipping Weight 90 lbs. 12.00

Offer No. 2—220 to 240 Egg Size, Shipping Weight 130 lbs. \$16.00
Offer No. 3—340 to 360 Egg Size, Shipping Weight 160 lbs. 20.00

My Guarantee

I positively guarantee that the Buffalo will make a high percentage hatch. I guarantee it to be well made, have more good principles, and more easily regulated than incubators costing \$8 to \$10 more, egg capacity considered. I guarantee to see you are satisfied. Your money back instantly if you are not—no waste of time or waiting. In the Buffalo you are offered more for your money than you have ever secured before.

You Take No Chances

You stand to lose nothing, but to gain everything—especially the satisfaction of having an incubator that hatches the highest percentage of healthy chicks. I stand back of you in this purchase—I protect you against loss of any kind. Fill out the order blank and mail today. Don't delay. We expect a deluge of orders and while we are better equipped than ever before—we urge you to send in your order early. This year it will be a case of first order in first filled—you are safe in ordering from me—my reputation and standing insure you against loss. If you want to know more about the Buffalo Incubator send a postal today. The offers in this advertisement are held open to all inquiries made now.

EDWARD BROWN, ROUTE 37, MENDOTA, ILLINOIS

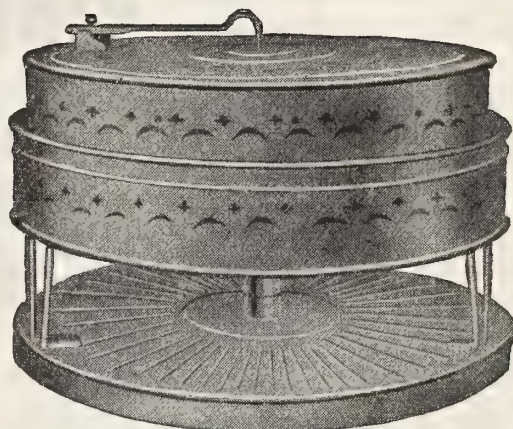

A Little Poultry and a Living

Is the title of a booklet we will mail free. It was written by the author of the PhiloSystem book, who makes everyone of his hens pay him a profit of \$50 to \$100 each

Cycle Brooder Hatcher, a complete all metal, fire-proof hatching and brooding plant for only \$8.00.

The All-Metal, 50-egg Cycle Hatcher only \$6.00, complete.

Our New Discoveries Make Poultry Keeping Easy and Profits Sure

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls, raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four metal mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time, with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steadily as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chicken like the mother hen.

TESTIMONIALS

The Cycle Hatcher Co.,
Elmira, N. Y.

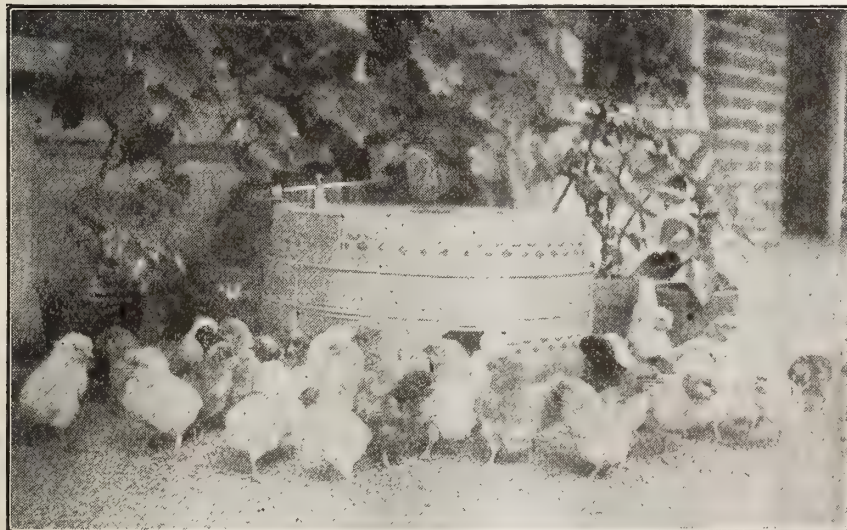

Sirs: I have used your incubators, both the Cycle Hatcher and the Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders.

Very truly yours,
Rev. E. B. Templar,
Valley Falls, N. Y.

The Cycle Hatcher Co.,

SPECIALISTS :

Our New

Poultry Book**ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY**

This Book Gives a Complete History and the Origin of all the Recognized Varieties of Chickens, Ducks, Geese and Turkeys, and is

Illustrated With 198 Colored Pictures of Fowls Painted From Life

Something Never Before Attempted by any Publisher

This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

HOW TO MATE

This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur.

PRICE ONLY \$1.00

Successor to Geo. H. Northup & Son

Box 15

Raceville, Washington Co., N. Y.

**Barred, White and Buff Rocks, White Wy-
andottes, Buff Orpingtons, Bronze and
Bourbon Red Turkeys, Ducks and Geese**

GREAT SALE lasts about 5 or 6 weeks longer, $\frac{1}{2}$ to $\frac{1}{4}$ real value, as we must close out
several hundred more birds before cold weather, as we cannot properly feed and care for so
many. Fine new fall catalogue free.

GREAT WINNING—See writeup about my birds, as to what others say of my winning
at the Illinois State Fair; the greatest fall show ever held in the midwest. Our birds have
won at Madison Square Garden, New York, Chicago, and all the big shows. We sell them to
you with a guarantee to win at shows or your money back. They have been bred for the
greatest show qualities for 15 to 20 years and should win anywhere. We will sell them
cheap if ordered in November, and can be delivered when you are ready for them.

WONDERFUL LAYERS—Five of our hens averaged 244 eggs in one year. Individual
records higher. They have been bred to lay for years and will give you far better results
than birds not line bred for great egg production for years. Our customers write us that
they are great winter layers. Our surplus goes cheap during November. If not satisfactory
money refunded.

TURKEYS—Bronze and Bourbon Red turkeys. We won our share of ribbons at the State
Fair; our birds in past 2 years have won at Madison Square Garden, New York, Missouri
State and other big shows; they go cheap. The 2nd cockerel at Illinois State Fair for sale
cheap, others for December and January show better—will go cheap.

DUCKS AND GEES—Indian Runner and Pekin Ducks, Toulouse and Embden Geese. We
have some fine ones and will sell them cheap.

WE PREPAY EXPRESS—Our fine new catalogue free, giving our winnings, experience
and other valuable information. Tell us your exact wants when you write so we can give
definite prices.

FIFTEEN Silver Cups free, given to 15 poultry shows whose members buy the most
birds from us. Get your friends to buy from us and get one of the largest and finest of
these cups for your show. Our catalogue tells about them.

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry
library. It contains 250 pages, and every disease to which
fowls are subject is treated in a most thorough manner. The
cause, symptoms and cure of each disease is put before the
reader in such a manner as to be understood at a glance.
With this book in hand you can be your own poultry doctor.
Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year
for only 75 cents. Send all orders to

S. C. White Leghorns are winners at the leading shows

At the big Allentown Fair our Leghorns won 1st and 2d Cocks, 1st, 2d and 4th hens, 2d cockerel, 3rd pullet, and 1st and 3d pens, and won for the second time the \$50.00 Stover cup for the best Leghorn; also won for the second time the \$75.00 Corey cup for the best display Leghorns. At the big Inter-State Fair Trenton, we won on 13 entries, 1st and 2d cock, 1st, 2d and 3d hens, 1st, 2d and 3d pullets, 1st, 2d and 3d cockerels, 1st and 2d pen, Silver cup for best display, and not one of these birds were shown at Allentown that won at Trenton. We still have some of the finest stock, we have ever raised. If you want bargains we have the quality in cocks, hens, cockerels and pullets for any show. We are booking orders for baby chicks.

Wm. C. Bowman, Manager - - - Box 337, Trenton Junction, New Jersey

WHITE ORPINGTONS

*Superb Type
Superior Quality*

*To be found in my yards can
be seen in this cut*

My birds are absolutely white, of that deep bodied type low down on legs, up to weight and I know I can please you.

My birds won at New York and many other shows last year, have won in all 15 firsts, 15 seconds and 4 thirds. Many Silver Medals and A. P. A. Diplomas. They are unexcelled as layers and if you want "Show Specimens" I can supply you. I also have a fine lot of high class breeding birds and can sell you a magnificent cockerel to head your pen, or mated trios and pens at reasonable prices.

Great Stamina and Vigor

are to be found in my birds, not usually found in White Orpingtons. I attribute this to strong foundation breeding stock, our pure air and Blue Grass range.

100 Acres in Russell Cave Poultry Yards and 7000 Acres in Elmendorf Farm. Express Pre-paid on all Orders, either stock or eggs. Every bird absolutely guaranteed just as represented or your money back without any questions. If you want fair treatment, send me your order. Mention American Poultry Journal.

GUARANTEED TO HATCH AND RAISE MORE AND LARGER CHICKS

WRITE FOR FREE CATALOG AND BOOK OF PLANS

The Famous PEERLESS INCUBATORS & BROODERS

More than 20,000 in actual use. Every one of them hatching and raising a larger percentage, with less attention and less expense than any other made. No other machine has so many improvements—so many money savers—so many labor savers as the Peerless. Here are a few of the special features:

Automatic ventilation and moisture; cold-rolled copper tank; heat distributing bars; tandem, double-compound thermostat regulator; automatic lamp; acme trip burner with combined damper and flame regulator—this is the safest burner made. It saves half the time, labor and cost of operation.

My Lampless Brooder—the greatest brooder success of the age. No lamp, no tank, no expense to operate. Raises a larger percentage of healthy, vigorous chicks than any other brooder on the market.

Either Knock-Down or Ready For Operation

I manufacture a complete line of Incubator and Brooder Supplies and fixtures; everything to repair or remodel your old machine or build new ones. I will also make to order anything special you may want in my line.

Send for my combined catalog and book of plans. It is free. It contains more than 100 photographic illustrations, showing step by step how Peerless Incubators and Brooders are constructed and how easily you can build them yourself. Whether you build an incubator or buy one ready made, you will save money by buying from me. Send for my free book today and learn all about the "House of Quality."

HOW TO GET BIG POULTRY PROFITS

Edgar Briggs, the most successful poultry expert in America, tells how to make the greatest success with poultry in his book, "Profits in Poultry Keeping Solved."

The new fourth edition covers every branch of poultry keeping and contains the many priceless secrets which you must know in order to get the largest profits from poultry. It also tells how to make the best poultry food for from 10c to 15c per bushel. Briggs' System calls for less equipment, labor and expenses than other plans and by one can readily care for 2000 layers and 3000 chicks. Three editions of this book rapidly sold for \$5 per copy. Price of new fourth edition including one year's subscription to Poultry Success, only \$1. If you have but limited space, you should get our new book, just published, "The Smith Method of Poultry Keeping," which gives the best, most comprehensive and practical system we know of for keeping many fowls on a small lot. It cuts down the work and care required to the minimum, and does not require elaborate equipment. It is also well adapted for large plants. By this system others are making \$2,500 per year on a space 40x60 feet. Why not you? Price \$1.00 including one year's subscription to Poultry Success.

Our Great Special Limited Time Offers:
—For \$1 we will send you your choice of either book, and include Poultry Success, the leading poultry magazine, for one year. For \$1.75 we will send you both books and Poultry Success for one year. For \$2.25 we will send you both books and Poultry Success for three years. For \$1 we will send you Poultry Success for three years. Regular price 50c per year. Leading and best poultry journal published; 21st year; 64 to 164 pages; best writers; beautifully illustrated; sample copy free. Send for free booklet containing many of the Briggs Secrets and other information.

The A. D. Hoesterman Co. :: Springfield, Ohio

BIE'S BARRED PLYMOUTH ROCKS

At four large shows, i. e., Kenosha, Chicago, Milwaukee and Waukesha, during the past season, we won 8 firsts, 4 seconds, 7 thirds, 6 fourths, silver cup and several other specials and at Milwaukee, besides winning 1, 2, 4, 6, 7, 9 and 10 on pullets, we won the grand specials for best display in the American class. Our prize winners, their sires and dams were all in our breeding yards from which we have raised the grandest lot of young birds, that we ever raised. Therefore we are prepared to furnish grand show specimens in either young or old birds. Write your wants I guarantee satisfaction or return money.

Geo. H. Bie : : : Racine, Wisconsin

SILVER WYANDOTTES

Our FIRST CHICAGO COCK that last year won over a number of noted winners was a typical Wyandotte in shape and one of the most marvelously laced birds ever exhibited. A son and a daughter just won the firsts at the great West Michigan State Fair, where we won all firsts and seconds in hot competition. 200 young birds for sale. Good breeders at \$2 to \$3 each. Fine exhibition birds, \$3 up, price according to quality, but always just a little more value than you purchase. Mention American Poultry Journal.

Clare E. Hoffman : : Allegan, Michigan

THREE TIMES WINNERS

Whitecrest farm, S. C. W. Leghorns and W. Wyandottes. Our birds won highest honors at the great Cleveland show, by winning the Silver Cup three years in succession 1908-1909-1910, for the best display of Leghorns. They have also won the blue at Detroit and many other shows. This proves their quality. This year they are better than ever. We can furnish you show birds and grand breeders at honest prices. Satisfaction guaranteed. Circular free which gives prices and show record.

Little Red Hen Poultry Tonic

Cures White Diarrhea, Roup, Cholera and Chicken-Pox

LOGANSPOUT, IND., 8-30-'10
WAYNE POULTRY TONIC CO.

GENTLEMEN:—The Little Red Hen Poultry Tonic has put all my chickens in good healthy condition and I think it is wonderful as I had some hens that could not hold their heads up. Now they are in a healthy condition and I did not lose a hen after I got your tonic. I lost ten or more before. I will not be without it. Yours truly,
Wm. J. Herfeld, 318 Market St.

SEND FOR FREE BOOKLET

Wayne Poultry Tonic Co. 213 Shoaff Building, Fort Wayne, Ind.

SOULONFUE, LA., 9-13-'10

WAYNE POULTRY TONIC CO.,
GENTLEMEN:—Please find enclosed \$1.00 for one quart of Little Red Hen Poultry Tonic. Besides being a sure cure for Roup, Cholera and White Diarrhea, we find Little Red Hen Poultry Tonic will cure Chicken-pox. We have always contended Chicken-pox to be a constitutional disease caused by a disease germ. We experimented on three fowls three different times, placing them in confinement with feed constantly before them and water with about three tablespoonsful of Little Red Hen Poultry Tonic to the quart. Yours truly, Jno. E. Berrott

Kaufmann & Windheim's Rose Comb RHODE ISLAND REDS

"AN AMERICAN BREED FOR THE AMERICAN PEOPLE
THAT MAKES THE AMERICAN DOLLAR."

Hundreds of high-class cockerels for sale, from \$2.00 up, that are bred from our famous winners at New York and Boston. Many are bred from our two great cock birds Bill Taft and Yantacaw. These two 1st prize Madison Square Garden birds have a reputation the country over, as being the best Rose Comb R. I. Red males ever produced. Now is your time to buy winners or breeders and at prices that are right. Our Reds are known from ocean to ocean as The Great Color Strain. When you want color, come to the breeders that have the goods.

KAUFMANN & WINDHEIM NUTLEY, N. J.

::: THE LARGEST EXHIBITORS OF REDS IN THE WORLD :::

8,000 Single Comb Buff Leghorns

Raised from 40 breeding pens containing 500 breeders that were selected from over 4,000 birds raised last year. The largest breeder of Buff Leghorns in the world. Best quality and more of it than all other breeders combined. My birds are trap-nested, and have wonderful egg records. Ten pullets averaged 222½ eggs in one year; individual birds in my other forty pens have done better. Winners last year at Chicago, St. Louis, Cleveland, Indianapolis, Toledo, Hamilton, Dayton, Columbus and Cincinnati. Can furnish single birds or by the hundred.

OF

Pigeons and Bantams

By F. W. DeLancey

One hundred pages, handsomely illustrated. The best ever published on the subject, because it goes into details; illustrates and describes all the leading varieties.

It Tells You---

How to mate---How, when and what to feed---How to tell males from females---System of feeding---Training the racing Homer---Disease---Building and construction of houses---History and origin of the different varieties. The most complete pigeon book published.

Bantams

It not only describes and illustrates the leading varieties, but tells you all about the mating, care and keeping. Articles by America's foremost breeders and best authorities. No Bantam or Pigeon breeder can afford to be without this valuable guide.

SHEPPARD'S FAMOUS ANCONAS

THE WORLD'S BEST

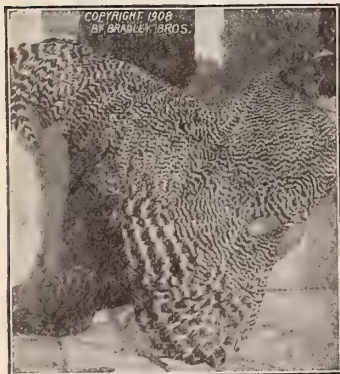

Champions at the world's greatest shows, including London, Eng., N. Y. City and Cleveland. In 1907-8 they won all the 1st and 2d prizes at Madison Square Garden in the largest Ancona class in the history of the big show. Have since won three times as many 1st and 2d prizes as all the other breeders together. In the great 1910 International show, in the largest and strongest class in the history of the world, my birds again distinguished themselves by winning three times as many **1st prizes** and **silver cups**, and four times as many special club ribbons as all others combined. My Anconas have the remarkable

EGG RECORD OF 256

average for the flock. Better exhibition birds than ever. Rose or Single Comb. If you want to win at your show, write me.

H. CECIL SHEPPARD IMPORTER AND EXPORTER **BOX M2, BEREA, OHIO**
President Int. Ancona Club

11% MORE FIRST PRIZES TOTAL

World's Champion of 1906.
Our \$2,000 Male.

Winner of First Prize and Sweepstakes Special at New York's Greatest Barred Plymouth Rock Show, nearly 500 in line.

Is descended from the sire of First Chicago Cockerel, 1902; also from the sire of First Chicago Male, 1906. These and other Chicago 1st Prize Winners were bred by us. Sons were winners in several shows, including New York and Boston.

ON BARRED PLYMOUTH ROCKS AT New York Shows

The Last 21 Years have been won by Birds we Bred and Raised than has been won by any other Exhibitor on ANY stock.

1st PRIZES ON COCKERELS More by 20 per cent.
1st PRIZES ON MALES More by 11 per cent.
Than any exhibitor has won on ANY STOCK.

All of the Silver Cups competed for have been won by us, three times out of five.

Four 1st, four 2d, three 3d Prizes besides other awards have been won by us at a single Madison Square Garden Show.

THREE TIMES have Males of our breeding won FOUR OF THE FIVE PRIZES offered in the class, including FIRSTS.

24 of our "LEE BELLE" Line of Females have been First Winners at New York Show alone.

First Prize in each of the two Largest Shows and the CHAMPIONSHIP PRIZE in what was considered the STRONGEST FEMALE COMPETITION OF THE YEAR, is a recent "LEE BELLE" record by BIRDS WE BRED, RAISED and SOLD. We have permission to state this, also the other records referred to.

FIRST PRIZE WINNINGS at CHICAGO and KANSAS CITY, and the largest shows outside of New York, which OUR BIRDS HAVE WON FOR OUR CUSTOMERS would alone be sufficient to demonstrate the SUPERIORITY of our strain.

SPECIAL—We are selling the finest lot of Breeding and Exhibition birds we ever offered for sale, both old and young stock, bred from these same lines of New York and Boston First Prize Winners. We also make a specialty of furnishing Carefully Mated Trios and Pens for breeding Exhibition Cockerels and Exhibition Pullets—birds that can be DEPENDED upon for first class results. 25 of the Best Cock Birds we ever offered, now For Sale. Just right to mate with pullets for Best Results.

FREE: Illustrated Printed Matter telling of Winnings at Kansas City, Chicago, New York, etc.

Bradley Bros., : Breeders of First Winning Barred Plymouth Rocks : **Box 909, Lee, Massachusetts**

Winner of Second Prize at New York Show
He and one of his sons, also a Winner at New York Show, each sold for one of the highest prices we ever received for a Barred Plymouth Rock male, both bred and raised by us.

New Standard

Ready this Month

You cannot raise fowls intelligently without a copy of the American Standard of Perfection, the Official Guide to Poultry Culture

THE AMERICAN STANDARD OF PERFECTION is published by the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of **all breeds and varieties** of Chickens, Ducks, Turkeys and Geese. The contents of the revised edition include:

- A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.
- The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.
- Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.
- The Standard shape, color and weight of every recognized standard bred variety of chickens, turkeys, ducks and geese; also the disqualifications of each variety.
- Half-tone plates of idealized black and white feathers, as found in parti-colored varieties; five full page plates of feathers in natural colors. A glossary of color terms.
- Full-page half-tone illustrations made from idealized photographs of living models, showing a male and female of the most popular varieties of chickens, turkeys, ducks and geese. The photographs were made by the world's best poultry artists and before being finally approved for use in the Standard were criticised by special committees appointed for the purpose and corrected by the artists to meet requirement.

Five Full-Page Plates of Feathers in natural colors. Half-Tone Illustrations from Idealized Photographs of Living Models

Prices:—Cloth Binding, \$1.50 postpaid. Leather Binding, \$2.00 postpaid. Order to-day and get one of the first copies. Send all orders to

birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

E. B. THOMPSON

Lock Box 510, AMENIA, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

ROYAL BLUE BARRED ROCKS

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York, 1909.

SWEEPSTAKES CHAMPIONS

I breed White Rocks, White and Columbian Wyandottes that win in strongest competition. 2000 CHOICE Exhibition and Breeding BIRDS FOR SALE at honest prices. EGGS from Prize Matings—1 Setting, \$5.00; 2 Settings, \$8.00; 3 Settings, \$10.00. \$25.00 per 100. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

"BOSTON BLUE" First Prize Sweepstakes Champion and Lawson Cup Winner at Boston, 1909.

BUFF WYANDOTTES THE KIND THAT WIN

At Chicago, 1909, in one of the strongest classes of Buff Wyandottes ever shown in the West, my birds won 1st, 2d cock, 2d, 3d hen, 4th, 5th ckl., 2d pullet and 3d pen, besides several specials.

I Can Furnish The Winners

A few more bargains left; four one- and two-year-old hens, mated to a yearling cock, for \$10. Trios \$8. Just one-half their real value. Send for catalogue that describes the stock on the largest Buff Wyandotte farm in the country. Mention American Poultry Journal.

Simon Beuth : : : : Box B, German Valley, Illinois

The "Norwich" Automatic Exerciser & Feeder

Is recognized by the leading poultrymen of the United States as the best, simplest and most practical Automatic Feeder and Exerciser on the market. It is GUARANTEED to be absolutely RAT, SPARROW and WEATHER proof. The same machine will feed four-weeks-old chicks, growing stock and breeders or layers. Saves its cost in feed and labor six times a year. Increases egg production, hastens growth, prevents disease, stops loss and makes poultry keeping pleasant and profitable. Very simple in construction and operation; will not get out of repair and will last a life time. Send for our booklet explaining our 30-day free trial offer. We will also mail our Barred Rock or Light Brahma catalogue for 10c in silver or stamps. State which breed you want. But the Feeder booklet is free. Ask for it. Address River Home Poultry Yards, Box B, Perrysburg, Ohio
